THIS title-page, printed in twenty-eight lines, is notable. It is six lines longer than that of the *editio princeps*, and stands in sharp contrast to the Dedication, in which, in six lines, Dr. Coues pays a fitting tribute to the people of the great West, as well as to the statesman who first foresaw, and the soldiers who first saw, their future domain. Lewis and Clark were the first men to cross the continent in our zone, the truly golden zone. A dozen years before them, Mackenzie had crossed in British dominions far north, but settlements are even now sparse in that parallel. Still earlier had Mexicans traversed the narrowing continent from the Gulf to the Pacific, but seemed to find little worth discovery. It was otherwise in the zone penetrated by Lewis and Clark. There development began at once and is now nowhere surpassed. Along their route ten States, with a census in 1890 of eight and a half millions, have arisen in the wilderness. These millions and more yet unborn must betake themselves to Lewis and Clark as the discoverers of their dwelling-places, as authors of their geographical names, as describers of their aborigines, as well as of native plants, animals, and peculiarities. In all these States the writings of Lewis and Clark must be monumental—the κτῆμα ἐς ἀεί that Thucydides wished for. In disputes about the ownership of Oregon, when it was urged that the United States could claim only the mouth of the Columbia because Capt. Gray had discovered nothing more, while a British vessel had been first to sail a hundred miles up the river, it was answered that the two American captains had explored it ten times as far. But they did very much more. They were the first that ever burst through the Rocky Mountain barrier, and they made known practicable passes. They first opened the gates of the Pacific slope, and hence filled the valley of the Columbia with Americans. We thus obtained possession, which is proverbially nine points, and that while diplomacy was still vacillating.

The credit of our Great Western discovery is due to Jefferson, though he never crossed the Alleghanies. When Columbus saw the Orinoco rushing into the ocean with irrepressible power and volume, he knew that he had anchored at the mouth of a continental river. So Jefferson, ascertaining that the Missouri, though called a branch, at once changed the color and character of the Mississippi, felt sure that whoever followed it would reach the innermost recesses of our America. Learning afterward that Capt. Gray had pushed into the mouth of the Columbia only after nine days' breasting its outward current, he deemed that river a worthy counterpart of the Missouri, and was convinced that their headwaters could not be far apart in longitude. Inaugurated in 1801, before his first Presidential term was half over he had obtained, as a sort of secret-service fund, the small sum which sufficed to fit out the expedition. He had also selected Lewis, his private secretary, for its head, and put him in a course of special training. But the actual voyage up the Missouri, purchased April 30, 1803, was not begun till the middle of May, 1804.

Forty-five persons in three boats composed the party. They were good watermen, but navigation was arduous, the river extremely rapid, changeful in channel, and full of eddies and sawyers. The last white settlement was passed within a week, but some meat and corn could be bought of Indians, though delays were necessary for parleys and even councils with them. Others were occasioned by hunting parties who were kept out in quest of game. After 171 days the year's advance ended with October, for the river was ready to freeze. The distance up stream they reckoned at 1,600 miles, or little more than 9 miles a day, a journey now made by railroad in forty-four hours. But it is not likely that any other men could then have laid more miles behind them. In addition to detentions already enumerated, rudders, masts, oars were often broken, and replacing them cost time; boats were swamped or overset, or could be forced onward only with tow-lines.

Winter quarters were thirty miles above the Bismarck of our day. Here they were frozen in about five months. The huts they built and abundant fuel kept them warm. Thanks to their hunters and Indian traffic, food was seldom scarce. Officials of the Hudson's Bay Company (who had a post within a week's journey) and many inquisitive natives paid them visits. From all these it was their tireless endeavor to learn everything possible concerning the great unknown of the river beyond. Scarcely one could tell about distant places from personal observation, but some second-hand reports were afterward proved strangely accurate, even as to the Great Falls, which turned out to be a thousand miles away. It was not long, however, before they learned that the wife of Chaboneau, whom they had taken as a local interpreter, was a captive whose birth had been in the Rocky Mountains. She, named the Bird-woman, was the only person discoverable after a winter's search who could by possibility serve them as interpreter and guide among the unknown tongues and labyrinthine fastnesses which they must encounter.

Early in April, 1805, the explorers, now numbering thirty-two, again began to urge their boats up the river, for their last year's labors had brought them no more than half-way to their first objective, its source. No more Indian purveyors or pilots: their own rifles were the sole reliance for food. Many a wigwam, but no Indian, was espied for four months and four days after they left their winter camp. It was through the great Lone Land that they groped their dark and perilous way. In twenty days after the spring start they arrived at the Yellowstone, and in thirty more they first sighted the Rocky Mountains. Making the portage at the Great Falls cost them a month of vexatious delay. Rowing on another month brought them on August 12 to a point where one of the men stood with one foot each side of the rivulet, and "thanked God that he had lived to bestride the Missouri, heretofore deemed endless." They dragged their canoes, however, up the rivulet for five days longer. It was 460 days since they had left the mouth of the river, and their mileage on its waters had been 3,096 miles. A mile further they stood on the great divide, and drank of springs which sent their water to the Pacific. But meantime they had been ready to starve in the mountains. Their hunters were of the best, but they found no game: buffaloes had gone down into the lowlands, the birds of heaven had fled, and edible roots were mostly unknown to them. For more than four months they had looked, and lo! there was no man. It was not till August 13 that, surprising a squaw so encumbered with pappooses that she could not escape, and winning her heart by the gift of a looking-glass and painting her cheeks, they formed friendship with her nation, one of whose chiefs proved to be a brother of their Bird-woman. Horses were about all they could obtain of these natives, streams were too full of rapids to be navigable, or no timber fit for canoes was within reach. So the party, subsisting on horse-flesh, and afterwards on dog-meat, toiled on along one of the worst possible routes. Nor was it till the 7th of October that they were able to embark in logs they had burned hollow, upon a branch of the Columbia, which, after manifold portages and perils, bore them to its mouth and the goal of their pilgrimage, late in November. Its distance from the starting-point, according to their estimate, was 4,134 miles.

A winter of disappointment followed, for no whaler or fur-trader appeared to supply the wayfarers with food or clothing or trinkets for the purchase of necessaries on the homeward journey. Game was so scarce that it is possible they would have starved had not a whale been stranded near them—sent, they said, not as to Jonah, to swallow him, but for them to swallow. In the spring of 1806, when they turned their despairing faces away from the Pacific, all the beads and gewgaws for presents to savages and procuring supplies during their home stretch to the Mississippi might have been tied up in two handkerchiefs, if they had had any such articles. Their last tobacco had been consecrated to the celebration of Christmas, and the last whiskey had been drunk on the previous 4th of July. All roads homeward are down hill. A forced march of six months brought the discoverers from the ocean to St. Louis, September 23, 1806, though they were obliged to halt a month for mountain snows to melt. From first to last not a man had perished through accident, wild men, or wild beasts, and only one through sickness.

Many an episode in this eventful transcontinental march and countermarch will hereafter glorify with romantic associations islands, rivers, rocks, cañons, and mountains all along its track. Among these none can be more touching than the story of the Bird-woman, her divination of routes, her courage when men quailed, her reunion with a long-lost brother, her spreading as good a table with bones as others could with meat, her morsel of bread for an invalid benefactor, her presence with her infant attesting to savages that the expedition could not be hostile. But when bounties in land and money were granted to others, she was unthought of. Statues of her, however, must yet be reared by grateful dwellers in lands she laid open for their happy homes. Western poets will liken her to Ariadne and Beatrice.

---

*Personal Recollections of Werner von Siemens.* Translated by W. C. Coupland. D. Appleton & Co. 1893.

SUCH a number of the Siemens brothers have distinguished themselves in the engineering world, and especially in electricity, that really a guide-book to their respective performances was becoming a public desideratum. This book in some measure fills that want. Siemens Brothers, Siemens & Halske, and other firms of Siemenses, which practically make one concern, are renowned all over the world for executing in the most scientific way possible everything connected with telegraphy, such as operating land lines, laying cables, inventing and manufacturing all sorts of electrical instruments, preparing gutta-percha, making the glass required in the business, mining the copper, and also as inventors and manufacturers of regenerative furnaces and the regenerative Siemens gas-burner. The brother whose name

is the most familiar to readers of English books was Sir William Siemens, who worked a great improvement in the quality of English enginery, and first forced the practical Englishman to entertain a sincere respect in practical matters for the scientific physicist. He died ten years ago, receiving the last distinction of a burial in Westminster Abbey. He was the fourth of the brothers. Hans, the second, made the glass. Friedrich, the fifth, inventor of the Siemens burner, devotes himself to regenerative combustion. Charles, the sixth, is probably the greatest business manager among them. Walter, the seventh, was the developer of the wonderfully scientific copper-mine in the Caucasus; while Otto, the eighth, was his successor there. Several others of the name have been connected with the business; but the most interesting man of them all has been the eldest of the brothers, Dr. Werner von Siemens, Member of the Berlin Academy of Sciences, inventor of the dynamo, discoverer of electrostatic charging by means of a battery, author of the Siemens unit of resistance, earliest adherent of Faraday's theory, and founder of the fortunes of the house of Siemens.

The mechanical perfection of the volume is worthy of the author. A sea-green linen binding, leaves of tinted paper so thick that 175 of them make an inch, tastefully cut pica, superb presswork, all proclaim that commercial remuneration has not been the first care. In fact, the work is in part quite frankly of the nature of a *réelame*. Dr. von Siemens had perhaps some share in a moral quality not unknown among his countrymen, a deep compunctious sense that his besetting sin was excessive modesty and self-depreciation, with an earnest resolve to fight it down, if so be by God's grace he might. But there are in truth several reasons why Werner Siemens did not for long receive all the credit to which he was justly entitled. In the first place, he was not a thoroughly educated physicist, and often made slips that show it. We will not recount the deplorable history of the bathymeter, but will rather select a less decided example. He says in this book (p. 327) that the problem of a flying-machine "is, for every mind possessing a slight mechanical training, a very simple one." He proceeds to say that inclined planes to assist in supporting the weight are worthless. Now, such argumentation was pardonable in Babinet forty years ago, but it has since that time been plainly shown that it rests on assumptions in regard to the motions of fluids which resemble but very slenderly the facts of nature. To-day, to accuse those who are engaged upon the problem of the flying-machine of ignorance is simply to expose one's own. Now, it is very natural that scientific men, with the enormous volume of new work that they have to examine, should be somewhat slow in finding out the real merit of those who so make themselves ridiculous. In the second place, Dr. Siemens stood, for the greater part of his life, outside the circle of German university professors, and advocated a theory to which they were disinclined. In some branches, such as that of philosophy, to be opposed to the official view in Germany means utter neglect. In physics, it is not so bad; still, even in physics nobody who understands the German can think that it could be unimportant. In the third place, Siemens's profession was one in which enormous profits were to be made—profits depending upon the man's reputation. No wonder, then, that, in that line, competition for the honor of discoveries should be particularly bitter and ungenerous. Add that Siemens himself had shown himself as adroit as anybody in combining scientific research with the pursuit of wealth, and it was hardly to be expected that the friends of his competitors should do him any public honor which, by any means not positively dishonorable, they could wrest from him.

After all, his scientific merit, which is certainly considerable, though hardly to be called great, is everywhere recognized. His highest capacity is not in pure science but in engineering, or, rather, it is of a military kind. He makes a marvellously clear and penetrating judgment quickly, and is ready to stake his fortunes upon it. The first successful deep-sea cable was laid in 1857 from Bona in Algeria to the island of Sardinia. The house of Siemens had furnished only the electrical apparatus; but Werner Siemens was to do the testing of the cable during and after the laying. He had no further responsibility. The cable was an old-fashioned affair weighing at least four pounds per yard. The problem of how to lay such a thing down, without breakage and without waste, at a depth of 1,000 to 1,500 fathoms, was so difficult that the different engineers who were to be upon the vessel found themselves, on the passage from Genoa to Sardinia, of the most widely different opinions about the matter. The man who was responsible, an Englishman, thought the best way was to proceed quickly, and let the cable run out without check, so as to bring no strain upon it. A French engineer, on the other hand, thought that the cable would hang down in a catenary curve, and would necessarily break. This was certainly far from a foolish idea. Siemens did not expect to have anything to do with the mechanical business, but declared that the operation could not be performed as the Englishman proposed, yet that it could be done by putting on a break sufficient to support a weight of cable equal in length to the depth of the water. They started from Bona in the evening, proceeding on the English plan. By dawn they found they had laid a third part of the cable, though they had covered only a fifth of the distance. They had only just enough left to reach a shallow spot near Sardinia. The contractor then went to Siemens and requested him to lay the remainder of the cable. Many a man would have simply washed his hands of it. Why should he undertake so difficult a task and such enormous responsibilty, without preparation, without any surplus of cable, and without adequate machinery? Incredible as it may seem, they did not even have a ship's log-line on board. Here was this untried problem of laying down perhaps a million dollars' worth of cable at the bottom of the deep sea, without losing it if one could help it. Yet Siemens does not seem to have hesitated. He laid the cable; and, although he strained it a little, he laid it successfully. We can well believe him when he says:

"The continuous mental strain, and the consciousness that any error committed may occasion the loss of the whole cable, makes the laying of a deep-sea cable a very anxious, and for a length of time thoroughly exhausting, affair for all concerned, and especially for the leader of the undertaking. Towards the end of the foregoing work, in which I would not allow myself a moment's rest and refreshment, I could only keep myself up by frequently taking strong black coffee, and required several days for recovering my strength."

The full account of Siemens's work will be most interesting to the engineer and to the man of science; but even the reader who may choose to skip all this will find it one of the most charming publications of the year. He will be surprised to find how many exciting adventures Siemens met with. At the very outset of his career he found himself defending a fort at Kiel against the Danes. For this purpose he was obliged to recruit a force, and, having enlisted them, to persuade them to go out of their own territory. It is needless to say that the defence was conducted on scientific principles. Submarine mines, or torpedoes, were used. They so scared the Danes that there was no attack. Another time he was shipwrecked in the Red Sea, and, with a whole steamer full of people, was cast upon a bare rock, where they nearly perished from thirst. Once, when he was laying a cable, a waterspout passed over the vessel. As for such incidents as accidental explosions, imprisonment, duels, being under fire in war, getting nearly frozen to death, complete destitution, peril from sharks and from robbers, danger of being put to death as a wizard, his life seems to have been full of them. There are many spirited descriptions of scenes and of phenomena of sky and sea. The anecdotes about curious personalities and amusing situations are many and good. Unfortunately the English of the translation, seldom excellent, is in many a place painfully awkward, quite ungrammatical, or downright unintelligible. The translator seems to be one of those persons who think they can improve upon accepted English idioms, and reform the language on a German model. There is, no doubt, some analogy between a rude, obscure style and disobliging, surly manners. It is singular how many admirers both find in Prussia. Siemens himself, though his style, when he is off his guard, is often delightful, yet explains, evidently with an approving conscience, that he has taken no pains whatever to write agreeably; and one of his main regrets at leaving the Prussian army was that he found the bluntness of the Prussian military manners so charming. He then considered whether or not he should become a Prussian Amtmann; but the manners of that class were not sufficiently rasping for his taste. Such tastes are certainly not to be disputed, but we should like to have them expounded. The idea seems to be that whatever is unamiable is sterling and virtuous.

*People's Banks:* A Record of Social and Economic Success. By Henry W. Wolff. Longmans, Green & Co. 1893.

THE cry for governmental aid for all the poor and oppressed is now so shrill and incessant that the public has no ears for reports of what the humbler members of society have done for themselves. These reports will be neglected until philanthropists understand that the problem of poverty is a moral one, and that all schemes for regenerating men by improving their material conditions are idle unless their character also is improved. Meanwhile, those who hold that men must work out their own salvation are cheered from time to time by evidence that this is done to a greater extent than is commonly supposed. Not long since we noticed Mr. Wilkinson's little book entitled 'Mutual Thrift,' as revealing the unsuspected magnitude of the business of the provident societies in England. We have now before us a very striking account of what has been done in the same general direction, although with different methods, in some of the Continental countries, especially Germany and Italy. It is much to be regretted, however, that the description of this work did not fall into more competent hands. Mr. Wolff is enthusiastic in a good cause; but his knowledge

of banking and finance in general is so limited, and his language so extravagant, that we are unable to give implicit credence to his statements. Some of his information, however, is evidently trustworthy, and it is fortunately the most important matter in the book.

The Credit Associations of Schulze-Delitzsch are comparatively well known, but their main features may properly be restated for the purpose of contrast with the loan banks of Raiffeisen, which have attracted much less attention. In Schulze's banks a certain number of persons associate themselves for the purpose of collecting savings and making small loans, every member subscribing for one share and paying for it in instalments as he is able. Deposits are received from outsiders, but a law passed in 1889 forbids lending except to members. The capital thus received is loaned, at as high interest as can be obtained, principally upon personal securities, but for very short terms. Three months is the usual period, but a renewal can be obtained. The managers draw small salaries, but are allowed commissions upon the business done. After the shares have been paid up, profits are distributed as dividends. The liability of the members of the association is unlimited. It has been estimated that banks of this general type now number 4,500, and do a business of £450,000,000; but this statement lacks proof. It is known, however, that there are more than 1,000 in the Schulze-Delitzsch union, having more than half a million members, and a working capital of nearly 600,000,000 marks. The entire growth has taken place since 1860, and has gone on in spite of the hostile policy of the Government; Bismarck exhibiting persistent malignity towards Schulze, while actively aiding the socialistic schemes of Lassalle.

The Raiffeisen banks date from 1849, but it was not until 1880 that they began to increase rapidly. They now number more than one thousand in Germany alone, perhaps two thousand all told. These organizations are strictly local, and, as will be seen, require personal acquaintance between borrowers and lenders. One bank to a parish is the rule, but if the parish has less than four hundred inhabitants, a group is formed within which the bank may operate. Liability is unlimited, no salaries are paid except to the cashier (who is not a director), the shares are of almost nominal value, the dividends are practically nothing, and no pledge is required of the borrower, who must generally, however, furnish one or two sureties. The bank is therefore simply an association of neighbors who agree to lend of their collective wealth to such of their number as they know are honest and capable of using money. This, after all, is the secret of successful banking, as we know it, which differs only in being carried on more with an eye for gain, and less from neighborly feeling. Its basis is "two-name paper," but in the case of the Raiffeisen banks the borrower must explain precisely for what he requires the loan. The interest charged is low, and the term of the loans, as is necessary for agricultural operations, is long. It is said that none of these banks has ever failed, and that they are so highly esteemed as to obtain many loans from savings-banks, and to be designated by the courts as depositories of trust funds. A central bank has been formed that, to some extent, supervises the affairs of the local institutions, receives and distributes their balances, and acts as their agent in purchasing goods and for other purposes.

It is apparent that these two types of bank have not only different methods, but also different fields of operation. In a manufacturing and commercial community it would be difficult to lend upon personal character alone, because people do not know each other so well as in a tranquil rural village—they are too many. Nor where competition is brisk would it be practicable to find men who would make themselves liable without limit for no pecuniary compensation. In a country town the attractiveness of a serious occupation is a sufficient compensation, especially when that occupation is intrinsically so fascinating as the acquisition of minute knowledge concerning the circumstances of our neighbors. In short, where business is brisk, time is money; where there is a superfluity of leisure, men will almost pay for something to do. At the same time the success of these combinations of business and philanthropy, if it is as great as Mr. Wolff represents, is a very remarkable social phenomenon. Many of our country towns and villages suffer from the lack of savings-banks, and there is no economic reason why institutions of the Raiffeisen type should not succeed here, except the principle of unlimited liability, which is not a necessary feature.

Mr. Wolff describes the "Banche Popolari" of Italy, established by S. Luzzatti, as resembling the credit institutions of Schulze-Delitzsch, and the "Casse Rurali" of Dr. Wollemborg as similar to Raiffeisen's loan banks. But it is unnecessary to follow him further. Chapters are added upon institutions of similar character in Belgium, in Switzerland, and in France, but they need no particular mention. Mr. Wolff deserves credit for calling attention to a very unobtrusive but very important development of economic enterprise, and we trust that his book may meet with such success as to induce him to continue his studies, and to give us some further information in which fact shall count for more, and hearsay and imagination for less.

---

*Shakspere:* Fünf Vorlesungen aus dem Nachlass von Bernhard ten Brink. Strassburg: Trübner. 1893.

At the time of his death, in January, 1892, Ten Brink had brought his 'History of English Literature' only to the threshold of the Elizabethan period, and had not made Shakspere the subject of any such long and thorough investigation as he had bestowed upon Chaucer. At the same time, Shakspere had long been a favorite study with him. It was the great dramatist that formed for him the central attraction of English philology, and dispelled whatever misgivings he might at any time have concerning the narrowness of his specialty. After his untimely death, therefore, it was natural that the pupils who had been delighted with his academic lectures upon Shakspere should wish to see them in print. But the manuscript proved unavailable, and so, as a second choice, his literary executors decided to publish a course of popular lectures delivered by him in 1888 at Frankfort-on-the-Main. These form the contents of the volume before us.

The first lecture is entitled "The Man and the Poet." Its problem, formulated in genuine German fashion, is the "possibility of identity" between the two. The lecturer pays his respects briefly to the Baconian theory, characterizing it as a "curiosity" and a "morbid manifestation of the time." He insists, however, that the miracle Shakspere will never be entirely cleared up. There is an inexplicable residuum there before which philology will always stand helpless. "All we can hope to reach," says he, "is the knowledge that the poet's inner development, as it can be inferred from his works, is compatible with what we know of the historical Shakspere." He then proceeds to a sympathetic sketch of the Warwickshire *milieu*—the aspects of nature, the life of the people, their sports, festivals, and superstitions, the inspiring historical associations of the place. Given a pupil of Shakspere's endowment, and what better education could his youth have had? School and university might easily have warped his mind, and destroyed that fulness of sympathy and that exquisite balance of faculties which were to be the secret and the condition of his power.

The second lecture deals with the chronology of the plays, as related to the great phases of the poet's spiritual history. A few words are devoted to the question of Shakspere's "objectivity," which is made to consist not in the suppression of self, but in the perfect transfusion of self with the matter in hand. "The most objective poet," we are told, "is at the same time the most subjective." Shakspere merges himself in his forms until he is one with them and his life becomes their life. This "holy earnestness" is a distinctive mark of his art. The chronology presented calls for little comment. "Titus Andronicus" is confidently claimed as Shaksperian—the work of a young imitator of Marlowe, whose life had not yet been crossed by the shadow of tragic moods, and who still conceived of tragedy as something utterly unusual, as a matter of peculiar characters, abnormal conditions, and horrible actions. In the sudden change which came with the year 1601, and ushered in the period of the great tragedies, Ten Brink sees a reflex of the tragic mood occasioned by the fate of Essex.

The third lecture, "Shakspere as Dramatist," treats first of the nature of the dramatic, as distinguished from the epic, gift, and of the advantages offered by the use of a traditionary fable. Then the "dramatic idea" comes in for consideration. Premising that earlier German critics went quite too far in reducing Shakspere's plays to abstract formulæ, Ten Brink still deplores the later tendency to repudiate "ideas" altogether. But when he attempts to give his own view as to what the "dramatic idea" of any given play really is, he can offer nothing better than that it is "the point of view from which the poet contemplates his subject-matter." Evidently alive to the vacuity of this definition, he turns from the domain of abstraction to illustrate his meaning by a comparison of "Romeo and Juliet" with Brooke's poem of 1562, which furnished the story. This comparison is more accurate and more instructive than the corresponding exposition in Freytag's 'Technik des Dramas.'

The fourth lecture, "Shakspere as Comic Poet," draws a comparison between Shakspere and Molière, with a view of showing why the former has not enjoyed that "universal and unreserved recognition" which has fallen to the lot of the latter. It is pointed out that in the essentials of comic art Shakspere is superior. On the other hand, Molière is nearer not only to the modern, but also to the antique conception of comedy. The Frenchman wrought more with the understanding and with singleness of purpose, the Englishman more with the fancy and with a freer admixture both of seriousness and of jest for jest's sake. "The Comedy of Errors," in its relation to Plautus, and the "Merchant of Venice," with reference to the character of *Shylock*, come in for somewhat extended discussion. Here it is remarked that "our feeling revolts against

the touch that the Jew is compelled to be baptized." There are people in Germany at present who would probably not accept this as a correct account of the modern attitude.

The last lecture is devoted to "Shakspere as Tragic Poet." The irrepressible Aristotelian definition is once more briefly explicated, though the lecturer does not omit to remind his hearers that Shakspere knew nothing, and needed to know nothing, of æsthetic theory. After this the salient features of the Shaksperian tragedy are described, the poet's artistic process analyzed, and "Julius Cæsar," "Hamlet," "Macbeth," and "Lear" are commented upon by way of illustration.

From this brief account it will appear that the lectures are in no sense a contribution to Shaksperian scholarship. We have not here such a treatment of the subject as we doubtless should have had if the gifted author had lived a few years longer. Still, just as it is, the little volume is worthy of a cordial welcome. It reads pleasantly and is characterized by urbanity and good sense. Here and there, too, imbedded in a context of easy popular exposition, one lights upon observations that go to the heart of the matter and testify to riches held in reserve. And, after all, we doubtless have here, unencumbered with any philological scaffolding, the main substance of what Ten Brink would have had to say in a more learned treatise. We may note in conclusion that the title-page is faced by a spirited etching of the author, and that the book is handsomely printed. One or two trifling misprints have come to our attention: *Porzia*, p. 53, but *Portia*, p. 146 and elsewhere; *Hindergrund*, p. 94.

---

*Life with Trans-Siberian Savages.* By Douglas Howard, M.A. Longmans, Green & Co.

To the four hundred and sixty-five books or papers on the hairy Ainu of Japan and Trans-Siberian Russia enumerated by Prof. B. H. Chamberlain in his bibliography of 1886, and to the eight or ten published since that time, is added another work of peculiar interest. This little book of about two hundred pages is full of strange experiences that are most probably true, and of careless statements that are manifestly untrue. Indeed, it is such a mixture of fact and fiction that an English critic has denounced it as "a romance of adventure of the Rider Haggard school, crowded with incidents quite incredible." It is certain that in late years literary adventurers in book factories like the British Museum, or naval officers visiting the seas of Japan and oppressed with the vast leisure on their hands, have palmed off works of compilation or imagination as pure narratives of travel or the testimony of eye and ear-witnesses. One has to invoke the aid of the higher criticism and apply its principles to not a few books on the Far East produced during this decade.

Our present author, evidently lacking scholarship in physical geography, ethnology, linguistics, philosophy, and geology, is wholly uninteresting and voluminously inaccurate when he ventures into the domains of these sciences. He rushes rather hilariously into fields where trained experts move with caution. He calls a storm on the *west* side of Sakhalin and Yezo a "typhoon." He tells us that he enjoys "the distinction of being the only English-speaking individual ever known to have passed a night on any part of that entire island," though we have known personally British naval officers who have done so, and an Englishman who lived several months in Sakhalin. Out of the German-Latin-Russian of his Muscovite informant, he learns that "the very oldest book in Japan, a book which was published according to our reckoning (712) seven hundred and twelve years before Christ, states as follows" concerning the Ainu, etc. Now, the 'Kojiki,' or Notices of Ancient Things, here referred to, was committed to writing 712 A. D. Nevertheless, from the idea that the Ainu "are historic as a formidable race" in Japan "2,604 or 3,000 years" ago, it follows that "the Ainus of Sakhalin existed for unknown ages before that," and on this theory the author builds other theories that damage his book, reducing to nonsense the greater part of his elaborate chapters on Ainu ethnology, history, and theology. Mr. Howard speaks of "the syllabic character of the Ainu language, in which respect it is entirely unique among the languages of all other neighboring peoples," when the Japanese is nothing else than syllabic. The *kana* syllabary of Japan illustrates one of the three ways in which language can be written, the Chinese being logo- or ideo-graphic, and the Corean, with its true alphabet, being phonetic. Other careless statements, of which these are samples, abound in Mr. Howard's pages.

Apart from these defects, and regarding the work as a narrative of personal adventure, we see little, from what we know, through Japanese and other books and actual visitors, of Sakhalin and the Ainu which seems at all incredible or false. What the author says in general about the nine months' unbroken winter, notwithstanding that Sakhalin and France are in much the same latitude, the amazing hauls of salmon, the wolfish dogs and their fish-catching powers, the odorousness of the aborigines in a soapless land, their skill in deer- and their valor in bear-hunting, and their arrow-poison, do not seem unduly wonderful, but are in accord with the literature and science of the subject. To those not versed in these, and to the old reader about Ainus, the narrative of things seen, apart from the author's speculations, is a fascinating one, and the book is of real value.

The author says he left London in 1889 to study the Russian prison system, of which Sakhalin, ceded, as to its southern half, by the Japanese to Russia, in exchange for several of the most northern of the Kurile islands, is a part. To this outer verge of the Czar's dominions, life-prisoners, or the worst of all, are sentenced. By favor of a Russian prince, he secured an invitation to visit Sakhalin with the commandant. In the hospital he found an Ainu woman treated for syphilitic disease communicated by one of the exiles. With tattooed lips, shell-hung ears, amazing luxuriance of head-hair, and with "neck, chest, arms and . . . the whole body . . . more hairy than the most hairy man I ever saw," she seemed a "phenomenon"; whereupon he resolved to visit the Ainu in their forest home. Driven some miles inland by a convict driver, he was kindly received, and, apparently without the smelling-salts and insect powder with which Miss Bird provided herself as aids to ethnological research, he spent some weeks among this ancient and possibly Aryan fragment of humanity. The huts for the storage of dried fish and other food, weapons, etc., were on platforms twelve feet high. In a great hut ten times larger was their place for dressing game or fish. Once a year Japanese traders are allowed to come and barter pots and kettles, knives, arrow-heads, cotton cloth, rice, tobacco, etc., for furs and skins. Unlike their brethren in Yezo, who are being gradually debased off the face of the earth by alcoholic liquors, the Sakhalin Ainu, by Russian law, have no access to either saké or vodka. The Ainu house is made of thatch laid on walls five feet high. A shallow pit in the centre of the mud floor, and a hole in the roof for a chimney and one at the side for a window, complete the structure. In winter the snow masses brace up and keep warm this odorous dwelling of men, whose own name is alleged to mean 'who-smell-of-their-ancestors.' The summer is devoted to catching and preparing fish for winter consumption, in hunting deer and bear. The author gives vivid accounts of the making and use of the *inao*, or whittled sticks, with the long curled shavings kept on, which are set up in every place of omen, danger, tabu, or sacred import. We know of no book about the Ainu which presents so vividly, and details so fully, the method of making and using these sacred emblems.

Pretty full accounts are given of the women, who are solid-looking, ugly, and with very thick necks, owing to the habit of carrying heavy loads slung from the forehead. The making of Ainu arrow-poison is fully described; the active principle which quickly paralyzes the muscles of the wounded animal being derived from aconite. With pulverized spiders and foxgall a paste is made and thickly spread upon the flat side of the arrow-head, which is lashed lightly to the shaft in order to remain in the wound after all but the head is broken off. The hunters quickly cut out the flesh around the wound, and also remove and bury the animal's heart so that the dogs may not eat it. An Ainu funeral, incantations, and many curious customs are also interestingly described. In vain the savages tempted the Englishman to cast in his lot with them, by offering him two or three of the ugliest young beauties of the village. He left them, regained the Russians, and visited Yezo.

---

*Sefton:* Comprising the Collected Notes of the late Rev. Engelbert Horley, M.A., together with the Records of the Mock Corporation. By W. D. Caroë and E. J. A. Gordon. Longmans, Green & Co.

In the village of Sefton, some six miles from Liverpool, stands one of the finest of old English parish churches. A recent rector was somewhat of an antiquary, and got together a good deal of information as to the history of the fabric; and these notes form the basis of the first 131 pages of this sumptuous volume. A club of jovial Liverpool citizens at the end of last century used to go over to Sefton every Sunday to dine and attend church, and amused themselves with parodying the proceedings of municipal bodies; the records of this "mock corporation" occupy the next 360 pages. And first a word as to these records. Except that they kept up an elaborate and—to the mere reader, who cannot enjoy their turtle soup—a tedious farce, the "corporation" differed no whit from scores of similar clubs, such as the festive Buccaneers with whom Captain Costigan spent the last night of his memorable stay at Chatteris. It is difficult to see what useful purpose is served by the printing of all these good gentlemen's ponderous jokes, unless it be to induce their descendants to subscribe to the volume and so assist in making more valuable matter accessible. What ought to have been done with such material was to pick out the few really interesting things and therewith to construct a little essay of some twenty pages on "The Liverpool Bourgeoisie during the French Revolution." Those drinking, church-going, slave-trading worthies were characteristic middle-class Englishmen. But we must

protest against their being allowed to bore us to the extent of 360 pages.

The earlier antiquarian portion of the book is fairly well done, and the architectural details come apparently from the hand of an expert. The horrors of restoration which the history of this church, like that of so many others, reveals, suggest that, now that the English bishops are widening the scope of their ordination examinations, they would do well to insist upon an elementary knowledge of architecture on the part of their clergy. The strength of the Church of England as a national establishment depends to so large an extent on the beauty and dignity of the edifices, that a little better understanding of the treasures committed to its charge would be no inconsiderable means of "church defence." To the historian, however, this volume, like most of the parlor books of its kind, offers only a few "pickings," although these are welcome. Thus we find in Sir William Molyneux, who died in 1548, a landlord who did not do what many of his fellows were doing, that is, "make the most of" his estate; for according to tradition "there were two things that he hated: (1) depopulating enclosures; (2) unworthy enhancements of rents; for he died with this advice to his son, 'Let the underwoods grow.'" The unaccustomed peace which Roman Catholics enjoyed for a few months after the accession of James I., is illustrated by the narrative of a recusant who tells us how, after living the life of a hunted hare for years "until the Queen's death," he "obtained from K. James a free and large pardon, which cost me in all but either 40 or 50 shillings. Deo Gratias."

Local records can do two things: they can help us to realize the continuity of every-day life; and, like the examples just quoted, they can give concrete illustrations of what otherwise are mere "movements" and "tendencies." But there is need of an improvement in editing.

BOOKS OF THE WEEK.

A Calendar of Verse. 2d ed. Thomas Whittaker. $1.25

# The Nation

Is published every week at Broadway and Fulton Street. It was founded by E. L. Godkin in 1865, and Mr. Godkin is still the editor.

THE NATION is an independent weekly review of literature, science, art, and politics, with a serial commentary on the most important American and foreign events, special and occasional correspondence, editorial and miscellaneous articles on prominent political and social topics, and thoroughly competent criticism of the latest developments of literature, science, art, music and the drama. The two hundred contributors who prepare this feast for the scholar and the thinker include the foremost names in American literature and thought, besides many famous men in England and France, Germany and Italy, South America and Japan. THE NATION has been pronounced by the *Saturday Review* to be "on the intellectual level of the best European periodicals." It has a large and widely distributed circulation in all the States of the Union and in foreign ports. The development of that class of independent voters who control the balance of power in several Northern States is largely the work of THE NATION, which has always fought for purity, wisdom, and independence in public life, and for honesty and integrity in legislation.

*Subscription, $3.00 a year, postpaid; shorter term at a proportionate rate. Sample copy sent free on application.*

## TO ADVERTISERS.

The weekly circulation of THE NATION is about 10,000 copies. This number represents, however, but a portion of the actual readers of the journal, as it goes to all the leading libraries and reading-rooms throughout the country, and to the homes of people of intelligence and means everywhere. It stands alone in its field. The announcements of the leading publishers are a feature of THE NATION, which contains more book-advertising than any other weekly paper. Prominent financial houses, the best schools, and other high-class advertisers of all kinds use its columns constantly. The utmost care is taken to exclude all unpleasant or unworthy advertising.

*Advertising rates or other information given on application.*

**206 to 210 Broadway, New York City.**

# Longmans, Green, & Co.'s

*MATTHEW ARNOLD IN THE "NINETEENTH CENTURY."*

"The New York NATION—a newspaper which I read regularly and with profit, a newspaper which is the best, so far as my experience goes, of all American newspapers, and one of the best newspapers anywhere."

# THE NATION,

an independent weekly journal, was established in 1865. Its contributors include the most prominent names in literature, science, and art, both in this country and abroad. It is emphatically found in the homes of people of culture and refinement. No intelligent American, desirous of keeping abreast of the best political and literary thought of the day, can afford to be without it. Subscription price, $3.00 a year, postpaid.

# All that's Yellow is not Cottolene

There's hardly a housekeeper in the country but has heard of **Cottolene** the new vegetable shortening. It is a strictly natural product; composed only of clarified cotton seed oil, thickened for convenience in use, with refined beef suet, pure and sweet. So composed,

## COTTOLENE

Was bound to win, and to drive out lard from the kitchens of the world. When housekeepers wish to get rid of the unpleasant features and results of lard, they should get **Cottolene,** taking care that they are not given cheap imitations with vegetable names, spuriously compounded to sell in the place of **Cottolene.**

It's easy to avoid disappointment and ensure satisfaction. Insist on having **Cottolene.**

Sold in 3 and 5 pound pails

# The Nation.

NEW YORK, THURSDAY, NOVEMBER 2, 1893.

## The Week.

THE final scenes in the Senate on the passage of the silver-repeal bill were of a lugubrious nature in some respects, especially so to Senators Morgan, Cockrell, Vest, and Harris. It was very trying to them to be brought face to face with a condition of affairs which would expose the worthlessness of all the financial rubbish that has been issuing out of their mouths during the past ten or a dozen years. It was very sad for them to be "driven into a corner," without the smallest scrap of compromise to exhibit to their angry constituents. Senator Morgan, who enjoys the distinction of being wrong on every public question, made a spiteful attack on the President, and said that if he had told the people of Alabama that silver was to die by Mr. Cleveland's command, that State would not have cast her vote for him. When Mr. Morgan says people, he means Populists. The people of Alabama were never in ignorance as to Mr. Cleveland's position on the silver question. He had declared it over and over again. The Democratic party had adopted it in their national platform calling for the repeal of the Sherman act. The Democrats of Alabama ratified both platform and nominee in the election. The Populists of Alabama, and they alone, took a position antagonistic to Mr. Cleveland on the silver question. The Democrats were with him then as they are now. Four-fifths of the Democratic newspapers of the State sustain him and favor the repeal of the Sherman act. Senators Cockrell and Vest, if not equally out of harmony with their own party at home, are by no means on the footing that they have formerly enjoyed. They are unmistakably condemned by the commercial classes and by the intelligent members of the community.

---

The *Congressional Record* continues to grind out the grist of speeches against time made by the Populists and silver Republicans in the Senate. The number for October 26 contains the two days' speech of Senator Allen of Nebraska, being mostly wind. During Mr. Allen's speech the ingenious Peffer came to his aid with some per-capita information that was particularly helpful. Mr. Allen had acquainted the world with the fact that during the war and the years immediately succeeding it the per-capita circulation of the country had been much larger than it is now, from which the inference was easily deducible that our monetary conditions were much happier and more satisfactory then than they are now. Gold was then at various rates of premium up to 280. The fluctuations in the value of the currency were rapid and excessive, affording great opportunities for speculation and turning all business into gambling—all except that of the wage-earner, who had no chance to profit by speculations, but was compelled to stand still and take whatever came to him. Senator Dolph ventured to question some of Mr. Allen's statistics. Then the ingenious Peffer, in whose nostrils currency inflation is the breath of life, came forward with tabular information showing the amount of various kinds of public debt in existence in 1866, including short bonds, compound-interest notes, national-bank notes, greenbacks, 7.30s, certificates of indebtedness, etc., all of which, as Mr. Peffer could prove, were in circulation at one time, making a glorious total of $52 per capita. The contrast between that flourishing state and the present stifling condition, when gold is worth only 100 cents to the dollar, is obvious without any argument from Peffer or Allen.

---

Senator Sherman's proposal that the Secretary of the Treasury be authorized to sell bonds, not exceeding $200,000,000 in amount, bearing interest not exceeding 3 per cent, and redeemable five years after date, is judicious, reasonable, and most probably necessary to carry the Government through the next two or three years. That the Secretary is facing a deficit estimated at $50,000,000 for the present fiscal year has been officially announced. He is meeting his daily expenses in part by borrowing from the gold reserve, commonly called the greenback-redemption fund. Nearly one-fifth of this fund has disappeared in this manner, the residue being little more than $80,000,000. Whatever views may have been held regarding the sacredness of this fund, all precedents have been shattered by the march of events. It was maintained at one time, and not very long ago, by high officials of the Treasury that this gold reserve of $100,000,000 could not be used to redeem the new Treasury notes issued under the act of 1890, but when the pinch came, and it was necessary either to break in upon that fund or to redeem those notes in silver, and thus to create two kinds of money in the country, all technicalities and legal scruples were brushed aside.

---

The ice having been broken, it was easy to dip in again when the panic had caused a shortage of revenue. It will be remembered that after gold importations began, as one of the consequences of the crisis, the $100,000,000 reserve was built up again. Gold was turned in at the Custom-house during the "currency famine" because the public preferred paper. This condition lasted until the currency famine had passed away, until the hoarding movement had ceased and the banks had again resumed payment in full of all checks. When the finances, both public and private, resumed their normal condition, the Treasury gold reserve began to shrink once more, from sheer inability to meet daily expenses out of daily receipts. The Secretary must either stop payment altogether or pay out such money as he has on hand. Senator Sherman a few days ago said that the Treasury was getting into a condition where it must either have bills payable or accounts payable, and that the former were preferable to the latter. This is a true tale. The case is analogous to that of a private person who owes his butcher, grocer, tailor, servants, etc., small sums of money which he cannot pay. His credit at the bank is good because his resources are ample. He can get his note discounted for enough to pay all the small claims, and thus get rid of duns and satisfy everybody. There are apparently some people in the United States, perhaps some Senators, who think that it would be a saving all around if the Government should continue to owe its clerks, judges, soldiers, sailors, pensioners, and other employees and creditors small sums which they cannot do without, rather than owe certain forehanded people a lump sum which they would readily pay for the Government's bills payable or bonds. Persons who have the notion that the Government can save something by not paying its debts promptly are as little to be reasoned with as Senator Pugh or the melancholy Bland. They must be voted down.

---

The death of the mayor of Chicago at the hands of an assassin is a sad ending to the World's Fair, but he cannot be wholly acquitted of responsibility for it. He was during his whole political career a strong sympathizer with the lawless element in the Chicago population. He did his best to save the Anarchists from the gallows after their murderous attack on the police, and down to a very recent date he allowed mobs to assemble daily in front of the principal hotel in Chicago to declaim against poverty. One of the greatest objections to lawlessness is that it begets lawlessness. Everything—whether anarchical talk, or lynching, or open defiance—which diffuses contempt for the law and its officers, and for the society for whose benefit or protection the

law is enacted, is open to the capital objection that it may bear fruit. No one can guarantee that it shall be mere talk, that it shall not fall on ears which shall turn it into action. Every large city contains hundreds of shiftless, discontented, half-cracked fellows, who only need a suggestion from some seemingly responsible source to conceive themselves justified in "removing" some local impediment to human happiness with a knife or revolver. The people who swarm in the streets with concealed weapons do not all carry certificates of sanity. This class Mayor Harrison undoubtedly helped to keep alive and to multiply, and in doing so undoubtedly in some degree contributed to his own tragic taking-off. If the occurrence has a warning in it for Gov. Altgeld, so much the better. He is playing the same dangerous game, and with the same object—to get the Senatorship.

---

Marshall Field's munificent gift of $1,000,000 assures to Chicago a memorial of its great Fair which will be of the highest educational value to the whole country. It was early in 1892 that certain public-spirited citizens of Chicago, the chief of whom was Mr. W. T. Baker, then president of the Local Board of the Exposition, and president also of the Chicago Board of Trade, began to agitate the project of establishing a Columbian museum as a permanent memorial of the Exposition. Seconded by President Harper of the University of Chicago, they formulated a plan which contemplated the erection of a fire-proof building in Lincoln Park, to be made the receptacle of the exhibits of scientific value bequeathed from the Fair. It was known that the exhibits in the field of natural history from the Central and South American countries especially would be of unexampled interest and value, and it was the desire to preserve these and others similar to them for the instruction of the people for all time which prompted the movement for a museum. The plan called for a fire-proof structure costing a million dollars, and assurance was given that if this could be erected, specimens and articles of historic interest aggregating three million dollars in value would be forthcoming. Mr. Field's generous gift secures the structure, which we believe is to be a reproduction of the present beautiful art palace in indestructible material, a fitting monument to the Fair, and to the seemingly limitless generosity and genuine civic pride of the people of Chicago.

---

The removal of Mr. Henry White from the place of first secretary to the American Embassy in London has just been effected. Mr. White's resignation was asked for some time ago for the purpose of giving the office to Mr. J. Roosevelt Roosevelt, who, we understand, contributed $10,000 to the campaign fund. Mr. Roosevelt is an estimable gentleman who has already had some diplomatic experience on the Continent, but it cannot be repeated too often that London is a post for which no experience on the Continent is of any use. In London, which is the principal seat of our diplomatic business abroad, no experience takes the place of local experience. To be of use to his country in London it is necessary before all things that the minister should know the men and women of the capital thoroughly, and should know the usages, and prejudices, and feelings of all of that very composite, complicated, and, to the outsider, rather mysterious body called English society, which has so much to do as yet with shaping legislation and making war and peace. Ministers, as they come and go, do not always, and cannot always, possess this knowledge, and it has accordingly been a wise custom to keep some one who did possess it permanently, as it were, in the first secretaryship. Mr. Moran held the place in this way for a long time, and so did Mr. Hoppin. Mr. White has filled it admirably for the past ten years. We doubt if anybody has ever brought as much tact, industry, patience, and good temper to the discharge of its duties. He was invaluable to Mr. Lowell and Mr. Phelps, and Mr. Bayard was, we understand, very desirous of having him stay. To turn him out now for a newcomer is as serious an offence against our diplomatic service abroad as could be committed.

---

Mr. Frederic R. Coudert, in his article on arbitration in the November *Harper's*, makes a brief reference to the Bering Sea case. He writes:

"What would have resulted from a persistent assertion of its rights by force, on the part of the United States, is of course a matter of conjecture. Mr. Phelps, minister at the Court of St. James's, was in favor of vigorous measures, and urged the continuation of the only course which, in his judgment, was consistent with self-respect. He felt and expressed entire confidence that Great Britain, knowing that she was in the wrong, would never go to war in defiance of the impregnable moral grounds on which the claims of the United States were based. This view was entitled to special consideration, emanating as it did from a profound jurist who had also proved himself an exceptionally skilful diplomat. But there certainly was some danger that the seizure of British vessels in the open sea might lead to a disturbance of the friendly relations between the two great powers."

This is putting it very mildly in view of the documents in the case. On June 14, 1890, Sir Julian Pauncefote, after vainly trying to get Mr. Blaine to abate something of his pretensions, served upon him a formal notice, of which the concluding paragraph was as follows:

"The undersigned is in consequence instructed formally to protest against such interference, and to declare that her Britannic Majesty's Government must hold the Government of the United States responsible for the consequences that may ensue from acts which are contrary to the established principles of international law."

After the receipt of this unmistakable intimation of what they were rushing upon with their seizures of British ships upon the high seas, Mr. Blaine and the President suddenly discovered that they had always been strongly in favor of a *modus* and arbitration. Mr. Coudert's way of putting the thing helps us to understand the laughter with which his jocose treatment of the American case was received by the Paris Tribunal. Mr. Phelps will immensely enjoy the humor of the references to himself.

---

Admiral Stanton's explanation of his conduct in saluting the rebel admiral in the harbor of Rio de Janeiro does not acquit him of having been guilty of an indiscretion, in view of his instructions to have nothing whatever to do with the revolution, but it does show how difficult was the situation he had to deal with. Precedents to guide him were exceedingly scanty, if indeed a single one precisely in point could be cited. As he says, Mello was the only Brazilian admiral afloat, and had sent an officer to make a ceremonious call upon the American admiral. Now there is no hard-and-fast rule about the receipt and return of these naval courtesies, though the principle is laid down in the books that, on the high seas at least, "they ought generally to be returned if offered by one of the parties," and admirals' ships, in particular, are expected to salute each other. The case was certainly a puzzling one. Here was the entire Brazilian navy under a single commander flying the Brazilian flag. It was not a question of choosing between the recognition of Mello and that of some admiral loyal to the established Government. Admiral Stanton had, in fact, first recognized the *de-facto* Government by saluting the forts under Peixoto's control. Then came the visit from the rebel admiral. It would have been an undoubted discourtesy not to return it. Mello was no pirate. He was an insurgent, and an insurgent of standing. Back of him was practically the entire navy, and two or three of the richest and most progressive States in the country. We suppose Admiral Stanton had no idea that he would be practically recognizing Mello's rights as a belligerent by saluting him. There is room for doubt whether such was, in effect, the consequence of his action. But there appears to be no room for doubt that he exceeded his instructions. He was in a delicate position. He should have managed to be "not at home" when the rebel admiral's card was sent up.

---

The last Legislature of Michigan passed a law which attempted to confer upon

women the right to vote in municipal elections. It was questioned at the time whether the Legislature possessed the power, under the State Constitution, to make so radical a change in the suffrage, and these doubts have been justified by an appeal to the judiciary. The Supreme Court rendered a decision last week declaring the law unconstitutional and void, on the ground that the Constitution of Michigan does not extend the franchise to women, and that the Legislature cannot confer the right by a statute, an amendment of the Constitution being the only lawful way to accomplish the result. Constitutional amendments providing for woman suffrage are, in fact, now pending in two Western States—Colorado and Kansas; and the vote on the question in the former State will be taken at this month's election. The Michigan law became practically a Republican party measure during its passage through the Legislature, the Democrats opposing it and predicting that the Supreme Court would annul it for unconstitutionality. Now that this prediction has been verified, the Detroit *Tribune*, the leading Republican organ, declares that "woman suffrage in Michigan, either equal or limited, is placed beyond the pale of political possibility for a generation at least." The *Tribune* considers it practically impossible to secure an extension of the franchise to women by means of a constitutional amendment—except "at the end of a long agitation, resulting in a very considerable change of sentiment among both men and women." Women still retain the right to vote at school elections in Michigan, but any further extension of the suffrage to the sex is, in the *Tribune's* opinion, far in the future.

---

As one more instance of the way the American manufacturer has to be protected against his foreign competitors, the *American Stationer* cites a statement made by Mr. Johann Faber of Nuremberg in regard to the difficulties which he is encountering in his European trade through the underselling of American lead-pencil manufacturers. He said that England was "flooded with cheap American pencils" to such an extent that his product had no chance of a sale. American cedar pencils are sold in England at from sixty-six to sixty-eight cents a gross—a price which the Germans cannot touch. This only shows how flagrantly Herr Faber has been deceived. If he had looked into the American tariff laws, in which the duties are never higher than are absolutely needed to withstand foreign competition, he would have seen that the rate on lead pencils is 50 cents a gross and 30 per cent. ad valorem additional. This amounts to about 130 per cent. of indispensable protection, and hence it is clear that the Germans can undersell the Americans by fully that margin. Yet it is just possible that the profound German mind is on the track of that great beauty of protection which consists in reserving the blessings of dear goods and high prices for its own people, and which ruthlessly degrades the foreigner by selling him the same goods at a ruinously low figure.

---

Mr. Asquith, who is unquestionably the coming man on the Liberal side in England, has been making a speech at Glasgow which has attracted a more than usual amount of attention, because it contains what may be considered the Liberal programme. He positively promised the passage at the present session of Parliament of the parish-councils and employees' liability bills, and then proceeded to discuss the defeat of the home-rule bill by the House of Lords, declaring that there "was no greater fallacy than to imagine that the House of Lords affords any effective safeguard against rash and revolutionary legislation." He illustrated this proposition by the promptness with which the Lords passed two of the most revolutionary measures ever introduced into the House of Commons, one the repeal of the corn laws, the other the extension of the suffrage in 1867—which Lord Derby called "a leap in the dark." Both these measures were introduced by ministers pledged to resist them, but the Lords passed them without hesitation, so that Mr. Asquith says they never resist rash legislation unless it is introduced by Liberals. Ridiculing the notion that the Lords have the people of England at their back, he calls attention to the fact, for fact it is, that the conversion of the large Tory majority of 1886 into the Liberal majority of 1892, on the home-rule question, came almost exclusively from England. In Ireland the Liberals lost two seats; in Scotland they gained four or five, but the majority by which the home-rule bill was finally passed came from a change of opinion in England only. He claimed that in discussing the details of the home-rule bill for eighty-two days, the House of Commons conceded the principle, and "that the whole difficulty between us arises in a manipulation of comparatively small points of legislative details." He concluded with the declaration that if, as Mr. Goschen advised, they were "to drop home rule," the Liberals "would be guilty of a gross dereliction of duty and dishonorable violation of pledge." But he did not say when the bill would be introduced again.

---

The fighting at Melilla is peculiarly well fitted to fire the Spanish heart. Besides being in line with the traditional glory of smiting the followers of Mohammed, it revives the memory of O'Donnell's successful campaign in Morocco in 1859-'60—an expedition which has served for food for Spanish boasting ever since. In addition is the certainty that a military triumph can be won in the end at a comparatively small outlay of treasure and blood, and that Spain may again appear, at slight cost to herself, to be cutting a considerable figure in European-African politics. Further must be reckoned in the solid military qualities which the recent desperate fighting seems to prove to be still inherent in the Spanish character, recalling the proud days of Charles the Fifth and the heroic period of the Napoleonic invasion, when the Spanish irregulars won an unequalled fame for valor and tenacity. There can be no doubt that the Spanish ministry will find the country, impoverished though it is, responding cheerfully to the call for men and money needed to secure and possibly to extend Spanish possessions in the north of Africa.

---

A recent prosecution for lese-majesty in Würtemberg had some peculiar features. A delegation of peasants, from a region suffering terribly from drought, visited the capital to lay their distress before the King, choosing as their spokesman the village doctor, named Hartmann. King William refused to receive them, whereupon Dr. Hartmann published an account of the affair in a popular newspaper, adding that the King's ministers were at fault for having advised his Majesty not to listen to "unpleasant truths from the mouths of his subjects," and that they were "sleeping upon a volcano." This was too much for a monarch brought up in Berlin, under the high and mighty idea of the divine right of sovereigns now prevalent in that capital, and accordingly the daring doctor and the equally audacious editor who let him into print were promptly hauled up for lese-majesty. To say that the King's subjects had "unpleasant truths" for the royal ear was a clear implication that the King had been doing something wrong—an absurd and impious supposition on its face. To talk about anybody sleeping on a volcano in a country blessed by so mild and beneficent a monarch was clearly incendiary and a direct insult to the good King, who, if he had his way, would have all his dear subjects sleep on (or under) nothing more dangerous than a German feather bed. Such, at least, were the contentions of the King's counsellors, but they were unhappily made short work of by the courts, which decided that the right of free speech and discussion had not been exceeded by either doctor or editor. Thus the effort of the King to strut at Stuttgart as the Emperor does at Berlin only served to show how thoroughly the divine-right props are knocked from under modern thrones.

### *EXIT SILVER.*

THE prolonged contest over silver has ended—as was inevitable if the majority of the Senate should stand firm and spurn every compromise—in the unconditional repeal of the purchasing clause of the Sherman act. Unfortunately this will not be the last of silver in American politics, but the future controversies over it will be with reference to the disposition of the stock on hand. There will be no more contests over free coinage or over new purchases. Silver will be no longer a persecuted sister, but an inconvenient ghost. From time to time we shall look at our enormous store of the white metal, and wonder how we ever became so bereft of reason as to buy it. How France, and Germany, and Austria came to have more of it than they want is easily understood. Their holdings descended from former generations. Their silver coins were really the "dollars of the fathers." Ours are our own dollars. Our fathers had no such dollars. They got rid of theirs in 1834. When the monetary revolution of 1870-76 was going on in the commercial world, why did we go backward? Why did we seek to stem the tide and put ourselves in opposition to a wholesome reform?

To answer this question we must go back to the legal-tender act of 1862. This act has been the parent of all the bad monetary legislation that the country has suffered from in the past thirty years. It planted in the public mind the idea that the Government could make money. It eradicated to a large extent the true conception that the Government's stamp on a coin is merely a certificate of its weight and fineness. The greenback, apparently, gave the lie to all such antiquated notions. Did not the greenback pay debts as well as gold? Did it not answer all the purposes of gold, except the single one of paying debts abroad? Was it not an advantage to have a kind of money that could not be exported? These and a great progeny of half-truths and quarter-truths secured extensive lodgment in the minds of the people, so that when the war was ended a demand for more greenbacks became ominous. "Don't you want to have plenty of money?" asked the demagogues of the day. Plenty of money signifies ease, luxury, freedom from care, and everything that this world can afford. Next to the hope of heaven, and sometimes far transcending it, is the desire for plenty of money.

To those who took the opposite view was assigned the task of proving that an addition to the paper currency would not add anything to the quantities of bread and meat, clothes, shoes, coal, lumber, and other commodities. The battle continued till 1874-5 with varying fortunes. Then President Grant vetoed the inflation bill and the people sustained the veto. This was the first knock-down for sound money, and here the battle would have ended but for an unexpected and calamitous circumstance, the like of which had never been seen in the world's history. The price of silver as compared with gold fell 11½ per cent. in the space of three years. During the previous two hundred years it had fallen only 7 per cent. Here was material for a new campaign of inflation and for a fresh appeal to the "debtor class." When it was discovered that the silver dollar had been legislated out of existence in 1873 (having been out of existence *de facto* nearly forty years), the discovery added fuel to the flames. The charge of fraud, of bribery and underhand legislation, was brought against the Congress of 1873 even by men who had been members of it and had voted for the act in question. There has hardly been such a disgraceful and unfounded libel in American history. In spite of repeated proofs that it was a false and calumnious charge, it has survived and has found men shameless enough to repeat it in the national Capitol within two months.

The arguments which were used to beat down greenback inflation would not serve the purpose as against silver, because that was a metal produced by labor in limited quantities, although rather larger than before. The fact that it was larger added zest to the campaign. "The larger the better," said the silverites, "the more the merrier." With these catchwords they carried the day and have held their supremacy in national politics for fifteen years. The "gold-bugs" told them that a panic would come whenever the public should apprehend that the pile of silver in the Government vaults could not be kept at par with gold, but this was so long in coming that most people thought it never would come.

It came a few months ago. The clock struck on the day when it was rumored from Washington that the Secretary of the Treasury would not use the $100,000,000 gold reserve to redeem Treasury notes, but only the old greenbacks for which it was first accumulated. This meant that there would soon be two kinds of money in the country, one at par with gold and the other not so. Although this story was quickly contradicted by the President's authority, it found lodgment in the public fears, because it was something which had been long though vaguely apprehended. People began to clutch at their money. The panic so long foretold had come at last, and from that moment silver was doomed. It is doubtful if a vote in either branch of Congress has been changed by arguments. The victory is due to the overwhelming compulsion of facts, the pitiless stringency of the money market. The people have learned at last that it is confidence which makes money plenty, and the lack of it which makes money scarce. They have learned, too, that gold and confidence go hand in hand the world over. Why it is so, it is needless to inquire. If gold is universally acceptable and silver is not, that fact is sufficient unto itself. To argue against it, to fight against it, is as idle as to combat the public preference for straight noses over crooked ones.

Greenback inflation made the war more costly to the Government by $800,000,000 than it would otherwise have been. This is the computation of first-rate authorities in finance. The silver craze, which is the second chapter of greenback inflation, has loaded us with $600,000,000 of unavailable assets, and has virtually added that amount to the national obligations, not counting cost of coining and guarding the stuff. The next problem in national finance will be to devise a banking system which shall gradually supersede all the Government paper afloat and give us a currency responsive to the wants of trade. When silver takes its final exit, this task will not be difficult. All classes will be alike interested in it. Prejudices against banks will disappear. These prejudices were an outgrowth of the inflation craze. Bankers, as a rule, understanding these questions better than the community at large, were opposed to all the unsound schemes. Their influence was thrown against greenback inflation back in the seventies, and against its lawful progeny, silver. Hence they acquired the hate of greenbackers and silverites and the persecution of Congressmen. But this too shall pass away.

### *SOUTHERN LYNCHING.*

THE editor of the *Forum* has obtained from Chief-Justice Bleckley of Georgia a very strong condemnation of lynching from the jurist's standpoint, and he adds to it a discussion of the matter from what he conceives to be the negro's standpoint. But there is one matter which all the Southern writers on this subject neglect, and that is the frequency of the offence which for the most part brings about the lynching of negroes. This is a capital point, because, if the thing were extremely frequent, it might be pleaded that the ordinary police arrangements of the communities in which it occurred were insufficient to deal with it. Bishop Haygood and Dr. Hoss gave us to understand, in a vague way, that the offence was very common, but refrained from saying how they knew it was very common. Neither of them made the slightest attempt at figures, or cited any better authority than vague rumors, circulated doubtless by horror-stricken women, or by the mobs who do the lynching and have to provide some justification of their conduct when they get home.

Our own belief is, that the offence is very rare. A few cases here and there over the vast area of the South doubtless occur in the course of the year—

probably about as many as occur at the North, and the imagination of the whites does the rest. Every one likes to add something to the tale of horror, as it increases his importance. The man who knows of five cases of negro outrage on white women is of course, for the time being, a "bigger man" than the man who has heard of only one, and thus the ghastly list grows till it reaches the editor of some newspaper, who multiplies it by ten. What is needed at the South is some process of official investigation and enumeration. Reports of negro violence ought to be hunted down and analyzed and the result published. The negroes themselves ought to have enough influence to bring this about. We suspect the count would make a great many people ashamed of themselves—including the editors of religious newspapers who claim for mobs the privilege of "emotional insanity."

The other agency which, added to the vagueness about figures, does most to keep this negro lynching going at the South is touched on lightly—too lightly—by the editor of the *Forum* himself, and that is the feeling that any sort of violence is justifiable if perpetrated on behalf of or in defence of women, "our women," or Woman with a capital W. One of the sure marks of the old Southern antebellum bully, and of the swashbuckler of the eighteenth century in every country, was his perpetual alarm about the honor of his women. His uneasiness on this point was always his most striking characteristic, and made his near neighborhood, when he had women under his care, something from which the quietest and most pure-minded male might well shrink. His readiness to fight with his equals about his women naturally begot a readiness to avenge all wrongs on them, *manu militari*. It is not very long since a South Carolina colonel "called out" and shot dead a lawyer of the same State for impugning his wife's veracity as a witness in a trial about a will. The curious feature of this case was, that the lawyer felt himself obliged by public opinion to accept the challenge, although he knew the colonel never missed his mark.

This supersensitiveness about women probably plays a larger part in the lynching troubles than most Southern moralists are willing to acknowledge. It is one of the marks, however, of a state of civilization which has passed away in other communities, and must pass away in the South. The notion that women, for instance, can "dishonor" other people by their conduct is uncivilized, and is fast dying out. That every human being is the guardian of his own honor is the larger and wiser doctrine under which all civilized states are learning to live. The notion that women cannot, like men, live under the law and trust to the law for their safety, honor, and welfare is another relic of barbarism of which the South must rid itself. There are cases, of course, where the strong hand of the man has to interfere for the protection of female weakness, but they are not more numerous than the cases in which the big strong man has to help the small and puny man against the insolent bully. Women are everywhere taking their place under the law as physically weak men, and the law has to take care of them as such, and popular manners are adapting themselves to the change. Women themselves are the last to ask for the services of roving mobs for their protection against any form of outrage. The courts and police suffice, and must suffice, for the purpose. The women of the North, or of England and France, dispense with the services of lynching parties by means of extra care in their goings and comings, with the certainty that the law will overtake all wrongdoers. For what can be more demoralizing to sheriff or police than the belief that mobs will do their work?

---

### *THE SUPPRESSION OF IMMORAL LITERATURE.*

An international congress against immoral literature—probably the first of its kind—was held at Lausanne, September 12 to 14. The eighty delegates present were united and emphatic upon the extent of the evil they had met to combat, but gave no signs of supernatural wisdom in the practical remedies they were able to suggest. In fact, the only thing they really decided to do was to do nothing—unless the agreement to establish an international "bureau of vigilance" may be regarded as better than nothing. Propositions were indeed made of every conceivable kind and degree of impracticability. One excited delegate was for having the authors of immoral books seized bodily and made to erase their offensive writings with their own tongues, after the ancient method of dealing with heretics. A Belgian member of the congress solemnly proposed that editors of reputable newspapers should agree to "exclude from their association" any fellow-editor who disgraced it; overlooking the fact that it is the non-reputable editors who are in a position to do the excluding, and that it would be just like the rascals, even if in a minority, not to go nor give up their rascality when ordered to do so by resolution. There was a great deal of talk, too, about the need of a strict enforcement of the laws against obscene books and periodicals, and about supplying good literature to supplant the bad, but nothing came of it all except the chance afforded the speakers to free their minds.

Nevertheless, the Lausanne Congress served a useful purpose in bringing into strong relief the fundamental difficulties in the way of suppressing immoral literature. The first is the impossibility of defining accurately what is immoral literature. There is, of course, a general agreement about the flagrant forms of obscene literature, which carry their grossness and their evil purpose on their face. Every civilized country has stringent laws against commerce in that kind of provocation to vice, and it everywhere has to be carried on clandestinely, if at all. But as soon as we try to extend our definition so as to make it cover the subtler forms of prurient literature, we break down. When the evil is disguised, and resides in the covert suggestion or the latent intention, it cannot be reached except by legislation which may be used against the harmless as well as the pernicious. The sort of danger we are exposed to, when thus on the border-land between the unmistakably indecent and the dubiously immoral, was shown in the Lausanne Congress by one delegate—it is needless to say he was from England—who told of his labors for the suppression of an illustrated edition of Rabelais and of another immoral French book, 'Paul and Virginia'!

The truth is, it is utterly impossible to reach this form of evil by any law, municipal, national, or international. To execute a law which would be effective against the elusive forms of immoral literature without being an instrument of tyranny, would require, in the authorities set for its interpretation and enforcement, a critical and æsthetic faculty and a moral sense such as the world has never yet seen in officialdom, or out of it, for that matter. Such a law would necessarily vest a great amount of discretion in the executive officer, which is only another way of saying that it would allow the executive officer to give his own subjective view of what was immoral the force of a statute. We should straightway have a burning of books more disastrous than Omar's, and should speedily be reduced to a literary diet which might be guaranteed to be moral, but which would be mightily like sawdust and water. Moreover, even supposing a law could be devised delicate enough to reach existing fashions of unwholesome allusion and inflammatory suggestion, a new dialect of immorality would be at once invented to take the place of the old one, and so the work would have to be done all over again. Even to the Lausanne delegates it was obvious that this would never do.

They were nearer on the track when they dwelt upon the need of driving out bad books with good. The example of the "Société Franklin" of France was held up for imitation, with its earnest attempts to get good literature into circulation. But a great deal of solemn truth on this subject was condensed in the remarks of the head rabbi of Geneva, who was a member of the congress. He reminded his hearers that good books were not made to order. It is not enough to say, "Go to, let us have a library of unexceptionable books to put into the hands of the rising genera-

tion." First get your books, and then, what is still harder, get your readers. "The good book," said this Nathan the Wise, "is too often the stupid book"; and he might have added that to force a young person to abandon an interesting book which may be dangerous, for a safe book which is infinitely tedious, is only to escape one kind of immorality by falling into another. It is a truth, which many excellent people fail to perceive, that what really gives some objectionable books their hold is their wit and grace and literary charm, and not at all the regrettable features which hide everything else to certain eyes. Nothing could be more deadly than to confound moral literature with the prosy preaching of morals.

The sum of the whole matter appears to be that there is no way of getting rid of all forms of immoral literature. This temptation will always remain in the world, as far as we can see, to beset unformed characters, and must be met, like all the other constant temptations of life, by bracing the individual to withstand it. Healthy sentiment and pure taste in the reading public will be surer death to corrupting books than all the laws which the wit of man can devise.

## THE COPYRIGHT CONFERENCE IN BARCELONA.

BARCELONA, October 7, 1893.

THE Association Littéraire et Artistique Internationale boasts an illustrious founder, Victor Hugo, who presided at the conference of organization held in Paris in 1878, in connection with the Universal Exposition. Since that time there have been yearly reunions in different cities in the following order: London, Lisbon, Vienna, Rome, Amsterdam, Brussels, Antwerp, Geneva, Madrid, Venice, Paris for the second time, in 1889, in connection with the Société des Gens de Lettres, upon the occasion of the Exposition of that year; London again in 1890, Neuchâtel, and Milan. In addition to these fifteen regular sessions, there have been two extraordinary sessions held in Berne, in September, 1883, and October, 1889.

As appears from the above list, two conferences had already been held in the Iberian peninsula, and why Spain should have been selected for this year's meeting is not apparent. It could hardly have been for the sake of the propagation of the ideas of the association, for Spanish literary-property legislation is already in some respects—notably as regards the length of the term of copyright protection—in advance of that of other European countries. Moreover, the city chosen offers few special attractions. It is not at all typically Spanish, even the old part having been so much invaded by modern constructions as to retain its characteristics only in secluded corners. With an aspect distinctly that of a flourishing commercial town, it belongs to what has been called the "Mediterranean type," lacking, however, the picturesqueness of Genoa. A certain beauty, even magnificence, the city possesses, with its lively and attractive boulevard of the Rambla, and still more beautiful Paseo de Colón, with its double row of fine palm trees and abundance of shrubs and flowers. The new town, which has been built within twenty-five years, makes a good impression because of its broad and tree-lined avenues. This part of Barcelona possesses one characteristic peculiar to itself. The streets all cross at right angles, and at every crossing the corners of the blocks have been sliced off so that each crossing becomes a small square. The effect of this is fine, but the excessive regularity of the solidly built-up streets, lined with six-storied apartment-houses, is monotonous. Aside from the fine cathedral, the Casa Consistorial, and old Palacio de la Disputación y Audiencia, there is little to attract the sightseer. The University building is modern and not particularly interesting.

A characteristic local note was the frequent remindings that the visitors were welcomed, not to Spain, but to Cataluña, and that they were among Catalans. But the hospitality extended, whether Spanish or Catalan, was lavish. The reception and entertainment of the members of the Congress was intrusted to the "Associación de Publicistas" (Press Association), and most liberally were these duties construed. The guests were serenaded on their arrival and departure, and during their stay were supplied with free passes for all the tramway lines and suburban trains, as well as with tickets to the theatres, and cards of admission to the literary clubs. Five public dinners were tendered, one involving an all-day excursion to the country-seat of an opulent Catalan at the hillside village of Vallvidrera, where were enjoyed extensive and beautiful views, with the Mediterranean upon one side and Montserrat upon the other. There were public sessions of inauguration and closure, and, for the evenings, club receptions and specially arranged theatrical performances—among the latter an evening devoted to original Catalan plays. The result was that although the Conference extended from Saturday to Saturday (September 23 to 30), inclusive, there remained time for only nine working sessions, insufficient for the work planned.

On Saturday afternoon, September 23, an informal meeting was held in one of the rooms of the University Library, for the purpose of introducing the members of the Conference to one another, and of laying before them the printed reports of committees, and announcing the programme for the working sessions. On Sunday morning the troops were reviewed from the balcony of the University, and it was just at the conclusion of this parade that there occurred the one event which threw a shadow upon the sunny days of the Barcelona Conference—the throwing of the bombs under the horse of Gen. Martinez Campos. Fortunately the general escaped with such slight concussions that he could participate in the public reception three hours later. In the afternoon the official inauguration took place in the Paraninfo—the richly decorated audience hall of the University. The exercises began more than an hour after the appointed time, an example of Spanish punctuality. It was characteristically Spanish, also, to account for the rather slender audience, notwithstanding the great number of tickets of invitation distributed, by the explanation that the hour of the meeting was such that attendance would interfere with the usual Sunday's *corrida de toros*. The mayor of Barcelona delivered, in Spanish, an address of welcome, which was afterwards distributed to the audience in a French translation. He was followed by other Spanish dignitaries, and responded to by members of the association, who, for the most part, spoke in French, but two Germans won hearty applause by speaking in good Spanish.

On Monday morning began the working sessions, also held in the Paraninfo, between the hours of 9 and 12 A. M. and 2 and 5 P. M. The attendance was at no time large, and the business of the sessions proceeded with an apparent briskness, due in part to the quick movements and rapid speech of the French delegates. But a certain amount of informality reigned, and there was no limitation either of the frequency of speech or the length of the remarks, while interruptions were common, and occasionally four or five persons would be speaking and gesticulating at the same time. Besides the president of the association, M. Eugène Pouillet, the author of a learned work on literary property, the persons in attendance whose active participation must be considered of the highest importance to the progress of copyright were M. Henri Morel of Berne, Switzerland, director of the Bureau of the International Union for the Protection of Literary and Artistic Property; M. Desjardins, delegate from the Ministry of Public Instruction of France; M. Chaumat, delegate from the French Ministry of Justice; Sig. Augusto Ferrari of Milan, representing various Italian literary associations; M. Jules Lermina, the perpetual secretary of the association, and Don Adolfo Calzado, a member of the Cortés of Spain. In a second group might be placed the younger men showing an active interest in copyright legislation, chiefly lawyers, rising literary men, or publishers, such as MM. Georges Harmand, Albert Vaunois, Ernest Eisenmann, Armand Ocampo, Lucien Layus, Georges Maillard, and Victor Souchon of Paris, and Dr. Albert Osterrieth of Heidelberg: while a third division would include the remaining members, for the most part literary men or artists whose greater or less interest in the proceedings of the congress is primarily due to their vocations—prominent among these being Dr. Max Nordau, the dramatist Grenet Dancourt, the brilliant young novelist Marcel Provost, M. Jules Oppert, the artist J. Davrigny, and Dr. Gustav Diercks of Berlin.

It is noticeable that while the association has skirted Germany, it has abstained from entering upon the territory of that empire, and this fact, together with some other evidence, leads to the conviction that, despite the word international in its title, the organization is still dominatingly French. At the Barcelona Conference the members bearing German names were found to be chiefly German literati living in Paris; and while there were representatives present from Belgium, Germany, Italy, and, of course, Spain, I fancied I detected in this non-French contingent a note of opposition. Great Britain sent no representative, and there was no one from the United States except your correspondent, who, while a member of the Authors' Copyright League, was present solely in his private capacity. In view of the object of the association, as declared in its constitution, "to defend and propagate the principle of international literary and artistic property," and in consideration of its primary practical purpose, viz., the unification of the legislation of the world regarding copyright, it is much to be desired that it should assume a truly international character.

The programme embraced the following subjects for discussion: (1) Translations; (2) contracts between authors and publishers; (3) the registration of copyrights at Stationers' Hall, London; (4) literary property in the South American States; (5) on the term of copyright; (6) on property in architectural designs; and (7) on the desirability of establishing at Berne a general registration of all works

upon which copyright is claimed in any of the countries of the International Copyright Union. In addition, there was to be an Essay on Catalan Literature, by Don Salvador Poggio of Barcelona.

The rector of the University, Don Julián Casaña, opened the first session with a brief address of welcome, and the secretary of the association followed, reporting on copyright movements in general during the year which had passed since the last conference. The president then read a report, by L. Lyon-Caen of Paris, on the right of translation, which was taken up with much interest, and the sense of the meeting was expressed by a resolution in favor of giving to authors control over the translation of their works for a minimum period of twenty years. The second topic was introduced by Don Antonio Torrents y Monner of Barcelona, who read a carefully prepared paper on contracts for publication, which elicited favorable comment. In the afternoon session the subject was continued by the consideration of M. Pouillet's printed report on a "Projet de contrat d'édition," and by a conscientious discussion, paragraph by paragraph, of the accompanying draft for a general code of law to govern the relations between authors and publishers in cases where no special contract existed between them.

The twenty-seven articles of this bill occupied the two sessions of Tuesday as well, but this considerable allotment of time was not disproportionate when the practical importance of the matter under discussion is considered. It may be said to be just now the burning question in relation to literary property, and is being agitated in France, Germany, Italy, Denmark, and Sweden, with a view to securing desirable legislation. M. Pouillet points out, in his interesting report, how especially necessary on behalf of the young writer—the author who approaches a publisher with his first book—is the existence of some law which shall secure his rights, in the far too common case of his having surrendered his literary production for publication without any definite contract with his publisher. But the difficulties in the way of evolving an international code of law governing literary and artistic publication are very great. The practices which have grown up in the different countries with regard to publication are so dissimilar that it would seem almost impossible to formulate a law of general application. It seems manifest, also, that the successful elaboration of such a project would require the sympathetic coöperation of an association or committee of publishers, and this last cannot be said to have been fully secured at the Barcelona Conference.

The discussion in Wednesday morning's session turned on the interesting question of what should be the period of copyright protection, a lengthy report being submitted by the novelist Armand Ocampo, entitled: "Rapport sur un projet d'unification de la durée du droit de propriété attaché aux œuvres de l'esprit." The report concluded with a series of votes, of which the following are the most important: (1.) That the duration of the protection in the case of intellectual production should be uniform in all countries; (2) that this term, if it must be limited, should be a fixed period of one hundred years from the date of the first publication of the work; and (3) that in the near future this provisionary term should be extended to perpetuity. These resolutions gave rise to a lively debate, several members defending the author's right to a perpetual property in his production, and others objecting to the term proposed as retrogressive, on the ground that it might prove a shorter period than the possible term under the present law of Spain, which secures the intellectual property for eighty years beyond the life of the author, which last might easily exceed a period of twenty years after the publication of his book.

The next subject taken up was of as much interest from the bibliographical point of view as from the side of copyright protection. This was M. Jules Lermina's scheme for a general registration of all literary, artistical, theatrical, and musical literature published in the countries within the International Copyright Union. It was proposed to charge the bureau of the Union at Berne, Switzerland, with the establishment of a registry of titles and names of authors, and with the statistical tabulation of intellectual production, and also to authorize the bureau to furnish on demand certificates of original publication which should be considered proof in the law courts. There seemed to be unanimity of mind as to the desirability of such a central bibliographical bureau, but considerable divergence of opinion as to the practical measures for securing it. M. Lermina's interesting report closed with a resolution to the effect that it is desirable that the States of the Copyright Union should impose on all their authors or publishers the obligatory deposit of one copy of every work published, this condition, however, to rest independent of a recognition of the author's property in his book. One of the professors of the University of Barcelona, Don Odón de Buen y del Cos, read with excellent effect a paper in Spanish, pointing out what might be called the natural order of deposit of copies in relation to literary property. As a record of the literature of the author's place of nativity one copy should go to the public library of his province, a second be sent to the capital of the State to register the national literature, and a third deposited at Berne to mark the growth of the literature of the world.

The time set aside for working sessions proved too short to do justice to several interesting subjects upon the programme. Papers relating to topics such as property in portraits, concerning which a report had been prepared by Albert Vaunois, Lucien Layus, and Jean Lobel; property in architectural designs, with a report by Georges Harmond; and recent copyright movements in South America, with a report by Alcide Darras and Ernest Eisenmann, entitled "Du mouvement législatif en matière de droits intellectuels chez les peuples de langue espagnole ou portugaise," could only be laid before the Congress with scarcely any discussion. The matter of registration in England was not brought up at all, and two exceptionally interesting contributions had to be passed over in silence, one by Dr. Max Nordau on property in the titles of literary works ("De la propriété des titres au point de vue des œuvres littéraires"), and the other containing the draft of a proposed new copyright law for Germany, by Dr. Albert Osterrieth, which embodied some original ideas well worthy of consideration.

It would be well if the Association Littéraire et Artistique Internationale could shortly hold a conference in the United States. It would afford an opportunity for correcting existing wrong impressions in the minds of foreign authors as to the actual law and practice under our present copyright statutes. On the other hand, the moral effect of the presence of a representative body of foreign authors seriously discussing copyright from the advanced standpoint of European thought on that subject would certainly be excellent, and would help to create fresh interest in the matter, and thus hasten the time for attempting such a revision of our copyright laws as would bring them more nearly into accord with the legislation of other civilized countries for the protection of intellectual productions. T. S.

## THE TOURIST IN NORWAY.

FAGERLUND, September, 1893.

SOMEBODY has called Norway a "Switzerland by the sea," but, aside from the fundamental characteristics it must necessarily have in common with Switzerland as a mountainous country, nothing more different can be imagined. It is the charm of Norway that it is unlike anything else, that it has a character as distinctively Norwegian as Switzerland's is Swiss. It is utterly impossible to see it vicariously by visiting some other part of Europe. You may get its elements elsewhere, its lakes, and rivers, and waterfalls, its forests and fields, its barren rocks and its snow-covered mountains; it is their combination here that is new and makes Norway a thing apart. The fjords of the western coast are the part of Norway most frequently visited and described. They are easily accessible by steamer from England or Scotland, and in the great majority of cases they and the North Cape form the objective and only point of a Norwegian tour. Not only people who have never been there, but many who have, believe that this is all there is. Americans and Englishmen in plenty, after such a coasting voyage and an occasional short drive inland to enable them to get across to the head of another fjord to resume their trip by water, come away with the idea of having "done" Norway, when they have, in reality, seen but its outermost edge.

The proper way to see the country is to leave the steamer say at Molde or Naes, post down (by *cariole*, *stolkjaerre*, or *vogn*) through the glorious scenery of the Romsdal and the Gudbrandsdal, and take the steamboat on Lake Mjösen, the largest lake in Norway, and the railway into Christiania, and then go back again, first by rail, then by the little steamboat that pushes its way through the floating logs on the long and narrow Lake Spirillen, and by carriage, as before, through the lovely scenery of Valdres to Laerdal on the Sognefjord. The traveller in this way sees Norway in all its phases—its desolate and its fertile parts, its vegetation and its natural resources; and he will come away with some knowledge, at least, of the manners and customs of the people. If, fortunately, he hits upon a season when there is not too much rain, he will inevitably be fascinated by the country, no matter where he may have been before.

To the traveller accustomed to other European scenery Norway will possibly, at the outset, be deficient in one particular charm. There are very few old buildings in any part of it, and very few places that have for any but a Norwegian an historic interest. For those who care about that sort of thing it lacks, in short, on all sides, the picturesqueness of association. So far as I know, there are but two ruins in all Norway—the four arches of the old Hamar Cathedral and the meagre remains of a Cistercian monastery on the Hovedö, near Christiania, both of which date from the twelfth century. There are stone churches at Christiania and Bergen; parts, at least, of the Cathedral at Throndhjem are ancient, and several wooden churches in various parts of the country are quite as old; but these complete the list. This

result is, no doubt, partly owing to the fact that the principal building material has always been wood. While some few of the buildings, like the churches just mentioned, which were exceptionally built at the beginning and have been carefully kept at all times, have lasted down to the present day, the great majority have necessarily perished. Almost all of the Norwegian towns, besides, have been swept by fire again and again. The larger ones are now being gradually more substantially built of bricks and stucco, but the buildings of the farms and in the smaller villages are still almost wholly constructed of squared logs, which are then, in the better houses, covered with clapboards. They are guileless here, as yet, of the lath-and-plaster walls of an American frame house, although the exteriors are often astonishingly familiar.

There are in Norway, particularly in the country, many resemblances to America that strike the traveller. In various parts of rural Norway, but particularly in the south, it is not an uncommon thing to see white farmhouses with red barns and outbuildings, which at a distance look the very counterpart of those in America. The resemblance is, of course, only superficial, and is quickly dispelled by a nearer view, which discloses the multifarious buildings that are characteristic of a Norwegian farmstead in their peculiar grouping about the spacious court. In remote parts of the country the more ancient farm buildings, dingy with age, are often curiously carved, particularly on the door-posts and lintels. This is especially true of the *stabur*, a sort of glorified corncrib, which, for some reason or other, all over Norway, is the one building of the farm which has best preserved an antique appearance.

The farms themselves and farming methods have but little resemblance to ours. There are very few large holdings, and it is curious to note the divisions and subdivisions of land indicated by the lettered posts by the wayside. Much of the tilled land has been fairly wrested from natural conditions by an energy which it seems might have been elsewhere better applied. The bastions along the roadside, ten or twelve feet wide at the top, made of all sorts of stones picked off the land and piled up to get rid of them, are evidence in point. Little strips of field high up on a mountain side, so inaccessible that the scanty crop of hay must be sent down on wires, are frequent enough, and, on the upland meadows which are too steep for a wagon, it is the common custom to get the hay in on sledges that are often drawn by man-power. Farming under such circumstances is necessarily done by primitive methods, and there is little modern machinery even where it might be used. In many places, girls and women may be seen cutting oats and barley with a sickle, not seldom in comparatively large fields.

Some of the farming methods are peculiar. One of the first things to attract the attention in agricultural Norway is the long, upright frames on which the grass is dried; these make a hayfield look like a parade-ground, with the troops drawn up in irreproachable line. The plantations of gnarled birch trees, whose tender boughs with the leaves on are cut off and dried in late summer for winter fodder for the sheep, are a new element in the landscape. Peculiar, too, at least to the extent that prevails in Norway, is the summer *saeter* life. Regularly with the coming of St. John's Day, the 24th of June, the live-stock of the farms, the cows, sheep, goats, and swine, are driven off to the mountain pastures, where they are kept until early September, while the home fields are mown for their hay. Up at the *saeter* the girls who attend the cattle live in a very primitive fashion, often in a house with a single room which is dairy and living-room combined. The butter and cheese produced are not infrequently brought down on their backs, and the few necessaries of life are carried up in the same way. The grass of these mountain pastures, especially on the sunny slope of a valley, is short but astonishingly abundant, and the cattle thrive. Norway without the life of the *saeter* would lose some of its most characteristic charms of sight and sound. Every one who has been through the Norwegian mountains will call to mind the plaintive sounds of the cattle-horn echoing down through the woods from some high pasture, and the minor notes of the cattle-call: *Kuss! kuss! kuss! kom hjem!*

One other resemblance to rural America that impresses itself upon the traveller from these shores is the way in which the farmsteads are scattered about the country, and the comparative absence of villages. Norway, as a whole, is very sparsely inhabited, partly owing to the nature of the country itself, and partly to the drift of the population to America. Long stretches are uninhabited, and the roads wind for miles without interruption through dense forests of tall, yellow-trunked pines, and spruces that have their equal for luxuriance of growth nowhere else in the world. There is a strange absence of animal life in these regions. A squirrel occasionally runs across the road, but there are few birds and no songsters. Norway in this respect is strangely silent. There were skylarks in the meadows in July, but they soon disappeared, and the only birds commonly left, besides the sparrows and the familiar little wagtails, were the ash-gray crows and the magpies, who seemed to have entered upon an alliance and were often seen to fly and feed together.

In spite of the sparseness of population and the comparative poverty of the country, the roads of Norway are scarcely surpassed by those of any other part of Europe. Of late years vast sums have been expended in this direction with superb result. Yearly, new districts are taken in hand, and the old roads are either straightened and levelled, or, in many cases, abandoned outright. It is an admirable country for bicycling; and wheelmen and wheelwomen, also, are met everywhere. Norway in most respects is not behind the rest of the world. There are few railways, to be sure, but such a recent appliance as the telephone is used all over the country to an extent that is absolutely unknown in America, and charges for it and the telegraph are astonishingly cheap. In most respects, although a peasant population is naturally conservative, ideas of all kinds penetrate rapidly through Norway, and this we may largely ascribe to an abundant and wide-awake journalism. In the present political conditions there is, in this way, a peculiarly active exchange of opinion throughout the land, which, under a calm exterior, is really undergoing a period of storm and stress whose intensity is utterly unsuspected unless one purposely looks for it.

At the time of my coming to Norway, all eyes were fixed upon the Storthing in Christiania, and the pending consular question was, for the time being, to the Norsemen, the most vital matter in the world. Outside of the newspapers, the two political parties kept their temper admirably. There were, almost as a matter of course, journalistic recriminations of the old familiar sort, and charges and countercharges which nobody believed. A Conservative did say once in my hearing that he wished that Ullmann, the Radical president of the Storthing, might be providentially and suddenly removed, but I have heard Englishmen speak much more disrespectfully of Gladstone. The popular attitude towards Sweden was less constrained and was often freely expressed. The feeling against Sweden is sometimes very bitter, and the Swedes themselves not seldom by their own actions help on a sentiment that, to say the least, is unfortunate. As far back as 1814, one of the Swedish commissioners then in Norway engaged in negotiations looking towards the election of Charles XIII. as King of Norway wrote to Bernadotte of *l'irritation enfantine de cette nation*, and I heard a Swede use the very term who was probably utterly unaware of any historical precedent. The Norwegians—that is, some Norwegians—in much the same way speak sneeringly of the "great Swedes." The feeling has actually grown among certain classes of the people into a traditional attitude of hatred on the one side and of contempt on the other. The most violent partisan that I saw in Norway was a little man who afterwards turned out to be a commercial traveller. I met him on the boat on Lake Mjösen, where he had a deck passage. He informed me that if he had a son he would show him the way to the Swedish frontier, with a rifle on his shoulder, and tell him to shoot five Swedes. Five, he explained when I questioned him, he thought would be one man's share. Such acrimony, however, is not frequent. After the dissolution of the Storthing the agitation and excitement soon calmed down, and the situation resembled the usual state of midsummer politics elsewhere. The members of the Storthing, with a view, doubtless, to a possible reëlection, addressed their admiring constituents in the schoolhouses throughout the country. Up at the large and fashionable sanitorium in the Gausdal, a little later on, an ex-cabinet minister and the leader of the Right might have been seen playing the game of bowls they call *boccia*, while a Swedish admiral looked approvingly on. At that very time, lower down the valley, at Björnson's estate, Olestad, a new element had come into the life of the nation—little Manfred Ibsen, the grandson of the two poets Björnson and Ibsen, whose voice, if he inherits the characteristics of both grandfathers, will by and by be loud in the land.

The time for a visit to Norway is early in the summer season, say, from the middle of June to the end of August. By the first of September the tourist tide has turned and many of the conveniences of travel disappear. The season is short at the best, for winter comes early and lingers late. What it is like when it fairly sets in, the immense wooden snowploughs, tilted up by the roadside at short distances all over Norway, unmistakably tell.

W. H. C.

## THÉOPHILE GAUTIER.

PARIS, October 12, 1893.

DURING the last years of the Second Empire, I hardly ever went to the opera without seeing Théophile Gautier in the place which he had chosen and which he invariably occupied—a stall in the middle of the first line of stalls that fill the inclined part of the pit, which rises towards the boxes of the first tier. There he was, in the centre of the immense hall, looking like a good old lion, half asleep, with his long, flowing, manelike hair. He never came for anything except the ballet; he looked through

his half-shut eyes on the evolutions of the ballet as if he were in a dream. There was nothing coarse in his admiration of the human forms which were moving before him and which looked to him almost unreal: he was old and careworn; the ballet was to him a sort of ideal recreation. He never ceased to be the poet of *form*, of "l'art pour l'art." Théophile Gautier was in truth a poet, though he was not a poet of the highest order; he materialized ideas and feelings more than he idealized matter. He was an artist in words, and he liked to play with them with a consummate skill. He never expressed any deep emotions, any sublime sentiments; the moral world seems to have been to him a *terra incognita*. He remained to the end what he had been in the days of his youth, full of a certain sort of animal admiration for the splendors of the world, and ignorant of its spiritual meaning.

He was born at Tarbes on the 31st of August, 1811. As he once said of himself: "Though I have spent my whole life in Paris, I have kept a meridional substratum." It was true. Born at the foot of the Pyrenees, of a family which came from Avignon (then subject to the Pope), he was a sort of foreigner in France. He was educated in Paris, in one of the great barracks of the University. When he left it, he tried first to become a painter, and entered the atelier of Rioult, near the Collège Charlemagne; but he soon abandoned art for literature. It was the time when Victor Hugo was proclaiming war against the Classic school. Gautier was one of the noisy and enthusiastic lieutenants of the great Romantic poet; he entered into notoriety at the first representation of "Hernani." Gérard de Nerval recruited young men in the Latin Quarter as *claqueurs* at this first representation; he gave six tickets to Théophile Gautier. For this occasion Gautier ordered a flaming red waistcoat. "One day," writes Maxime Du Camp, "I said to Theo [he was so called by his friends], 'You were famous very young.' 'Yes,' answered Theo, with the air of indifference which gave so much character to his pleasantries—'yes, very young; it was on account of my waistcoat.'"

This first representation of "Hernani" was the battle of Austerlitz for Victor Hugo; it was truly a battle. The young Romantics of the parterre, headed by Gautier and by Gérard de Nerval, actually almost came to blows with the Classics. When *Hernani* exclaims to *Ruy Gomez*, who has given *Doña Sol* as a hostage to the young *Don Carlos*:

"Vieillard stupide! il l'aime,"

somebody in the parterre, instead of "vieillard stupide," heard, or affected to hear, "vieil as de pique"! A great tumult arose, and the representation was nearly interrupted. To the end of his life, Théophile Gautier liked to give all the details of this representation: how with his friends he had to wait for eight hours in the darkened theatre. He continued ever faithful to his youthful admiration; he always looked on Victor Hugo with deep reverence; and when, under the Second Empire, he became a writer on the official paper of the Empire, he had the courage to speak admiringly of the author of the 'Châtiments,' though he had nothing to live upon but his salary.

At the age of nineteen he left the atelier and published his first volume—a small one—under the title of 'Poems.' Alas! it appeared on the 28th of July, 1830, the first day of the Revolution. He entered the "Cénacle," the club of the Romantic school, and, like the other members of this literary club, he wore long flowing hair and a beard (which was then contrary to fashion), a long pointed hat, and overcoat with broad facings and slender waists; this was the Romantic costume. In the novel 'Les Jeune-France,' which he wrote at the age of twenty-two, the new school is described, with its contempt for old things, old forms, old sentiments. "Remember this," says, for instance, a Young-France (we say now *fin de siècle* for a similar state of mind), "and put it in your judgment-box: 'One woman is as good as another, if she be only as pretty.'" These young men spoke of burning the Institute, of hanging for an example the last of the Classic poets. These young enthusiasts of the Cénacle are now well forgotten; only one made a name for himself—it was Gautier. The others spoke much and wrote little, and, as Rivarol says: "It is a terrible advantage to have done nothing, but you must not abuse it."

In one sense Gautier always bore the mark of the Cénacle: he was always—and it was one of the two causes of his failure in life—a Bohemian. Mürger has painted, in his 'Vie de Bohême,' the life of the young men who, filled half with animal spirits, half with the spirit of independence, made their lives a sort of perpetual carnival. Some of the Bohemians of 1830 had the sense to understand early that they were not in harmony with the general laws of a tyrannical society; many became ministers, ambassadors; like Balzac's Rastignac, they forgot their own part. Gautier, owing to his lazy nature, his real want of ambition, never tried to emerge from the ranks of the artistic and literary Bohemia; he never consented to wear the uniform of the world and to bear its tedium. He found at last, to his own detriment, that he had to undertake many duties without having any of the advantages which generally accompany duties. He became a slave to those duties, which, to do him justice, he never tried to shirk; he condemned himself to dull work entirely unworthy of him; he gave accounts of the most stupid vaudevilles and operettas in his theatrical *feuilletons;* he described very indifferent pictures in his Salons, and consoled himself only by recommencing, in his own colored style, the work of the painters, and showing that there was more life in his pen than there was in their brush.

I said that there were two things which became constant stumbling-blocks in his way: one was the remnant of the Bohemian which persisted in him from the days of the Cénacle and of "Hernani," the other was his novel, 'Mademoiselle de Maupin,' which can only be called pornographic. Our time has become very lenient, and the author of 'Nana' has just made a sort of triumphal visit to England: Zola may some day force the door of the French Academy. Gautier never could do so. Mlle. de Maupin, half man, half woman, a mysterious creature that united the vices of the two sexes, always stood between him and the Academy. I found some difficulty in reading this much admired and much abused novel, and I must confess that I found it simply dull. I much prefer Gautier in his travelling notes, such as 'Tras los Montes,' which he wrote in Spain; and, after all, there is much truth in the axiom of the new school of painting, "Paint what you see." Gautier saw Spain; he never saw Mlle. de Maupin, and it is to be hoped that such a creature never existed. Far be it from me to reduce the artist to a thorough realism; but reality must be the foundation of all works of art. The poet says nothing to us if the sentiments he paints are not real. This brings me back to what I said at the beginning: Gautier was a poet, and it is a great pity that his poverty forced him to become a penny-a-liner. He showed his poetical faculties especially in a small collection of poems, called 'Émaux et Camées.' Some of these small poems are really jewels, and so impress themselves on the mind as never to be forgotten. They have a precision, a distinctness, a richness of color, which is really remarkable.

In 1836 Théophile Gautier entered on the staff of *La Presse*. "There," he says, "finished my happy and independent life." He became a slave of the *feuilleton*. He had already published 'Albertus' (1832), 'Les Jeune-France' (1833), the first part of the 'Grotesques' (1834), 'Mademoiselle de Maupin' (1835), and innumerable articles, of which the details may be found in a bibliographic work by Vicomte Spoelberch de Lovenjoul, a Belgian devotee of Théophile Gautier. When the *Journal Officiel* took the place of the *Moniteur Universel*, Gautier accepted the position of theatrical and art critic, and held it for thirty-six years. As an art critic he remained loyal to the ideas of the Romantic school; he treated Delaroche with the greatest severity. In 1833 he began for the *France Littéraire* a series of articles called "Les Grotesques." They were a sort of exhumation of such writers as Scarron, Scudéry, Cyrano de Bergerac, Villon, etc. Théophile Gautier never sold his pen; his eulogies were ever absolutely disinterested. He was not satisfied with the small salary paid him by Alexandre de Girardin, the millionaire editor of *La Presse*, and he sometimes thought of resigning. But he often said to Maxime Du Camp: "I have nothing else to live upon, and others have to live by my aid." Towards 1862 or 1863, Maxime Du Camp met Girardin at a watering-place. One evening they were sitting by each other, and Du Camp reproached Girardin for the harshness he had shown to Gautier in various circumstances.

"He looked at me," says Du Camp, "with his familiar impertinence. 'Gautier,' said he, 'is an imbecile who does not understand journalism. I placed a fortune in his hands; his *feuilleton* ought to have brought him thirty or forty thousand francs a year—he never got a sou out of it. There is not a theatrical manager who would not have paid him a salary on condition that he would be his mouthpiece. Since he has left the *Presse*, he is on the official paper of the Empire; he makes nothing out of it. I repeat, he is an imbecile who never could improve an opportunity.'"

We find in a letter written by Gautier to one of his sisters (December 17, 1858): "My sole regret is not to be richer and to give so little to you. . . . You know into what disgust at men and things I have fallen; I live only for those I love. . . . I wrote a *feuilleton* the day our mother died, and it helped me to pay for her burial." Gautier lived long enough to see the fall of the Empire, the invasion of France, and the Commune; he died at the age of sixty-one years, October 23, 1872.

# Correspondence.

## AMERICAN PRINTING.

To the Editor of The Nation:

Sir: I should be sorry to let any blame rest upon the shoulders of others which really ought to rest on mine. The faults, if they are faults, of orthography, punctuation, and capitalization which you have noticed in my little book on the United States are entirely mine.

All three things are really in a very fluid state. The weakness of my hand, which obliges me to dictate, and a pair of old eyes have perhaps something to answer for.

I am able to compare the work of the American house of the Messrs. Cushing, who printed this book for Messrs. Macmillan, with that of the University Press at Oxford, of which I was one of the Delegates, and which is supposed to have arrived at perfection. I really do not see any inferiority on the side of the Messrs. Cushing.

Yours faithfully,

GOLDWIN SMITH.

TORONTO, October 30, 1893.

## ADMISSION TO SOUTHERN COLLEGES.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of October 19 your correspondent from New Orleans on "Entrance Examinations in Southern Colleges" suggests two or three interesting questions:

(1.) To what extent does the "tendency" "in the direction of the curriculum" in Southern colleges prevail? It would be certainly a valuable contribution to our working knowledge on that line if we could have a more detailed statement of the comparative movements in this direction of a larger number of Southern colleges, provided a more complete examination shows the movement to be as universal as your correspondent believes to be the case. In the University of North Carolina, for example—the oldest Southern college except William and Mary—no such tendency is manifest; but the trend has been rather towards such an elective system as is found in the majority of the best Northern institutions. In the A.B. course, for instance, the elective studies begin in the second year; and during the third and fourth years they increase, respectively, to nearly half, and considerably more than half, the total number of hours of work required.

(2.) Is it because of the lack of good secondary schools, or for what reason, that Virgil is required so rarely for admission to Southern colleges? Only seven of the twenty cases cited by your correspondent show any requirement at all in Virgil; and none but the University of North Carolina appears from the tabulated statement to have reached the usual Northern standard of six books of the Æneid. A similar question might be propounded concerning Homer.

(3.) What stands in the way of the organization of a *Southern Association of Colleges and Preparatory Schools* on a similar plan to that well-known association whose annual meeting has just closed at Yale University? Various beginnings point not only to the usefulness of such an association, but to its possibility in the immediate future. Your New Orleans correspondent mentions a meeting of delegates from South Carolina colleges. An association of North Carolina colleges has existed for two years. Moreover, experience, in this State at least, shows that the better academies and city public schools are eager to know and to reach the standard of admission set by the colleges. No one thing would raise so rapidly the grade of Southern preparatory schools as a steady and united insistence by Southern colleges on a more nearly uniform standard of admission. Nor is there any other one thing that would go so far to prevent so large a proportion of college students leaving college after one or two years. As it is now, men often find themselves deceived as to their relative advancement when they enter, and are unable in the long run to keep up with their classes.

Yours respectfully,

KARL P. HARRINGTON.

CHAPEL HILL, N. C., October 23, 1893.

## COLUMBIAN EXPECTORATION.

TO THE EDITOR OF THE NATION:

SIR: Happening to pass through the French section of one of the great buildings at Chicago, I saw a disconsolate exhibitor raising his hands in attitude of prayer towards a beautiful case in which were displayed a number of exquisitely artistic articles. I had the rudeness to interrupt his devotions: "Vous priez, monsieur?" He received my impertinence with imperturbable good nature, and replied in tragic accents: "Yes, sir, I am praying to the good God to send me back to France, away from these barbarians who are driving me crazy here in *Shicago! On crache partout!*" he added.

It was pathetically true. The great national vice of spitting was never more repulsively exhibited than at our splendid Exposition. Placards mildly requested visitors not to spit from the elevator-landing in the Liberal Arts Building, but to remember the human insects crawling below! In the Kansas Building you were similarly urged not to insult the life-like effigies of coyote and moose; but, in spite of it all, there was often a rain of saliva from above and a fringe of tobacco stains in the sacred enclosure. Everywhere men were spitting. I saw women indulging in the same vulgar vice. But it was not only Americans born: Germans and Turks, Russians and Samoans, Irishmen and Zulus, with equal effrontery, left their traces on corridor and rug, on sidewalk and car.

It was disgusting. But then there is room for optimism: only a little more than a hundred years ago Dr. Samuel Johnson, just returned from Paris, said: "The French are an indelicate people; they will spit upon any place." And when Boswell asked him: "Is not modesty natural?" Johnson replied: "I cannot say, Sir, as we find no people quite in a state of nature; but I think the more they are taught, the more modest they are. The French are a gross, ill-bred, untaught people; *a lady there will spit on the floor and rub it with her foot.*" (Boswell's 'Johnson,' Hill's edition, ii., 462; iii., 400). The French would therefore seem within a century to have learned manners. Is there not hope that Americans also will some time, though not in our generation, grow ashamed of such barbarism and make it a penal offence to spit? I know of one Harvard graduate who has his epitaph already composed in both Latin and English: "Here lies one who never spat upon the sidewalk."

I am, etc., N. H. D.

BOSTON, October 27, 1893.

# Notes.

HENRY HOLT & Co. have nearly ready 'Novel Notes,' by Jerome K. Jerome; 'Days of Lamb and Coleridge,' by Alice E. Lord; and a translation of Karpeles's 'Heine,' by Arthur Dexter.

A sumptuous edition, in English, of Victor Hugo's 'Ruy Blas,' illustrated with etchings after paintings by Adrien Moreau, and limited to 500 copies, is announced by Estes & Lauriat, Boston.

The new *édition de luxe* of the Standard Book of Common Prayer, of which we have already given an account, will soon be off the press of Theo. L. DeVinne & Co.

Macmillan & Co. promise shortly a volume on 'Irish Life and Character,' by W. R. Le Fanu, late Commissioner of Public Works in Ireland, and brother of the late J. Sheridan Le Fanu, the well-known novelist.

Brentano's has in preparation five more volumes of the "Petite Library" of biography of great musicians and poets. Wagner, Weber, Handel, Haydn, and Mendelssohn are to be the subjects of these lives.

Pending the publication of the official Proceedings of the Parliament of Religions at the Columbian Exposition, the market is to be forestalled by "enterprise." We already have "a condensed report" of the speeches and papers under the title, 'The Religions of the World,' put out by the Latin Historical Society of Chicago; and now a "Narrative of the Grandest Achievement and of the Most Important Event in Modern Religious History" is to be given to the world by F. Tennyson Neely, Chicago, under the title, 'The Parliament of Religions.' The writer is Prof. W. R. Houghton.

A Scotch professor of moral philosophy, who puts into the preface of his volume on 'Aspects of Theism' (Macmillan) a confession of great indebtedness to Matthew Arnold, Spencer, Huxley, and Tyndall, and who takes up the various formal "proofs" of the existence of God with the frank warning to start with that they are philosophically "unsatisfactory," invites attention to himself as a novelty, if nothing more. These lectures by Prof. William Knight of the University of St. Andrews are, in fact, remarkable throughout for their candor and freedom from dogmatism in a field too often ravaged by it. The author's note may be gathered from these words in his final chapter: "Theistic evidence comes and goes; it is not, and cannot be, constant in any of its manifestations. There are not only many minds to which it does not appeal in any mood; there are also many subjective states in which even the most convinced theist has no realization of it." Darwin's parallel sentiment will occur to every reader.

The procession of reprints is endless. At the head of the section now in view on our table we may properly name the series already familiar to our readers—through Macmillan, the 'Pirate' in the Messrs. Black's Dryburgh edition of Waverley, and Fielding's 'Amelia' (three volumes) and Anne Brontë's 'Tenant of Wildfell Hall' (two volumes) in Dent's admirable productions. Next in importance is the new Riverside edition of Thoreau's Works, the first uniform and the only complete, to embrace ten volumes (Houghton, Mifflin & Co.). Some unprinted matter will be introduced, we are told, and the letters are not included in the scheme, being "reserved for separate and extended publication." Beginning is made with 'A Week on the Concord and Merrimack Rivers' and with 'Walden,' the foundations of this writer's fame. The former volume has for frontispiece a copy of Rowse's crayon portrait of Thoreau (1854), with its Emersonian suggestiveness. These books are, we need not say, handsomely printed. In this particular, and in the binding, they conform to the much-prized editions of Lowell, Emerson, Hawthorne, Whittier, and Longfellow proceeding from the same press and firm. Each is complete in itself and is properly indexed. As little as in the case of the foregoing need we speak of the contents of Carlyle's 'French Revolution' and Blackmore's 'Lorna Doone' which bear the

imprint of T. Y. Crowell & Co. They are, both, cheaply made and illustrated, and there is a fine assurance in mingling with the portraits in the Carlyle a loose latter-day fancy sketch and dubbing it "A Favorite of Louis XV." Charles Scribner's Sons have revived the Memoirs of Mme. Junot, in four volumes, well printed and sparsely illustrated with portraits. They fit in well with the present renewal of interest in and publications about Napoleon and his era; but, like the two-volume edition of the Messrs. Appleton in 1880, they lack the distinction of an index, which, in the case of memoirs particularly, would be an all-sufficient excuse for a new edition. This reproach cannot be laid at the door of the new impression of the 'Conversations of Lord Byron with the Countess of Blessington,' which forms an octavo volume of liberal typography, interspersed with several good if familiar steel portraits. Finally, we will mention with praise the neat two-volume edition of Frederika Bremer's 'The Home; or, Life in Sweden,' from the Knickerbocker Press of G. P. Putnam's Sons. It will be seen from this summary how much attractiveness for the present generation our publishers (in the temporary default of literary creativeness) discern in works that delighted their fathers and grandfathers.

By way of postscript we may as well mention here the handful of "Literary Gems" from the press just named, in continuation of a series begun in past seasons. The little pocket volumes in question contain Ruskin's 'Ideas of Truth,' De Quincey's essay on 'Conversation,' Matthew Arnold's 'Study of Poetry,' D. G. Rossetti's sonnet sequence, 'The House of Life'; Keats's 'Eve of St. Agnes,' and sonnets; and Goldsmith's 'She Stoops to Conquer.' Each of these booklets, except the last, has a portrait of the author.

Mrs. Van Rensselaer's more than clever 'Handbook of English Cathedrals' (The Century Co.) is a reprint of the articles from the *Century Magazine* which were before reprinted in the handsome volume called 'English Cathedrals,' duly noticed by us. The only changes are apparently changes of detail. Some slips and errors are corrected, some paragraphs recast. Mr. Pennell's captivating drawings are thinned out, and those that remain, though sufficient for illustration, have lost much in clearness and brilliancy by the loss of the cut-paper and careful printing that set them off before. The book naturally suggests comparison, in fact, invites it, with King's larger 'Handbook.' It is much the more interesting, more shapely, and better adapted for general use, though it is also much less full and less valuable to students. It would be worth while to complete it by a second volume including the other dozen of the cathedrals of England, for it is probably the best thing of its kind—but its title is now a little misleading.

Mr. Denton J. Snider has taken upon himself the task of commenting on the "Literary Bibles" of the world, viz., Shakspere's dramas, 'Faust,' the 'Iliad,' the 'Odyssey,' and it remains to be seen what else. The present work, 'Dante's Inferno' (Chicago: Sigma Publishing Co.) is written in a somewhat exuberant style, not unlike that of a popular preacher, and is addressed to the masses, not to scholars. The comment is subjective in the extreme. Minds and tastes differ, and we can scarcely imagine those who know the great poem best finding in it quite what Mr. Snider reads there. It is impossible, however, to treat with disrespect such an earnest attempt to regard the 'Divine Comedy' as poetry, not as mere philology or history.

'The Repudiation of State Debts' is the title of a study in the financial history of twelve of our States by William A. Scott of the University of Wisconsin (T. Y. Crowell & Co.). The history of twelve States is considered, and if the irredeemable currencies of the colonies were reckoned, the number might be swelled. In some cases what was called repudiation amounted to nothing more than refusal to acknowledge fraudulent claims, and in others to rejection of claims without legal validity, although possessing merit in equity. The particulars of all the acts of repudiation are stated with clearness by Mr. Scott, and though his discussion of the causes of and remedies for repudiation is not very profound, his work has a value in its collection of facts concerning some interesting and instructive episodes in State finance.

Admirers of the father of Mrs. Edith Emerson Forbes will be pleased to see the ancestral leaven producing a 'Children's Year-Book: Selections for Every Day in the Year' (Boston: Roberts Bros.). It is intended to affect children of from seven to fifteen years of age, by forming a "habit of reading each day at least a few sentences from the Bible, or some religious book," and so "cultivating the spirit of *reverence* which is usually found in young children, and can only be retained by cherishing; and the lack of it," Mrs. Forbes truly adds, "is the saddest characteristic of the young people of this generation." Like other similar collections, it is recommended for bedside reading perhaps before the volume is given into the child's hand to read for himself. Where it was easy, one observes an obvious fitness in the extracts, *e. g.*, in those for New Year's, February 22, April 19, July 4, December 22 and 25. Altogether, any parent, without regard to systematic use, should be glad to have this repertory of wholesome and elevating prose and verse at hand.

Mlle. Delphine Duval's 'Petite Histoire de la littérature française depuis les origines jusqu'à nos jours' (D. C. Heath & Co.) is practically Petit de Julleville's 'Leçons de littérature française,' interlarded with extracts from or paraphrases of criticisms by Nisard, Brunetière, Lemaître, and Demogeot. Whole paragraphs are taken from Petit de Julleville, to such an extent that, were they excised and the contributions of the other authors named also removed, the book would be reduced to not much more than the table of contents, the signature of the scissors-and-paste-brush professor, and the claim to copyright. It is true that Mlle. Duval acknowledges that she has "gleaned" and has "not hesitated in copying the text itself" when, strange as it may seem, it expressed her ideas better than she could have done it, and that she has "consulted" some authors named, and "borrowed largely from Petit de Julleville." Still, when one compiles, one should not sign the work as one's own. If a college student handed in a theme "written" in a similar manner, what would be his or her lot, even at Mlle. Duval's hands?

Jean Moréas, the Symbolist poet, has brought out a new edition of 'Le Pèlerin passioné' (Paris: Vanier), into which he has introduced a number of new poems not different, in their inspiration and form, from those which he has withdrawn, and which are with others to form a separate volume. Moréas is not, perhaps, as difficult of comprehension as most of the singers of his circle, but he is not invariably clear, and while one cannot fail to perceive that he has genuine poetic feeling, the language in which he too frequently disguises his thought proves a stumbling-block to the uninitiated reader. Happily, among the pieces under the caption "Enone au clair visage," there are several easily apprehended and enjoyed, while the final invocation has a ring in its verse that reminds one somewhat of the splendid sonorousness of Heredia.

Albert Soubies's 'Le Théâtre en France de 1871 à 1892' (Paris: Flammarion) is not only one of those dainty little volumes justly prized by bibliophiles, but one which contains, together with a great mass of authentic information, some sound reflections on the past development and future prospects of the drama in France. It will prove useful in many ways to those who study the history of the drama from a purely literary standpoint; to those who desire to be thoroughly informed of the nature and number of dramatic productions for twenty years past, it is indispensable.

That bone of contention to critics, the Independent Theatre, was to begin its season last week (October 27) with "A Question of Memory," a modern prose play in four acts by "Michael Field." The same author's "William Rufus" had been announced for the first performance, without scenic accessories, but the difficulties in the way of producing it apparently daunted even the energies of Mr. Grein. Another author with whom Mr. Grein proposed to make the London public acquainted is the Belgian Maeterlinck, whose "Princesse Maleine" he last spring announced his intention of giving by marionettes. Whether this plan prove feasible or not, Mr. Grein has an ardent supporter of his admiration for Maeterlinck in the art critic William Sharp, who, in the September number of the *Nineteenth Century*, gave an able study of the new literary movement in Belgium, including an appreciative estimate of that most weird, gruesome, and unique production of Maeterlinck, "Les Aveugles." Other up-to-date plays promised by Mr. Grein are "The Death of Count Godfrey," a one-act piece of Messrs. Walter Besant and W. H. Pollock, Ibsen's "Wild Duck," Zola's "Heirs of M. Rabourdin," translated by Mr. A. Teixeira de Mattos, and a translation by Justin Huntly McCarthy of Strindberg's three-act tragedy, "The Father"—this last to be read at an "at home."

In *Petermann's Mitteilungen* for August there is a detailed description of the changes of the coast of southwestern Schleswig during the past six centuries, with three maps showing the conditions in 1240, 1643, and at the present time. There is also an unusually clear account of the semi-independent States on the southern slope of the Hindu-Kush mountains and their geographical relations to the Pamirs. It is accompanied by an admirable map showing the principal roads and passes. Dr. G. Schweinfurth contributes a review of Maj. R. H. Brown's recently published work, 'The Fayûm and Lake Moeris,' which he regards as offering a nearly final solution of one of the most difficult problems of ancient geography. The principal article of the September number is an account of the methods employed in several European stations for automatically recording the earthquake waves over the earth's surface, together with a list of 193 observations made since 1889. Much too brief notice is taken of the heroic attempt of Miss Taylor of the China Inland Mission to reach Lhasa. She was turned back when only three marches distant by the assurance that her life would be the forfeit if she should enter the sacred city. There is also an abstract of the meagre information which the authorities of

the Congo Free State have permitted to be published about their mysterious expedition to the Equatorial Province, sent out in February, 1891. Little is yet known except that the expedition reached Wadelai on the Nile, and that the leader, Vankerckhoven, had been killed. A supplemental number contains "New Contributions to the Geology and Geography of Japan," by Dr. E. Naumann.

The Yale Psychological Laboratory signalizes the close of its first year by issuing No. 1 of 'Studies' therefrom, edited by Edward W. Scripture, Ph.D., instructor in Experimental Psychology. The two papers possessing a popular interest are "Experiments on the Musical Sensitiveness of School-Children," by J. A. Gilbert, and "Drawing a Straight Line: A Study in Experimental Didactics," by E. W. Scripture and C. S. Lyman. There are several cuts of new apparatus.

A correspondent writes that in the colonial MS. records of a Massachusetts town he has encountered the following sentence: "Paid for Doing ye Meeting hous and for a Suppolidge . . . £4." And he desires to ascertain the nature of the service or thing described by the closing word.

"G. A. R." writes from Washington:

"The suggestion of a correspondent that the medical examination of pension applicants be made by army and navy surgeons, leads to the further suggestion that the administration of the pension laws be placed in the War Department. The pension roll would then become, what everybody professes it should be, a roll of honor; honorable to the country and the pensioner."

—We instinctively associate with the *Atlantic* the "literary" essay of not quite the newest and most fashionable cut. It is not, however, the characteristic critical articles, or even the original verse and fiction, that redeem the November number from dulness, but two short and very businesslike essays on current affairs, which strike freshly the minds, and perhaps touch the imaginations, of all readers save those who are unusually well informed. The first is an expansion and justification of the dictum of the president of the ophthalmological section of the British Medical Association, that a man who goes about with his eyes unspectacled will ultimately be so rare in civilized lands as to cause beholders to blush. Nature, it seems, has not dealt so kindly with us after all. She has not only left us the useless and dangerous legacy of tonsils and vermiform appendices, but she regularly misfits us with eyes, and provides that age and use make the calamity more grievous. The wise child, therefore, whatever he may do in regard to his other troublesome bequests, consults at an early age the expert, who studies the interior structure of each eye by means of the ophthalmoscopic mirror, calculates the degree of refraction he finds there, and sets Nature right before she can do any really serious damage, by prescribing glasses of an appropriate character. The general use of spectacles thus becomes a test of the degree of civilization to which a nation has attained. Not less suggestive to the imagination than this spectacled future of our land is the knowledge of the fact —and the significance of the fact—that the Legislature of North Dakota has passed a bill establishing courts of conciliation, before which all civil suits must come before being brought to trial. The system is well established in Norway, where it is found that nine-tenths of such suits are amicably settled without going further. A scheme more simply patriarchal and kindly can scarcely be imagined, nor one that if generally adopted might have a greater influence over the devious paths of law and justice.

—The *Century* is full of interesting biographical material touching a whole galaxy of famous men of both past and present times. We have an account of George Michel, the French painter of romantic landscapes, never widely known at home or here; the rest of the contemptuous British diary concerning the voyage to St. Helena of the "once great" Napoleon; a light sketch of Bismarck at home among his dogs and canes and pipes; and a good narrative of the adventurous escape of Gen. Breckinridge from Florida to Cuba after the capture of Jefferson Davis. Most interesting, however, are the memories and letters of Booth which his friend Mr. Bispham begins to collect in this number, and the two pieces which Prof. Norton prints from the manuscripts left by Lowell. One consists of fragments from a college lecture of his (presumably introductory to his course at Harvard on Cervantes) on humor, wit, fun, and satire. Distinctions of the kind he makes are always subjective and somewhat too subtle for unquestioned acceptance, but here, as in all of Lowell's work, the charm lies not in the result of his thought, with which any one may disagree, but in the individuality of the suggestions which he conveys to the reader at almost every line. A talker, not a lecturer, he was always at his worst in wholly objective work, and at his best where a linked chain of thought is not indispensable. The other piece is nothing less than Emerson's poem in honor of Lowell's fortieth birthday, a "horoscope, half of memory, half of hope." The lines, with all their rhythmical defects, may rank with the writer's best; they contain a text of criticism that we can easily imagine Arnold's spinning into a whole sermon-essay. "Strength for the hour" was Lowell's horoscope as Emerson cast it in 1859, nor did the thirty years that came after find his strength inadequate for whatever his genius or his duty impelled him to perform.

—In *Harper's* for November Mr. Arthur Symons describes, after a somewhat conventional fashion, the French school of decadents, impressionists, symbolists, or whatever they please to call themselves. The first term seems to him most significant because "this representative literature of to-day is really," in contrast with classic literature, "a new and interesting and beautiful disease." All this we have now heard many times, with an implication that æsthetics and literary criticism must now make themselves anew in order to include a new order of data. A "school" like that which Mr. Symons gives the outlines of with such wonderment is picturesque, of course, but it is not new, not worth the inventing of a new critical vocabulary nor the admiration and imitation of a host of college boys. Mr. Symons goes on to put two of his contemporaries, Mr. Pater and Mr. Henley, inside the mystic ranks of the impressionists. The latter's verse is, however, in no need of a new recommendation; it is rather of an old fashion than a new, and any reader may adequately express his opinions of him without necessarily comparing him with queer painters, or falling into the lingo of decadent criticism. As to the impressionism of Mr. Pater, the reader may judge from his "Apollo in Picardy," which is luckily printed in the same number with Mr. Symons's essay, perhaps as a specimen of symbolism, certainly not as a proof that Mr. Pater never writes "a page that is not perfectly finished," with a minute elaboration that "can be compared only with goldsmiths' work."

—The current number of *Scribner's* contains a great variety of matter, from the picturesqueness of the World's Fair to that of the upper Burmese border, and from Madame Roland to Lincoln and the late Prof. Freeman. The most suggestive article treats of girls' education in France, and deserves careful reading at the hands of the thousand or more young women who have this fall entered our better colleges. In this country the whole trend of ambition is towards an education which fits women to take the world by the horns for themselves. The curriculum is thus usually modelled almost absolutely on the norm of the college for men. The Harvard Annex and Barnard College do not even diverge in the slightest from Harvard and Columbia in the amount and character of their prescribed and elective work and in their methods and means of instruction. At another large women's college the president informed a professor from outside, who had been engaged to deliver a course of lectures there, that he must expect success in his teaching in proportion as he avoided implying to his hearers that they were of a different sex from that of the audience he customarily addressed. Here, in short, we train girls, from their very entrance on college life, to depend on their own wits, to settle great and small matters by investigation and research, and to make themselves mentally independent. In France the whole spirit of women's education is different. She is to be a wife, a mother, a housekeeper, her husband's friend and assistant. She must be intelligent, judicious, and ready at conventional and practical knowledge. The whole training through which she is put, consequently, is essentially unlike that in vogue here. Just what is the real difference between the results obtained in the case of the rank and file of educated women, it would be interesting to hear from some one familiar with the intellectual life of both countries.

—In an address at the annual distribution of prizes at the Mason Science College, Birmingham, October 9, Prof. Jebb of Cambridge declared that classical studies were never more efficient, deeper, more comprehensive, or more in touch with the literary and artistic interests of the day than they are at present in England. He sketched rapidly the reaction against the Romanticism dominant in the early part of the century, saying that Grote's 'History of Greece' marked the commencement of a wider influence of the classics "by investing ancient Greece with a modern interest." The late Prof. Freeman's work in this direction he cordially recognized, and referred to Tennyson as that "powerful poetic mediator between the antique masters and the English speaking world." The numerous works which popularize without vulgarizing the classics, and the greater attractiveness with which the study has been invested, have also aided in enriching and enlarging the study of these standards of literature and models of art, this treasure-house of ideas "which have been fruitful in every field of human thought and life." Referring to the danger of a too great zeal for scientific precision arising from specializing the various departments of classical study, Prof. Jebb says that no study concerned with the creations of the human mind in language, in literature, or in art "can attain its highest aim unless the purely intellectual spirit of science is controlled by the literary and artistic sense, which is partly moral." Quoting

Bacon's opinion that the progress of knowledge had been retarded by a tendency to neglect the training of the mind in favor of professional studies, he summed up the claims of the classics, historical, literary, and linguistic, for forming, moulding, and instructing the mind. "Modern life, so complex, so restless, and so competitive, naturally tends to insist first upon instruction; but as no progress of science can enable men to think faster, a sound economy of educational time depends on the same principles as ever."

—Four volumes have now appeared of D. Marcelino Menéndez y Pelayo's 'Antología de Poetas Líricos Castellanos' (Madrid: Librería de la Viuda de Hernando y Ca., 1890-'93), and we are able to form some estimate of the value of the work. The first criticism that suggests itself is that the collection is far too *weitschweifig*, as the Germans say. As yet, only the last quarter of the fifteenth century has been reached, and one fears that before the poets of our own time have been disposed of, the Anthology will form a library in itself. The fact is, much has been admitted that is not properly lyric poetry at all (*e. g.*, most of the extracts from Gonzalo de Berceo, the 'Libro de Alexandre,' and the Canciller de Ayala in vol. i.; the 'Danza de la Muerte' in vol. ii.; the 'Regimiento de Príncipes' of Gómez Manrique in vol. iii.; two-thirds at least of the ninety pages given to Fray Ambrosio Montesino in vol. iv.). Then the editor's desire to include everything, however poor in itself, illustrative of the beginning or course of new literary movements makes him many times forget the inevitable sufferings of his readers. Besides the extracts, each volume has a *prólogo*, in which Señor Menéndez y Pelayo discusses the history of the poetry he is exemplifying. Here diffuseness has gone so far as to cause history and literature to part company at the end of the first volume. The prólogo of vol. iv. barely concludes the discussion of the period illustrated in vol. i. The reader wonders how the two parts of the work are to be brought again into conjunction. Perhaps by a volume by and by containing nothing but a prólogo. In spite of these defects, however, the Anthology is a useful book. The extracts give us in the main the best of a great mass of bad poetry, and the introductions outline competently, if not compactly, the history of that poetry. We are really very badly off for sound books upon Spanish literature. Ticknor is practically obsolete, at least for the mediæval period; and Amador de los Rios is inaccurate and untrustworthy. On the whole, no one in Spain knows better the results of the latest investigations on the subject, or is better able to give them to us in consecutive form, than Señor Menéndez y Pelayo. He is perhaps too fluent for our taste; but that is essentially a Spanish fault.

—We are impressed by this fact when we take up vol. iii. of the monumental edition of Lope de Vega, edited for the Spanish Academy by the same indefatigable scholar (Madrid: Sucesores de Rivadeneyra, 1893). Vol i. appeared in 1890, and contained a new biography of the poet by D. Cayetano Alberto de la Barrera. The *obras* proper began with vol. ii. (1892). The volumes are heavy but beautifully printed quartos, containing each over six hundred pages; and we are informed that forty-four or forty-five such will be required before all the pieces of the *monstruo de la naturaleza* are in type. This is appalling, yet will have its compensations for the student of the golden age of Spanish letters. Hitherto we have practically had to study Lope in the selections from his dramatic and non-dramatic works made respectively by Hartzenbusch and Rosell for Rivadeneyra's "Biblioteca de Autores Españoles." The materials there afforded (amounting in all to five large volumes) are undoubtedly extensive; but as one looks over the pieces already printed in the new edition, he is struck by the number of those not to be found in the volumes of the "Biblioteca," or, indeed, in many cases, anywhere else. The inedited works are thus far twenty-four, although it should be added that many of these are almost certainly not Lope's. It may be that this proportion of novelties will not appear in subsequent volumes, for the editor has given us as yet only the *autos* and *coloquios*, which, though peculiarly dear to their author's heart, had something essentially ephemeral about them and were less likely than the *comedias* proper to obtain the permanency of type. In no part of Lope's work, however, does what we may call the journalistic character of his genius better appear. In them we see him taking advantage of all kinds of occasions of religious festivity for the production of dramatic editorials in which the chief questions then interesting the public were poetically discussed. There was seldom much originality in his conclusions, but the free play of his fancy and occasionally a flash of pure imagination gave to what he said a certain appearance of splendid newness. This seems to us the only theory upon which we can account for the amazing rapidity with which his pieces followed each other. In conclusion, we may remark that the new edition seems carefully edited, and that a large amount of useful information is given in the *observaciones preliminares* which accompany each volume.

—'The Japanese Abroad' (*Sekai ni Okéru Nihon Jin*) is the title of a very interesting book published in Tokio, at the office of the *Keizai Zasshi* (the *Economist*). The author, Watanabé, gives a lively account of his countrymen who in earlier centuries travelled or won fame abroad. Making diligent use of Marco Polo and Hildreth's 'Japan as It Was and Is,' and supplementing his reading from Oriental sources, he has compiled a volume of striking interest. A Western student, in plodding through the history of a far Oriental nation, hails as an oasis any point of contact with the great stream of the world's life. So, too, the Japanese now desire to know where, when, and how any of their fellow-islanders have played their part in the world abroad. Watanabé tells of the voyages made around the Cape of Good Hope in the sixteenth century by the native Christian noblemen to Rome and Spain, and of their crossing the Pacific to Mexico. He gives biographical outlines of the most famous converts to Roman Christianity who lived in Europe. The voyages and adventures of his countrymen in the Philippines, China, Corea, Annam, and Siam are also related. The fortunes of the famous Yamada and his band, who for a time powerfully influenced Siamese history, are finely told. Reinforcing the text are several wood-cut illustrations of trade with the Europeans, receptions in Rome, maps, routes of voyages, and portraits. Probably the most suggestive pictures are those illustrating Japanese marine architecture in the fifteenth and sixteenth centuries. One, a high-sterned, castellated, and two-masted *funé*, vastly superior to a "junk," reminds one strongly of the caravels of Columbus. Another print, of a first-class war-ship with three masts, two decks, a broadside battery of sixteen cannon with two "bow-chasers," crow's-nests in the tops for match-lock sharp-shooters, with ample deck-room for fighting-men, and a notable spread of canvas, shows vividly the sea-power of the Japanese before Iyéyasu sealed up the country, leaving only an air-hole at Déshima. Thoroughly at home on the sea, and roving freely from India to Siberia, the Japanese were a terrible "neighbor-disturbing people," as the Chinese declared, as well as great traders. A study of their power on the sea—making all allowance for European aid and suggestion—explains largely the wonderful celerity and brilliancy of that Japanese conquest of Corea in 1592-93 which so thoroughly scared great China, and which China fears may be repeated. The book forms a worthy companion to Mr. Inagaki's work on 'Japan and The Pacific,' reviewed in these columns some months ago; the author of which, by the way, is now in mid-Asia studying "the Eastern question" from an inland point of view.

## THE NEW LEWIS AND CLARK.—II.

*History of the Expedition under the Command of Lewis and Clark*, etc., etc. Edited by Elliott Coues, late Captain, etc. In four volumes. New York: Francis P. Harper.

Our first transcontinental exploration was set on foot the very year that the great unknown it revealed had become United States territory. The interest thus roused was doubled by a widespread fear that the explorers, unheard of for more than a year, would never be heard of again. It was the real discovery of the Great West, and indeed of America to an extent beyond the accomplishment of any similar endeavor before or since. The enterprise was excellently executed and it was as excellently described. The captains had been ordered to keep journals, nor did they let any day pass without many a line, feeling that half a word fixed on the spot is worth a cartload of recollections. More than one of their subordinates did likewise. As soon as a note-book had been filled, it was soldered in a water-tight case. Thus twenty volumes or more of manuscript came back from the utmost corner of the West with not a line obscured. The first of them committed to the art preservative was the journal of Sergt. Patrick Gass, published at Pittsburgh in 1807, within a few months after Gass had reached his home in that neighborhood. This work was often reprinted here or abroad. It was used with other documents in getting up divers pretended official narratives which had a great run, but are justly stigmatized by Prof. Coues as apocryphas.

Regarding the note-books of the captains on which the text of Biddle was based, Dr. Coues appears to have fallen into a strange heresy. His creed is that they were not written at all during the progress of the exploration. He would trace these gospels back to a protevangelion that has perished. Such a doctrine covers with dim eclipse the halo which has so long gilded those venerable volumes, and might well call up the ghost of Jefferson. It is sufficiently refuted by Jefferson's own words, namely (Works vi., p. 595): "Capt. Lewis had journalized all occurrences day by day as he travelled, in morocco-bound pocket volumes, small octavos, opening at the end [the very volumes as to which Dr. Coues is sceptical]. Every one had been put into a separate tin case to prevent injury from wet." Jefferson adds that they were brought to him, etc. The narrative of

the captains detailing the daily progress of the expedition was to be prepared for the press by Capt. Lewis. The year after his death, which was in 1809, their field-notes were taken in hand by Nicholas Biddle, who early in 1811 had them ready for the publisher. But war was coming on, and business collapsed, so that it was 1814 before Mr. Biddle's volumes saw the light. They were reproduced in Dublin (1817) and London (1814), but, until the edition of Dr. Coues, have never been again given to the American public. The *editio princeps*, nominally 2,000 copies, had only about 1,400 that were not imperfect, and has been so long out of print that a copy cannot often be bought for fifty dollars. Its place has been taken by an abridgment in Harpers' Family Library which had long ago appeared in a score of editions.

Students in Western history—and more than others those dwelling beyond the Mississippi and on the Pacific Slope—have long been impatient for a reprint of the *editio princeps*, with an index, with maps connecting the expedition with the settlements that now border its route, with supplements to the text from the official manuscripts, as well as with notes elucidating matters historical, geographical, ethnological, zoölogical, and botanical. What they desiderated they now have, thanks to Dr. Coues, who, as the last editor of Lewis and Clark, is clearly the right man in the right place. Serving with the international commissions which marked our Northern boundary westward from the lakes to the ocean in 1873-'76, long a naturalist on far West United States surveys in subsequent years, with all his perplexities, historic and scientific, cleared up by fellow-specialists from governmental authorities in and out of Washington—above all with the eighteen codices, the autographs of the great captains, all the while in his hands—how could he have been better equipped at all points for his task? But his superlative fitness lies in this that his work has been throughout a labor of love. Whatever Jefferson foresaw, whatever his captains saw, he delights to honor them for, and views them as beyond others preparing for the course of empire to take its way westward. More than a thousand notes bespeak his tirelessness in making full proof of his opportunities. The long chapter on botany and zoölogy evinces how indispensable his labors were to reveal the manifold discoveries made in those departments, and do justice to the merits of the discoverers.

But critics, whatever the beams in their own eyes, will never cease to see spots on the sun. The volumes are well printed, and yet we meet with errors we should be glad to think typographical, though we cannot always. Wayne's victory of 1794 is set down as two years earlier (page c.). Had it been, how many an Ohio scalping would have been escaped! Land ceded *by* Indians is said to have been ceded to them (page xxxix.). We read: "The first newspaper in St. Louis, the *Missouri Gazette*, appeared July 12th, 1808," (page xl.); but an item is quoted from that paper early in 1807 (page 256). Again, this paper, on September 13, 1810, is said to have been conducted through twelve volumes (page xl.). The notes of Dr. Coues—above all, those derived from the manuscripts of the captains—are invaluable. His habit, however, of interlarding them with his own private opinions on irrelevant matters occasionally emphasizes the lack of information that would throw light on his main theme. Thus, Capt. Lewis's sources of knowledge when he entered his bateau are inadequately treated. We are told that he could not procure D'Anville's map, nor yet Vancouver's (page xxiv.), but what he did have we are not told. The correspondence of Lewis during his year of preparation must yield more light on his literary outfit than is vouchsafed us by his latest editor. The Arrowsmith which is referred to (page 357) we think was not, as Dr. Coues calls it, an "atlas," but the London "map of the northern regions of America." A trifle of further research would have made some things plain which puzzle Dr. Coues. The word *brace*, in the phrases "1 Brace Blue cloth" and "3 Brace of cloth," he says apparently does not mean a pair, but declares himself ignorant of its meaning, and asks what it can mean (page 241). Had he turned to Dr. Murray's thesaurus, he would have found at once what he desired—namely, "*Brace*, 2. A measure of length, orig. representing the length of the extended arms. The French *brasse* was about 64 inches," etc. We have to thank Dr. Coues for a winning likeness of Capt. Clark. Most readers will lament the lack of a letter-press description of his personal appearance. The following was sent to the writer in 1889 by Henry Shaw, founder of the St. Louis garden:

"Gen. Wm. Clark, in 1819, was a tall, military-looking man, as erect as the recently deceased Gen. Harney, of dignified and pleasing address, of light complexion, gray eyes, scant hair, and I think he wore a queue bound round with an eelskin, as was then the fashion with ancient men of St. Louis; on the whole, the same style of man as Washington—perhaps a trifle taller."

Mr. Biddle's narrative had been drawn up on a principle analogous to the British rule of military etiquette which forbids mentioning any private soldier by name. But in this regard Dr. Coues from the codices has largely reformed the text, and given a tenfold individuality to most members of the whole band. What is said, however, regarding the subsequent fortunes of the men who, in Dr. Coues's words, "accomplished an immortal purpose," forms a rather beggarly account. Aside from the memoirs of the captains and one sergeant, the notices of the interpreter and wife as alive till after 1832, and Shannon till 1836, of Gibson dying at St. Louis, of the slave York freed and telling stories in saloons there, of Drewyer again on the upper Missouri, and of Colter at La Charrette in 1811, are about all that Dr. Coues has gleaned from all sources. Admitting that Shannon had lost a leg, he adds, "but under circumstances unknown to me." Perhaps he had forgotten Clark's remark in 1805, "George Shannon cut his foot with the ads [*sic*]." Most doctors would say that that cut was "poison given to work a great time after." While stating that the party in addition to land were granted double pay (p. cxi.), Dr. Coues neglects to tell us what double pay means. This extra pay amounted to only $11,000, which sum, with the outfit estimated by Lewis at $2,500, and possibly something more from the secret service fund, was the entire cost of the expedition. The value of the land we shall show further on. When has so much been bought for so little?

Dr. Coues takes pains to tell us that Gibson was from Pennsylvania and that the two Fields were from Kentucky. We can add that McNeal was from the same State with Gibson, that Collins was from Maryland, Ordway from New Hampshire, Howard from Massachusetts, Werner and Whitehouse from Virginia. Frazer probably hailed from Vermont, Drewyer and Cruzatte called Missouri their residence. These facts add much to the evidence from names which prove English, Scotch, Irish, French, and African descent, to show what a gathering from the four winds combined to discover the future home of heterogeneous nationalities! Another interesting incident which escaped the research of Dr. Coues is that nine of the adventurers, whose names are all known, within a week after the return to St. Louis, sold their prospective land claims for $2,200, and that seven of these claims were bought by their fellow-soldiers. Frazer, while still in Vermont, had bought a hat, but had absconded without making any payment. While he was in the extreme West his hatter failed and ran away to St. Louis, and was recognized by Frazer among the crowd there who welcomed the returning adventurers. Frazer was so glad to see an old familiar face, even in the guise of a dun, that he paid the debt with interest—nor was this difficult, as he at once received $250 for his prospective land claim. Dr. Coues extols Drewyer, the Nimrod from whom more than from any other man the party received their daily food. Had he known that this crack shot was killed by Blackfoot Indians on the Upper Missouri in 1809, he would have shed more than one tear for his untimely fate. These annals are short and simple, but they forbid us to agree with our editor that, "excepting four, we know next to nothing more than the names" of the thirty-two adventurers. Another most important fact concerning the men, unnoticed by Dr. Coues, is that the captains had "encouraged the men to keep journals, and that seven of them did, to whom the officers gave every assistance in their power," as well as that some of these journals were sent down from the Mandans to St. Louis in the spring of 1805. This significant fact, that no less than seven men kept journals, to which we find no allusion in the four octavos of Dr. Coues, and others equally significant, can be learned only from the despatch to the President from Capt. Lewis when half-way up the Missouri—a document which even the London editor and the Dutch translator saw to be full of meaning, but which is unaccountably unprinted by Dr. Coues, though, as he shows, it had made the fortune of several apocryphas. It would illumine a volume more than a chapter of Biddle sometimes does.

Resorting to the Historical Society of Wisconsin would have been fruitful in side-lights to Dr. Coues. He would have been astonished to see in such a provincial establishment most of the works which figure in his Bibliography, and some which he confesses never to have seen. Besides the Dunbar apocrypha of 1806, several editions of Gass, one of them the best, the *princeps* of Philadelphia and that of Dublin, both with plates and maps in good condition, and the Dutch version of Van Kampen, he would there have handled the 1811 Philadelphia Gass in a perfect copy, though the only one known to him has lost half its title-page and the whole of the last leaf, so that he does not give its title with absolute correctness. The Wisconsin copy of Fisher's apocrypha would have shown him that he had no reason for doubt whether it had portraits (p. cxvi.), and that in stating Master Neddy to be there dropped, he was mistaken, unless, indeed, the Wisconsin edition is one unknown to him altogether. But what he would have espied there with most glad surprise is the largest collection, it is believed, in existence of manuscripts relating to the Clark family. The Mandan letter already referred to, and one from his father fourteen years earlier, are specimens of scores in the intervening period.

It is almost ungracious to suggest further research to such diligence as Dr. Coues has

manifested; nevertheless, he might have secured the letter of Clark on the eve of his second year's voyage up the Missouri to his brother in Louisville, which was the last heard of him till his return from the Pacific. This midway writing seems at least as worthy of facsimile as the specimen which Dr. Coues has so honored. Again, he might by possibility have got on the track of Sergeant Ordway's journal, which was laid up in the same repository with the codices, and which was declared by Biddle far superior to that of Gass (p. lxxxvi.), to which Dr. Coues everywhere is glad to confess his obligations. Moreover, as we have already stated on the authority of Capt. Lewis, a journal kept by a sergeant, perhaps by Pryor, was sent down from Ft. Mandan to St. Louis, and may lurk there still. More than this, others besides the captains and two sergeants kept journals. The preface to the work of Gass says: "That the information gained might be preserved more effectually, it was enjoined upon the several persons belonging to the corps who were considered capable *to keep journals*, and every necessary information and assistance given them for that purpose," etc. This is in keeping with the statement of Capt. Lewis a year after the voyage began, that seven of the men did keep journals. There is evidence that Robert Frazer was one of these journalists. The writer has now before him the following prospectus, which, soon after the return of the expedition, was sent from St. Louis to Rutland, Vt., where Frazer had in former years been a fencing-master. This paper has never before been published:

"Proposals for publishing by subscription Robert Frazer's Journal, from St. Louis in Louisiana to the Pacific Ocean, containing an accurate description of the Missouri and its several branches; of the mountains separating the eastern from the western waters; of the Columbia River and the bay it forms on the Pacific Ocean; of the face of the country in general; of the several tribes of Indians on the Missouri and Columbia Rivers; of the vegetable and animal productions discovered in those extensive regions; the latitudes and longitudes of some of the most remarkable places, together with a variety of curious and interesting occurrences during a voyage of two years four months and nine days, conducted by Captains Lewis and Clarke. Published by permission of Captain Meriwether Lewis. This work will be contained in about 400 pages octavo, and will be put to the press so soon as there shall be a sufficient subscription to defray the expenses. Price to subscribers $3."

The unexpected happens. Such a happening would be the find of the journal by Frazer. The discovery of the codices was, scarcely a year ago, a great surprise to Dr. Coues himself (p. 985). That discovery might well have constrained him to reform altogether the plan of his work. Those volumes (a score wanting two filled with the *ipsissima verba* of the exploring captains) should have been printed just as their authors wrote them, barring, perhaps, errors in spelling, etc. Such has been the feeling of the present writer ever since he began nine years ago to contrast their crisp and idiomatic utterances with Biddle, coldly correct and classically dull. Almost every note of Dr. Coues based on a codex has deepened this feeling—and he sometimes seems to betray it himself (p. 484, etc.). Sparks gave us the writings of Washington not as Washington had penned them, but as Sparks thought they should have been penned, and not without additions and subtractions. The public, however, soon saw that they were shown not the genuine Washington, but a Sparks make-believe. They refused to see him stretched on a couch of Procrustes. They demanded the identical words of Washington, and the demand has now brought a supply, while the work which Sparks flattered himself would be monumental for himself as well as his hero, is vanishing away. Again, when Congress employed M. Pierre Margry to print for them the narratives of the Frenchmen who, next to Lewis and Clark, were the greatest discoverers in our American world, they required him to fill his volumes with the very words of the original journalists —nothing omitted, nothing inserted. In England the voyages of Capt. Cook, the greatest of English discoverers, were long read, not as chronicled by his own hand, but largely as dressed up in words of learned length and thundering sound by Hawkesworth, Solander, and Banks. Yet such a second-hand story could not be tolerated for ever, and so the original journals of the navigator have this year been published in London. Bowdler, Collier, and others brought out Shakspere improved according to their own notions of taste, sound and sense. These bubbles, however, soon burst, and the trend of all modern Shaksperians to the unadulterated original, "minishing not a word," is unmistakable.

In perusing Dr. Coues's samples, appetite grows by what it feeds on. He says that "Biddle, in his text, nowhere followed the actual words of the explorers themselves. Had he done otherwise, the world would have been treated to an unexampled curiosity in literature." It ought to have been so treated long ago, and we trust it will be at no distant day. The limited edition which Dr. Coues has now issued will be soon exhausted. Let him meantime make ready the codices for the press with his old explanations, as well as such new ones as he will see to be called for, and he will do for the twentieth century much more than Biddle did for the nineteenth, producing a work not only more readable and instructive, but one which cannot be superseded. The world has long laughed at a Bowdlerized Shakspere; it will not always be content with a Biddleized Lewis and Clark.

## PIATT AND BOYNTON'S THOMAS.—I.

*Gen. George H. Thomas:* A Critical Biography. By Donn Piatt, with concluding chapters by Henry V. Boynton. Cincinnati: Robert Clarke & Co. 8vo, pp. viii., 658.

THE title of this book is a misnomer. The name of Gen. Thomas is only a stalking-horse for coarse abuse of Gens. Grant, Sherman, Sheridan, and other prominent officers in our civil war. It is not confined to events or campaigns in which Thomas had a part. As much space is given to campaigns in Virginia or on the Mississippi as to those in Kentucky and Tennessee. The object seems to be simply to make occasion to pronounce everything done by Grant and Sherman, especially, to be stupid and wicked, and themselves destitute of character as soldiers or as men. The reverse of the medal is to declare Thomas perfect in all he did, all he did not do, and all he might have done had he been in the place of the others. The research of the book proper seems to be confined to Van Horne's 'Life of Thomas,' Reed's 'Siege of Vicksburg,' and Boynton's 'Historical Raid,' with occasional references to Badeau, or, as the author facetiously puts it, to "Grant through Badeau," for purposes of objurgation.

Of Grant, Piatt says that "had he possessed more sense, he would have been less successful. Of all the generals who achieved notoriety during the civil war, he is the one whose career as a soldier will bear the least scrutiny." He is "the tanner who developed through retreats the high capacity of a commander." He is a "heartless butcher of his own men," a "hero of disaster," "the most incapable of our commanders," kept at the head of an army by the influence of an "Illinois politician," the "hero of fevers, smallpox, and measles." He is a "brutal butcher who would fight without knowing how to fight." He has "more boiler than machinery." His will is a "tenacity of fool purpose." He made a "miserable fiasco at Belmont," and a "murderous assault" at Champion Hill. Other men make their lies hang together, but he "leaves his feeble inventions where they are forced to fight each other." The author finally, in summarizing the campaign of Vicksburg, finds himself "ashamed" that the country should accept it as a triumph, "and out of its incompetent leader construct a grotesque greatness that would be laughable were it not such a melancholy disgrace." Does it need any argument that such "grotesque" extravagance answers itself and insures contempt for the book in which it is found?

On another point personal to Grant it may be well to say a word. His intemperance before the war had been the ground of apprehension among his friends, and his resolute and progressively successful fight with that temptation had been a mark of strong character and a noble purpose. If in any conjuncture of public importance a lapse from his good habit had affected his public conduct, influenced events, or brought injury to others, there would be justification for plain but moderate reference to it. To use a charge of intemperance wantonly, without pretence of evidence as to the particular time referred to, and only as a cumulating sting to other libels, is a crime. This is done in the book before us, not once or twice, but again and again. What is offered as evidence of such lapses during the spring and early summer of 1863 is a private letter of Rawlins to his general, dated after midnight of June 6, which has been for some years in print. The letter is one of the proofs of a friendship of the most chivalric and sacred character. It is absolute and indisputable evidence for what it states, which is that on that evening Rawlins had seen evidence that Grant had participated in social drinking, so that, while he attended to business after it, the chief-of-staff noticed the effects. Although in the small hours of the night, the devoted friend penned a remonstrance before he slept. But that remonstrance, which is used to support reiterated charges of continuous and disqualifying intemperance, itself gives the lie to them by the explicit statement of a pledge given "early last March," and that the general had "kept that pledge during your [his] recent campaign." The faithful sentinel (to use his own figure) had given the alarm at the first symptom of weakness he had himself detected, and his association with his chief was that of continuous daily and hourly intimacy. This is used as "official evidence of General Grant's personal habits and condition in these dreadful days." It is, on the contrary, conclusive evidence of the unscrupulousness of the vilifier. The subject should not be dropped without adding that to receive such a letter and to grip the writer of it to his heart with hooks of steel till Rawlins was laid in his grave after the war was over, was to show a trait of character which in the eyes of a magnanimous critic would cover a multitude of sins.

The attacks upon Gen. Sherman are more commonly in the form of associating him with

Grant as a common target for epithets of the kind first quoted. The special chapters which Boynton devotes to him will be noticed later. Sheridan is saluted with a squib in the preface, in which it is said of the Winchester victory, "The commander was asleep in bed twenty miles away. He would have been called to account for thus absenting himself from the front at a time of great peril to his forces from the immediate presence of the enemy, and had to answer to a court of inquiry or a court-martial, but for a crazy poet and a patriotic actor." The recklessness as to facts in this statement will deceive nobody. Its fatuousness is only too evident when we reflect that it comes from one who can see nothing but perfect wisdom and generalship in Thomas's absence of twenty miles from the battle of Franklin, to which he did not ride either on a charger or a locomotive, though the railway was open to the field. Other officers are complimented by abuse, but the examples are enough for the purpose for which they are given, which is to show that extravagance answers itself and becomes its own *reductio ad absurdum*.

To pass from persons to things, it may be well to cull a brilliant example or two of historical method. The first is a small matter in itself, but is one in regard to which universal notoriety makes everybody a judge. The author romances on the capture of Fort Donelson, reaching the sapient conclusion that "instead of a blessing, it proved a grave calamity to our cause in the field." The reason given is that "from that out, all thought of Thomas's wise plan to hit the Confederacy where the Confederacy was vulnerable disappeared." Of this reason, more presently; but among a number of incidents of the battle of which Piatt has a monopoly in knowledge, is one relating to the authorship of the phrase "unconditional surrender." He tells us that a flag of truce was sent to Gen. C. F. Smith asking for terms of capitulation. "'Unconditional surrender,' was the prompt response, 'and unless immediately complied with, I will move upon your works.'" That Grant had nothing to do either with the fight or with the surrender, or even with the famous form of words, Piatt informs us, "is the true story of Fort Donelson." Whatever blind prejudice might assert with regard to Grant's own part in the battle, an intelligent person would have supposed that nothing short of insanity would question his authorship in "unconditional surrender." Not only do the war records contain the letter of Gen. Buckner asking for terms, which was addressed to Gen. Grant by name, but Grant's autograph answer which contained the phrase was, after the war, photographed by consent of Buckner, and the facsimile was everywhere spread abroad. The attribution to Smith is a pure invention, so bald as to raise a doubt whether the whole book was not consciously intended for a hoax to test the gullibility of a certain class of readers.

Let us turn for a moment to the reason for bewailing Grant's great victory as a public calamity. It is, ostensibly, that a plan of Gen. Thomas for an invasion of East Tennessee by way of Cumberland Gap was thenceforward ignored and disappeared. In other parts of the book the same assertion reappears, with the gloss upon it that the plan involved not merely the relief of the loyal men of the Holston valley, but the capture of Chattanooga, which itself would end the war. This is scarcely less a burlesque than the "unconditional surrender." The idea of a campaign for the relief of East Tennessee was discussed in Washington from the very beginning of the war. Andrew Johnson and Horace Maynard were instant in season and out of season in pressing it, and Lincoln heartily sympathized with their wish. McClellan included it in his written plan submitted to the President on August 2, more than three weeks before Thomas was made a brigadier and ordered to Kentucky. McClellan had also the intelligence to add to the political object found in the relief of the loyal Tennesseans the military one of "seizing the railroad leading from Memphis to the east." Later in the season, and, as he himself says, soon after he went to Kentucky, Thomas offered to march through the mountains upon Knoxville if twenty thousand men were given him for the purpose, properly equipped. Buell, who was his commander, showed in his correspondence with Washington that it was impracticable to supply an army in East Tennessee by wagon transportation over the Cumberland Mountains. He urged (and the event showed he was right) that the true line was to Chattanooga by the railway through Nashville, and that this was a case in which the longest way round was the shortest way home. The capture of Donelson secured Nashville as a base for this movement as well as for a secondary one upon Pittsburgh Landing. Unable to see this, Piatt says the surrender of 15,000 Confederates at Donelson was a calamity to the national Government because it made our armies in Tennessee move upon Chattanooga with a railroad to supply them, instead of marching through the Cumberland Mountains by roads over which mules could hardly haul their own provender except in the few weeks of midsummer.

Methods of composition are hardly less noticeable than methods in criticism. Van Horne, in his 'Life of Thomas,' mentions as a rumor that Mr. Lincoln, when pressed to give early promotion to Gen. Thomas, had said, "Let the Virginian wait." If the rumor had any foundation, though it probably had none, it was of course based on the doubts which existed for a time in regard to Thomas's purpose —whether he would resign, as Lee and Johnston had done. Such doubts were soon removed, and to say that Lincoln continued unfriendly to Thomas's advancement is not only baseless, but contrary to Lincoln's whole attitude towards men of the border States. He not only relied upon that other Virginian, Winfield Scott, but he made haste to give important commands to Anderson, Nelson, Crittenden, and Wood, Kentuckians, as well as to men of Missouri and Tennessee. Farragut is in the same list, whether he hailed from Louisiana or Virginia. But here was too good an opportunity "to point a moral and adorn a tale," and the rumor in Van Horne becomes a fact in Piatt, and is reiterated on every occasion, until it grows into "the President's one invariable answer was, 'Let the Virginian wait!'"

Van Horne had also said in his eulogy of Thomas that his transfer from the rearguard to the vanguard during active campaigning usually indicated a like transfer of emergencies. Piatt transfers the statement to his pages, without credit, but adds: "It made no difference what rank he held, he was ever in command so far as the commanding officer was concerned." The transfer and the addition are characteristic of the whole book, and characteristically far from the fact.

In the narrative of the campaign of Buell against Bragg, page after page is copied from Van Horne without credit, but with an occasional slip which makes nonsense of the criticism. Bragg crossed the Tennessee at Chattanooga and entered the little valley of the Sequatche. So much Buell knew; the question was whether Bragg would come out of the valley by crossing the Cumberland plateau lower down or farther up. The positions of both Thomas's troops and all the rest of Buell's command were on the west of the mountains, Thomas being at McMinnville; and no part of them either obstructed or commanded the Sequatche valley on the other side of the range. Van Horne's criticism is that by concentrating at Murfreesboro and withdrawing Thomas westward from his former post, Buell opened the way for Bragg to march *out* of the Sequatche valley and take the shortest route to Kentucky. No matter what may be the value of the criticism, it wholly loses its point in Piatt. The latter says: "If Bragg's purpose was to invade Kentucky, he would cross over *to* the Sequatche valley. If, *on the other hand*, he meant Nashville, it would be necessary to check the move at McMinnville. The two routes were too far apart to hold both," etc. He concludes that Thomas had to obey orders, and in so doing opened the way for Bragg *through* the Sequatche valley, "the shorter and better route to Kentucky." Buell's doubt was whether north Alabama or middle Tennessee was aimed at. The fact that Piatt has wholly missed the relation of the topography to the plans of either side does not prevent him from shouting pæans to Gen. Thomas, whose military judgment he finds unrivalled in the juncture.

It would be hard to imagine a more extreme type of what professed history and biography ought not to be. Boynton's appendix calls for some separate notice.

---

*Dictionary of Quotations* from Ancient and Modern, English and Foreign Sources, etc., etc. Selected and compiled by the Rev. James Wood. Frederick Warne & Co. 1893.

*A Dictionary of Foreign Phrases and Classical Quotations.* Edited by R. D. Blackman. Eleventh edition. G. P. Putnam's Sons. 1893.

If we rightly interpret an abbreviation not put down in Mr. Wood's list, and discover him in the "*Ed.*" of the little sentiment on *Reality* on p. 369, we cannot reproach him with an abuse of his opportunity. Nor can we complain that he has slighted American authors, for we have noted as many as thirty-three, and he has drawn his aphorisms with marked liberality from the Concord Transcendentalists, the Brook-Farmers, and other literary lights of New England Unitarianism—from Emerson above all. The printers have unwarrantably distinguished Judge Halyburton (p. 549) from Haliburton (p. 25), and the Rev. T. T. Murger (p. 448) from Munger (pp. 265, 315). The ethical aim of this collection is proclaimed on the title-page, which we have abbreviated, and the Dictionary appeals first of all to those who resort to the sayings of wise men for "their bearing on life." After this class, perhaps, the motto-seekers have been most kept in mind, and these must be on their guard against various forms of inaccuracy. If, for instance, one had rather say in Italian than in English, "Follow thou thy own star," he must beware of taking Mr. Wood's professed equivalent from Dante—"*Se* tu segui tua stella," a conditional sentence of which the inspiring conclusion well deserved to be quoted. Grammatical and typographical slips, too, are likely to betray unscholarly adoption from Mr. Wood,

as "Dannosa è il dono" (p. 53), "Muss scheden" (from Feuchtersleben's "Es ist bestimmt," p. 85), etc. Such mistakes are not very numerous, but they must be reckoned with. Liberty is taken with Voltaire's "Écrasez l'infâme": on p. 76 the first person is employed, "Écrasons." So a change from plural to singular marks a famous passage from the 'Annals' of Tacitus, which is otherwise distorted, clearly at second hand (p. 84): "Eo magis præfulgebat quod non videbatur," for which read: "Præfulgebant Cassius atque Brutus, eo ipso quod effigies eorum non visebantur." We do not know whether the present stage of reformed spelling in Germany sanctions "Dämmerung ist Menschenlos" (for -loos) on p. 52. Certainly "Siéyès" on p. 360 is a misprint (for Sieyès). Finally, there is a third class which will use this Dictionary for definitions, like "Jour gras—Flesh day," "Fille de chambre—A chambermaid," "Sub Jove—In the open air," "Sicut lilium —As a lily," etc.; or for such colloquialisms as "Das glaub' ich—That is exactly my opinion."

The arrangement is alphabetic, whatever the language, with *a*, *the*, and even *and* leading off. An index partly helps the inquirer to the significant word, but is confessedly incomplete; thus, we are directed to "*whistled* for want of thought," but not to Franklin's "He has paid dear for his whistle," on p. 142. The foreign phrase is regularly translated, but not always correctly, as we have seen. The reference is to writers, not to chapter and verse of their works, and now and again the writer is unnamed even when notorious, as in the case of "Solitudinem faciunt." The translator is perhaps invariably unnamed. No rule has been observed as to quoting an author in his own language or in English. On the same page we find Bossuet in French and Victor Hugo in English.

On the whole, Mr. Wood's work is as meritorious and as useful as most of its kind; dreary to read consecutively, with plenty of commonplace, but also with gems enough, typographically rather better than the average, and not to be trusted without scrutiny.

For aught that we can see, everything in Mr. Blackman's slender 'Dictionary' might properly have found a place in Mr. Wood's, though its "phrases" very frequently consist of a single word. As it is, the contents of the two sometimes overlap, yet without necessarily agreeing or showing exactness wholly on one side. For instance, Wood gives: "Natura il fece, e poi roppe la stampa," and Blackman: "Natura lo fece, e poi ruppe lo stampo." The seeker after truth can take his choice, as also between "Tros Tyriusve" (Wood) and "Tros Tyriusque" (Blackman). Mr. Blackman is not content with a single alphabet. His Latin section fills nearly half the book; Greek, French, Italian, Spanish, Portuguese, and German follow, the last three being very meagre.

BOOKS OF THE WEEK.

A Handbook for Sewing-School Teachers. Thomas Whittaker. 35 cents.
Andersen, H. C. The Little Mermaid, and Other Stories. London: Lawrence & Bullen; New York: Putnams. $3.

*Reading Case for the Nation,*

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with *The Nation* stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

*READY EVERYWHERE WEDNESDAY, NOVEMBER FIRST.*

# THE CENTURY MAGAZINE
## FOR NOVEMBER.

**The First Number of a New Volume. Beginning Some Important Serials.**

**Illustrations** by Childe Hassam, Charles Dana Gibson, George Wharton Edwards, E. L. M. Pape, Louis Loeb, W. Taber, J. Carrell Lucas, M. Trautschold, George Michel, C. W. Allers, Mary Hallock Foote, Walter Shirlaw.

*THE CONTENTS INCLUDE:*

**A Very Timely Paper on Bismarck.** The report of a visit to Bismarck at Friedrichsruh, by a personal friend of the ex-chancellor—his conversation on American and German topics, etc. Illustrated.

**An Unpublished Poem by Ralph Waldo Emerson.** Written to Lowell on his fortieth birthday.

**Fifth Avenue. Illustrated by Childe Hassam.** A delightful paper by Mrs. Schuyler van Rensselaer, with ten large illustrations.

**Memories and Letters of Edwin Booth.** The first of two papers contributed by the nearest friend of the great actor, containing in the familiar letters glimpses of Mr. Booth, the winning companion and the generous friend.

**James Russell Lowell on "Humor, Wit, Fun, and Satire."** A hitherto unpublished essay, the first of several to be printed by arrangement with Mr. Lowell's literary executor.

**George Michel, a Great French Painter.** An article on "The Painter of Montmartre," richly illustrated with reproductions of his works.

**A Story by George Kennan.** A Psychological Study from Life, entitled "John Henderson, Artist," by the famous Siberian traveler, George Kennan.

**Escape of the Confederate Secretary of War.** A narrative of the adventurous experiences of General John C. Breckinridge after Appomattox, by John Taylor Wood, a member of the party. Illustrated.

**Tramping with Tramps.** A record of most unusual adventures. A study of tramp life in America,—North, East, South, and West,—how tramps live, how they travel, how they are treated in different parts of the country; by a young man who has lived with them, disguised as a tramp. With interesting illustrations.

**"My First Lions."** An exciting story of hunting fierce game in Eastern Africa—the first of several similar papers. Illustrated.

**A Story by Charles Egbert Craddock.** The first half of "The Casting Vote," by the author of "In the Tennessee Mountains." Illustrated.

**Complete Stories** by Mary Hallock Foote, Anna Eichberg King, A. W. Drake, and Richard Malcolm Johnston.

**Artists' Adventures: "The Rush to Death."** First of a group of separate papers recording notable adventures, either humorous, dangerous, or tragic in character, from the pens of well-known American artists, with illustrations by the authors. Walter Shirlaw's "Rush to Death" in this number will be followed by a humorous story of a French courier, "Bäader," by F. Hopkinson Smith, in the Christmas number.

**Taking Napoleon to St. Helena.** The second part of the diary of the Admiral's Secretary who accompanied Napoleon into exile.

**"Luvbyrd Goes a-Courting"** is one of several humorous contributions to the "Lighter Vein" department,—illustrated by C. D. Gibson.

## THE NEW NOVEL BY MARK TWAIN,

which will begin in the December Century, like several of Mark Twain's stories, has for its scene a steamboat town on the Mississippi River forty years ago. It is perhaps the most dramatic novel that Mark Twain has ever written. "Pudd'nhead Wilson," a hard-headed country lawyer, furnishes much of the fun that one naturally expects to find in a story by the author of "The Innocents Abroad," but he appears in quite another light in the murder trial which forms the thrilling climax of the story. The plot introduces a novel and ingenious employment of science in the detection of crime. The story will run through six or seven numbers. Other important serials to begin soon include:

> There is this trouble about special providences,—namely: there is often a doubt as to which party was intended to be the beneficiary. In the case of the Children, the Bears and the Prophet, the bears got more real satisfaction out of the episode than the prophet did, because they got the children.—Pudd'nhead Wilson's Calendar.

### A NEW SERIES OF COLE'S ENGRAVINGS.

The publication in The Century of engravings of Old Italian Masters by Timothy Cole has made an epoch in the history of American art by the popularization of the work of the world's greatest painters. Mr. Cole is now engaged upon a supplemental series on the Old Dutch Masters, the results of which are such as one might expect from the enthusiasm of Mr. Cole in his new work. The first of these will appear in the Christmas number.

### IMPORTANT PAPERS ON MUSIC.

Following the articles already printed in The Century on musical topics by such eminent composers as Messrs. Gounod, Massenet, and Saint-Saëns, The Century will print a group of similar papers on the great composers of the past, from the pens of the most famous of living musicians. These will include a brilliant paper on Schumann by Grieg, another on Schubert by Dvořák, a third on Berlioz by Reyer (the composer of "Salammbô"), a study of Grieg by William Mason, and others of equal interest.

### IMPORTANT EXPEDITIONS.

At the present time The Century is gathering, and will soon print, the results of expeditions recently completed or now being carried out in distant and little-visited parts of all the five great continents of the world.

**December will be a great Christmas Number.**

**Four Dollars** will bring you this splendid magazine for one year. Begin with the new volume, November number. The Century is always issued on the first day of the month. Dealers will receive subscriptions, or remittances may be made to the publishers direct by check, draft, money- or express-order, or in registered letter. Single numbers, 35 cents each.

## Charles Scribner's Sons' New Books.

### THE ONE I KNEW THE BEST OF ALL.

By Mrs. BURNETT.

A Memory of the Mind of a Child. Fully illustrated by R. B. Birch. 12mo, $2.00.

Mrs. Burnett's story is unique in literature, being the frankly autobiographical narrative of the experiences of a child up to girlhood, with its sensations and emotions as each new phase and problem of life opens to it.

"Mrs Burnett describes a child's thoughts and emotions very successfully, recalling memories of which most women are only too prone to take no note when dealing with children."—*Boston Pilot.*

**Men of Achievement.**

**Explorers and Travellers.** By General A. W. GREELY, U.S.A.

**Inventors.** By PHILIP G. HUBERT, Jr.

Each illustrated, half leather. Crown 8vo, $2.00 *net.*

The publication of these two books completes the set of four volumes **Statesmen,** by NOAH BROOKS, and **Men of Business,** by W O. STODDARD, having already been received with marked favor by the public.

**Meh Lady.**

A Story of the War. By THOMAS NELSON PAGE. *New Edition.* Illustrated by C. S. Reinhart. Small folio, $1.50.

A new and beautifully illustrated edition of this charming Southern classic in uniform style with the illustrated edition of "Marse Chan," issued last year.

"Nothing more beautiful has ever been penned by a Southern writer "—*New Orleans Picayune.*

### CUSTOMS AND FASHIONS IN OLD NEW ENGLAND.

By Mrs. ALICE MORSE EARLE, author of "Sabbath in Puritan New England." 12mo, $1.25.

"Thanks to Mrs. Earle's investigations, we may follow the Puritan child from his cradle through his life There is not one of the chapters which is not full of interest."—*N. Y. Sun.*

**The Land of Poco Tiempo.**

By CHARLES H. LUMMIS. Illustrated. 8vo, $2.50.

Mr. Lummis has made the land of Poco Tiempo—New Mexico and adjacent regions—his own subject; and in this volume he describes its social customs, racial types, its prodigious ruins and sublime landscapes in his well-known vivid and picturesque style.

**With Thackeray in America.**

By EYRE CROWE, A.R.A. With 121 Illustrations from sketches by the author. Small 4to, $2.00.

"It is a book that no lover of Thackeray will be willing to leave unread. Not only is it interesting for the near view it gives of the author of 'Vanity Fair,' but for the picture it paints of the United States forty years ago."—*Critic.*

### NEW FICTION BY POPULAR AUTHORS.

**David Balfour.** By ROBERT LOUIS STEVENSON. 12mo, $1.50.

"Nothing better in the field of fiction has been produced since Scott."—*Philadelphia Telegraph.*

**Ivar the Viking.** By PAUL B. DU CHAILLU. 12mo, $1.50.

"A true picture of the life of the Norse chiefs of the third and fourth centuries."—*Boston Beacon.*

**The Watchmaker's Wife,** and Other Stories. By FRANK R. STOCKTON. 12mo, $1.25.

"A delight to the many friends of his previous stories."—*Boston Times.*

**Opinions of a Philosopher.** By ROBERT GRANT. Illustrated. 12mo, $1.00.

A sequel to the "Reflections of a Married Man."

**Tom Sylvester.** By T. R. SULLIVAN. 12mo, $1.50.

A novel of incident and action, in which the central figure is a young American of the present day.

**The Copperhead.** By HAROLD FREDERIC. 12mo, $1.00.

### NEW VOLUMES OF ESSAYS.

**Virginibus Puerisque,** and Other Papers. By R. L. STEVENSON. With etched Portrait.

**Letters to Dead Authors.** By ANDREW LANG. With etched Portrait and four additional Letters. Each 16mo, $1.25. Two new volumes in the Cameo Edition.

**Stelligeri,** and Other Essays Concerning America. By BARRETT WENDELL. 12mo, $1.25.

**Windfalls of Observation,** for the Edification of the Young and the Solace of Others. By E. S. MARTIN. 12mo, $1.25.

**The Sunny Days of Youth.** A Book for Boys and Young Men. By the author of "How to be Happy though Married." 12mo, $1.25.

**An Old Master,** and Other Political Essays. By WOODROW WILSON, Ph.D., LL.D. 12mo, $1.00.

*AN EXTRAORDINARY OFFER.—The* BOOKBUYER *for November, the large Christmas issue, and January—the three most valuable numbers of the year—will be sent to any address for* ONLY 25 CENTS. *The Christmas* BOOKBUYER *will be the handsomest literary annual published, containing over 180 pages of interesting matter concerning holiday literature, contributed by Kate Douglas Wiggin, Lyman Abbott, Laurence Hutton, William Winter, T. A. Janvier, and other popular authors, and over 80 Illustrations by eminent artists.*

## NEW BOOKS
OF
## History and Biography.

**MASSACHUSETTS: Its Historians and its History.**
By CHARLES FRANCIS ADAMS, author of "Life of Richard Henry Dana," "Three Episodes in Massachusetts History," etc. Crown 8vo, $1.00.
Mr. Adams claims for Massachusetts leadership in the struggle for political freedom, but shows her guilty of religious intolerance. A vigorous, very interesting book.

**SAM HOUSTON AND THE WAR OF INDEPENDENCE IN TEXAS.**
By ALFRED M. WILLIAMS, author of "The Poets and Poetry of Ireland." With a Portrait and Map. 8vo, $2.00.
"At once a good piece of biography, and a concise, lucid account of an historical event that is usually vaguely conceived, and sometimes grossly misstated."—*The Dial, Chicago.*

**COLLEGE TOM.**
By CAROLINE HAZARD, author of "Memoirs of the Rev. J Lewis Diman," etc. 8vo, $2.00.
The life of Thomas Hazard, including much new and very interesting historic information about Rhode Island four generations ago.

**THE LIFE AND WRITINGS OF JARED SPARKS.**
Comprising Selections from his Journals and Correspondence. By HERBERT B. ADAMS, Professor in Johns Hopkins University. With six heliotype Portraits. 2 vols., 8vo, $5.00 *net.*

**LETTERS OF ASA GRAY.**
Edited by JANE LORING GRAY. With Portraits and other Illustrations. 2 vols., crown 8vo, $4.00.
Professor Gray was not only one of the foremost men of science, but had admirable literary skill. His letters are highly valuable for the range and interest of their subjects, and attractive by virtue of their charming style and the very engaging personality they reveal.

*Sold by all Booksellers. Sent, postpaid, by*

# GINN & COMPANY.

## NEW BOOKS OF GENERAL INTEREST.

**The Psychic Factors of Civilization.** By LESTER F. WARD, author of "Dynamic Sociology," etc.

8vo. Cloth. xxi+369 pages. Price, $2.00.

This book is a new presentation of the whole subject of social progress, written from a scientific standpoint, but in a popular style, and carrying the reader from the most fundamental principles up to their application to the living issues of the times. MIND, instead of brute force, is made the basis of political economy.

**The Mark in Europe and America.** A Review of the Discussion on Early Land Tenure. By ENOCH A. BRYAN, President of Washington State Agricultural College and School of Science.

12mo. Cloth. vi+164 pages. Price, $1.10.

This book will be found of value by all who are interested in any of those sociological questions which are connected with the history of land-holding, and especially to teachers and students of history and economics.

**The Principles of History.** (Grundriss der Historik.) By GUSTAV DROYSEN, late Professor of History in the University of Berlin. With a Biographical Sketch of the Author. Translated by E. Benjamin Andrews, President of Brown University.

12mo. Cloth. xxxv+122 pages. Price, $1.10.

This little work will appeal powerfully to all readers possessing a philosophic cast of mind, and it cannot but have a deep interest for all thorough thinkers and teachers, whether specially cultivating history, theology, or literature.

**The Classic Myths in English Literature.** Based chiefly on Bulfinch's Age of Fable. Accompanied by an Interpretative and Illustrative Commentary. Edited by Charles Mills Gayley, Professor of the English Language and Literature in the University of California.

12mo. Cloth. xxxviii+539 pages. Price, $1.65.

The work is elaborately illustrated with a large number of specially prepared new cuts and reproductions from the antique and from recent authoritative publications. The whole work will be found eminently satisfactory from both the literary and artistic points of view, and as a manual of ready reference, being elaborately indexed, will prove itself invaluable.

**Ethics of Hegel.** (Ethical Series.) Edited, with an Introduction, by Professor J. Macbride Sterrett, Columbian University.

12mo. Cloth. xii+216 pages. Price, $1.10.

This volume contains selections from the *Philosophie des Rechts* and other works of Hegel. The introduction gives the relation of Hegel's theory with the ethical thought of his immediate predecessors, and a popular exposition of his own theory.

**Hume's Treatise of Morals: and Selections from the Treatise of the Passions.** (Ethical Series.) With an Introduction by James H. Hyslop, Ph.D., of Columbia College, New York.

12mo. Cloth. iv+275 pages. Price, $1.10.

In this edition the effort has been made to lead the student into Hume's system of the moral theory by constantly regarding the intellectual conditions under which he labored.

**Biography.** (The Phillips Exeter Lectures.) By Rev. PHILLIPS BROOKS.

12mo. Paper. 30 pages. 12 cents.

*These books will be sent by mail, postpaid, on receipt of prices given above.*
*Special terms for introduction.*

# NOTABLE BOOKS

### Old Court Life in France.

By FRANCES ELLIOTT. Fifth Edition, with Preface addressed by the author to her American readers. Two volumes, octavo, gilt tops. Thirty-two Illustrations. $4.00.

These charming volumes, which have retained a deserved favor with two generations of readers, are well worthy of the new and attractive form that has been given to them. The personal episodes and stories presented have a dramatic interest of their own, and have been accepted also as admirable characterizations of the historic personages about whom the stories turn. We have here, says one critic, the "substance and the spirit of history, with all the charm of dramatic story."

### Woman in France During the Eighteenth Century.

By JULIA KAVANAGH. Two volumes, octavo. With ten portraits on steel. $4.00.

In France, during the eighteenth century, a group of remarkable women exercised a power so distinctive and important as to be probably without a parallel in the history of their sex. It was, says Miss Kavanagh, the power of woman which hastened the downfall of the monarchy and the outbreak of the most terrible of modern revolutions. Studies, therefore, of such women as Mme. de Maintenon, Mme. de Tencin, Mme. du Châtelet, Mme. de Pompadour, Mme. Necker, Mme. de Genlis, Mme. de Staël, Mme. Roland, Mme. Tallien, and Charlotte Corday, while possessing a personal and romantic interest, have value for the light thrown upon events of history.

### The Story of Parthia.

By GEORGE RAWLINSON, author of "The Story of Ancient Egypt," "The Story of Phœnicia," etc. Volume thirty-seven in the "Story of the Nations" Series. 12mo, with maps and illustrations. Cloth, $1.50; half leather, $1.75.

"At the time of the defeat of the Parthians by the Persians, in 226 A. D., they had occupied the position of second nation in the world for nearly four centuries. The volume is an interesting addition to the valuable series 'The Story of the Nations.' It reveals firm ground of rational historical continuity in a period where many readers might suppose a great gulf to be fixed. Canon Rawlinson has made himself an authority on this period of history."—*N. Y. Tribune.*

### Chinese Nights' Entertainments.

Forty stories recorded by ADÉLE M. FIELDE. Illustrated by Chinese artists. Octavo. In the series of "Fairy Tales of the Nations." $1.75.

These charming fairy tales for children were heard by the writer as they were told in Swatow vernacular of Southern China. Illustrations were prepared, under the direction of the author, by native artists, in the school of the celebrated painter, Go Leng.

### Studies of Travel.

By E. A. FREEMAN, author of "History of Sicily," etc. Part I., Greece. Part II., Italy. Each complete in one volume. With frontispiece. 16mo. 75c.

There probably was no man better fitted than the late Prof. Freeman to write sympathetic and intelligent studies of travel in these two countries—no man who had more exact knowledge of their historical relations or who could feel more keenly their wonderfully enduring influence. These volumes, the fruit of travel towards the close of the author's life, are mainly devoted to historical and archæological studies. While interesting to many classes of readers, they should prove of special value to cultivated travellers.

### The Home, or Life in Sweden.

By FREDRIKA BREMER. Uniform with the *Exmoor* edition of "Lorna Doone." Two volumes, gilt top, $2.50.

Miss Bremer's great romance was first published in this country by G. P. Putnam in 1850, under an arrangement with the author. N. P. Willis spoke of it as "one of the most sterling of novels, a story which will outlive change and will be accepted by successive generations," and time has justified Mr. Willis's judgment of the work.

## G. P. PUTNAM'S SONS,

**New York and London.**

*Descriptive prospectuses of the "Story of the Nations" and the "Heroes of the Nations," and quarterly "Notes," giving a full description of the season's publications, sent on application.*

# The Nation.

*NEW YORK, THURSDAY, NOVEMBER 9, 1893.*

## The Week.

WITH the action of the House in putting an end to the silver misery, the country may well look back with astonished gratification at the rapid march of events. Three years ago everybody was dickering for the votes of the silver States, and the only uncertainty was how soon the demand for free coinage would sweep everything before it. Eighteen months ago the coolest observers thought the chances favored free coinage, and we certainly escaped from it only by the narrowest squeak. Now that peril is past for ever, and, despite the hollow boasts of the angry Populists and Populist-Democrats, it is clear that the question of the standard of value is definitively settled in this country, and that all attempts to reopen it will be futile in the face of the sure diversion of popular interest to the tariff and administrative economy and reform. The great change has come with a swiftness and completeness unexampled. Like the immense popular revulsion on the tariff question, it is in part, no doubt, a result of the condition of arrested development in which all fiscal and financial matters were so long held by political forces growing out of the war. When it was at last possible to vote on the tariff and the currency without having the question thrust in your face whether you wanted to reward treason and reënslave the negroes, the dammed-up waters came out with a rush.

---

President Andrews chooses this auspicious occasion to inform his anxious friends that, in his opinion, the free coinage of silver at a ratio of 20 to 1 "would be safe." The processes of reasoning by which he arrives at this conclusion it would be interesting to examine, if the conclusion itself were any longer of conceivable human interest. The proper rôle for President Andrews, at present, would appear to be that of one who has left off making predictions, and is calmly waiting for the fulfilment of those he has already made. It was not long ago that he told us that the repeal of the Sherman act would "bring England to her knees" in frantic appeal to the United States to join her in doing something for silver. Only a fortnight ago Mr. Moreton Frewen said in this city that "if you stop purchases we shall have a panic in London." He and President Andrews should spare us further prophecies and hypotheses until their advertised kneeling and panic come off.

The effect of repeal upon political conditions in the South remains to be seen, but there are already signs that it will infuse spirit into the more intelligent class of Democrats, and weaken rather than strengthen the Populists. In South Carolina, Wade Hampton announces his readiness to organize national Democratic clubs throughout the State, and draw the line between those who stand on the Ocala (Populist) platform and those who stand on that of the national Democracy. It was a sad day for the State when that wave of demagogism swept over it which deposed Hampton from the Senate and put Irby in his place, and it would be still more unfortunate if Butler should succeed in his apparent purpose to save himself by virtually turning Populist while still claiming to be a Democrat. Such success as the third party has achieved in the South has been due largely to the cowardice of public men who knew its dangers, and should have fought and could have crushed it. They should take courage from the example of Wade Hampton.

---

While Senator Sherman was being introduced to the Cincinnati Chamber of Commerce on Friday afternoon as "the one man who, more than all others, had been instrumental in repealing the purchase clause of the silver act," Senator Voorhees at Washington was stating the exact truth when he said in an interview:

> "The darkest hour for the bill was after Senator Sherman's famous interview, a month ago, in which he encouraged its enemies and discouraged its friends by declaring, in the strongest terms, that unconditional repeal could never pass the Senate. I felt that blow more than any other in the long contest, and in my judgment it prolonged the fight at least two weeks."

No one can doubt this who had anyacquaintance with the inside of the Senate fight. All the talking against time and all the filibustering were only a grand kicking up of the dust, under cover of which the bargaining for a compromise was busily going on. To help the scheming along, Senator Sherman gave out that nothing but a compromise could possibly pass. If he had stood up squarely for unconditional repeal, and lent no countenance to the sappers and miners, they would have surrendered weeks before they did. The Ohio Senator comes out of the long contest with no part of his reputation heightened except his inveterate tendency to compromise away his convictions. That element of his fame was already securely established.

---

The Senator who brings most credit out of the struggle is a comparatively new member from the young State of Wyoming, Joseph M. Carey, who comes from a mining section and yet voted against the mining interest because he thought it his duty so to do. He made this admirable statement of his position before casting his vote:

> "I believe that a man who comes to this body should come prepared to vote as his conscience dictates. I shall never cast a vote here where I shall have to apologize to my own conscience. If this vote shall result in my political overthrow, I would rather be a free man and do what I think is right, than a United States Senator who yields to popular clamor."

Mr. Carey is a native of Delaware and a graduate of Union College in New York, but has lived in Wyoming for twenty-five years, having held the offices of district attorney, justice of the Supreme Court, and delegate in Congress before his election as one of the first Senators upon the admission of the Territory as a State in 1890, his term expiring in 1895. He may not get another term, but, if he does not, he can retire with a clear conscience and a sense of self-respect.

---

We have not observed that any reporter has thought it worth while to get the opinion of ex-President Harrison on the repeal of the Sherman law. In this city last summer he expressed amiable doubts about Mr. Cleveland's ability to drive "his wild team," which was certainly a very appropriate phrase in the mouth of a man who had never had any difficulty in driving *his* team, for the simple reason that he always gave them their heads even when making straight for a precipice. The party managers who hitched up the silver wild horses of 1890 did not have to take the driver into account at all, or, as Senator Sherman has more elegantly expressed it, they did not think that Harrison ought to have the "responsibility" of vetoing a bad bill laid upon him. If he had been in the White House two weeks ago, when the grand Gorman-Sherman compromise was at last put on view, the contrivers of it would not have troubled themselves to ask whether the President would sign it or smash it.

---

It is denied from Washington that any order has been given for "coining the seigniorage" of the silver bullion now in the Treasury. The question is still under advisement, especially in its legal aspects. The law is very much complicated by the recent repeal of the purchasing clause of the Sherman act, and the points in controversy might baffle the keenest legal intellects in the country. A telegram to the Philadelphia *Ledger* states these controverted points in the following manner:

> "(1.) Must a sum equal to the amount of Treasury notes issued be coined before the seigniorage can be utilized? (2.) Can Treasury notes be issued against the seigniorage? (3.) Has the Secretary authority to cancel Trea-

sury notes when redeemed under the provisions of the third section of the Sherman act?"

Whatever opinions the legal profession might hold on these questions, we think that all persons who were conversant with the legislation of 1890, *i. e.*, the Sherman act, will agree that the intention of Congress was to keep all the silver bought after July 1, 1891, in the form of bullion until it should become necessary to coin it in order to redeem *in silver dollars* the Treasury notes issued against it. "*As much* as may be necessary to provide for the redemption of the Treasury notes herein provided for" cannot mean *more* than may be necessary for the purpose. The clause in the same law which declares it to be the policy of the United States to keep the two metals on a parity with each other has been officially and properly construed to require the redemption of the Treasury notes in gold if the holders desire gold. If we can imagine any holder of such notes presenting them in order to get silver dollars in exchange for them, then the Secretary is directed to coin as much of the bullion as may be necessary for this purpose, but no more. Any construction of the law which goes beyond this, will exceed the intentions of the Congress that enacted it.

---

One chapter of this year's panic history closed November 1st in the cancellation of the last clearing-house loan certificates. The first of these certificates were issued in New York during the third week of June. Within a few weeks New York's example had been followed by the clearing-houses of Philadelphia, Boston, Baltimore, and Pittsburgh. Chicago alone of the great banking centres failed to resort to this emergency measure, and though in the stress of local panic a resolution authorizing such issue was passed by the Chicago clearing-house, none of the banks made use of its provisions. From the middle of June to the closing week of August, the issue of loan certificates was continuous, the maximum issue, reached at the latter date, being $38,280,000 in New York and $11,040,000 in Boston. How great was the need of such banding together of the city banks' resources may be judged from the fact that, within these two months, bank deposits in New York decreased no less than $32,526,300. It was impossible to contract the loans in equal measure without causing general wreck, and the certificates were used solely to maintain and extend the loans of hard-pressed borrowers. Towards the close of August, the hoarding of money and the needs of debtors had increased to such an extent that the loans and discounts of the New York clearing-house banks exceeded the total deposits by $39,592,200, almost exactly the measure of the loan certificates outstanding. The ending of the panic and the return of public confidence have now restored a monetary equilibrium. Loans made on the basis of the clearing-house certificates have either been paid off or renewed from the actual deposit funds of the individual banks. Since September's opening, the loan account of the New York city banks has in the aggregate been only slightly contracted, but the deposits have increased by $59,251,600. The working of the loan-certificate issues this year has been a particularly noteworthy experiment in bank finance. This safe and easy expansion and contraction of the available money supply, according as the needs of the day dictated, furnishes, moreover, some useful principles for future consideration in the bank-currency discussion.

---

It is obvious to everybody that, whatever the cause of Tuesday's overthrow in this State, whether hard times or machine politics, the Administration would have come in for some of the credit and avoided all the discredit of it by a closer adherence to the policy which Mr. Cleveland traced out in many speeches and letters before his inauguration. There are a great many people who say that adherence to civil-service reform does nothing for a party; but does adherence to the spoils system? This question has often been answered at the polls in the negative, but never more impressively than on Tuesday. We can understand Mr. Cleveland's unwillingness to quarrel openly with the Hill ring, but what was the use of giving the principal post-office in the country to a politician who was ostentatious in announcing that in filling places he gave a preference to Tammany men? Where would have been the harm of keeping the anti-snapper element in the Democratic party in his confidence and taking its advice, instead of somewhat conspicuously keeping it at a distance? The indifference, to use a mild word, to the anti-snapper element on the part of the Administration seems to have been based on the idea that there are no such things as Democratic Mugwumps, and that good Democrats can be counted on to vote the ticket with unfaltering regularity. Well, 30,000 Democrats in this city alone failed to vote it on Tuesday, which shows that there are limits to their endurance, and that their moral sense needs to be more or less pandered to. We do not suppose many, if any, votes turned solely on the Van Alen or Roosevelt appointments, or on the general "revel in spoils" which has gone on all over the country. But they have undoubtedly deepened the impression of Democratic incompetency and hypocrisy and dishonesty which the general situation has created. The spectacle of Mr. Cleveland struggling with the spoils system would have helped to build up a respect for the Democratic party among the decent and intelligent classes—the absence of which is now its greatest difficulty in keeping in power; but no such spectacle has been forthcoming.

---

The result of the elections outside of New York, where special and peculiar conditions existed growing out of the nomination of Maynard, must be ascribed mainly to the financial panic of last summer and the consequent hard times. Large numbers of workmen were thrown out of employment, and great suffering fell upon them. Few of them could understand the silver question. All were ready to give ear to the statement that apprehended changes of the tariff had brought about the disastrous condition. If this condition were really all owing to that cause, it ought to have arisen as soon as the result of the Presidential election was made known. The tariff was the great issue of that campaign. Mr. Cleveland was elected upon that issue distinctly. If it contained the elements of a panic, they ought to have manifested themselves at once. They did not. Business continued to be good until the Treasury's gold balance fell below the $100,000,000, and the people began to fear that the silver basis so long threatened was actually in sight. Shortly after this happened silver was demonetized in India, and this added to the prevailing distrust. The panic came. The Democratic party was in power, and it had to take the consequences. The repeal of the Sherman act came too late to have much effect on the fall trade, and it showed the majority party to be equally divided, one half for repeal and one half against it. In this particular they have been properly punished. In the other they are the victims of accident. It was an accident that the silver panic came at a time and in a way so that it could be laid at the door of a change in the tariff which the country had voted for, but which had not yet been enacted or formulated.

---

Vote-buying in Indiana is made an expensive luxury by a law which was passed in 1889 and has been sustained by a recent decision of the Supreme Court of the State. Under its provisions any elector who has been bribed to vote or refrain from voting can bring suit against his briber or bribers and recover $300 and "reasonable attorney's fees for collecting the same." A man who sold his vote for $10 in the election of 1890 brought suit under this law, and the lower court held it invalid, on the ground that he did not come into court with clean hands, and should not be allowed to benefit by his wrong-doing. The case was therefore carried to the Supreme Court, which reversed the decision of the lower court, sustained the law, and awarded the plaintiff his $300 and attorney's fees. In rendering

its decision the court held that a man who has been bribed has suffered a grievous wrong; that he has been induced to barter away his honor, manhood, and political freedom and sovereignty, and is thereby entitled to some redress; that the Legislature has a right to give this redress, and thus incidentally aid in the enforcement of the laws against election bribery. If this case becomes a precedent, as it is very likely to do, since men who sell their votes are actuated by mercenary motives and will get all they can out of the business, the practice of vote-buying will have to be continued in Indiana under most trying conditions.

---

M. Turrettini, one of the French civil engineers who went to Chicago during the Fair, has communicated to a Swiss paper—the *Journal de Genève*—a memorandum he made of Mayor Carter Harrison's address to them when he received them. In it the mayor is made to say that though the French engineers had done great things, the Americans would soon beat them; that he himself was not an engineer, but directed their labors; that he was, however, head of the firemen and put out fires, and head of the police, and could put any of them he pleased into jail, and let them out when he thought proper ; that he had every sort of power; that some people thought he was head of the clergy, but this was a mistake; that they might think him a very great man, which was true; that he was the greatest man in Chicago, and Chicago was the first city of Illinois, and Illinois the first State of the Union, and the Union the greatest country in the world; he was, therefore, the greatest man in the world; that he had made the tour of the globe, visiting Paris, the Champs Élysées, Rome, the Vatican, the Seven Hills, the Acropolis, and Moscow, and had seen nothing like the White City. The *Journal de Genève*, commenting on this stuff, which it reproduces in all its "fatuité naïve," says that "it is far more instructive about things in America than any number of essays." We do not believe Mayor Harrison said these things as here reported, but he probably said things very like them. He was fond of humorous exaggeration, and he doubtless thought this mode of introducing himself to the Frenchmen a capital joke. To them, on the contrary, it was like the address of an African chief to European travellers, which, as the *Journal de Genève* truly remarks, there is no use in their trying to understand.

---

The Princeton faculty have taken very proper action regarding the football game with Yale in this city on Thanksgiving day. They cordially approve the action of the football management in requesting the municipal authorities of New York to arrest any students who may be found guilty of disorderly conduct; they appeal to the college alumni to "exert their influence in every way possible to redeem the game from these objectionable features"; and they serve warning that, should these efforts prove ineffectual in reforming the evils, "they must at once take into consideration the question of forbidding the game in New York on that day." They announce, further, that the Thanksgiving recess will end at midnight of Thursday, November 30, and that all students must be back in Princeton by that hour, unless a prolongation of the absence to the following noon has been previously secured upon the written request of the parent or guardian. It is unfortunate and discreditable that the faculty of a university should be compelled to take such steps as these in order to preserve decorum among its students on a holiday, but it would be infinitely more discreditable if the authorities of the institution had longer condoned the offences which have grown so notorious.

---

Redmond, the leader of the minority of the Irish party, has given notice to Mr. Gladstone that he must not count on the votes of his wing—about a dozen in all—unless he brings in the home-rule bill again in the spring. There is a certain importance in this, because, though there would still remain a ministerial majority, it would hardly be large enough for the conduct of business without extraordinary efforts on the part of the Liberal whips to keep members in attendance. But there is no good reason for believing that, should Mr. Gladstone continue in active service, the bill will not be introduced. Of all the Liberal measures this is the one which he has most at heart, and there can hardly be a doubt that should he be in office next February the bill will be sent to the Lords again next year. That the Lords will again reject it is, of course, certain, and it is generally believed in London that, when it is rejected, there will be a dissolution and a general election next autumn. The Liberals are generally prepared for this course of things, and are, therefore, most anxious to pass at least the parish-councils bill and the employers'-liability bill before dissolving, so that the session shall not seem utterly barren to English electors.

---

Whether they ought to venture before the electors with the clause in the home-rule bill which keeps more than eighty Irish members in the British Parliament, is a point on which there is considerable variety of opinion. In the first bill of 1886 the Irish members were wholly excluded. The critics of the bill then said that this meant total separation, and even Mr. Chamberlain offered to vote for it if the Irish members were retained. Mr. Gladstone gave way to the clamor, and put the Irish members back again, and now the clamor is greater than ever, for, say his enemies, he is going to let Irishmen meddle in English and Scotch affairs, and will not let English and Scotchmen meddle in theirs. There is no doubt that the retention of the Irish is hard to defend, and will be used against the Liberals in the coming canvass much more effectively than their exclusion could have been, and it is quite within the bounds of probability that this feature of the bill will be abandoned when it is next introduced. There is, of course, no way of making the bill acceptable to the Conservatives —though it ought to be as non-contentious as the parish-councils bill; but it is almost as certain as anything can be in politics, that they will eventually bring in a home-rule bill of their own. They did this about the corn laws and about the extension of the suffrage, and they will do it now with greater reason —seeing that, with 85 recalcitrant Irish in the House of Commons, the game of politics, under English rules, cannot be carried on.

---

The ignominious downfall of Count Taaffe terminates the shuffling, characterless policy which for fourteen years he has been able to pursue by relying on combinations of Clericals and Feudalists, Liberal Germans and Poles. All of these parties deserted him when he finally sprang upon the Reichsrath his bill for the extension of the suffrage —an extraordinary measure, socialistic in its effect even if not in its motive, the evil of which is sure to live after him. It seems that the Emperor, who was loath to part with his favorite, was forced to yield to the representations of Count Kálnoky, who became alarmed at the danger to the Triple Alliance resulting from the remodelling of the House of Deputies in conformity with Taaffe's bill. The extension of the suffrage would have been certain to strengthen the Slavic and clerical elements to such a degree as to give them a majority, inimical to the alliance with Germany and Italy. Although Taaffe was willing to drop his bill at the last moment, his utter isolation rendered his retirement inevitable. He is succeeded by Prince Windischgrätz, who, although a Feudalist, has shown himself a man of character, and, though a large landed proprietor in Bohemia, has held out firmly against the patriotic ravings of the Young Czechs, to which so many members of the Bohemian aristocracy succumbed. From the coalition ministry which he has formed the Czechs derive no encouragement whatever, while the Poles, the German Liberals, and the Feudalists capture each two seats.

*THE TARIFF AND THE CONSULS.*

We believe that every advocate of tariff reform looks for, and has all along looked for, an increase of our exports as a result of the new policy. In fact, it is one of the elementary truths of the low-tariff gospel that you cannot have large imports without large exports. Exports pay for imports. The state of things in which foreigners dump their goods on our wharves for nothing, or in which Americans refuse to export goods unless they are paid in gold or silver, is now one of the well-recognized chimeras of financial science. No one is any longer taken in by it. Whether it be owing to original sin or not we cannot say, but the fact is that the minute you lower the tariff in any country in the world, the trade between the natives and the foreigners becomes more active. So it has always been, and so it will be with us. Consequently, our tariff-reform agitation has meant from the beginning a larger intercourse with both the European and South American States, in which, unless we are greatly mistaken, Americans are likely to get the best of the bargain.

This being true, our manner of selecting our consuls in foreign centres of trade and industry becomes more and more important. We venture on the assertion that there have never been, among the advocates of tariff reform, many who did not look forward to consular reform as a necessary adjunct or accompaniment of tariff reform. One of a consul's most important duties is the making of reports on the markets and productions of the countries to which he is accredited. He ought to be the greatest aid to the American buyer or seller in foreign countries. We say nothing here of his duties in protecting the United States custom-house from fraud, or in enforcing our immigration and quarantine regulations. We are considering him simply as the agent and helpmate of the United States producers and dealers. As such it is difficult to overestimate his importance. He ought to stand as high, as regards education and character, and as regards the dignity and security of his office, as the consuls of any of our competitors—England, France, or Germany, for instance. He should know the language of the country to which he is accredited. He should be familiar with its manners and customs, with its legislation relating to tariff and emigration. His tenure of office should be such as to relieve him from anxiety about the ups and downs of home politics, and to make his growing experience the property and profit of his own people. Though last not least, he should, in cases of marked superiority, ascertained by actual service, be promoted to better posts under the same tests of fitness.

In this view of the consular service, in connection with tariff reform, we have, we are glad to say, the hearty concurrence of the Boston Merchants' Association. At their meeting held on Wednesday of last week a report on the consular service, and Mr. Quincy's dealings with it, was read by the chairman, Mr. Jonathan A. Lane. After going over Mr. Quincy's action and the excuses for it, the report remarked:

"Moreover, if they [the consuls] are, as they should be, earnest promoters of increased commercial intercourse between the countries, they naturally fall into the belief that a moderate tariff is best, as it certainly does tend to increase the business and enlarge the returns of their consulates. There is no need of this constant displacement of tried and proved competent men because at one time they belonged to a party which, in the turn of events, is out and not in power."

The report also recommended some action in coöperation with the Chambers of Commerce of Boston and New York, to urge on the State Department the creation of "a perfect digest of every consulate, to the end that it may be fortified against unfit applicants," and on Congress "the adoption of some plan for the legal recognition of merit in the consular service." How necessary this is may be inferred from the fact that the great bulk of Quincy's appointments were made without any knowledge whatever of the applicants, except what was furnished by the "influence," *i. e.*, the member of Congress who recommended them. There is no information except this on file at the State Department. The course of proceeding seems to have been simply to let every congressman of the party get what he could out of the heap for the man who had worked hardest for him in Mississippi or Arkansas. In other words, each place was filled on the recommendation of the person most interested in deceiving the department about the qualifications of the candidate.

That the Chambers of Commerce would have the hearty support of the President in bringing about the proposed change, there is, Quincy notwithstanding, every reason to believe. He cannot, we say confidently, have approved of this young gentleman's activity. He is committed to the principle of civil-service reform in every way that can bind an honorable man. He spoke in its favor in 1882, when accepting the nomination for governor; in 1884, in his letter accepting the nomination for President; in 1888, in his letter accepting renomination; in 1885, in his inaugural address; in 1882, in his letter to the New York Civil-Service Association; in 1884, in his second message to the New York Legislature; in 1884, in a letter as Presidential candidate to the New York Civil-Service Reform Association; in the same year, in a letter to the Civil-Service Reform League; in 1885, in his letter accepting the resignation of Dorman B. Eaton; in 1885, in his first annual message to Congress; in 1886, in his second annual message; in 1893, in his inaugural address. On all these occasions and a great many others the President gave in his unqualified adhesion to the doctrine that the business of the government should be conducted on business principles, and that fitness, and *nothing else*, should be the qualification for the public service. The Chambers of Commerce, therefore, should they take the matter up, may see with what confidence they could approach him on this subject.

*THE FUTURE OF SILVER-MINING.*

The Senators and Representatives opposed to the repeal bill were of two general classes, those desiring "cheap money" and those whose constituents were interested in the mining of silver. It has been the belief of these latter that the profitableness of silver-mining and its very existence depended upon finding a market in the United States Treasury for the greater part of their product at artificial prices. They thought that the purchases by the federal Government under the Bland-Allison law and then under the Sherman act would carry the price of silver up to $1.29 per ounce, or to parity with gold at our ratio. In this they were greatly disappointed.

What now will be the effect of the passage of the repeal bill upon mining and the price of silver? Following out their old reasoning, the honest advocates of that metal are predicting general distress as well as ruin to the business of silver-mining, and consequently to the silver-producing States. Perhaps not all of them, while repeal was pending, believed that the prospect was as dark as they painted it. Perhaps they felt under the necessity of taking the blackest possible view in order to prevent some more dismal prophet, like Gov. Waite, from outbidding them for the votes of ignorant people. Senator Teller, for example, is not a baby, yet his final speech on the repeal bill was a most childish lamentation. One might think, after reading it, that the Senator and all of his constituents were about to enter Dante's Inferno and for ever leave hope behind. Neither Mr. Teller nor any silver advocate addressed himself to the actual condition of things, or attempted to show what would be the consequence of simply adhering to it. The actual condition was demonetization by India, and uncertainty as to the future action of the United States—these two main factors having resulted in a price for silver of about 73 cents per ounce. Neither Mr. Teller nor any of his colleagues ever said that they considered that condition a happy one. Nor did they ever say how or at what time they ever expected to reach a happier one. The only thing they could tell us was that repeal would make their condition in a general way much worse than it was before.

Neither their earlier nor their later prediction has been verified. Their earlier one, that the price of silver under the Sherman act would rise to $1.29 per

ounce, was based upon the idea that an enlarged and artificial demand would not lead to increased production. Their later one, that the withdrawal of the artificial demand would lead to a great decline of price, has been equally falsified. The non-paying mines, it is true, are closed. There is no harm in that. The paying ones have hitherto been operated at too high a cost. In many of the mines whose cost of production is really low, a number of hangers-on or superfluous officers have been employed, usually friends of the management, whose principal duty was to prevent the stockholders from getting excessive dividends. The miners' union, too, has been one of the strongest of trade associations, whose object was to share in the bounty accorded by the federal Government to silver by demanding for the men and receiving twice the wages ruling in other employments. One result of the stoppage of Government purchases will be to reduce the pay-rolls of the mining companies to the general level. Moreover, the business pressure which other manufactories feel, but from which silver-mining has been exempt, will stimulate invention, not only in the mechanical handling of ore, but in all directions. Of course, we must expect a period of adjustment, during which prices may fluctuate and losses, perhaps, be incurred; but we are justified in looking forward to a fairly profitable trade in silver—as profitable certainly as the mining of iron or of gold.

To begin with, there is the fact that quotations for silver have not sensibly declined since the passage of the repeal bill. After the closing of the India mints silver fell to 62 cents per ounce. Thereupon arose the heavy demand from Asia which, London being bare of stocks, sent the price up to 78 cents. It then fell slowly, and the average price during the late summer in New York was 73. On November 1 the quotation was 68½ cents, while now it stands at about 70, having actually advanced a few points on the announcement of repeal. This would indicate that the whole theory of the silver-mine owners in their fight for federal protection was founded on a misconception, and that the Government purchases were really a hindrance to the industry, giving it a false bottom and "rigging the market" in the face and eyes of the world. Certainly no legislative action of ours could alter the fact that nations which include a large portion of the human race will continue to use and to buy silver.

The repeal of the Sherman act has affected but a small part of the world's demand for silver. The fall in price last summer stimulated this demand, while the speculative quotations now ruling for silver bullion seem to reflect the opinion of London and New York brokers that the production of the American mines will find a market at a certain price not far from the present quotations. Whichever view of the future price we may take, the broad fact remains that there exists and always will exist a demand for silver bullion, which the American mines can easily and profitably supply. Colorado will not lose her mining industry, nor the people dependent upon it their business. The collapse of credit has hurt that State far more than any temporary or forced stoppage of silver-mining; for the latter when on a commercial footing will have a better basis than before. All the evidence we have leads to the conclusion that the repeal of the purchasing clause of the Sherman act will work no real harm to silver-mining; rather will in the end benefit it. There is therefore good ground for the belief that the silver advocates who have been contending as they thought for the very life of silver-mining, have in reality been fighting a mere shadow, a foe which existed only in their own imaginations.

---

### *A NAVY WITH INTERROGATION POINTS.*

THE chagrin of the Navy Department and of the warrior press over the blunders just brought to light in the construction of the new war-ships is but natural. After the succession of patriotic thrills with which we have been called upon to witness the launching of our "commerce-destroyers" and formidable fighting machines, it is somewhat disheartening to find that five out of the seven commissioned within the twelvemonth are topheavy and unsafe, and must be radically made over. Only the other day Secretary Herbert was represented as breathing a sigh of relief at the safe arrival of the *Detroit* at Rio de Janeiro. She was despatched thither to strike terror to the hearts of foreign intermeddlers, but was so notoriously unseaworthy that it was considered about an even chance whether she would not founder on the way. The chiefs of the various naval bureaus are actively laying the blame for the bungling upon each other, but the practical question of interest to the country is, Why go ahead spending millions on ships which are certain to be obsolete in ten years, even if they are devoid of blunders in construction which make it doubtful if they will float at all?

An answer to this question is given in the last number of the *Engineering Magazine*, in which Lieut. W. H. Jaques, U. S. N., writes of "The United States Navy of 1893." In his article we find a most naïve revelation of the spirit pervading the Navy Department. He admits that all the principal problems of naval construction "are yet surrounded by interrogation points." He acknowledges that "already some of our types seem obsolete." But, he observes:

"This is not unnatural, and should not for a moment stop the good work. On the contrary, it should be an encouragement for further development in the sciences of naval architecture and ordnance, for the granting of more opportunities to the minds who have already accomplished so much, and larger appropriations for the employment of native labor and for the spread of the technical education that is so valuable to the nation and its people."

We may very likely be in for such disasters as overtook the *Victoria*, on account of her "instability and improper distribution of weights"; but never mind that. Our naval constructors must learn by experience, and every such calamity makes it less likely that the next one will come in exactly the same way.

In other words, the view of Lieut. Jaques, and presumably that of the department which he represents, is that the building of war-ships is principally in order to furnish material for repeated experiments. He takes the detached and impartial attitude of a scientist, and reminds one of the physicians who will grow enthusiastic over a "beautiful case" of hydrocephalus, and speak positively of "a most successful operation," irrespective of the fact that the patient died. What does it matter that the *Detroit* had to lie to for two days on her way from Hampton Roads to Barbados, all on account of her faulty construction? We ought to be thankful that the department will not now build any more ships of *that* kind, and that the science of naval architecture is by so much advanced.

In one candid and delightful paragraph, Lieut. Jaques commits himself completely to the doctrine that men-of-war are built principally to furnish occupation to the builders and designers. Speaking of conflicting views among naval experts and of frequent changes of model, he argues:

"These rapid changes are frequently used as arguments for inaction, but they are much less frequent than the returns of hunger that we do not hesitate to satisfy; separated by much greater periods than the seasons for which we provide constantly changing forms and qualities of clothing. But our attention to them is no less important, and the benefits to our industries and people not less useful; as an education, an occupation, a provision for adding to the usefulness and happiness and general benefit of our people; a safeguard and protection against the evils of the wars for which they are designed. Let us hope that these splendid engines may not be needed for other than purposes of occupation, education, discipline."

This is nothing less than the doctrine of final causes which Henry Crabb Robinson reports a Jena professor to have held, namely, that doctors did not exist because of disease, but that there were diseases precisely in order that there might be doctors, and quarrelling litigants in order that there might be lawyers, and miserable sinners in order that there might be clergymen. The lieutenant pushes the thing one step further, and says that war vessels are to be built in order that there may be occupation and education for those who build them.

What is involved for the taxpayers of the country in this amusement of the

constructors is pretty clearly intimated by Lieut. Jaques when he refers to the ridiculously small number of new ships now provided for by law. He says that "these will go but an infinitesimal way towards utilizing the facilities of our many shipbuilding plants." That is to say, if we *can* build ships we *must* build ships. Have not the shipbuilding plants been established in reliance upon the Government to keep them supplied with orders? Have they not a "vested interest" in new cruisers and torpedo-boats and harbor-defenders, and will it not be a breach of faith to make them turn for a living to the building of vulgar merchantmen? We do not see how any true believer in protection can oppose this logical extension of it, and we think the shipbuilders would be justified in getting up a Chilian war-scare every year in order to force a reluctant Congress to vote new ships, as some of them were heard to assert that they had done last year.

Meanwhile, it is likely that a well-informed Washington correspondent is right in predicting that the President's annual message will contain cold comfort for those who want a lot more of naval playthings. With the severest economy absolutely necessary, it is probable that we shall see a great revival of that "prairie idea of a navy" which is so heartrending to all fighting editors. It will doubtless give them acute inward pain, but we fear they will have to accustom themselves to a navy merely sufficient to do our official business, and not one filled with costly failures, or large enough to whip England with one hand tied behind our back.

## AN IDEAL CAMPING-PLACE.

TROUT LAKE, WASHINGTON, August, 1893.

THERE are many excellent trouting and tenting-places in the vicinity of the Oregon and Washington snow peaks, some near the glacial streams at their bases, others part way up their slopes—diverse Trout Lakes and Lost Lakes. Perhaps none of these combines so many advantages as Trout Lake near the foot of Mount Adams. It is reached from Portland by taking the Columbia River boat (ten hours) as far as White Salmon station, where a farmer can be easily induced to hitch up his team and take you to the lake in seven more hours. The Columbia River locks, unluckily, are not yet completed, and passengers are still subjected at the Cascades to the vexatious delay incident to unloading the freight from the lower to the upper steamer. Some changes have been made in the details within the last few years. The Union Pacific boats have been taken off the upper Columbia, so that those who wish to see that part of the river, as far as the Dalles, are obliged to take the boat of the Dalles, Portland and Astoria Navigation Company. The Union Pacific boats used to land on the Washington side of the river and transfer passengers and freight to the upper steamer by means of a primitive railway of about six miles. The new line takes its lower boat five miles further up the river, plunging boldly into the foaming cascades and landing on the Oregon side, where the locks begin, and whence it is less than a mile by rail to the placid safe water above the Cascades. The delay is about the same in both cases, but the trip up the rapids into the lower half of the Cascades—and down again on the return trip—is almost as exciting as shooting the rapids of the St. Lawrence River near Montreal. The disadvantage is that the long-continued rocking of the lower boat while it is being loaded, on the down trip, makes some very sensitive women and, it is said, even a few men, seasick—just at lunch-time, too.

At certain places and in some states of the weather this river does not need the aid of these rapids to make passengers seasick. I have often seen white caps on the upper Columbia, and surging billows as on our great lakes during a storm, with the spray dashing over the bow of the steamer. It is easy to account for this tempestuous wind, which in midsummer is almost of daily occurrence and always blows up the river. Eastern Oregon and Washington are largely a vast desert, where the summer thermometer ranges above a hundred. The hot air rising upward sucks in the cooler ocean and mountain air of western Oregon and Washington through the gap which the Columbia has found in the Cascade Mountains on its way to the Pacific. On the banks of the river this wind sometimes blows so violently that farmers are unable to load their hay, the wind unloading it as fast as it is pitched on the wagon. Squalls are as sudden as on mountain lakes, and residents on the upper Columbia dread crossing in small boats.

Along this "upper" part of the Columbia the scenery is as wild as the wind and waves; it is even more attractive than that between the Cascades and Portland; yet there is danger that in a year or two there may be no boat from which tourists can see and admire it. The Union Pacific Railroad is warring on the new steamboat line which was established by Dalles merchants to reduce extravagant freight rates to Portland. The railroad has now cut rates to an unprofitable point, in order to "freeze out" the boat, and many farmers are shortsighted enough to desert their friend for a momentary advantage. If the railroad company succeeds and returns to its old rates, no one will pity the foolish farmers, but it would be a shame not to have a single passenger steamer on the most romantic and bracing section of our grandest river, were it only until the locks are completed.

White Salmon Landing is simply a sandy curve of the bank encircled by a few trees. Here is some of the most fertile bottom-land, with several farmers to cultivate it. Grapevines flourish on the hot hillsides, and the young orchards are laden with fruit, entirely free from the worm which has done so much harm to the old Oregon apple orchards. The road to Trout Lake is a good one, and although the lake is 1,740 feet above the river, the ascent, except at the beginning, is so gradual as to be almost imperceptible. Settlers are few and very far between. After leaving the stores of White Salmon village, campers will have no more opportunity to lay in supplies except such as farmers can spare them. Along the whole road of twenty-eight miles there are but half-a-dozen visible farms and log-cabin "claims." Nor will you meet more than two or three teams, or perhaps a squaw with her pappoose behind her on horseback, smiling pleasantly as you nod to her, and probably on her way to buy provisions at the Dalles for her party engaged in fishing the white salmon—a small and inferior variety of that royal fish, which white folks do not usually deign to eat. The White Salmon, in which they flourish, is a turbid stream issuing from a glacier fed by Mount Adams. It is too deep and rapid for fording, and is crossed about half way up on a bridge near some low falls. Interest on the road centres in the magnificent forest, now dense with underbrush like an Indian jungle, and again, for miles, like a park—isolated, majestic firs, and yellow pines, without underbrush—strikingly resembling the Arizona forest near Flagstaff. Bears are occasionally seen to cross this forest road, on their way to the river for a drink or in quest of berries or ants. Here and there the trunk of a tree is seen stripped of its bark by bears in their eager hunt for their favorite titbit, the intelligent ant. Strange that so huge a brute should feed on such tiny insects and equally tiny berries, becoming carnivorous or dangerous only when driven by famine or attack. A few timber-wolves still exist hereabouts, and an occasional cougar. The farmers have a habit of turning loose their horses in the forest for months at a time. Occasionally a colt is eaten by a cougar, but they say that a bell around the colt's neck frightens off the beast of prey. That in such a region there are deer and grouse and other game for sportsmen needs no saying. On the flanks of Mt. Adams a kind of grouse occurs almost as large as a turkey, and the tracks of wild sheep or goats have been seen in the snow.

At frequent intervals along the Trout Lake road we come upon rough mounds of porous rock and sections of lava flow, evidence of the former volcanic activity of Mt. Adams. But among all the sights the pleasantest surprise was the mariposa lily or butterfly tulip, growing here in great abundance. It is equal in beauty to all but one or two of the California varieties, from which it differs in color and in having long narrow streamers between the petals. I have often wondered why some enterprising florist does not endeavor to popularize this loveliest of American flowers in New York. It would surely flourish there, for its climatic range is considerable. I have seen it near Mexico, on temperate Catalina Island, on the floor of the Yosemite Valley, as well as near the snows of Cloud's Rest, and now again as far north as eastern Washington, where it adorns the neighborhood of Trout Lake, a region where snow lies many feet deep all winter. Usually this snow disappears early in spring, but last winter the fall was so heavy that it did not all melt till May, and the grand neighboring mountain still had its upper mantle almost without black summer patches as late as mid-August.

On arriving at the lake we obtained Mr. Hoag's permission to pitch our tent in the shade of a group of cottonwood trees flourishing on the moist bank of the creek which flows from the lake. It is an ideal site for a tent—Mt. Adams from top to base in full view on one side and on the other some lower crests and forest-clad flanks of the Cascade Range. Hay for beds and wood for fuel can be obtained at a moment's notice, and water, cold as artesian, dipped from the creek whenever needed, nor is it the muddy outflow of a glacier, but pure spring water. There is no butcher's meat to be had, but plenty of spring chickens, eggs, butter, and vegetables at country prices, all of which, combined with an unlimited supply of trout, quite suffices to avert a Russian famine, even though your "stove" consists of a hole in the ground, a few rocks, and a square piece of sheet-iron. For dessert you can buy berries of the farmers (currants are here almost as large, individually and in clusters, as Delaware grapes), or pick thimble-berries or service-ber-

ries. The latter are not relished raw by some persons, but stewed they are delicious and curiously like stewed cherries in taste; in appearance they resemble blueberries. There are also huckleberries, Oregon grapes, wild gooseberries, raspberries, and blackberries. A zest is given to the outing appetite by the mountain air, which, although the place is but about 2,000 feet above sea-level, has the exhilarating quality that is usually found only at an elevation of 5,000. It is air which compares with that of the western part of the State as sparkling water does with lake water.

Trouting is less of a "sport" here than it was five years ago; that is, an unprincipled, selfish fellow cannot come here and murder three or four hundred trout in a day for the mere pleasure of catching them and throwing them away. But an expert still can "whip the rough surface for trout" and bag over a hundred a day, provided the surface *is* rough. Fortunately this is a windy region, calm days being the exception, for almost daily the stiff breeze from the Columbia River gap ruffles the surface of Trout Lake and Creek. Yet even in a calm day any fisherman of some slight skill can make sure of enough for his three daily meals. When fishing in the creek, it is well to have two hooks on the line; often a grasshopper, periwinkle, or bit of river-clam tempts when the artificial fly fails. For a larger catch the lake is the best place. A boat can be rented for fifty cents a day, and is necessary, as the water near shore is too shoal; indeed, the whole lake is grass-bottomed and rather shallow, so no danger need be apprehended from sudden gusts of wind. The largest fish known to have been caught here in recent years measured twenty-six inches in length; at present half-pounders are the average size. There are at least two varieties, one with white meat, the other pink, somewhat more juicy and richly flavored than the white.

With such fare, fun, and mountain air the ravages of city life are rapidly repaired. There are no troublesome flies, and although on some nights the sanguinary mosquito comes to claim his tithe, an arch of blue netting over the bed enables you to smile at his frantic musical efforts to gore you in the morning twilight. Hornets come as unbidden guests to the table, but they are harmless if unmolested. Equally harmless are the garter snakes that come boldly in quest of fish-heads and other camp refuse. One day I threw the axe at a big one and cut it in two. Before I could reach the head-piece it escaped into the creek. The next day this half-snake was found calmly basking in the sun, thirty feet from the tent. Rattlesnakes flourish at Hood River and White Salmon, but none has ever been seen within fourteen miles of Trout Lake, which is lucky, as they are said to have a neighborly way of nestling for warmth in the blankets of campers on cold nights. They would appreciate blankets in this region, where the summer nights are always cool and sometimes cold, a midsummer frost not being a curiosity. Yet it is rarely cold enough in the evening to make a camp-fire desirable, except for social and ornamental purposes. Nor is there any danger here of being compelled by rain to spend several days in the tent in shivering discomfort, or to make a board floor to prevent the hay-beds from being inundated. They do have summer rains at Astoria, sometimes at Portland too, but never by any chance in eastern Oregon and Washington, shut off as they are from the moist coast air by the Cascade Mountains. Here, as in southern California, the air is so dry and germ-free that meat escapes taint and milk refuses to turn sour. We tried it with a pint placed, with honorable gastronomic intentions, in the sun for four days, but it remained hopelessly sweet, and the corn-cakes had to be left to the imagination.

The greatest attraction of this ideal camping-place is its lion, Mount Adams, whose isolated summit pierces the clouds at a height of some 10,000 feet above the ocean level. It looks that height, every inch, in the daytime, but in the evening, when it turns gray and black, it seems a mere Eastern peak, so much difference does snow make in the grandeur of a mountain's aspect. The direction of the sun also affects its appearance remarkably; in the evening it is only half snow and half bare rock, while in the morning it appears all snow, and the rocks merely faint shadows on it. There are three peaks, the middle being the highest. The ascent can be made from Trout Lake in one very long day, with the aid of a sagacious Indian cayuse (pony), to find the faint return trail at night. There are no dangerous places, and the summit view includes all the peaks and ranges of Washington and Oregon. Clouds have to be taken into consideration in making the ascent; not infrequently they hide the sides, or sail along in splendid Alpine procession. One evening a large cloud, like a white turban, enveloped the head; another evening the clouds hovered massively over the summit, shooting skyward like the steam and smoke over active Vesuvius. There are sunset effects resembling the Swiss *Alpglühen*, and occasionally one can fancy a pink lava stream flowing down the snowfields, carrying back the imagination to the time when Adams was an active volcano, of which period the Indians still preserve the tradition in their legend of the fight between Hood and Adams, when they threw huge stones at each other, and blocked up the Columbia at the cascades by breaking up the natural bridge which, according to their tradition, once spanned it here. These Indian legends cannot be many centuries old, and they suggest the query whether these volcanic warriors will ever again belch forth their jealous wrath in stones and lava streams. Why should they not? Trout Lake is only eleven miles from the base of Adams, and there are numerous antique lava streams in its neighborhood, with other strange phenomena.

It is, indeed, an uncanny sort of place. In walking you will occasionally notice a hollow sound underneath; should you dig down you would probably come upon a cave. There are dozens of caves within a few miles of the lake —sudden holes in the ground into which you can descend and explore to your heart's content. The strangest thing about them is that some are lined with perennial ice. Every one, on hearing of the ice-caves near Mt. Adams, naturally fancies that they must have some connection with the glaciers of that mountain; but they have no more connection with the Adams glaciers than with the Muir glacier in Alaska. Adams has his ice-rivers which are distinctly visible from the lake as large brown spots, from their sandy surface; but this ice melts and forms the White Salmon River, without leaving the mountain side. In one of the ice caves a shrewd farmer stores his spring butter for autumn prices. The largest one known is about five miles from the lake, and can be reached by wagon. The road for the most part goes through a thin pine forest, the ground of which is densely covered with a luxuriant growth of wild hay. One farmer last year cut fourteen loads of this hay, and the region would make an ideal cattle ranch. Yet, although the flanks of Adams are said to have fed 40,000 sheep last year, no animals are seen in this region, which is still unclaimed Government land, not even yet surveyed.

Suddenly, in a perfectly level place, the wagon stops, and on the right there is a hole in the ground. It is only about twelve feet across, and on approaching the edge you will notice a pile of midsummer snow only ten feet below, barely out of reach of a broiling sun. A short ladder leads into the cave, and you are at once in an arctic abode where the sides are lined with thick ice which drips and forms huge icicles. The largest of these icicles, unfortunately, are carried away by farmers and fishermen to market their trout in; some day a guardian will be appointed. Guided by a torch of pitch-pine, one can explore the cave quite a distance on either side of the opening, coming out on the left side at a different hole. As we were studying the cave, an Indian came down the ladder with a tin bucket. He scooped up some ice-water from the floor and carried it to his squaws and children above. Contrary to Indian etiquette, he helped the women before he drank. On one of the ponies sat a girl of about four, who took care of two horses besides her own. Trout Lake is an excellent place to observe the gypsy-like family life of the reservation Indians. They are perfectly harmless, and can usually be relied on not to steal. One day one of them came to our tent with his two boys to beg fish-hooks, explaining that his boys were "no good," as they had lost his hooks. He walked off happy with a few flies, but did not thank me for them; they have learned to say "good morning" and "hallo," but not "thank you." When night comes they roll themselves in blankets, without other covering. In a camp a short distance down the creek we found a squalid old squaw, who tried to explain to us in Chinook and English that the day before had been very windy, consequently many white salmon were caught. Her small boy was munching a dried fish with as much relish as if it had been a stick of candy, and her grown daughter we had seen washing for a farmer. The main feature of the camp was a bower, ready to be covered with blankets and heated with hot stones, for the "old man" to take his air bath in. These Indians assemble hereabouts in considerable numbers during August for the salmon and for the huckleberries. There is one immense patch of these berries, about twenty miles from the lake, where as many as five thousand "braves" collect during berrying time. They have regular horse races, and there is much gambling, in which an Indian often stakes a hundred ponies at once, and, for a last resource, may throw his squaw into the balance. The squaws make mats of rushes, on which the berries are dried; they are then put into a sort of box or basket made of bark, and loaded on the cayuses to be taken to market, or to their store-rooms for home consumption.

About five miles from the lake there is a smaller huckleberry patch which should be visited, both to get a taste of the delicious berries and to see what one of the vast slopes of the Cascade range looks like when you get on it. There is no road, only a rough trail made by and for the Indians, crooked, like all their trails, and sometimes forcing itself among such dense bushes that the overhanging branches almost sweep one off the horse. These bushes are graceful willows, glossy-leaved, aromatic sweet-laurels (often seven feet high), and hazel. The laurel perfumes the air like an Oriental garden, and you can fill your pockets with hazel nuts without stopping the horse. There are

also millions of the dry but well-flavored thimble-berries, peeping from among the broad velvety leaves like pretty scarlet flowers. At an elevation of about 5,000 feet above sea-level we came upon the huckleberry bushes, which covered the whole mountain side. There are several varieties, some as large as small cherries; from three to four gallons have been taken from a single bush, and there was such a profusion that we did not wonder that the Indians we met did not resent our use of their trail and poaching on their preserves. The view from this mountain side includes Adams, Tacoma, and Hood. They were partly veiled by the usual summer smoke, which in a few days became so dense that we pulled up stakes and returned to Portland. From the elevated points we had reached, the superb forests of Oregon and Washington seemed illimitable and indestructible; but what with the annual forest fires and the new method of substituting gun-cotton for the woodman's slower axe, it is doubtful if they will survive another century. *Après nous le déluge.* HENRY T. FINCK.

## THE SOCIAL UNREST IN SICILY.

ITALY, October 15, 1893.

ONCE again the Sicilian question is occupying the attention of the public, the Government, the press; and again the Minister of the Interior has sent Senator Sensalis to institute a fresh "inquiry" into the condition of the agricultural and working classes. This is simply a loss of time, for inquiries have been made during the last twenty years, always yielding the same results—the proofs that misery, ignorance, and superstition are rife throughout the island, and that nothing has been done or even attempted to ameliorate the wretched condition of the people, either in the large towns or in the few rural districts where the agricultural populations are agglomerated. When we say that nothing has been done or attempted, it must not be forgotten that the Government, with Crispi at the helm, did succeed in passing certain beneficial laws on the understanding that they were to be put into execution immediately. The charitable institutions were to be reformed; all the *opere pie* that no longer responded to the wants of modern civilization were to be transformed. Such legacies as provided for the assistance of the poor, the sick, for education or instruction, or for certain families, were to be preserved, but to be reformed and administered by the congregations of charity to be chosen by the members of the municipal councils. The lands, funds, and buildings belonging to the charitable institutions abolished or transformed were to be devoted to hospitals, to orphanages, to the new foundations for waifs and strays, etc., etc. Another excellent law was that relating to strikes. Hitherto the Government, the local authorities, the police had combined against strikers *as such;* as trike being unlawful. Now only intimidation and violence were to be prevented and punished.

Again, the new law on coöperative societies for undertaking public works by the Government, the province, or the commune was excellent. Societies of bona-fide workingmen were to be allowed to assume the works not exceeding a certain sum; they were to be paid every fortnight, a tenth part of the sum to be retained until the works completed should be pronounced "in order." A certain reform of the police was decreed. Then the Crispi Government was overthrown, and the cabinet that succeeded, on the pretext of economy, or simply out of indifference, failed to apply the new laws. Hence the last state of the poor populations is worse than the first. A splendid sanitary code was sanctioned by both the House and the Senate. It provided among other things for the decent housing of the poor—the building of sanitary houses was rendered obligatory. The code remains a dead letter. When the cholera devastated the southern provinces in 1884 in Naples, and in 1886 in Palermo, for Naples the nation voted a free gift of a hundred millions for the *disembowelling* of the awful slums of Porto, Pendino, etc., for the building of large tenements with every apparatus of modern sanitation. This sum has been squandered, pillaged by speculators. Many of the slums were destroyed and the people evicted before any new tenements were prepared for their reception. The slums left standing were sublet by the company to usurers who crowded in double the number of the evicted, making each pay a higher rent. Now the works are almost suspended. The chief culprit withdrew from the society and was made a Senator.

In Palermo the cholera in 1886 carried off in two months 2,500 victims of the very poorest denizens of the *catodi* (one-roomed huts with no windows on the ground floor). If things there have not been carried on with such a total disregard to honesty and decency as in Naples, the habitations of the poor have been but slightly ameliorated, and only in those portions of the city which surrounded the great exhibition. But there, to the shame of the authorities, the huge, unsightly *Teatro Massimo*, which from first to last will cost the city ten millions, is being completed. In that city where, owing to the different system wisely pursued by the authorities, the works are divided into small lots, the coöperative societies of bona-fide workingmen applied for lots. Not one was accorded. In Palermo the charitable institutions are in a sorry plight. Huge foundations for the old, the sick, for orphans, merely serve to feed a horde of administrators. Inquiries have been instituted, and these gross thefts have been proved, but the robbery goes on and the poor are defrauded of their rights. The hospital of that populous city is insufficient for even the few utterly destitute who have no home, no relations to tend them. The foundling hospitals are abominations all over Sicily; the children retained in the buildings die off quickly, those farmed out fare little better, and we might fill pages with the abuses, the cruel sufferings inflicted on the poor by the rich without exhausting the subject. Yet still the climax of horrors is not reached till we come to the agricultural classes, who are literally starving in that fertile soil under that sunny sky.

People call Sicily the Ireland of Italy. It is a telling phrase, but conveys a false idea. The land question in Ireland is simply a question between landlords and tenants. In Sicily it is the question of two-thirds of the population—of the real, actual, sole tillers of the soil—that is at stake. The abolition of feudal estates in 1812 by the barons themselves wrought little or no change in the condition of the peasants, or rather it aggravated the hardships. The barons no longer owned feudal estates, but the estates remained theirs just the same, and, despite the abolition of the laws of primogeniture and of the transmission of land to the male descendants only, very little change has ensued, as the nobility have small families, and the portion (by law one-half of the whole substance must be divided equally among all the children) is generally given in money; the eldest son still continues to inherit the land. The one law which ought to have wrought wonders for the peasants, providing for the abolition of the common right of cutting wood, pasturing flocks, and the substitution of an equivalent portion of the land itself, to be divided among the poor of the commune who used to pasture their flocks and cut wood, has never been executed save in a few communes. The lands handed over to the communes have been usurped by the proprietors, just as were the English commons and open spaces which belonged to the people. Again, all the ecclesiastical property sequestrated by the Government, and sold or let on long leases, which was to create a peasant ownership, was indeed put up in small lots, but the *camorra* at the outset bought up the greater portion, and, where some real peasants acquired small lots, within a few years either the want of capital for cultivation and the enormous land tax compelled them to sell the deteriorated land for a nominal price, or the *fisco* seized it and evicted the proprietor for arrears. Had the land thus concentrated in the hands of a few wealthy individuals been properly cultivated, the peasants would have had at least work and pay; but the old proprietors, the barons, retired from the country altogether—many have never seen their estates. These were let to speculators who knew and cared nothing for the cultivation of the soil. Many of these *gabellotti* live at Palermo, even as do the barons, and their land is underlet in various manners always most oppressive to the tiller of the soil.

They talk of the métayer system, but that, as it is known in Tuscany, does not exist in Sicily. The peasant who has a horse or mule or a donkey, has to plough the soil and to sow it with seed lent by the master, who retakes it, in superior quantity and quality, at the harvest; he then has to weed, hoe, reap, thresh, sift, carry to the threshing-floor; and when all these operations are performed, under the scorching summer heat or freezing winter, the peasant is entitled to one-fourth after paying no end of dues, his portion of the taxes, the soup for the overseer, the priest who comes to bless the grain. Sometimes he gets one-third *on paper*, but generally, as he has had to get subsidies in grain mixed with earth during the winter, he goes home with *il tridente intorno al collo*, with no wheat for winter bread or maccaroni paste, but condemned to live on beans—not haricot, but horse-beans, which form the staple food of the peasantry in Italy. Often his portion of the crops is insufficient to repay the winter debt; then the overseer seizes his horse, or mule, or donkey, and the *mezzadro* is reduced to the ranks of the common laborer. As there are no country habitations, the peasant has to walk miles and miles to and from his work, and, in the summer, camp out for weeks; of water fit to drink, there is none, so he wears out his weary life till fever, malaria, or simple exhaustion from fatigue and want of food ends all with "the happy release."

Travellers who visit the large cities of Sicily, and make excursions in their neighborhood to visit the ancient monuments, the relics of days when Sicily was cultivated as perhaps no land before or since in Italy, when it was the granary of the Roman empire, when whole tracts of soil were known as the hundred-seed plain, may object to these statements as exaggerated, and say, "Why, in the Golden Shell round Palermo, in the nursery kitchen-gardens round Caltanissetta, in the almond plantations below Girgenti, I have seen well-to-do

peasants, working on thriving farms full of pigs, poultry, and milch cows, splendid mules, and strong, if lean, oxen." This is true, for round all the cities of the seven provinces the land is highly cultivated and irrigated. If it formerly belonged to the feudal lords, it is retained still by their descendants. If, instead, it happened to be sold to some private individual at the time of the dispersion of ecclesiastical property, you may be sure that he has kept hold of it, farms it well, and pays his laborers at least decently. In the first place, public security close to large cities is generally safeguarded so that the proprietor can visit, even live on his farm; then, he finds ready market for his produce, be it wine, oranges, lemons, live stock, or cereals. But these small tracts are exceptions to the rule in comparison with the immense *latifondi*, where you find neither trees nor water nor habitations. These perfections only show the general defection; the state of the peasant who works on them proves what a fine, robust race it is which is now being gradually deteriorated. These things were repeated *ad nauseam* in the grand agricultural inquiry set on foot by Bertani, and which for Sicily alone occupies five folio volumes of six hundred pages each, in the works of Sonnino and Franchetti, in numerous other works, and the result is that the peasant population is far worse off now than under the worst days of the Bourbon. For in the bad old days the rich and not the poor were taxed; now it is the tax on consumption, on grain, wine, meat, eggs, poultry, vegetables — even the sticks that the poor go out to pick up—that takes their last mite; this, and the rent for the pigsties in which they herd together.

What wonder, therefore, that, after waiting painfully for thirty years for the signori to do something for them, these very peasants and the miners, whose lot is still harder, have decided to do or to attempt to do something for themselves; that they lend a willing ear to the only leaders who have cast in their lot with them, and resolved to stand or fall together? I allude to the formation of the Fasci dei Lavoratori, whose societies are increasing in every town and village in the island, whose numbers, amounting to over 300,000, have fallen like a thunderbolt from a cloudless sky on the very signori who have been fattening and thriving on the charitable institutions, on the land that belongs to the people. When I was in Sicily two years since, I had opportunities of conversing freely with every class of Sicilian, and, with the aid of the *medici condotti* and doctors in general, arrived at a pretty clear understanding of what were the feelings of the lower towards the higher orders of creation, and I was quite prepared for any amount of combination and resistance on the part of the workingmen, and especially of the miners. But no aftermath of knowledge can make me believe that I then thought the peasants would be the first and foremost to combine, to contribute their money towards a scheme which only promises to better their lot in the future. They seemed too patient, too hopeless, too resigned, in Mohammedan fashion, to the inevitable. The younger men, indeed, especially those who had served their time as soldiers, muttered curses low and deep when an overseer was unusually insolent or they were defrauded of more than the usual share; but between this and the gigantic union now formed there seemed an abyss. The leaders of the Fasci have merely given a voice to the ever less and less inarticulate groanings, moanings, and curses. The leaders call themselves collectivists, socialists, not anarchists; these they disclaim, and forbid to membership, maintaining that as order is the law of the universe, as disobedience to the laws of nature has produced all the evils from which humanity now suffers, from anarchy and confusion nothing but confusion and anarchy can result. Neither are they republicans or puritans. No, they take things as they find them, and for the first time in their history are really teaching the people the power that lies in numbers, who shall vote all, vote all together, vote for the candidate whom the majority of the members shall decide on. It is extraordinary that, in so short a time for propaganda, they should have gained so much influence as to be absolutely obeyed. During the last administrative elections many of the candidates of the Fasci were duly elected, and now sit on the city councils. One of these, Signor Petrina, whom I last saw in prison at Milazzo, where he was undergoing a long sentence as a socialist, is now bringing home to the municipality of Messina certain deeds of evil—peculation on a large scale—in a fashion that is little to the liking of the signori who are his colleagues.

The attitude of the upper and middle classes in the island itself is abject; they seem terrified, paralyzed. The members of Parliament, with two exceptions, simply urge the Government to send large bodies of troops, on the pretext of restoring public security, but in reality to arrest the leaders of the Fasci and disperse the members of the societies. Two Sicilian members have spoken freely, and have laid the case of Sicily before the House with precision and no exaggeration; these are the member for Catania, Gioffredo de Felice, whose conduct since his election has won for him golden opinions from adversaries and honest men who in the early part of his career deplored his methods; and the famous Colaiani, a man of high integrity and strong intellect, who is a socialist and a collectivist, but who deprecates any propaganda which shall stir up the people to revolt before the time when they can effect a triumphant revolution. But the Government seems to take no heed of the warnings given. While the state of public insecurity is such in the province of Palermo, Cattaneo, and Syracuse that neither proprietors nor peasants are safe on the high road; when syndics are sequestrated and liberated only on the secret payment of large sums to the malefactors; when poor fishermen are robbed and murdered, carters beaten and left for dead (which facts show that the miscreants are vulgar thieves without even the courage of the old brigand of romance); when the Government and the local authorities are unable to cope with this state of things—when the murderers of Notarbartolo are undiscovered, and the pillagers of the provincial treasury of Caltanissetta unpunished—the concentration of the efforts of the police on the arrest of the leaders of the Fasci and on the dispersion of the members is pitiful, contemptible, dangerous.

What are the objects of these associations—the union of the workingmen, of the miners, of the peasants? The workmen seek to obtain better wages from employers, or to form cooperative societies, in which the workmen shall enjoy all the profits of their labor; the miners to insure a minimum price—a sliding scale in certain parts—so that a fall of prices in sulphur shall not affect the miners' wages only. Many insist that the mining law which denies private ownership in mines in other portions of Italy be applied to Sicily. The peasants demand an entire revision of present agricultural contracts by which the peasant, if he cannot hope to receive a fair half, shall at least not be mulcted of his fair third. The peasants have defined their intentions with extraordinary precision, though one is often puzzled to translate their demands into Italian, still less into a foreign language. There is nothing revolutionary in them, but the owners and tenants have refused to grant them. In some districts the peasants struck, and as they had induced the *pastori* and herdsmen to join them, many had to give in and the peasants went to work as usual. The strikes are perfectly legal, unaccompanied by violence, yet the Government has ordered the arrest of many of the chiefs. After a few weeks or months of imprisonment, all have been set at liberty because no cause has been found to send them before a court of assizes. The one text of these chiefs to their followers is: "No violence; keep within legal limits!"

It has been said in some of the Italian papers that the Sicilians are meditating separation from the continent. This is untrue. What they have claimed from the first is a certain autonomy which Mazzini, the most absolute and rigid unitarian, admitted to be necessary in a certain degree for the islands. Sicily cannot be governed from Rome any more to-day than in the olden times when the great slave wars kept Rome at bay. The men who represent Sicily in Parliament are not the chosen of her people, with very few exceptions, but Government candidates, who succeed by Government corruption, by the interference of the police, who ought to be looking after thieves, blackmailers, vagabonds, and evildoers in general. And Italy does ill thus to neglect and ill-treat the patriotic population of the island which has ever sided with Europe against Africa, with civilization against barbarism, and which now, with France in possession of ancient Carthage, with ports and military stations everywhere on the opposite coast, will still be Italy's bulwark in the struggle that seems inevitable and may soon commence. The Sicilians are Italians to the backbone; the present movement of the masses is not directed against Italy, but against the classes who oppress them. The most extraordinary feature of the movement is the entrance on the scene of Sicilian women. Hitherto women in Sicily have kept aloof from all political or social questions; now they are foremost in the fray. They have formed their own *Fasci*, the female sections being separate from those of the males, and are the most enthusiastic attendants at the conferences. They support their husbands during their strikes, scoff at the spies or agents who go to learn something of the men's movements, and, on being asked why they neglect the Sunday mass, answer that "they learn more useful things at the Fasci." The very name seems to fascinate them; Garibaldi always used it to promote union. "Form your Fasci," he would say, and tell the story of the bundle of faggots, and then dilate on the importance of that symbol of union among the Romans.

Hitherto the poor peasants, isolated, suspicious one of the other, have been dominated and despoiled; now that they are united, it will be difficult to crush them. Senator Sensalis is a Sicilian, has been prefect in various provinces, was successful in discovering a real association of malefactors in Girgenti, called the Fratellanza, or brotherhood. The chiefs of the Fasci present themselves to him, and as yet he seems more impressed by the general misery of the populations than by the danger of the associations. The cholera in Palermo continues, but the victims are few, owing to the amelioration of the sanitary re-

gulations; nevertheless its presence is detrimental to commerce and industry. The agrarian crisis, the low price of sulphur, the phylloxera and other maladies affecting the vines, all tend to aggravate the situation, while the rigorous application of the income tax—its increase in some parts—falls heavily on the small traders and families with limited incomes.

The outlook is gloomy indeed, and not only for Sicily but for the whole of Italy. On the continent, however, the crops and the vintage have been on the whole excellent; while in the island the extreme drought has spoiled the corn, barley, and fava bean crops. To-day the prime minister, Giolitti, is to expound his financial and political programme at Dronero. Never was there more needed in Italy a great statesman, versed in finance and in administration, who should be able, by his integrity and ability, to command a working majority in the House, representing the various classes and interests in the country. At present, no signs of such a man appear on the horizon, and the enemies of the new kingdom at home and abroad seem preparing to take advantage of the situation. J. W. M.

## ISOCHROMATIC PHOTOGRAPHY AND VENETIAN PICTURES.

VENICE, October 14, 1893.

AT last we are to have good photographs of the great pictures at Venice. Those who care for Venetian art will rejoice to hear that two of the best photographers in Italy, Alinari Brothers of Florence and Domenico Anderson of Rome, have been hard at work all the summer and autumn photographing the most interesting pictures in Venice and neighboring towns. The difficulties in the way are immense, and they are not usually understood by any but the initiated. In the first place, many of the finest pictures left upon the altars for which they were painted are practically invisible. Even at the hours at which Baedeker advises or the local guide takes you to see them, they are often mere dim outlines, hidden in the gloom of overhanging arches or deep cornices. Or else the restorer's brush has converted them into sparkling mirrors of dusty varnish which are far more tantalizing than enjoyable. Every one will remember the impossibility of getting a good look at the great Bellini in San Zaccaria, and the Titian in the Gesuiti, the miseries of dazzling lights and obscuring shadows that make a visit to the Scuola di San Rocco a mingled cup of delight and discomfort, and the disappointments that attend the attempt to peer through the darkness that hides such pictures as the Bellini at San Francesco della Vigna, or the Sebastianos in San Bartolommeo in Rialto. The splendid series of Tiepolos in San Polo is absolutely invisible except by candle-light. The Bellini of the Frari, Tintoretto's "Marriage in Cana" in the Salute, and a hundred others that it would be tedious to enumerate, are placed directly in front of windows, so that the glare of light practically blinds the eye to the details of the picture.

Even in the Academy things are little, if any, better. On a rainy day there is no light at all, and, when the sun shines, the curtains are quickly drawn over the skylights of the large rooms, reducing the Carpaccios and Gentile Bellinis, the Tintorettos and Bonifazios, to dim ghosts of themselves, in order, forsooth, that a ray of sunlight may not fall on the upper corner of a tenth-rate skied Mansueti! The great "Pietà," Titian's last masterpiece, begun in his ninety-sixth year, is so placed between the reflecting lights of two windows and a door that an impatient critic like Mr. Kenyon Cox may almost be excused for comparing it contemptuously to old cheese.

But if this state of things is hard upon the ordinary sightseer, it is harder still upon the photographer and upon the connoisseur. For the two go to a great extent hand in hand. Printing itself scarcely could have had a greater effect on the study of the classics than photography is beginning to have on the study of the Old Masters. If most people are still incredulous about the possibility of giving a rational, systematic basis to the criticism of art, it is largely due to the fact that until very recently any accurate comparison of pictures was out of the question. The basis of connoisseurship is the assumption that an artist in his work develops steadily and gradually, and does not change his hand more capriciously or rapidly in painting than in writing. Unsigned works, therefore, are ascribed to this or that master, as are fragments of the classics when they come to light, by fancied or actual resemblances to signed or otherwise perfectly authenticated works. But the hitch in connoisseurship has always been in comparison. In the days of slow travel, when there were no photographs of old pictures to be had, the connoisseur was obliged to depend largely upon prints. But a moment's comparison of even the best print with its original will show how utterly untrustworthy and even misleading such an aid to memory must be. No engraver, however well intentioned, can help putting a great deal of himself into his reproduction. His print has no other value than that of a copy. The connoisseurs and art historians, therefore, who had to depend on prints, no matter how good a general notion of a painter's various compositions they might have drawn from this source, could have next to no acquaintance with those subtlest elements in his style which distinguish him from the mere copyist or clever imitator.

Is it surprising, then, that really accurate connoisseurship is so new a science that it has as yet scarcely found its way into general recognition? Few people are aware how completely it has changed since the days before railways and photographs, when it was more or less of a quack science, in which every practitioner, often in spite of himself, was more or less of a quack. Quackery in the criticism of art is unfortunately not less common now than it was then, but the difference is that the quack no longer has the least excuse for himself. Of the writer on art to-day we all expect not only that intimate acquaintance with his subject which modern means of conveyance have made possible, but also that patient comparison of a given work with all the other works by the same master which photography has rendered easy. It is not at all difficult to see at any rate nine tenths of a great master's works (Titian's or Tintoretto's, for instance) in such rapid succession that the memory of them will be fresh enough to enable the critic to determine the place and value of any one picture. And when this continuous study of originals is supplemented by isochromatic photographs, such comparison attains almost the accuracy of the physical sciences.

To realize what a difference has been made in art study by railways and photographs, one need only compare three writers on Raphael, each of them epoch-making in art history. Passavant's researches were undertaken before the present development of railways and before photography had been applied to the Old Masters. His work, therefore, is so unsound that to-day it no longer has any value. Even his æsthetic criticism, based as it was on a perfectly inadequate acquaintance with the subject, generally rings false. Cavalcaselle also had the misfortune of having taken his notes and formed his method before photography could aid him. His consequent satisfaction with the *à peu près* robs his work of all those delicate distinctions which make the difference between criticism and indiscriminate praise or blame. Morelli was the first critic who made systematic use of photographs, and the overwhelming superiority of his work from the point of view of connoisseurship is so great that even his bitterest opponents have been obliged to adopt most of his conclusions.

Morelli, however, as a student, gave somewhat disproportionate attention to the study of drawings and of the Tuscan painters, interesting himself much less in the Venetian school. It could scarcely have been otherwise until three or four years ago. The old system of photography was, even in the hands of the best operators, incapable of rendering the values of the colors—only fit, at the best, to give an accurate notion of the outline. Drawings consequently were photographed pretty satisfactorily by the old system, while paintings as a rule came out wretchedly. This was less true of the Tuscans, because in their works the line is of much greater importance than the color. But for the Venetians, who depend more upon color than upon line, this system was totally inadequate. Isochromatic photography alone is capable of keeping the relative values of the different colors. Ordinary photography, by changing blue to white, and red and yellow to black, distorted and confused a portrait to such an extent that it was no longer recognizable. To obviate this difficulty, the photograph was freely retouched by ordinary operators destitute of special artistic talent, and so departed farther and farther from the original. Even an engraving gave a better idea of Titian or Tintoret than photographs of this kind, such as Naya's, for instance, for the engraving was executed by a person with at least some pretence to art culture. Even until recently it seemed so impossible to get a good reproduction without retouching, that it occurred to an eminent engraver, Mr. Cole, to devote his talents to this work—for his engravings from the Italian masters are nothing but photographs retouched on the engravers' block by an artist, instead of on the negative by a mere operator.

Those, however, who wished for accurate impersonal renderings of the Old Masters continued sighing for photographs of pictures at Venice such as have been made of the Louvre, the National Gallery and Dresden by Braun, of Berlin by Hanfstängel, of Vienna by Löwy, and of Milan by Marcozzi. It is true that perhaps more Venetian masterpieces are to be seen abroad than in Venice. Yet the pictures at Venice happen to be peculiarly useful to the student because of the undoubted authenticity of many of them, and peculiarly desirable for the ordinary tourist, whose acquaintance with Venetian painting usually begins and often ends in Venice itself. It is therefore most welcome news to hear that two such splendid photographers are already in the field.

The Alinaris are too well known a firm to need description. Suffice it to say that they have set to themselves the noble task of photographing isochromatically every good picture in Italy. They have already done most of Tuscany and Naples, and have just finished

Padua, Vicenza, Treviso, and even Castelfranco, so that at last everybody can have a perfect reproduction of Giorgione's one absolutely authenticated work. Anderson, although more of an artist, is less known. He devotes himself entirely to photographing pictures, and his reproductions are in consequence more satisfactory than those of any other photographer. They render the values to perfection, keep the tone, and are scrupulously faithful to the line. Leaving out the color, they are the pictures themselves on a smaller scale. Part of his extraordinary success comes from the fact that he always develops and prints them himself, and, having a good artistic memory, he is able to bring out in them, by careful exposure, just the tone that best recalls the original. Printed darker, that effect would be lost; printed too light, they would not recall the reality.

But the difficulties do not begin and end with the printing. What patience it takes to discover exactly the right moment for reflecting the light from a church window or door upon some hidden treasure, what skill it requires to balance the mirror so that the reflected light never dwells too long upon one spot; and, above all, what science is necessary to focus so that every part of the picture comes out with equal clearness! To photograph a picture is far from being the mechanical pursuit the Italian Government evidently considers it, putting all sorts of annoyances in the photographer's way, laying ridiculous taxes on his work, as if it were an unskilled trade, and giving him no proper guarantees for his copyright. In the light of all these difficulties, and considering the importance of photography in art study, such photographers as Alinari and Anderson are regarded by students with something of that gratitude entertained for Aldus and his sons by the scholars of the sixteenth century. B. Berenson.

# Correspondence.

## THE AMERICAN PROTECTIVE ASSOCIATION.

To the Editor of The Nation:

Sir: I have as yet seen no reference in the *Nation* to the very remarkable movement in progress in some of our States. The memorial presented in the House of Representatives, in Washington, from Mr. Youmans, former member of the House from the Eighth Michigan District, who claims to have been defeated by the efforts of a secret, oath-bound, anti-Catholic, political society, known as the American Protective Association, has called the attention of the whole country to the matter. The movement has been in progress here for some time, and a brief report of it may be of some interest to your readers.

When it began cannot be told with exactness. It has certainly been in operation over a year. The methods employed have been as follows: Documents, purporting to be authoritative utterances of the Roman Catholic hierarchy, were passed from hand to hand. No one could tell where these had been printed or who was responsible for them. One was entitled "Instructions to True Catholics"; another purported to be an encyclical letter from the Pope, calling upon the faithful to rise on a certain date (September 13) to massacre all Protestant heretics. Certain newspapers, filled with similar literature, with the most alarming reports of Roman Catholics drilling and arming in preparation for an outbreak, and making the most shocking charges against priests and nuns, were sent to prominent persons and distributed from hand to hand. Accompanying these were the most exaggerated reports of the number of Roman Catholics holding public office. It was said that they practically controlled our municipal, county, State, and national governments, and that this was part of a deep scheme to capture the entire country. Protestants were urged to organize to resist the nefarious design. Councils of the American Protective Association were organized. To-day they claim ten thousand members in this city of one hundred thousand inhabitants. One public-spirited clergyman, the Rev. Washington Gladden, denounced it from his pulpit. No doubt this courageous action did something to check its progress, but it had already attained great headway. Several ministers identified themselves with the association, and sympathetic addresses were publicly made. An exposé of the inner workings and obligations of the order was published, the material having been secured, it was understood, by the representatives of a detective agency. There can be no doubt that each member takes an oath to boycott all Roman Catholics, politically and industrially. The exact words of the oath are—"that I will not employ a Roman Catholic in any capacity, if I can procure the services of a Protestant," and "that I will not countenance the nomination, in any caucus or convention, of a Roman Catholic for any office in the gift of the American people, and that I will not vote for, nor counsel others to vote for, any Roman Catholic, but will vote only for a Protestant."

The organization has already had influence in local politics, and not a little excitement has been stirred up. There can be little doubt that it has captured the local Republican organization. This, at least, is certainly true, that the Republican politicians are using it. The principal newspapers have said nothing either in condemnation or approval. They are evidently waiting to see which way the wind will blow. Stranger still, many of the ministers, chiefly of the Methodist and Baptist persuasions, get the credit of being members. How they reconcile the oath with the teachings of Christ, of which they profess to be expounders, doth not yet appear.

Advices from other places show that the movement has been pushed by precisely the same methods as here—forged documents, lying misrepresentations, and newspapers that should be a hissing and an amazement wherever there are public schools. Some communities have been almost panic-stricken in anticipation of an uprising of the Roman Catholics to murder Protestants. The movement has been rampant in the cities of Ohio, Michigan, Wisconsin, Iowa, and Indiana. It has appeared in St. Paul and in Kansas City. It has been working eastward, and is now in Buffalo, N. Y. Altogether it has been a most singular and astonishing revelation of the ignorance of many people in our enlightened communities, and a new evidence of the strength and tenacity of religious bigotry. Let us hope that we may have an investigation from Congress that will reveal it to the whole country. Such a movement grows in darkness and perishes in the light.—Respectfully yours,

Alexander Milne.

Columbus, O., October 31, 1893.

## MEDICAL EXAMINERS FOR PENSIONS.

To the Editor of The Nation:

Sir: To a person who, like this correspondent, has had occasion as a private medical adviser to see great numbers of pensioners, the justice and good sense of "B.'s" article in No. 1478 are apparent. It is easily seen how the members of the pension boards may be influenced by the fact that the examiners are dependent, as private practitioners of medicine, upon the claimants and their friends. It is a fact that there is no guarantee of even a moderately fair medical education in the possession of a diploma or the license of a State board of examiners. The only class of medical practitioners of whom the public can know that the members are thoroughly qualified, is that of the medical corps of the army and navy, and these men are independent of the pension-seekers.

The reform is highly needed in the interest of the Treasury, but yet more in the interest of public morality.—Respectfully, H.

Minneapolis, October 28, 1893.

To the Editor of The Nation:

Sir: The complimentary suggestion (*Nation*, No. 1478) that the medical officers of the army and the navy would be suitable examiners of applicants for pensions, leads to the comment that the majority of the army medical officers are west of the Mississippi, where the civil population is sparse. Those who are at more eastern stations are too few and far between to avail. There are very large areas with masses of population and, presumably, multitudes of applicants where no medical officers at all would be accessible. Where they are stationed within reach, as at Fort Sheridan, Ill., Columbus, O., West Point, N. Y., and the artillery garrisons near the cities on the coast, their time is fully occupied with their current work. To undertake in addition that proposed would interfere with their efficiency in both. Frequent or irregular absence from their stations would be detrimental to the public service. It will not do to assume that their time is not pretty well occupied already.

As to the medical officers of the navy, the conditions appear to be similar. Those at sea would, of course, be unavailable. Those on shore duty are scattered along the seaboard. Those awaiting orders or on leave might be supposed available; but they are not numerous, and such assignments would change their official status and might derange their regular tours.

In fact, both bodies combined do not make a large number.

A Medical Officer of the Army.

October 28, 1893.

## PEOPLE'S BANKS.

To the Editor of The Nation:

Sir: The reviewer of "People's Banks," by Wolff, in *Nation* No. 1478, says: "We are unable to give implicit credence to his statements. Some of his information, however, is evidently trustworthy," and closes with the wish that the author might be encouraged to continue his studies and later publish more facts and less "hearsay and imagination"; as though statistical information of a thoroughly reliable nature were still not only desirable but inaccessible. Please allow a subscriber to call public attention to certain articles bearing on the subject of Mr. Wolff's book which may be found in many private and in most public collections of economic literature, and which are therefore reasonably accessible. It is true, I have not had opportunity to verify the articles, but they are published under circumstances that strongly commend them to stu-

dents of economic literature. I refer to articles in the *Handwoerterbuch der Staatswissenschaften*, edited by Profs. Conrad, Lexis, and others (noticed *passim* in the *Nation*, volume 52), viz., articles on Raiffeisen, volume v., p. 340; Schulze-Delitzsch, volume v., p. 600; "Darlehnskassenvereine," volume ii., p. 906; "Kreditgenossenschaften," volume iv., p. 880; "Konsumvereine," volume iv., p. 838; "Erwerbs- und Wirtschaftsgenossenschaften," vol. iii., p. 308.

Readers who have to depend on works in English would appreciate an estimate of Wolff based on a comparison with the authorities cited.—Respectfully,

FREDERICK W. MOORE,
Adj. Prof. of History and Economy.

VANDERBILT UNIVERSITY,
NASHVILLE, TENN, October 31, 1893.

## THE TRIBE OF ATHLETES.

TO THE EDITOR OF THE NATION:

SIR: In the course of my reading I have met with the following lines from the "Autolycus" of Euripides, which I transcribe as translated in Symonds's 'Greek Poets.' Euripides, it is said, was educated to be an athlete; his words, therefore, have especial force, and perhaps are worthy of the attention of our college presidents and trustees, and of that small body of students who, in the present-day revival of athletics, are hoping and working for a revival of learning.—Yours truly,

HENRY RUTGERS MARSHALL.

October 31, 1893.

"Of all the thousand ills that prey on Hellas
Not one is greater than the tribe of athletes;
. . . . . .
How to be poor and row in fortune's boat
They know no better; for they have not learned
Manners that make men proof against ill luck.
Lustrous in youth, they lounge like living statues
Decking the streets; but when sad old age comes,
They fall and perish like a threadbare coat
I've often blamed the customs of us Hellenes,
Who for the sake of such men meet together
To honor idle sport and feed our fill;
For who, I pray you, by his skill in wrestling,
Swiftness of foot, good boxing, strength at quoits,
Has served his city by the crown he gains?
Will they meet men in fight with quoits in hand,
Or in the press of shields drive forth the foeman
By force of fisticuffs from hearth and home?
Such follies are forgotten face to face
With steel. We therefore ought to crown with wreaths
Men wise and good, and him who guides the State,
A man well tempered, just, and sound in counsel,
Or one who by his words averts ill deeds,
Warding off strife and warfare; for such things
Bring honor on the city and all Hellenes."

## COLUMBIAN EXPECTORATION.

TO THE EDITOR OF THE NATION:

SIR: The feeling and appropriate letter of your correspondent on the subject of "Columbian Expectoration" recalls a deliciously unconscious bit of description of manners which unfortunately cannot be called local, that was to be seen (and still is, for all I know to the contrary) at the Natural Bridge in Virginia. The narrow country road runs close below the wide pleasant veranda in front of the second-story bar-room—so close as to prevent the Jedge or the Colonel or the casual Northern visitor, with his feet on the railing, from seeing what is passing below. A modest sign reads: "Gentlemen will please look over before you spit." E.

BOSTON, November 4, 1893.

# Notes.

THE 'Life and Letters' of the late Mrs. Lucy Stone will be compiled by her daughter, Alice Stone Blackwell, who requests the loan, for copying, of any characteristic letters of her mother. Miss Blackwell's address is Dorchester, Mass.

Houghton, Mifflin & Co. announce a book of 'Pastoral Offices,' for marriages, baptisms, funerals, etc., by the Rev. Dr. William H. Furness.

Stone & Kimball, Cambridge and Chicago, make their début as publishers of somewhat elegant books with 'First Editions of American Authors,' by Herbert Stuart Stone; 'The Holy Cross, and Other Tales,' by Eugene Field; 'The Building of the City Beautiful,' by Joaquin Miller; and a new edition of 'His Broken Sword,' by Winnie Louise Taylor.

Ginn & Co. will have ready this month 'A First Book in Old English,' by Prof. Albert S. Cook of Yale.

Geo. Gottsberger Peck will shortly publish 'On the Cross,' a romance of the Passion Play at Oberammergau, by Wilhelmine von Hillern, translated by Mary J. Safford.

The autumn announcements of William Heinemann, London, include translations of Tolstoi's 'The Kingdom of God' (by Constance Garnett), Waliszewski's 'Romance of an Empress' (Catherine II. of Russia), Paul Gaulot's 'Marie Antoinette and Count Fersen,' under the title 'A Friend of the Queen,' and Émile Michel's 'Rembrandt' (by Florence Simmonds); a 'Life of Heinrich Heine,' by Richard Garnett; 'Letters of S. T. Coleridge,' edited by Ernest Hartley Coleridge; 'Stray Memories,' by Ellen Terry; 'Rousseau, and Education according to Nature,' by Paul H. Hanus; 'Horace Mann, and Public Education in the United States,' by Prof. Nicholas Murray Butler; and 'My Paris Note-book,' by the little-scrupulous author of 'An Englishman in Paris.' The same publisher undertakes 'Songs on Stone,' a series of lithographic drawings in color, by J. McNeill Whistler.

F. W. Christern sends us prospectuses of a 'Recueil de Cartes, Plans et Vues relatifs aux États-Unis et au Canada: New York, Boston, Montréal, Québec, Louisbourg, 1651-1731,' reproduced from inedited sources in the Bibliothèque Nationale as a contribution to the Columbian centenary, and published by E. Dufossé, Paris; and of Adolf Furtwängler's 'Meisterwerke der Griechischen Plastik,' illustrated in a superb manner, often from examples of recent discovery or in private collections.

Since the sale of the Soleinne library just fifty years ago, no such collection of books about the stage—more particularly about the stage in France—has come on the market as that of the late Baron Taylor, which is to be sold the last week of this month in Paris. The catalogue has been prepared by the successors of M. Techener. Among the rarities is a play on "Judas Maccabeus" in the autograph of Calderon. The list abounds in curiosities, among which may be noted "Il Cromvele," a tragedy published in Bologna in 1671, and three French translations of Addison's "Cato."

Each year, for some years past, the Christmas number of *Harper's Magazine* has contained an elaborately illustrated article by Henry Van Dyke on some phase of Christian art connected with the infancy of Christ, from the Annunciation to the Dispute with the Doctors. These articles are now united in a volume which its subject and its pictures make an especially appropriate gift-book. Doubtless, also, the text will be pleasing to many. The author should not be confounded with John C. Van Dyke, the art critic and author of 'Art for Art's Sake,' whom he quotes in his preface.

Houghton, Mifflin & Co. have made a dainty little holiday volume (in the prevalent white covers) of Longfellow's 'Hanging of the Crane, and Other Poems of the Home.' It is beautifully printed by the Riverside Press and illustrated by eight little plates, by one of the photogravure processes, after various artists. The artists' names are not mentioned, and one must make out the signatures to be sure with whose work one is dealing. One of the cleverest is the illustration of the title poem by C. Carleton, who is not yet as well known as he is likely to be.

Two more volumes have appeared of the new Riverside Edition of Thoreau's Writings, namely, 'Cape Cod' and 'The Maine Woods,' and with the latter theme, at least, the dark green covers of this comely series are quite in harmony. Houghton, Mifflin & Co. have also put out a new two-volume edition of the 'Autocrat of the Breakfast-Table' illustrated by Howard Pyle, and it is much to say for this artist that he has not marred the classic text by his restrained decorations and his clever full-page designs in photogravure. He sticks very closely to the Autocrat's personality, introducing the well-known face whenever called for, and has succeeded in adding with a free and sympathetic hand two acceptable portraits to the list of frontispieces to Dr. Holmes's works, after sun-pictures at different ages. For the rest, Mr. Pyle's imaginings are chiefly antiquarian, as become his own chosen style and his present author and book. Altogether we think no better presentation of the 'Autocrat' has yet been made.

Other holiday editions of well-known books are Thomas Nelson Page's 'Meh Lady,' with drawings by Mr. Reinhart (Scribner), and Sheridan's 'Rivals,' with many rather feeble drawings and five "aquarelles," all by Frank M. Gregory (Dodd, Mead & Co.).

Dodd, Mead & Co. have also brought out a very handsome edition of Maxime de la Rocheterie's 'Vie de Marie-Antoinette,' a book in which an honest effort is made to present a true picture of that unfortunate queen, so bitterly maligned by some, so fulsomely praised by others. A perennial interest attaches to the revolutionary period in France; and the scenes of that fearful time, together with the part the queen played in them, are related with a moderation and an earnest striving after impartiality which are highly satisfactory. The work is well translated by Mrs. Cora Hamilton Bell, and admirably manufactured. The illustrations are good and well chosen, the paper and the type of excellent quality; but why allow a blemish on the very first line of the title-page?

Daudet's 'Lettres de mon Moulin' is also made accessible in English and in equally handsome garb by the same firm. Apart from some absurd misapprehensions of the French original, the translation in no slight degree conserves the charm of the peculiarly captivating style of Daudet in these ever delightful pages. It is the work of Mr. F. Hunter Potter. The full-page colored illustrations, by Madeleine Lemaire, are showy, but mostly weak and inapt. Some of the headpieces by G. W. Edwards are good—not all, or nearly all. An excellent portrait of Daudet is prefixed to the volume.

'To Gypsy Land,' by Elizabeth Robbins Pennell (The Century Co.), gives us an account of the adventures and impressions of the author in her visits to gypsies, first in the United States and then in Hungary. The conclusion she reaches is that we can find the more interesting and romantic types of the race in this country; and she protests indignantly against the measures of the Hungarian Government to domesticate a people who have been vagrants

for centuries. The book does not amount to much, but, thanks to a charmingly bright style, it makes a couple of hours' pleasant reading. The profuse illustrations are by Joseph Pennell.

We have already praised Mr. E. F. Knight's 'Where Three Empires Meet: A Narrative of Recent Travel in Kashmir, Western Tibet, Gilgit, and the Adjoining Countries' (Longmans), and we are glad to see that it is now reissued in a third and less expensive edition, still retaining the map and the fifty-four illustrations.

'Clear Round,' by E. A. Gordon (London: Sampson Low), is not very much worse or better than the average volume in the annual crop of books produced by tourists round the world. Canada, the Pacific, Japan, China, India, Egypt were visited, and are described with no originality of view or note of things not usually seen. The author is very English, and rakes up a good deal of exploded nonsense about the Dutch in old Japan, besides adding new inaccuracies. Appendices of notes, an index, a map of the Canadian Pacific Railway, and a few illustrations do not redeem the book from commonplace. One pleasant feature is the happy application of thoughts and fine phrases from the English poets to things seen and heard in Asia, while the general style is bright and pleasing.

The International Limited edition of the Waverley Novels issued in this country by Estes & Lauriat has reached the nineteenth volume with 'Ivanhoe' and 'The Monastery' in two volumes each. For the former, M. Ad. Lalauze has furnished the etched illustrations; for the latter, Mr. Gordon Browne the designs —the one weak in his figures so far as they are meant to be expressive and characteristic; the other vague as possible in backgrounds and accessories, in which the decorative French artist excels.

The pallid history of 'Woman in France during the Eighteenth Century,' by Julia Kavanagh, and the pallid historical romance of 'Old Court Life in France,' by Frances Elliot, have been launched anew by G. P. Putnam's Sons, in good print, and with portrait illustrations sufficiently harmonious in quality. Each fills two volumes, and so does Mrs. Gatty's fantastic 'Parables from Nature,' from the same house, with some embellishments (rather than illustrations) from a French source.

It is gratifying to receive the third extended 'Index to *Harper's Monthly Magazine*.' The last, published in 1886, covered the first seventy volumes, and was printed in odd pages, to allow for additions on the blank even pages. The latter have now been used to accommodate the contents of vols. 71–85, and with room to spare except in the case of the "Historical Record," whose fulness makes an apparent confusion, as the later volumes are sandwiched in with the earlier; but this is quickly understood. No attempt has been made to add to the class "Essays," and we doubt if anything is lost by it, since it is difficult to draw the line. The addition to the "Portraits" is notable. The "Easy Chair" is filled out to its abandonment last year on the death of the lamented Curtis.

We must also welcome an 'Index to the *Popular Science Monthly* from 1872 to 1892' (vols. i.-xl. and the twenty-one numbers of the Supplement), compiled by Frederick A. Fernald (D. Appleton & Co.). This, too, is printed in odd pages, and is an author and class index under one alphabet. The execution appears to be excellent, but while each portrait is noted under the individual name, we are surprised that there is no grouping of the whole series under one heading; all the more because this service has been rendered for the years 1872-1889 by Dr. H. Carrington Bolton, in the *Library Journal* for November, 1889.

The 'Manual of Telephony,' by William Henry Preece and Arthur J. Stubbs (London: Whittaker & Co.; New York: Macmillan), is intended to replace a volume on the telephone by W. H. Preece and Julius Maier, published in November, 1888, and reviewed in these columns. Very great progress has been made in the art since that time, and for this and other reasons the original work is now superseded. The present is probably the most elaborate and complete treatise which we possess. Great pains have been taken to make it a good book for reference. The first six chapters treat of transmitters and receivers, history, theory, and practice. These, and a chapter on comparative efficiency, make up part i. Part ii. treats of complementary apparatus, such as bells, relays, etc., typical forms of complete instruments, and the best methods of dealing with intermediate stations. Part iii. is devoted mainly to ordinary simple exchanges. Part iv. deals with the subject of multiple switches and large exchanges. Part v. takes up telephonic translators or transformers, call-offices, multiplex telephony, simultaneous telephony and telegraphy, military telephones, domestic switchboards, and selective or individual signals. Part vi. embraces construction wires and cables, and has an interesting chapter on the limiting distance of speech. An appendix contains valuable tables. We suggest that if the work should come to a second edition, a valuable chapter might be added on the actual performance of the telephone at the present time, on the long-distance telephony of this country, and on the special points in which further improvement is desirable. But as it is, the work deserves hearty praise.

'A Text-Book of the Theory and Practice of Medicine by American Teachers,' edited by Prof. William Pepper, M D., LL.D. (Philadelphia: W. B. Saunders), in two volumes, of which the first has just appeared, succeeds 'A System of Medicine by American Authors,' published under the same editorship in five volumes in 1885. The new book is more convenient in size and more condensed in matter, and the monographs which make it up are excellent examples of the better medical literature. The literary control of both works being the same, the continuous progress of the science of medicine is well marked. Two or three of the cleverest papers are by authors whose personal contact with their subjects cannot have been extensive; and, as so much of the value of medical papers depends upon the personal experience of the writers, it is a pity that these subjects could not have been treated by clinical and not merely scholastic authority. Nevertheless, the 'Text-Book' defines present high-water mark, and the more active the practitioner, the more perfectly he will appreciate its value.

'Public Health Problems,' by John F. J. Sykes, B.Sc., M.B. (Charles Scribner's Sons), is crammed full of well-expressed information on sanitary science, and is an admirable compendium for health officers, for physicians, and for all interested in sanitation. It is written from an English point of view, but it is well written, and fortunately public health is not insular. The only slip, and that merely a technical one, that we have noticed is in implying (p. 112) that the pneumococcus of Friedländer, rather than Sternberg's micrococcus Pasteuri, renamed M. pneumoniæ crouposæ, is the cause of pneumonia. The injunction (p. 236) that "epizoa, as mosquitoes, bugs, fleas, etc., should be kept from the body," without prescribing the method, at first looks like a weak attempt at humor. It is redeemed by the explanation that they may transfer disease, but, regardless of that, some practical mode of exemption, from mosquitoes at least, would be acceptable to American readers.

'An Introduction to the Study of the Dependent, Defective, and Delinquent Classes,' by C. R. Henderson, D.D. (Boston: D. C. Heath & Co.), is what it professes to be. There is nothing in it positively new to the tolerably well-informed student of such subjects; but as these branches or, to group them as the author does, this branch of sociology is not generally studied, it may serve as a real introduction for many well-disposed but as yet unenlightened persons. It is particularly commended to clergymen, who, as the clerical author remarks, "need what few educational institutions have until recently attempted to supply, a thorough training in the methods of social science," and to other benevolent persons whose emotions require direction if not restraint. A very acceptable feature in the make-up of this book is the introduction of authorities for study and illustration directly at the point of discussion. A copious bibliography is thus distributed exactly where it applies.

S. Rocheblave's 'Les Cochin' (Paris: Librairie de *l'Art;* New York: Macmillan) is one of the very best in the official series of "Les Artistes Célèbres." It deals fully with the three greatest engravers bearing the name, of whom the first, Nicolas Cochin le Vieux of Troyes (1628–1677), was not certainly related to Charles Nicolas Cochin (1688–1754) and his son and namesake (1715–1790) of Paris. A very interesting section is also given to the Dutch family of Horthemels, and the three sisters, engravers and painters, of whom the elder C. N. Cochin married one. This was a Jansenist connection, and the product of their burins forms an enduring part of the history of Port Royal. As the engravings of Nicolas of Troyes record the campaigns of Louis XIII. and the first of Louis XIV., with Condé for a leading figure, so C. N. Cochin, the father, illustrated the age of Louis XV.; and the son, a court favorite and protégé of Mme. de Pompadour, continued the pictorial annals of the same reign with extraordinary fecundity of design, but heralded the coming of the Revolution by furnishing the allegorical frontispiece of the 'Encyclopédie,' and by illustrating (absurdly, says M. Rocheblave) the works of Rousseau. The younger Cochin had already been studied by the Goncourts in their 'L'Art au 18e Siècle,' but here, as in the case of the elder Cochins, M. Rocheblave has added much by his intelligent researches. Of special interest are the chapters devoted to Cochin as an art critic (in his 'Voyage en Italie' and in other writings); he appears to have been greatly in advance of his time—witness his judgments of Raphael, of Veronese and the other Venetians. The work is profusely adorned with facsimiles of engravings by or after the artists we have mentioned, and is provided with lists of plates and with bibliographies.

The editor of the Tauchnitz collection of British authors, now nearing its three thousandth volume, continues to select his wares for purely mercantile reasons; and admission to the collection is no proof whatever of the literary merit of the book thus presented for circulation on the continent of Europe, although it is evidence as to the probable popularity of the book among the British at home

and abroad. The American novelist most frequently represented in the last hundred volumes—of which he supplies seven—is Col. R. H. Savage, author of 'My Official Wife.' Only ten other volumes of the hundred are by American writers, chiefly Mark Twain, Bret Harte, and Marion Crawford.

With the November number the *Sewanee Review* enters on its second year, and now Prof. W. P. Trent's name appears as editor. The number contains a very sensible discussion of the evils of "Sectionalism in Finance," and a singularly open-minded article on "Uncle Tom's Cabin Forty Years After," by the Rev. Prof. Shoup, in which attention is drawn to the accuracy and impartiality of the book. That such a criticism should appear in a Southern review is of good augury for the future of the South.

The New York Shakspere Society will begin at New Year's the publication of a magazine, the *Bankside Quarterly*, devoted to Shaksperiana and the contemporary drama. It will be edited by members of the society, and published by the newly incorporated Shakspere Press.

—Beckford's heart would have leaped to embrace the delicious 'Vathek' of which Macmillan & Co. publish 150 numbered copies in America, with its dress of green silk reminding us of the annuals of his time, and its Arabian design stamped in gilt upon its side, such as Beckford's England could only dream of. Its etchings, by Herbert Nye, are steeped in the spirit of the story. The type, imitated, with supposed improvements, from a quarto Elzevir (a type not compressed like that of the pocket Elzevirs), is too modern in its business-like roundness and with its typewritery short tails to the *b*s and *d*s, *p*s and *q*s. It is printed moist upon a hand-made laid and creamy paper. A book-lover might wish it were in duodecimo instead of a nine-inch octavo. For the "library editions" of books of entertainment—say, a stately Alfred de Musset printed in a way fit for a *recueil* of treaties—are not for those that read their books. This volume, however, is by no means a flagrant offender. The old duodecimo was calculated, when bound, to weigh half a pound; a post octavo, a pound. A pretty tome that weighs no more than a pound and a half, instead of two, like most of its octavo brethren, may still pass for light reading. This can be said for 'Vathek': though written for young people just beginning to disregard the advice of their elders as to what they had best read (*virginibus puerisque*, said Beckford), and though it *was* read by most of us at that susceptible epoch, yet, no matter how old we have grown, so long as memory holds her seat, we never can cease to remember the termination of this tale. The present editor, Dr. Garnett, says, indeed, that everybody must like 'Vathek' who likes its *genre*. That depends upon what its genus is taken to be. If it is to be defined as a romance which seeks to make amends for the sensuality of its earlier parts by a heart-rending and terrible ending—if, in short, 'Vathek' is to be tossed upon the heap where rot 'Les liaisons dangereuses' and such—then the remark is, beyond doubt, true. But if by its *genre* is meant that of the 'Arabian Nights,' we must protest that the greatest charm of those stories, their child-like irreflectiveness, is signally lacking in 'Vathek.'

—Nevertheless, it is an immortal book, and it was written in one sitting—one sitting, of three days and two nights! So said Beckford himself, fifty years later; and why doubt it? Dr. Garnett thinks he disproves this by showing that the author was engaged upon the composition for at least a year altogether. But that proves nothing. Of course, Beckford had been turning it over in his head for months; and, of course, he made corrections and even alterations, later. Moreover, when he had written it, he did not perceive that he had written it. He thought he had only made an amazing good beginning. "My Arabian tales go on prodigiously," says he, April 25, 1781, and a few days later, "The tale of the Caliph Vathec goes on surprisingly." But all the labor of the many months following, down to the end of 1784, went to the production of additions, which his own incomparable good taste rejected *in toto* at last. Recipe for making an immortal book: Write it at one sitting in 3 days and 2 nights; devote 3½ years to improving it, and then publish it as near as possible as it originally was. It was written, by the way, in French, and our English text is nothing but Henley's translation, which was published in advance of the original, in spite of Beckford's prohibition. The French reads far the better.

—About a year ago we called attention to the new 'Dante-Handbuch' of the indefatigable bilingual Swiss scholar, Dr. G. A. Scartazzini, who preferred making a new book in German to translating and revising his Italian 'Prolegomeni' of the year before, or to expanding his earlier 'Manuale Dantesco.' The 'Dante-Handbuch' Mr. A. J. Butler, the English editor and translator of Dante, has now put into English under the title of 'A Companion to Dante' (Macmillan). The version is satisfactory, and will no doubt be of value to students in England and America. We wish, however, that Mr. Butler had allowed himself more liberty in the treatment of his original. The 'Handbuch' is diffuse in style and overweighted with irrelevant material; it could with profit be greatly abbreviated. The translator might, too, have added much that would be of value. He has omitted Scartazzini's frequent bibliographical lists on the ground that the books he mentions are in foreign tongues, or inaccessible to the English reader; but he should surely have inserted compensating references to English and American publications, such, for example, as the various translations of Dante's minor works. After all, it is not so much a translation that the 'Handbuch' needs for our purposes as a comple e remodelling. Scartazzini is learned and industrious, but he is also narrow, pedantic, and whimsical. We still lack a companion to the study of Dante that shall give us all the necessary facts, a candid statement of the main theories in regard to disputed points, a discriminating bibliography, and material (such as has never been published in English) which will enable the student to see Dante, not through the mists of polemics and text-criticism, but in his proper relation to the decay of mediæval and the birth of Renaissance thought.

—The last report (for the year ending June 20, 1893) of the "Women's University Settlement for work among the poorer districts of London" is of special and timely interest from the fact that it gives full details of the latest feature of the Association—professional philanthropic training. This English society is the first to institute courses, lectures, and two scholarships tenable at the Settlement, for the training of workers. This step, we are told, has been taken in the "hope of raising the standard of social work among the poor, . . . of meeting an increased demand for trained workers, . . . and to attract those who wish to prepare themselves either for paid or honorary posts . . . in Southwark, in other parts of London, or in the country." The training (begun in January, 1893) is formulated as follows: "The ordinary course," which extends over one year, divided into three terms of thirteen weeks each, is intended to give an outline of general principles and sound methods, and consists of weekly lectures, the preparation of papers, and reading, and of practical work under other workers. For the first six months three days a week are spent with charity organization committees, the other three in some special Settlement work in connection with already existing local agencies; the wise policy of the Settlement being to supplement rather than originate philanthropic centres of energy. During the second six months, "practice" is divided between visits to societies and institutions in London for the purpose of observing and comparing their methods and results, in the keeping of accounts, and in some special branch of outdoor work selected with a view to the student's preparation for her future employment. The fees (inclusive of board, lodging, and teaching) are £50 a year for resident students, and £10 for non-residents; these latter must attend lectures, and give not less than four days a week to the active work. Moreover, students are offered at their option a second year, "so as to gain a more thorough knowledge of some special branch of the work." Curiously enough, in this first year the two scholarships are held by non-collegiate women. Outsiders may attend the lectures by payment of from 5s. to 10s. per term, or of 2s. for a single lecture.

—As the character and efficiency of work among "the submerged tenth" depends largely upon women, it is a matter of public interest whenever any body of women philanthropists thus publicly recognize how closely the every-day difficulties of social work are connected with economics, with local government, with poor-law administration—in a word, with those fundamental business principles which underlie the decent and successful ordering of a modern municipality. Among the lecturers during the two terms which ended in July, we find Miss Octavia Hill instructing in the "Principles and Methods of Keeping Accounts," Mr. Bernard Bosanquet on the "Duties of a Citizen," and Mr. J. Lowles on "How London is Governed," while the lectures for the term beginning in October were to be on "The Poor Law" and the "Relation of Economics to some Social Questions." The risks and difficulties of definitely attaching to a primarily philanthropic movement the diverse responsibilities and claims of an educational "experiment" were frankly confessed in the prospectus of the scheme, but Mrs. Henry Sidgwick (principal of Newnham College), at the recent annual meeting of the Settlement Association, asserted that any objections that might be made to training of that sort on the ground of its sometimes checking spontaneity, were quite outweighed by its advantages, "as it was a method of obtaining in a short time what unaided experience would take years to teach." This new departure of our English cousins in formally recognizing a need which has hitherto been rather disjointedly met by University Settlements in both England and America, marks an important step in the evolution of Settlement life. The report discloses a percentage of permanency at the Southwark Settlement higher than has been obtained among our-

selves: of the 18 residents for the current year, 12 have been in residence from four years to ten months, the average being twenty months; of the 6 new workers added to the force in 1893, 5 represent an equally permanent element. These English women, out of their own experience, have found that all the finer qualities are wanting in the service which is casual, transitory, or much broken. "Some things may be done by the passing helper, but not the best things." Finally, their eventual aim is nobly stated in these words: "We hope . . . that each year shall find us less of settlers and more of citizens of Southwark, . . . helping not less in the charities, but yet more in the duties of the place we have made our home—duties which city and village, East End and West End, alike call upon its inhabitants to perform in the spirit of true citizenship, or, in other words, of true brotherhood."

—The nineteenth annual report of the Japanese Department for Education, with the accompanying 'Outlines of Modern Education in Japan,' calls for less critical notice than usual, because of a wholesome fact. Under the energetic administration of the new Minister of State for Education, Mr. Kōno Tokama, who assumed his office August 8, 1892, there has been made a searching criticism of existing standards of attainment. In the 'Outlines,' a valuable historical retrospect of over two hundred pages, this critical spirit is especially manifest, and wholesomely takes the place of mere laudation or colorless statement. The determination of the Government to hold the people up to a thorough national reinvigoration through culture is manifest in various ways. Sometimes this takes the form of hostile jealousy towards private or non-governmental schools, in which, it is believed, most of the "half-baked" *soshi* are mis-educated. These young fire-eaters, who dictate policies to cabinet ministers and attack members of the Diet with deadly weapons, are mostly ill educated boys who have imbibed just enough of foreign ideas to make them dangerous. The insistence upon thorough courses in the schools under Government control is believed to be an effective preventive measure against too large a crop of *soshi*. The other methods of educational elevation of the people are shown in the steadily rising standard of admission to the middle and higher schools, and in the liberal rewarding of well-trained native teachers with responsible positions. This necessarily results in the employment of fewer foreign instructors, so that there are now (1891) but 252 American and other instructors in the Japanese schools, whereas in 1890 there were 287. In addition to the schools of almost every sort known in Europe or America, the development of public libraries is noteworthy. Fifteen of the large cities have libraries in operation, one at Fukushima having 18,225 volumes, and another at Miyagi, 3,719. The Imperial University library contains 187,551, of which 81,986 are in European languages, that of Tokyo having 31,629, of which 2,332 are foreign works. While not progressing as rapidly as it ought, the public library system shows a healthy growth in Japan. We note that while the Academy has not the fame of its French prototype, it has twenty-seven members, and is in full activity of nearly monthly meetings open to the public. Ten of the members have passed the sixty-year line which insures them pensions for life. In a word, the work of education in Japan, at present, is one of firm establishment and steady improvement, rather than enlargement or extraordinary change.

## PIATT AND BOYNTON'S THOMAS.—II.

*General George H. Thomas:* A Critical Biography. By Donn Piatt. With concluding chapters by Henry V. Boynton. 8vo, pp. viii, 658. Cincinnati: Robert Clarke & Co.

THE appendix to Piatt's book is added upon the hypothesis that his death interfered with a purpose to continue the work. There are indications that the author did not view it so. He had a curious theory that the possession of Chattanooga was in itself all that was necessary, and the conclusion of his sixteenth chapter had declared that Rosecrans's campaign ended "in the capture of Chattanooga and virtually the end of the war." The siege of that place followed. Chapter xix. is a running summary; the author himself then wrote the introduction and preface, and had apparently done all he intended. The added chapters are in two very distinct parts. There is an interesting and uncontroversial account of Wilson's cavalry campaign of Selma in the spring of 1865, which is so different in tone and literary style from the rest as to indicate its preparation by a third writer. The remainder is from Boynton's pen, and is, in substance, a repetition from his 'Historical Raid,' published in 1875, of the chapters criticising events after May, 1864, in which General Thomas had a part. A final chapter is devoted to supposed grievances of Thomas in his assignments to duty after the war, and especially to an alleged "suppression" of a part of his telegraphic correspondence with Washington during the Nashville campaign. It is now charged that Grant was responsible for this, and, in the Piattesque language which becomes the appendix to such a volume, it is declared to be an "assassination." On reading the "suppressed" telegrams, no murderous motive for suppression is visible, for they contain nothing startling, or which materially changes the discussion of the reasonableness of Grant's demand for earlier activity. Common sense would conclude that nothing worse than carelessness was probably chargeable. It is a wanton offence against good taste and an injury to the memory of Gen. Thomas to connect it with his death. The "suppression" is described as being a failure completely to fulfil a promise made by Grant, then President, to furnish Boynton as a newspaper correspondent with copies of the telegraphic correspondence mentioned, to be used for newspaper publication, or, as collation of dates would seem to indicate, in the preparation of his 'Historical Raid.'

The attacks upon Sherman differ from those published so long ago chiefly in ornamentation by epithets. In the original there was a little affectation of personal respect for the general and a little recognition of his standing in the world as a great soldier. Nearly twenty years have gone by, and the dead lion is now, as in the fable, the target for kicks. His great campaigns are a story of "uniform and unbroken failure," a "bungling business," a "mortifying story." His march to the sea is "abandoning his objective," "marching away from the theatre of war," from a "desire to reach Gen. Grant and have an equal share with him and the army of the Potomac in ending the war"! Every dishonorable motive is personally attributed to him, and the indications of passionate hatred are everywhere apparent. The result will inevitably be the same as with the body of the book; its extravagance defeats itself, and it will pass into literature as railing and not criticism.

As we cannot examine in detail every part of such a tirade, let us confine our attention to the march to the sea and the provision made by Sherman for accomplishing at once the ruin of Hood and of the Confederate cause. We are told that Sherman left Thomas to "confront an enemy which had sorely tried the metal of General Sherman's three armies for half a year." This is a travesty of the fact. Hood's army was the same in nominal organization as that of Johnston, but *quantum mutatus ab illo!* By his rash assaults on Sherman's lines around Atlanta he had reduced his divisions to a fraction of their former strength, so that the military men of the Confederacy have agreed with all others that it was a fearful waste of a splendid army. The reduction of numbers gave a certain added mobility, approximating that which Jefferson Davis thought would enable him to prolong the war indefinitely when small and scattered bodies might elude the heavier columns of their pursuers and weary them out in the chase. When Hood began his movement in October upon the rear of our army, Davis had incautiously announced the plan to manœuvre Sherman back into Tennessee and thus to regain the territory lost in two campaigns. The report of the speech came to Sherman and he was forewarned. Hood made desperate efforts to avoid fighting while leading our army a long chase to the rear. Sherman pursued him a hundred miles northward, nearly to Chattanooga. Hood doubled on his tracks like a hare, and raced southward behind the mountains of Taylor's Ridge to Gaylesville and Gadsden, Alabama. Sherman followed hotly to Gaylesville, while Hood doubled again and made for the Tennessee River. It was here that Sherman halted and reported to Grant that his thorough effort had proved vain, and that Hood's comparatively small force could continue this game indefinitely, for not only could he live on the country, but he exhausted it so that the chasing columns had to carry their supply trains with them and be delayed by them. Then it was that he determined that if Hood passed west of Decatur he would divide his army, leave Thomas, whose headquarters were already at Nashville, to meet Hood, and make the crushing final movement to Savannah and thence through the Carolinas. At Tuscumbia near the Mississippi line, Beauregard and Hood stood in dismay at the result of their manœuvring, and the Confederate Government at Richmond was trembling at the vision of speedy and final ruin. This is the situation when we hear a voice screaming, "Sherman has abandoned the object of his campaign and has run away from Hood to get under Grant's wing."

In making the march to the sea, cutting loose from his communications, Sherman had necessarily to reckon upon two things: first, that he could get no reinforcements, supplies, or ammunition till he opened new communications with his friends; second, that the forces left to confront Hood could be supplied and reinforced to any extent that might be necessary. The country from the Tennessee River to the Ohio was in two departments, one under Thomas, the other under Schofield. Sherman had confidence in both as competent to conduct a campaign, and, by leaving both behind him, he provided for contingencies. Thomas was made chief, and could call on all the troops in Schofield's department as well as his own, and have a second in command on whom he could thoroughly rely. The garrisons at posts in these departments were, of course, to be concentrated to the utmost. If Hood were beaten, the posts would be safe. If he were not, the garrisons would have to surrender. To say that Sherman's direction to "break up all

minor posts and get about Columbia as big an army as you can, and go at him," was "equivalent to abandoning the country it had taken two years to secure," not only is puerile, but condemns Thomas, whom it professes to praise, for he did this identical thing before he finally fought the battle of Nashville. The concentration was to be in front of Hood and to keep him busy, at the same time covering the country behind.

Again, we are told that Thomas's command was made up of "odds and ends" and of "trash" sent back by Sherman. The record proves this untrue. The troops under Rousseau, Steedman, and Granger in garrisons in Tennessee and north Alabama were old organizations of the Army of the Cumberland, and all showed their quality in this very campaign. They fought in defence of Decatur and Murfreesboro, or took part in the battle of Nashville. Sherman's sick and "footsore" did *not* appear in Thomas's list of present for duty. They were in hospital or on sick-furlough. His convalescents were organized into a division under Gen. Cruft and fought with the best.

Finally, the assertion is made that Gen. Sherman had, in the opening of his spring campaign, a force "more than double that of the enemy," while Gen. Thomas, until after the battle of Franklin, "was outnumbered two to one." These statements are made with an affectation of knowledge of the official records, which contradict them both. As to the armies of Sherman and Johnston, the statistical paper by Maj. E. C. Dawes in the 'Century War Book' (vol. iv, p. 281) is an accurate synopsis of official reports of numbers. It shows the proportion between the two armies to have been as ten to seven. As to Thomas's strength relative to Hood's, it would seem that reckless disregard of the official records could hardly go further. The misstatements are so glaring that one wonders if the writer ever saw the returns of force made from Thomas's own headquarters. Making constant assertion that he is speaking from the record, and constantly assuming that he is an expert in investigating the official returns, he regularly gives figures having no resemblance whatever to those which Gen. Thomas himself sent to Washington every ten days in accordance with army regulations. These astonishing reprints of old falsifications of the records are made now when the forty-fifth volume of the War Records containing the official figures after November 12 is being put in type, and when those of preceding dates are already published and placed in every considerable library of the country.

Let us first fix the force under Hood's command, which we are told was twice as large as Thomas's. In volume xxxix, part 3, we find it tabulated on page 893, giving 35,662 officers and men present for duty; of this number 2,857 is cavalry. But this includes only one of the divisions of cavalry, the others being absent with Forrest, and the whole when present amounting to nearly or quite 10,000 horsemen. The smaller total which the Confederates give under the title of "effectives" will be omitted, for reasons that have been given in these columns in our review of Allan's 'Army of Northern Virginia.' A larger total, under title of "aggregate present," is also omitted in speaking both of the national and the Confederate forces. It included the sick in camp and the detached and extra-duty men. Thomas's connection with Sherman was broken on November 12. The troops which had been assigned to him had been before that under his orders, but their returns were not all made through his headquarters till that time. His reports, made every ten days, include on November 20 for the first time the Twenty-third Corps and other additions made by Sherman to his force. The official records prepared for publication in the xlvth volume show that, on the date just mentioned, Thomas reported his troops "present for duty" to be 71,463. This did not include the employees of the Quartermaster's and Commissary's Departments, which were organized into a division under Gen. Donaldson, and were used to supply the place of enlisted soldiers in garrisons, as General Thomas himself states. It did include, however, the whole of Wilson's cavalry corps, numbering 17,323, of which the same report shows that 11,578 were "equipped." The dismounted cavalry were available to relieve garrisons, and, both in the Atlanta campaign and in this, sometimes fought as infantry. On the date of this report Hood began his advance from the Tennessee River, and the preceding eight days had been available for the concentration of the national forces either at Decatur, Ala.; or at Pulaski, near the southern border of Tennessee, where the Fourth and Twenty-third Corps already were. Sherman's directions to abandon minor posts and concentrate were not followed; yet the official figures show that the ratio "two to one" was very nearly applicable in exactly the opposite sense from that in which Boynton uses it.

On November 30, the date of the battle of Franklin, Thomas made another official return to the Adjutant-General's office, showing 85,450 "present for duty," still omitting the division of employees. His cavalry was now returned at 20,929, of which 12,570 were "equipped." Still there was no concentration at the front, and although Hood's force was reduced by 8,000 in that sanguinary battle and the affairs which preceded it, Schofield was ordered to fall back to Nashville, where the concentration was finally made. This was the period when Grant said he had expected, at least, that the stunning blow Hood had suffered should have been followed by an offensive return, and when Lincoln, Stanton, and Grant were all alarmed at the enemy's continued progress northward.

Eight days of good weather followed, during which Hood not only advanced to besiege in Nashville his vastly stronger opponent, but from his diminished force detached one whole division and part of another to attack Murfreesboro and to burn the railroad bridges between that place and the very picket line at Nashville. Forrest took part in this with his cavalry, and raided the country far to the northeast beyond Lebanon, sending a detachment into Kentucky to operate on the railroad behind Thomas. During that whole week nothing was done on the national side, the desire to "wait until Wilson can equip all his cavalry" being the reason which Gen. Thomas gave. Then it was that remonstrances at Washington changed to commands to "wait no longer for a remount of your cavalry."

On the 10th of December Thomas reported that he had present for duty 87,710, still omitting the division of employees. His cavalry was now returned at 22,829, of which 13,214 were "equipped." On the 9th the memorable storm of rain and sleet gave good reason for not then beginning aggressive operations, and the delay in beginning the fight from that day to the 15th is not open to criticism. Before that time, however, during the whole of Schofield's retreat with the two corps the eighty miles from Pulaski to Nashville, there was not a single day when it was not entirely feasible for Thomas to concentrate in front of Hood a larger force than the whole with which that general crossed the Tennessee. The movements of troops actually made by rail during that period afford a measure of time and transportation that demonstrates it.

The figures quoted above have been accessible in the War Records Office to every serious investigator. The writers of the book before us were both residents of Washington, and one of them has professed to be familiar with the records. Yet, in the face of them, for twenty years the welkin has been made to ring with the assertion that Thomas was forced to meet Hood with shockingly inadequate means—so inadequate as to make it proof of a wish to destroy him. The false witness as to the records has been made the basis of insulting diatribes against the great soldiers whose fame is a national treasure, and who were far older, more intimate, and truer friends of Thomas than any of these would-be champions. They had spurred him to a vigor which finally made his glory safe, and put him, too, among those the country delighted to honor. Then they congratulated him in words which are as gold to dross when compared with the adulation of flatterers. The victory at Nashville proved that Grant spoke the truth in his despatch of December 9, when his words were: "I have as much confidence in your conducting the battle rightly as I have in any other officer." The figures and dates in the official records prove that he was quite as correct in saying, "but it has seemed to me you have been slow, and I have had no explanation of affairs to convince me otherwise." To Sherman, Thomas's success was as essential as his own, and his injunction to "get about Columbia as big an army as you can and go at him," was the essence of military wisdom as well as enterprise. To say that out of 71,463 present for duty in Tennessee a commander could not concentrate enough to stop the advance of 45,000, is to stultify one's self. What posts, garrisons, and reserves does any such person suppose Hood had left behind him in Alabama and Mississippi? The enemy can concentrate, but we cannot!

Candid persons have generally been content to let the satisfaction at a glorious result cover the preceding steps; and they would gladly refrain from criticism and forget the universal alarm the country felt when Hood crossed the Tennessee and steadily marched forward to Nashville. But these superserviceable friends of Gen. Thomas will not have it so. By the indecency of their assaults upon others, and the effrontery of their appeal to the official records, they make their exposure a duty. They are the only real enemies to the military reputation of Gen. Thomas.

## RECENT POETRY.

In *Fliegende Blätter*, a man points out to his wife a wild-looking personage and says, "That man, my dear, has rendered eminent services to German poetry." "Why—because he writes so well?" "No; because he has stopped writing." On this general principle, the compiler of a collection of poems has often the advantage over those whose works he uses, since he knows when to stop, and they perhaps do not. Thus we have never seen the recent Canadian poetry appear to such advantage as in 'Later Canadian Poems' (Toronto: Copp Clark Co.), forming a supplement to the earlier collection of Sladen in his 'Younger American Poets.' Mr. Wetherell has also far more taste and discretion than his predecessor; and

as he includes no poem published before 1880, the work has a certain freshness. He has verses by writers now well known in the United States—Roberts, Lampman, Cameron, Carman, and others—and it is interesting to see the pictures of these authors, because they look so very youthful. Mr. Cameron was born in 1854 and died in 1885, but no other poet represented was born earlier than 1860. It is certain that the Canadian poets have already developed much power in describing the peculiar landscape features of their land, and that they have in a few cases struck deep human notes; but there is about them an effect of vague longing which might almost seem to be satirized in Mr. Wetherell's motto on his title-page:

"But thou, my Country, dream not thou!
Wake and behold how night is done."

How can the most gifted Canadian poet apostrophize his country until he knows whether his country is Canada or England?

'Songs of the Common Day, and Ave! an Ode for the Shelley Centenary,' by Charles G. D. Roberts (Longmans), really puts its author at the head of these young Canadian poets. It would be hard to find any one this side the St. Lawrence who could surpass the fine imaginative touch of this which follows (p. 56):

EPITAPH FOR A SAILOR BURIED ASHORE.

He who but yesterday would roam
Careless as clouds and currents range,
In homeless wandering most at home,
Inhabiter of change;

Who wooed the West to win the East,
And named the stars from North and South,
And felt the zest of freedom's feast
Familiar in his mouth;

Who found a faith in stranger-speech
And fellowship in foreign hands,
And had within his eager reach
The relish of all lands—

How circumscribed a plot of earth
Keeps now his restless footsteps still,
Whose wish was wide as ocean's girth,
Whose will the waters' will.

Another pleasing volume of Canadian poems, seemingly by an author too young to be included among Mr. Wetherell's bards, is 'Canadian Melodies and Poems,' by George E. Merkley (Toronto: Hart & Riddell). This author, too, has his hopeful utterances in regard to colonial poetry: he says that "the dearth of national literature in Canada is to be deplored"; and, as if in answer to the reasonable inquiry as to how there can be a national literature without a nation, he asks in turn, "Did not the Greek colonies produce a literature worthy to be compared with that of Athens in her glory?" (p. vi).

Mr. William Wilfrid Campbell, still another of the young Canadians, has published a volume inadequately entitled 'The Dread Voyage' (Toronto: Briggs), which, while marked by prevailing shadow, has this delicately cut gem (p. 150):

"Love came at dawn when all the world was fair,
When crimson glories, bloom and song were rife;
Love came at dawn when hope's wings fanned the air,
And murmured, 'I am life.'

"Love came at even, when the day was done,
When heart and brain were tired, and slumber pressed;
Love came at eve, shut out the sinking sun,
And whispered, 'I am rest.'"

Goldwin Smith's 'Bay Leaves' (Macmillan), by an author who is at least a Canadian *pro tem.*, is an agreeable *mélange* of Latin fragments, aiming to do for Roman poetry what Edwin Arnold and Dean Milman did many years ago for that of Greece. His style of translation suits the dignity of Lucretius better than the easy grace of Catullus; his touch being a trifle too heavy for this last poet. The preface is admirable and singularly condensed; he points out that there is no such barrier between ourselves and the Roman poets as that which separates us from Homer and Æschylus, and thinks that Gibbon was quite right in holding that no age would have suited him better than that of the Antonines. On the whole, Mr. Smith succeeds best with Horace, an artist a shade less delicate than Catullus, and it would be hard to find a better modernizing of the ancient spirit than this version of the familiar "Tu ne quæsieris, scire nefas" (p. 45):

"Draw not that curtain, lady mine;
Seek no diviner's art,
To read my destiny or thine—
It is not wisdom's part.

"Whether our years be many more,
Or our last winter this
Which breaks the waves on yonder shore—
Our ignorance is bliss.

"Then fill the wine-cup while you can,
And let us banish sorrow;
Cut short thy hopes to suit thy span,
And never trust to-morrow."

We miss the graceful turn of the "envious time" (*invida Aetas*), and there is a jangle between the "you" and "thy" in this last verse; but it is an uncommonly good paraphrase, nevertheless.

To turn to recent English volumes, 'The Poems of Arthur Henry Hallam, together with his essay on the lyrical poems of Tennyson' (Macmillan) are edited by another poet, Richard Le Gallienne, who introduces them with an interesting and, on the whole, satisfactory memoir. The poems themselves are less satisfying; we nowhere find in them that "master bowman" of whom Tennyson wrote, and their technique is curiously negligent for the friend of an artist so exquisite. Thus Hallam rhymes (p. 73) "breathest" and "sweetest," and his sonnets are a chaos as to the sequence of the rhymes. Nor will his essay on Tennyson, published in August, 1831, in the *Englishman's Magazine*, make much impression on the American reader, since Tennyson found a welcome so much more promptly here than in England. But the book certainly deserves a valued place among Tennysoniana.

Mr. H. D. Rawnsley's 'Valete: Tennyson, and Other Memorial Poems' (Glasgow: MacLehose), if exhibiting no marks of genius, has also a place among Tennysoniana. The late laureate was married, it seems, at Shiplake-on-Thames, the residence of Mr. Rawnsley's father, and the memorial poem has many details, both in the text and in the notes, of the boyish life of Tennyson and his brothers. There is also a sonnet to Charles Tennyson Turner, the best known of these brothers, but it is wanting in that peculiar charm which marks this poet's own early sonnets.

A book to be assigned to the class of Wordsworthiana is 'Poems, Old and New,' by Charles D. Bell, D.D., Honorary Canon of Carlisle (London: Arnold), a thick volume which, with a good deal that is mediocre, yet conveys to us from the English Lake District a pleasing prolongation of Wordsworth's spirit. There is also a sonnet on Niagara; and various complimentary letters from Longfellow, Whittier, and Holmes are cited, after the English fashion, at the end. 'Musa Consolatrix,' by Charles Sayle (London: Nutt), is one of those volumes of thoughtful and measured verse which come to us sometimes from the English universities (in this case Cambridge), bringing along with their Greek mottoes a simpler and more genuine character than London commonly yields. It is not the author's first literary venture; without having any salient quality, its tone is pure and manly. 'Teresa, and Other Poems,' by James Rhoades (Longmans), is a volume of serious and thoughtful poetry by an author already well known as a successful translator of Virgil. It contains some strong sonnets, and a poem, called "The Lay of the Oubliette" (p. 105), which ought to take its place in collections, as a tale of woman's heroism, finer and less hackneyed than the inexhaustible "Curfew must not ring to-night."

'Secular Poems,' by Henry Vaughan and his twin-brother Thomas, selected and annotated by J. R. Tutin (Hull, England: Tutin), will doubtless disappoint those who know the former only by those religious poems which take rank with George Herbert's. Yet there are here a few love-poems to "Etesia" which have something of the same refined flavor.

'Through Starlight to Dawn,' by A. Ernest Hinshelwood (London: Gay & Bird), consists largely of "A Tribute of Sonnets," mainly love-sonnets; a series singularly thoughtful and tender, and also highly finished. They have, however, the defects that accompany those qualities, and their absolute uniformity is monotonous. In the whole forty-three there is not only no variation from the Italian model, but there is no acceptance of that variety in the sequence of rhymes which Petrarch and Rossetti fearlessly practised, and which gives such relief. Indeed, the tendency of poets now is to distribute their sonnets among their other poems for the further avoidance of monotony—as is done, for instance, in Lowell's 'Heart's-ease and Rue.' A strong and complete sonnet is really too fine and unique a thing to be simply stood up in a row with fifty others, each ticketed with its number, like a convict or an American Chinaman.

The Celtic flavor is apparent in Sir John Croker Barrow's 'The Seven Cities of the Dead, and Other Poems, Lyrics and Sonnets' (Longmans). The author is vehemently conservative as to "Woman's Rights" (p. 126):

"For she will find, if Holy Writ she search,
Man head of Woman is, as Christ of Church."

But in regard to Ireland he writes (p. 128)

A LAST APPEAL.

Great-hearted Englishmen! yourselves so free,
So chivalrous in aid of all oppressed;
So just, so generous, to all distressed,
Whoever, or wherever they may be!
Look once again across Saint George's Sea
To that fair island waiting your behest;
And whilst new hopes are kindling in her breast,

In pity listen to her final plea;
Heed not the threats of those who more or less
Would reënact the persecuting past:
Heed not the sneers of party pen or Press.
Great-hearted Englishmen! the die is cast!
Establish peace, a peace that will endure;
Make Ireland free, and England thus secure!

'Skeleton Leaves' (Longmans) is the rather unsatisfying title of a volume containing a long poem by Mr. F. Leyton, whose previous volume, 'The Shadows of the Lake,' was favorably reviewed in these columns. The present book is inscribed "To the Chairman and Members of the Howard Association who have done so much to rescue the Orphan Children of this Country from a Contamination which is often worse than death." It is a sombre and powerful poem, and withal dignified and without sensationalism; it is written in blank verse, and shows a directness and earnestness which are rather out of fashion among the younger English poets. 'Woman Free,' by Ellis Ethelmer (London: Women's Emancipation Union), is a tract rather than a poem, having about thirty pages of rhyme and nearly two hundred of notes. It is written in a good cause which it hurts by over-vehemence; and the notes are a curious hodge-podge of valuable and valueless authorities. It will be enough for American readers to know that it cites as competent authority that utterly worthless book 'Esoteric Anthropology,' by T. L. Nichols, M.D., and quotes profusely and enthusiastically from Mrs. Farnham's 'Woman and her Era,' which would not now be placed nearly so high by re-

formers on this side of the water. Mr. Elmer cites also "the American physiologist, Helen H. Gardener." The whole tone of the book throws away as useless all that air of caution and fairness which is so peculiarly important when a layman handles scientific themes.

A book called 'Selections from the Verse of Augusta Webster' (Macmillan) gives an uncommonly well-chosen selection from the many volumes of one of the best of England's women poets—one who, if she never rises above a certain point, rarely falls below it. Compared with Emily Dickinson and Helen Jackson—to name no other Americans—the Englishwomen who now write poetry do not seem daring or passionate or profound; they yield few haunting strains, but they are thoughtful, finished, cultivated, well-bred. It would be impossible, for illustration, to find any one more un-English than Miss Guiney, who is, indeed, of Celtic blood, and who shows in her thin volume, 'A Roadside Harp' (Houghton, Mifflin & Co.), enough of varied thought and impulse and motive to set up a dozen Mrs. Websters. Yet she is always disappointing—the reader always expects that the next time, or the next, her yeast will appear as bread, but that period is still postponed, though it is clearly coming nearer.

Future bibliographers will be somewhat puzzled, no doubt, over the numerous volumes by Mr. and Mrs. Piatt, so often have their contents been recombined and rearranged. We have in times past called attention to the beauty and pathos of Mrs. Piatt's Irish poems, and she now reprints them in a separate volume, 'An Enchanted Castle, and Other Poems: Pictures, Portraits, and People in Ireland' (Longmans). Mr. J. J. Piatt, like his wife, selects for the English public a book of local poems, his being 'Lyrics and Poems of the Ohio Valley' (Longmans). It is a curious fact that, with all his love of his native region and all his gift of local coloring, his best poem should be "The Morning Street," whose strength lies wholly in its city flavor. Written thirty-five years ago, it still remains his permanent contribution to the anthologies.

'Such as They Are,' a volume of poems by Thomas Wentworth Higginson and Mary Thacher Higginson (Boston: Roberts), is, so far as we remember, the first joint book of American verses, by a husband and wife, except in the case of Mr. and Mrs. Piatt. Lowell and others have included poems by their wives, but anonymously. This small volume has been most gracefully illustrated by Garrett, through head and tail-pieces. A portion of the poems have already appeared in the magazines; but others are wholly new, as, for instance, this brief opening lyric:

THE TRUMPETER.

I blew, I blew, the trumpet loudly sounding;
I blew, I blew, my heart within me bounding.
The world was fresh and fair, yet dark with wrong,
And men stood forth to conquer at the song
I blew, I blew, I blew.

The field is won; the minstrels loud are crying,
And all the world is peace; and I am dying.
Yet this forgotten life was not in vain;
Enough if I alone recall the strain
I blew, I blew, I blew.

Mrs. Higginson's poems, which have only recently made themselves known among magazine-readers, sometimes deal with external nature and occasionally have a little sermon in song, like the following:

REPRIEVE.

Tempests and clouds made dark the day
For fitful Madge and me;
At length repentance had its way,
And brought her to my knee.

The softened eyes revealed a tear;
But hope is brave at ten.
"Will you forgive me, Mother dear?
Can I begin again?"

"O child," I said, with weary sigh,
"Too often you begin";
"Yes, Mother," and the calm reply
Showed victory within.

In this remorseful heart sank deep
My lambkin's pleading glance;
What if the Shepherd of the sheep
Denied me one more chance?

Mr. Garrett has also illustrated as well as edited a charming volume of 'Elizabethan Songs' (Boston: Little, Brown & Co.), which is, however, weakened, not adorned, by one of Andrew Lang's jauntiest and shallowest prefaces.

Mr. R. W. Gilder, who likes to issue his poems in small volumes as dainty and delicate as themselves, publishes 'The Great Remembrance, and Other Poems' (Century Co.) in this refined style, his wife furnishing the illustrations. The title-poem is a memorial of the war, and does not, except in single lines, rise greatly above the accustomed level of such contributions; but there are in the book, small as it is, many of those delicate cameos in which no one of our poets, not even Aldrich, exceeds this author. Take, for instance, this song (p. 71):

"Fades the rose; the year grows old;
The tale is told;
Youth doth depart—
Only stays the heart.

"—Ah no! if stays the heart,
Youth can ne'er depart
Nor the sweet tale be told—
Never the rose fade, nor the year grow old."

Mr. James Whitcomb Riley, like the other poets, combines and rearranges his poems, and gives us, in the beautiful typography of the De Vinne Press, his 'Poems Here at Home' (Century Co.). No one can read them without feeling anew that he is at the head of all the living dialect poets; nor did Lowell himself ever achieve anything in dialect so profoundly human and pathetic as Riley's "The Old Man and Jim." Perhaps no other poem, in dialect or not, strikes so completely at the heart of the average experience of the civil war, North or South—its genuineness, its simplicity, its homeliness, its unspoken tragedies. It is a hard ordeal for a poet to intermingle this subdued pathos with the simpler homelinesses of daily life—"The Raggedy Man," "The Boy Lives on Our Farm," "The Literary," and the like (and why omit "Let's go a Visitin' down to Grigsby's Station," the best of all this class?)—and then to include serious and simple poems with no dialect at all. Yet how well Mr. Riley does it may be seen in this, which will reach many hearts (p. 183):

BEREAVED.

Let me come in where you sit weeping—aye,
Let me, who have not any child to die,
Weep with you for the little one whose love
I have known nothing of.

The little arms that slowly, slowly loosed
Their pressure round your neck; the hands you used
To kiss.—Such arms, such hands I never knew,
May I not weep with you?

Fain would I be of service—say some thing
Between the tears that would be comforting—
But, ah! so sadder than yourselves am I,
Who have no child to die.

We have called attention more than once to the slight but steady improvement in Mr. Madison Cawein's self-criticism, and now note with pleasure that he concedes in his latest preface "the frequent obscurity, superfluity, and exaggerated expression of the earlier works" in his volumes, and has therefore rewritten several poems. This would be very hopeful but for the fact that his new volume, 'Poems of Nature and Love,' is dedicated to Joaquin Miller—an even worse model, surely, than his earlier masters, Poe and Swinburne. The book is full of his usual cheap affluence, perhaps a very little retrenched. He still gives us, to take a verse at random (p. 6):

"There the hazy serpolet,
Dewy cistus, blooming wet,
Blushed on bank and boulder;
There the cyclamen, as wan
As faint footprints of the Dawn,
Carpeted the spotted lawn:
There the nude nymph, dripping drawn,
Basked a peachy shoulder."

Perhaps there was nothing inappropriate, after all, in dedicating this volume to Mr. Miller.

'Bits of Blue,' by Wesley Bissonnette, should be useful reading to Mr. Cawein, for we can sometimes see our own faults best when carried a little further in the person of another. Mr. Bissonnette has the same lush affluence with which Mr. Cawein began, and is as yet no further toned down than to write thus preposterously of "The May-Maid":

"She is a slim-sheathed being, blossom-born,
With gray gold gauzes stirring into sight,
Like misty dresses o'er the shadowy grass,
Swathing her limbs in skeins of slumbery light,
Until the white hot sodder of the morn,
Swelling o'er all the silvery sluices bright,
Seals the chill world in frosty wreaths of glass."

Or this of "The Day-Dream":

"She is a maid of moistest modesty,
Who doth her fairness fragrantly enfold
From the plush palmy pleasures of the sun."

Or this:

"Melts the mute marble! O the musical
The mad maturities!—
Pure pallid poem of a maiden muse
Of mysteries!"

No reference can be given to the pages on which these strange passages (and there are many more of them) occur, because it is one of the eccentricities of the book to be unpaged. But is it not strange that Poe, who of all critics would have handled such exhibitions most savagely, should really be the source of influence to which they are mainly due? And yet there are single poems, like "The Wayside Mill," to show that the author has a genuine imaginative power. Perhaps what he really lacks is a sense of humor that would enable him to see the errors of his less judicious moments.

Another poet who shows some real sensibility and imagination, but has no sense of humor as applied to himself, is Dr. Frederick Peterson, previously known by his Swedish translations, and now author of 'In the Shade of Ygdrasil' (Putnams). It is not possible to pardon much to a man who will put in print such doggerel as the following, even under the title of "The Bluebells' Chorus: Chanson Fantastique" (p. 58):

"Our carillon will carol on
In mellow melody,
To invisible dead Isabelle,
Who is a bell to be."

'The Other Side: An Historic Poem,' by Virginia Fraser Doyle (Riverside Press), is a singular survival of that inexorableness on the part of Southern women which doubtless prolonged the civil war for many months and still makes reconstruction difficult and imperfect. In her preface she defines contemporaneous literature as "the logbook by which the historical mariner can steer off the shoals of narrowness and lift above the fogs of sectionalism the many phases of a heterogeneous people." Her contribution towards this desirable end is a long poem in heroic couplets, in which every Southern soldier of the civil war becomes a picturesque cavalier, and every Union soldier a "brutal hireling," and the two hundred thousand black soldiers who fought for the nation are foolishly classed (p. 17) as

"those poor ebon chattels of his hand—
Enfranchised mockeries—held in the lines
By bayonets that prodded from the rear."

It is a curious indication how the laws of trade are doing more to reunite the nation than can

be done by the private wrath of man—or woman—that this book was sent to Cambridge, Massachusetts, to be printed.

'For Fifty Years' is a collection of verses, mostly occasional, by the Rev. E. E. Hale, D.D (Boston: Roberts Bros.). It is distinctively a collection and not a selection; bearing that character of literary odds-and-ends which mars so much of this brilliant man's work. We have found nothing in it so striking as the short translation from Homer called "Neptune Descending" (p. 98), and this is very much impaired by alteration from the form in which it first appeared, many years since, in the collection called 'Thalatta: A Book for the Seaside.' The author has now broken it up into short lines and given it a sort of Hebraic twist, suitable enough for the Psalms of the Old Testament, but peculiarly un-Homeric.

'On the Road Home,' by Margaret E. Sangster (Harpers), is a collection of pure and pleasing poems, thoroughly feminine and domestic, and likely to have many readers and warm friends. There is always a certain attraction in the Scottish dialect, and Mr. James Law, in his 'Dreams o' Hame, and Other Scotch Poems, with a Few Experiments in English Verse' (Paisley and London: Gardner), comes perilously near relying too much on this for the flavor of his volume. He lives apparently at Camden, N. J., but publishes in Scotland. One of the poems is described by Prof. Blackie as a "rich geographical ditty," and this or some other is guardedly and felicitously endorsed by Dr. Holmes as being "characteristic," which may mean much or little. 'Poems and Plays by Donn Piatt' (Cincinnati: Clarke) may certainly be labelled with that epithet; it is a mixture of journalist and politician, and the reader wonders whether the thick volume is the final apotheosis of the Sunday newspaper.

## CHILDREN'S BOOKS.

Despite the facts that the Chinese hieroglyphics stamped on the imperial yellow cover of Adele M. Fielde's 'Chinese Nights' Entertainments' (Putnams) are upside down, and that the green dragon looks wonderfully like an American tow-path mule, the interior contents are not disappointing. There are forty stories of indigenous flavor, felicitously translated out of a bulky Chinese novel entitled 'The Strayed Arrow.' Like two-score mirrors, these tales reflect faithfully as many phases of the social, official, commercial, and imaginary life of the Middle Kingdom. The book is so charming, in that translation and condensation take the place of philosophy or comparison, that the title of one of the stories, "Jean Valjean in Cathay," rather mars than improves. Underneath the folk-lore, the exposure of corrupt politicians, the circumvention of wicked purposes, the proper punishment of the naughty, and the liberal rewarding of the good, is a vein of sly wit and dry humor. The story-teller seems to be continually chuckling in his sleeve at seeing the biter bit, and the digger of the pit falling into his own snare. Especially interesting are the illustrations, by modern Chinese artists of one school, their modernness being shown especially in the jin-riki-sha imported from Japan. These pictures, drawn with spirit and finely reproduced, add greatly to the value of the work. Few accessible books give so faithful an epitome of Chinese life.

R. M. Ballantyne's 'Walrus Hunters' (T. Nelson & Sons) is a story for boys, not much better or worse than the other boys' books that have proceeded from this prolific writer. The Eskimo are not like any Eskimo known to travellers, the Indians are similarly unique, and the whole story of their relations to one another is equally removed from fact or probability. If there were such Eskimo and such Indians, it is possible they might act as here represented. Apart from this, the tale is rather amusing, and the narrative has a certain amount of "go" in it, so that the average uncritical boy reader will probably think it "not a bad story."

'Ivar the Viking,' Mr. Du Chaillu's latest contribution to literature (Scribners), is, according to the title-page, "a romantic history based upon authentic facts of the third and fourth centuries." Exactly what is meant by "authentic facts" is, apparently, facts that are neither doubtful by assumption, nor that have, in any way, succumbed to the wear and tear of time and the attacks of the critics. The reader, however, who looks for facts of this sort appertaining to the third and fourth centuries in the present book will be forced upon some other explanation. If the author were in secret possession of some new and startling sources of information not yet revealed to the eyes of the rest of the world, that would be the solution. Manifestly this, also, is untrue, for the source of the material of the book is plainly to be recognized in both of the Eddas and in the Sagas, with the added evidence of antiquarian finds with which we are all familiar. Some few of the elements comprehended under this last category in reality do go back to the specified time, but they are entirely insufficient to found this or any other story upon.

It may be, in fact, asserted that we know almost nothing at all of the Norsemen not only of the third and fourth centuries, but of those succeeding down to the so-called Viking Age, which began with the middle of the eighth century. Even then the material is scanty enough. The oldest of the Eddic songs do not, in all probability, antedate the ninth century, and the Sagas are later. The great body of Mr. Du Chaillu's "authentic facts" is, in reality, derived from the tenth century. Much of his mythology could not possibly be earlier. The picture of Walhalla, for instance, as we have it, is a distinct growth of the Viking Age. What the Norse mythology of the third century was, no man knows, and it is utterly incapable of reconstruction from what we have left of it. If Mr. Du Chaillu had put on his title-page and elsewhere the "tenth century," no reasonable complaint could have been made. There would have been, to be sure, some anachronisms, but they would have weighed comparatively light in the balance, and might easily have been forgiven.

Aside from the inconsistencies noted, and the few others which might possibly be adduced, the story of Ivar the Viking is to be thoroughly recommended to the young readers for whom it is intended. The history of the Norse chieftain begins with his birth, and tells of his fostering away from home, of his education, his expeditions and his voyages, and finally of his accession to rule upon the death of his father. Like the good old-fashioned tales everywhere, it ends with a marriage, and Ivar and his bride sail away home on a dragon-ship. The story is characteristically spirited, and the romantic part, at least, leaves nothing to be desired.

'Robin's Recruit,' by A. G. Plympton (Roberts Bros.), is a short tale of life on a frontier post. The recruit, a man of weak will and desperate, sullen impulses fostered by early wrongs, is won over to a certain degree of self-restraint through the trust and admiration gratuitously bestowed upon him by little Robin, his captain's child, and finally sacrifices his life in an heroic attempt to save the powder-magazine from threatening fire. The book is written in a rather sentimental tone, despite the protest against sentimentality delivered in season and out of season by the blunt faithful servant, Susannah. "I ain't going to have any man sprawling on the parade-ground picking flowers for *me*," is her acknowledgment of a delicate attention.

The stories in Mr. J. T. Trowbridge's new volume, 'Woodie Thorpe's Pilgrimage' (Lee & Shepard, surely sound the depths or scrape the shoals of commonplace. One after another introduces a youthful hero, generally poor and in some doubtful crisis of his career, often encumbered with some personal disadvantage—among others, "grimmy paws" in one case. They severally emerge from their difficulties, sometimes by the exercise of quite astonishing wisdom and virtue, and again through happy accidents and even in spite of their own ill-behavior. "Never mind," the author seems to say, with cheerful optimism; "a boy's a boy for a' that, and bound to turn out well in the end."

Col. T. W. Knox's 'The Boy Travellers in Southern Europe' (Harpers) is characterized by the merits and defects of its numerous predecessors. It contains a large number of well-chosen and generally good pictures of the principal cities of Italy and a few of southern Spain, with an accompanying text, descriptive and historical, closely packed with information, but which the dreary attempts at humor scattered through it cannot make entertaining. An unusual number of slight, but unnecessary, errors, as, Spielgen for Splügen, Trajan for Titus, and *Sir* Randolph Churchill, indicate haste in preparation. It should also be said that the usefulness of the book for reference is almost lost for the lack of an index.

'John Boyd's Adventures' (D. Appleton & Co.), by the same author, is the story of an American sailor in the early part of the present century. He passes through the usual experiences of heroes in sea-stories, is attacked by privateers and pirates, is shipwrecked, and makes an involuntary voyage in an African slaver. His capture by Algerine pirates and imprisonment in Algiers and Tripoli give occasion for an interesting account of some of the episodes in our naval war with the Barbary States. There is a lack of life and color in the story, and there is no originality and very little excitement in it, but it is unobjectionable, John Boyd being a manly fellow who deserves his promotion.

The 'Comic Tragedies,' written by "Jo" and "Meg" and acted by "The Little Women" (Roberts Bros.), come as an aftermath from Miss Alcott's hard-driven pen. They were worth gathering together chiefly as a passport to further intimacy with a mind that has given so much good cheer to other minds, whether young or only still keeping the spirit of youth. There are doubtless readers who will feel a thrill of genuine sentiment at the sight of these stage texts of the windy performances with which Louisa and her less gifted sisters amused themselves in the earlier Concord days, "the happiest of my life." In themselves they show no promise of the sympathy with homely human nature, its every-day hopes and thoughts, which is the constraining charm of her works. Love-lorn Zuleikas, Biancas, and Ianthes run riot on the boards; witches, bandits, black masks, and their ilk make havoc of every shred of congruity or probability. But it was

"Jo" herself who took the part of ranting villain or disdainful queen, and whose ingenuity made the most of the heterogeneous stage properties graphically described in the "foreword by Meg." This being the case, a volume without intrinsic merit of its own will be sure to find acceptance among readers of all ages and conditions, who will approach it from as many standpoints of interest as there are stages of appreciation of the imaginative faculty and of the value of its productions.

The easy writing and easy thinking of "Susan Coolidge's" stories for girls make them easy reading also. It is quite certain that the young people she has the knack of amusing so pleasantly will get no harm from the bevy of girl acquaintances she gives them. Nor will they often find a hint in her pages that the world is other than a cheerful sort of place, where every nice girl's pudding is sure to contain a matrimonial plum or two, and where common sense and pluck—especially if combined with an instinct for delicate cookery—are tolerably sure to bring their possessor to some good end. In a certain sense life proves to every one very much as he or she takes it, and a stock of comfortable optimism is by no means a bad thing to set out with. From this point of view 'The Barberry Bush' (Roberts Bros.) is an excellent little volume. But for more strenuous ideals a girl must look elsewhere. Intellectual incentive she will not find in any or all of these nine stories, nor will she gain from them that nice feeling for the finished use of her mother-tongue which comes from a familiarity with some of its masters. She may while away pleasant hours with tales thus genially conceived and not ungracefully told, but they will never open up to her the best delights of reading.

---

*Alfred, Lord Tennyson, and his Friends:* A Series of 25 Portraits and Frontispiece, etc. London: T. Fisher Unwin; New York: Macmillan. 1893.

Among the most important of the holiday books this year is certain to be reckoned this handsome folio volume, of which an edition of 400 numbered copies, 150 for sale in America, has been brought out. The portraits are well-executed photogravures, most of them from the celebrated photographs from life of the late Mrs. Julia Margaret Cameron and those of her son H. H. Hay Cameron. Five of them are from portraits by G. F. Watts, and one, that of Arthur Hallam, is from a bust by Chantrey. There is a short introduction by Mr. Cameron, and Mrs. Anne Thackeray Ritchie contributes some rambling but gracefully written Reminiscences, which give pleasant glimpses of Farringford and of the near-at-hand island studio of Mrs. Cameron and its enthusiastic occupant.

Mrs. Cameron took her art very seriously, and *as* an art, and it is a little odd to find her writing, as a great portrait-painter might write, of her effort at "recording faithfully the greatness of the inner as well as the features of the outer man" of her illustrious sitters. She seems to have felt that her admiration and insight were communicated in some way to the plates, and to consider her photographs as done with her soul and her eyes rather than with lenses and acids. Never was such a feeling more nearly justified by the results, and never has photography been more nearly transformed into a fine art. This woman, whose own intensely earnest face here looks out at us from Mr. Watts's portrait, by some magic of sympathy, by intelligence of arrangement, by feeling for light and shade, and, above all, by a trick of focussing which gives a certain vagueness of detail, has managed almost to divest photography of its mechanical nature while retaining its convincing accuracy as a record of fact. The result is a portrait-gallery of the highest interest, and one which posterity will value as giving at once the most just and the most artistic presentation of the faces of some of the greatest men of Victorian England. It is to be regretted that we are not told, except in one instance, which of the pictures are by the son, but, as well as we can judge from the date and other evidences, his plates are somewhat more commonplace than the mother's—excellent photographs, but with less individuality of manner.

The volume opens, after a frontispiece or illuminated title by W. A. Smith, in which there is little to praise, with four portraits of the Laureate himself at different ages. The first is Watts's portrait of 1859, dreamy and poetic-looking, but not very real, the author rather than the man. Strongly contrasted with it is the celebrated photograph, taken in 1865 by Mrs. Cameron, which Tennyson himself always spoke of as the "dirty monk." It is haggard and dishevelled, a face of power rather than of sweetness, the shoulders wrapped in an old cloak. There is a complete absence of linen that is slightly unpleasant in suggestion, and probably gave it its name. The head is in nearly full profile, and the high retreating forehead and aquiline nose are well shown. Mrs. Cameron herself said of it that it was "a fit representation of Isaiah or of Jeremiah," and Sir Henry Taylor thought it as fine as Tennyson's finest poem. That of 1866 is mild and combed, with a look as of a Dickens with longer hair. It suggests, too, somehow, the head of Jean François Millet. It is not very striking or individual. Last comes a photograph of 1888, nearly full-faced, with flat velvet cap, and beard now white with age—a strong, mild face that looks steadily at you from under brows and lids that droop less, apparently, than in some of the earlier portraits.

Chantrey's somewhat commonplace and smug-looking bust of Hallam, and Watts's refined but vapory Lady Tennyson, are followed by the magnificent profile of Carlyle which is best known to many by T. Cole's fine engraving published in the *Century* some years since. It is the most remarkable thing in the book, and one of the best portraits in existence. Only the great masters of portraiture have done anything at once so fine in aspect and so convincing in representation of character, and it reminds one rather of Velasquez or Rembrandt than of ordinary photography. It is little wonder that, difficult as Carlyle was about his portraits—calling that by Watts a "flayed horse"—he should have given a grumbling acquiescence to this one as having "something of likeness." Only less impressive than the Carlyle are the melancholy, leonine head of Sir John Herschel, and the vast pent-house brow and snowy beard of Darwin. To turn from these to the portrait of Gladstone by Watts is to realize what we moderns owe to photography. No one could read the character of the "grand old man" in these uncertain and characterless features.

Between Carlyle and Gladstone is Browning's strong face, and after Herschel come a good commonplace photograph of Hallam Tennyson, the present Lord, and one, not so good, of his brother Lionel; Mrs. Cameron herself by Watts and Watts by Mrs. Cameron—a fine portrait, noticeable for the likeness to Titian, which the painter is evidently aware of, and then James Spedding from Watts's drawing—"calm, wise, bald, combining the best features of youth and age," as FitzGerald said. The "forehead," on which FitzGerald joked, and which Thackeray caricatured as a milestone and a rising moon, is very conspicuous, and reaches beyond the crown of the head. Neither FitzGerald himself nor Thackeray is here, more's the pity. Mrs. Cameron would have made something very fine of Thackeray's noble face, one imagines. Americans will prize the portrait of Longfellow and the very fine one of Lowell, and every one will be interested just now in the "cherubic" countenance of Prof. Jowett, a delicate, refined, and kindly face, not without a certain resemblance to Thiers. Besides these, there are Dr. Butler of Trinity, Mrs. Thackeray Ritchie, Dean Bradley, the shrewd, diplomatic-looking face of Lord Dufferin, the homely, heavy-jawed Lecky, and, last of all, the younger Cameron's very fine portrait of Irving as *Becket*. Altogether, this is a book to be thankful for.

---

*General Greene.* By Francis Vinton Greene, author of 'The Russian Army and its Campaigns in Turkey in 1877-78,' etc. D. Appleton & Co. 1893. [Great Commanders Series.]

When Jared Sparks says that Gen. Nathanael Greene "may justly be regarded as the most extraordinary man in the Army of the Revolution," it is to be assumed that primary reference is had to the extraordinary circumstances under which he rose to his singular eminence as a soldier. The son of a Quaker preacher, trained "among the most superstitious sort," to use his own words, taught to despise all learning outside of the Bible, to regard all worldly amusements as sinful, and to abhor war as criminal, he early began to collect books, was passionately fond of dancing, had a fancy for military parades, enlisted in the "Kentish Guards," despite three separate warnings from the "Meeting," pored over Cæsar's Campaigns and Turenne's Memoirs, surreptitiously imported a musket from Boston, hired a British deserter from Gen. Gage's army to teach the manual of arms to his train-band comrades, and finally, though only a private in that squad of military rustics, was elected *per saltum* Brigadier-General of the "Army of Observation" raised by the Assembly of Rhode Island in 1775 for the relief of Boston. At the age of thirty we find him lamenting his want of a liberal education, for the want of which, as he said, his mind had been "cramped." At the age of thirty-three we find him suddenly elevated by his fellow-citizens to the most important and responsible station in their gift; and his biographer is compelled to admit that history is silent as to the reasons which induced this extraordinary and sudden promotion.

But history is not silent as to the reasons which subsequently justified it. Among all the generals who, beginning at the siege of Boston, rendered service in the Continental Army, Washington and Greene are the only general officers whose service was continuous. Fiske thinks it not too much to say that Greene was Washington's "right arm" in every campaign, while "for indefatigable industry, for strength and breadth of intelligence, and for unselfish devotion to the public service he was scarcely inferior to the commander-in-chief." Cornwallis, called to measure swords with him in the campaign of the Jerseys, bore a frank tribute to Greene's military capa-

city. "Greene," he wrote, "is as dangerous as Washington; he is vigilant, enterprising, and full of resources." Alexander Hamilton has praised "the vast, it may be almost said the enormous, powers of his mind," while Robert Morris allowed the language of eulogy to rise into the *aliquid immensum* by saying that he was "an officer who found in his own genius an ample resource for the want of men, money, clothes, arms, and supplies."

Captain Greene brings to this biography a candid, and what, at certain stages of the narrative, becomes a critical, appreciation of the conduct he is here called to review, while the writer's military knowledge has well fitted him to interpret the theory of the movements made in each of the campaigns in which Greene figured. Especially interesting is the description here given of the Southern campaign, in which Greene manœuvred Cornwallis into Virginia and cooped up the remnant of the British army in Charleston.

It is admitted by his biographer that Gen. Greene's exit from the office of Quartermaster-General of the Continental Army "was not as dignified as might have been wished"; but it is pleaded, in partial extenuation of any peevishness he may have shown in retiring from that post, that its duties were very ungrateful to him, and that the provocations he received from his enemies in Congress were great. But undoubtedly the most painful episode in the whole of Gen. Greene's career is the complication in which, towards the end of the Southern campaign, he became involved with a firm of army contractors, in which one Banks was the managing principal. It is known that, without apprising Congress of the fact, Gen. Greene went as security on Banks's paper for the fulfilment of certain contracts, and was fraudulently left in the lurch by that bold operator. To add to Greene's humiliation, it was not only "insinuated" but openly charged that he was a silent partner with Banks in the hard bargain which the latter had driven with the Southern Army, and it came out, in the investigations to which the case led, that two of Greene's aides-de-camp had certainly been in collusion with Banks. From all the evidence in the case, we are perfectly persuaded that Greene was innocent of any confederacy with this rapacious army sutler, but we can hardly concur with the biographer in holding that Greene's "conduct throughout this humiliating incident was dignified and proper *with one single exception*"—the retention of the speculating aides-de-camp in their confidential relations after their complicity with Banks had been detected. This certainly was a grievous error, but the fountain and origin of Greene's whole imprudence was in becoming surety for Banks without at the time giving notice of the fact to Congress. We can see that the motive for this reticence may have been as patriotic as it was seemingly prudential, but the secret compact was made in contravention alike of public duty and of private safety, as the result soon proved. The biographer is entirely correct when he says that the widow of Gen. Greene was "warmly assisted" by Alexander Hamilton, while he was Secretary of the Treasury, in pressing her claim for public relief from the heavy burden which the estate of Greene was called to assume because of the failure and frauds of Banks. But Hamilton, with all his confidence in Greene's probity and in the purity of Greene's motives, could not bring himself to justify an obvious deviation from the ordinary rule of public prudence, and submitted it, "without observation, to the contemplation of legislative discretion."

The appeal to Congress was not made in vain, for in 1796 an act was passed, after full discussion, for the relief of the estate of Gen. Greene from the entanglement with Banks. And so it came to pass, in the end, that the national legislation set its seal to the integrity of Greene, and when it was proposed in the Senate to accompany this act of justice with an insulting proviso, to the effect that the moneys paid for the estate should be reimbursed to the Government "if at any time hereafter it should appear that the said Gen. Greene was interested in this transaction as a member of the house of Hunter, Banks & Co.," the proviso was promptly voted down, because the injurious implication had been negatived in the eyes of candid men by all the disclosures to which the scandal had led.

Capt. Greene writes in a quiet and easy style, but we do not share his predilection for such locutions as "the *balance* of the militia went home," "he withdrew the *balance* of the garrison," when the same thought could be just as well expressed in more reputable English.

---

*The Philippine Islands.* By John Foreman. Charles Scribner's Sons.

We should recommend this book to any one who intends to visit the Philippine Islands for a length of time, or who wishes to investigate seriously their history, nature, and resources. We should not recommend it to any one else except to the very patient. Mr. Foreman evidently is at home in his subject; he has lived and travelled in the Philippines for nine years, he has studied and observed, and he furnishes us with much useful information. What a pity that he does not know how to use his material! His book is heavy from beginning to end; facts, figures, and personal experiences dragging along one after another in sleepy succession. Although he shows insight and we respect his opinions, he grasps his ideas clumsily. We miss a sense of proportion, of what is worth saying and what is not. His style, always tiresome, is often positively bad, especially when he attempts fine writing. On the first page we find: "Nor has the subsequent example of colonizing nations served to quench, in spirit, their petrified conservatism." Such an opening is discouraging to the reader who has nearly five hundred large pages ahead of him. Still, we repeat, Mr. Foreman tells us much.

The chief impression we get from his work —and it is also his own—is how little Spain has done in three hundred years with her splendid possessions. Many of the natives are yet unsubdued, none of them are really civilized. It is the usual story of Spanish bigotry and misgovernment. The laws are complicated and bad, brigands abound and are seldom punished, the officials are corrupt, capital and enterprise are lacking and receive no encouragement, and "every impediment possible, in the present day, seems to be placed in the way of trade." The great undeveloped resources are likely long to remain so; but, as in other countries where nature is bountiful, life easy, and modern industrial conditions unknown, there is almost no absolute want. On the whole, we get an unflattering view of the natives. They are incurably lazy, deceitful, and improvident. "In the South there is no way of expressing thanks in native dialect to a donor. . . . Even the best class of natives neither appreciate, nor feel grateful for, nor even seem to understand a spontaneous gift. Apparently, they comprehend the favor when one yields to their asking. The lowest classes never give to each other, unsolicited, a cent's worth. If an European makes voluntary gratuities to the natives, he is considered a fool—they entertain a contempt for him, which develops into intolerable impertinence." On the other hand, they are sober, patient, clean, they are rather honest, and they are brave when well led.

We regret that Mr. Foreman does not appear to be familiar with Java, to which he makes no allusion, though it is the colony of another power that can most fairly be compared with the Philippines. We believe that the Dutch get much the better of the comparison in every respect but one, which, however, the Spaniards probably think the most important of all. *They* have converted their subjects, including many of the Chinese, some of whom have even been admitted to holy orders, whereas the Dutch have not done so. Since the beginning of its history the Church in the Philippines has been all-powerful. "The conquest of this colony was decidedly far more a religious achievement than a military one." At the present day the influence of the parish priests or "friars" is immense, an influence in most cases bitterly opposed to all progress and reform. A great opportunity has been lost. In spite of symptoms of revolt against clerical rule and of a general awakening, we doubt if the islands can now ever hope to attain the prosperity they might once have enjoyed. Formerly the limited supply of tropical products which the world needs was obtained from a few favored countries; but such enormous tracts of tropical land have been recently acquired by European nations that it is hard to see how any such possessions can be very profitable. If any are, the Spanish certainly have not the best chance.

In conclusion, as a curiosity, here is an item in the expenditures that may interest some people in Chicago and elsewhere: "Share of the pension paid to the heir of Christopher Columbus, the Duke of Veragua ($23,400 a year), $3,000."

---

*Madoc:* An Essay on the Discovery of America by Madoc ap Owen Gwynedd in the Twelfth Century. By Thomas Stephens. Edited by Llywarch Reynolds. Longmans. 1893. 8vo, pp. xvi-250.

At the Eisteddfod of 1858 a prize was offered for an essay on "The Welsh Discovery of America." Five papers were handed in, of which the present book was one, and it was esteemed much the ablest of all in research and literary skill; but, to save the national pride, it was thrown out, because, taking the ground of a non-discovery, it was held not to be upon the assigned topic. The writer of it has a reputation as the author of the 'Literature of the Kymry.' The essay has not lost by an enforced obscurity of five and thirty years, and is now made public. The question which it discusses has long been settled in the estimation of careful historical students who can weigh evidence, and the subject can well pass into oblivion under the impression which this treatment of it makes. The book in one sense is not a good one, because the author's method involves so much repetition, and the magnitude of the book is consequently out of proportion to the task given to him. He divides the matter into three sections. In the first he states the various so-called evidences, bardic and otherwise. In the second he follows down the critical literature of the topic based on these evidences. In the third he goes over the material of the first and second sections in the light of his own judgment. In this way pretty much the

same material is three times laid before the reader.

The examination of what is called the bardic proofs shows that perversion, garbling, and substitution have been the triple method of making these evidences serve an affirmative purpose. Mr. Stephens makes it clear that there is no contemporary historical evidence, and that legendary stories on the subject had no reference to Western discoveries until after the exploits of Columbus were known, when incidents, in some ways very like the experiences of the Genoese, were engrafted upon the legend. He then examines, at so great a length as to overdo the matter, the hollowness and hearsay character of the innumerable stories which have prevailed since the middle of the last century, of Welsh Indians among our aborigines, presumably descendants of Madoc's companions; and he disposes of them one by one as presumptions or falsities. Humboldt sixty years ago dismissed the question with the assurance that the main features of the story were quite possible, as indeed they are, and the authority of his great name has ever since been evoked in support of the claim by the same sort of minds as those which get a polite acknowledgment of their new book and think they have got a critical commendation.

BOOKS OF THE WEEK.

Across France in a Caravan. 2d ed. Randolph. $4.50.

## HENRY HOLT & CO., N. Y.

HAVE JUST PUBLISHED:

**THE LIFE OF HEINRICH HEINE.**
Told in his own words. Translated from Karpeles by ARTHUR DEXTER. A biography compiled from the poet's writings, and told as no other is, with the poet's own unapproachable charm. With portrait. Red top and rough edges. 12mo, cloth. $1.75.

**THE DAYS OF LAMB AND COLERIDGE.**
Based almost entirely on the writings of these poets and their intimates. By ALICE E. LORD. 12mo, cloth. $1.25.

**JEROME K. JEROME'S NOVEL NOTES.**
Thought to be the author's best work. Recalls, by his keen burlesque of the world pictured by novelists, the delightful Satire of "Stageland." Displays a marked power in the handling of the grotesque and terrible that his earlier books give no hint of. With 140 illustrations, mostly half tone. Cloth, 12mo. $1.25.

**ZIMMERMAN'S BOTANICAL MICRO-TECHNIQUE.**
Translated by J. E. HUMPHREY. A laboratory manual which presents thoroughly, explicitly, and compactly the latest and best processes. 308 pp. 8vo.

# The Safe Side.

Several hundred million dollars of the people's money is annually intercepted in the support of the weak sentimental requirements of an artificial standard of excellence based upon that which has no connection whatever with any question of ethics, it being simply assertions invented in explanation of a pretended phenomenon that never occurred. A far greater public loss is suffered by the long-continued substitution of those peurile requirements in the place of the natural rigid discipline of the faculty of honor prevalent in all secular associations, social and commercial, and expressed in the law; the consequence being that the average of honor has been reduced to a degree so low as to now endanger the peace and welfare of this country. This artificial ethical system is thus the fouutainhead of corruption and of a poverty-stricken condition of widely needed public conveniences, and it has become a bar to progress in every direction, socially, morally, and politically. It is composed mostly of false virtues and false sins, and has been brought down to our time by the enforced silence of opponents, by falsifying the lessons of history, by retarding a knowledge of scientific discoveries conflicting with it, and by contentions exclusively upon false issues.

The effect of this weak, crime-excusing sentimentalism upon our hundreds of thousands of juries within a century has probably been of more injury than such corruption as there may have been in all of our various legislative bodies within that time.

The priesthood have been successful only in that which pertains to their own interest. Their success in that respect is equal to the magnitude of their exertions and to the intellectual ability employed. Their vast united wealth and attending dignity is a tangible thing, perceptible to the senses at all times, throughout all Christendom, and it impresses the mind with far greater power than can be done by any mere matter of opinion, which is all there is to show for the pretended effects of Christianity. It is an inherited opinion and exists in the mind only. Their real failure is obscured by the brilliancy of their success in securing worldly goods and honors for themselves. They will usually pass in silence any dishonorable conduct of members, because a trial would advertise a failure. On the other hand, trials for heresy magnify the pretended importance of their explanatory doctrines and are self-laudatory; hence upon such charges they are prompt and merciless. The same men who will condone offences that religion is intended to prevent will fill the world with their contentions over figments of opinion regarding conditions in a future existence of which they know absolutely nothing.

Nature's conservation is secured by certain laws of the mind whereby we not only inherit ideas but are chiefly governed by them. The correction of the many errors these ideas always contain is provided for in a separate process, which process is made inoperative by churchmen in just the degree that they obtain control of education.

The importance of inherited ideas, the mental law that secures them, how the public mind is made homogeneous, and continuous and slow but sure intellectual advancement assured, the accidental origin of Christianity, John the Baptist's disciples, Paul's two Epistles to the Corinthians were in contention with them, why the New Testament has so much of Paul and so little of Peter and still less of James, the evolution of the Fourth Gospel, the ascension, natural depravity, the teachings of Christ, why he was crucified, faith, conversion, immortality, basis of New Testament statements given in the works of Josephus, the same circumstance started both Paul and Josephus on a journey to Rome, both were shipwrecked, Theodosius and Trinitarianism, far-reaching effect of a certain edict of Justinian, etc., forms the subject matter of THE SAFE SIDE: *A Theistic Refutation of the Divinity of Christ.*

". . . It is a book which, for its matter, its thought, to say nothing of its manner, is thoroughly worthy of equally simple and complete refutation, if any one can achieve it."—*Chicago Times.*

". . . The work should be read by doctors of the church and able, educated ministers of the Gospel who possess superior knowledge of the subject. . . ."—*Chicago Tribune, Sept.* 9, 1893.

". . . Many orthodox readers will sympathize somewhat with the view Mr. Mitchell takes of the clergy. . . . Throughout it is ably written, in clear, fitting language. . . ."—*Review of Reviews, April,* 1893.

In the prospectus which will be mailed upon application, are published highly complimentary letters from Hon. Andrew Dixon White, ex-President of Cornell University, now United States Minister to Russia; Prof. O. B. Frothingham, Boston; Judge Henry Booth, Chicago; Prof. Hudson Tuttle, Berlin Heights, Ohio, and extracts from reviews.

A small edition of this book was first issued for the purpose of obtaining criticism. It is now revised, enlarged, and improved, printed on first-class paper, is bound in best English cloth, and contains 475 pages, 12mo.

The price per single copy of THE SAFE SIDE is $1.50, for which price it will be sent free to all parts of the country, usually by express, if possible, at publisher's special prepaid rates. Address

RICHARD M. MITCHELL,
10 Pacific Avenue (opposite Board of Trade),
CHICAGO.

## Autumn Announcements.

### Low Tide on Grand Pré: A Book of Lyrics.

By Bliss Carman. Neatly bound in cloth, 12mo, 120 pages, $1.00.

The London *Athenæum* has styled Mr Bliss Carman "the most poetical writer of verse that Canada has produced." It is with great pleasure that we announce the publication of Mr. Carman's first volume of poems.

### Alfred, Lord Tennyson: A Study of His Life and Work.

By Arthur Waugh, B.A. Oxon. New cheap edition. Cloth, illustrated, 8vo, 350 pages, $1.50.

We have arranged for the American publication of a new cheap edition of this work at half the former price, well printed, and with all the original illustrations, together with additions and revisions in the text. This standard working biography of the laureate is likely to retain its popularity among lovers of his verse.

### On Sunny Shores.

By Clinton Scollard, author of "Under Summer Skies." 12mo, 300 pages, illustrated. Cloth, $1.00.

Professor Clinton Scollard will issue this fall a further description of his poetical pilgrimages, entitled "On Sunny Shores." It will be published as a companion volume to his popular "Under Summer Skies," the two works complementing each other. The charm of style and daintiness of touch shown in the former book of travels is more than maintained.

### Under Summer Skies.

By Clinton Scollard. Cloth, 8vo, 300 pages, $1.00.

"These records of his wanderings are written in an engaging and unpretentious style; they abound in poetic descriptions of persons and localities, and here and there throughout the volume are delightful lyrics which lend an added grace to the prose."—*The Critic* (New York).

### Our Village.

By Mary Russell Mitford. 16mo. 348 pages. Bound in colored cloth, 60 cents; fine white vellum cloth, gilt top, 75 cents.

Early in the present year we arranged to publish a one-volume edition of selected stories and sketches from Miss Mitford's "Our Village." The volume will be brought out this fall in a dainty binding at a very moderate price.

*The first issue in our new "Violet Series." Other volumes to be announced.*

*Catalogue and Price-lists free on application.*

**** Our publications are for sale by all booksellers, or are mailed, postpaid, on receipt of price.*

**Charles L. Webster & Co.,**
*67 Fifth Avenue, N. Y. City.*

# J. B. Lippincott Company

*HAVE JUST ISSUED:*

### History of the Consulate and the Empire of France.

By L. A. Thiers, Ex-Prime Minister of France, Translated from the French, with the sanction of the author, by D. Forbes Campbell. An entirely new edition, printed from new type and illustrated with thirty six steel plates printed from the French originals. Twelve octavo volumes. Cloth, $3.00 per volume Three volumes now ready, to be followed with one volume a month until completed.

### History of the Reign of the Emperor Charles V.

(Two volumes)

### Biographical and Critical Miscellanies.

(One volume.)

*Completing the De Luxe Edition* (limited to 250 copies) *of the works of* William H. Prescott. Containing all the steel plates on India paper and maps that appeared in former editions, together with one hundred and sixty-five new phototype illustrations Large 8vo, handsomely bound in half morocco, gilt top, $5.00 net per volume.

### Queechy.

By Susan Warner, author of "The Wide, Wide World," "Dollars and Cents," etc *New Edition.* Uniform with "The Wide, Wide World." Printed from new plates and illustrated with thirty new pictures in the text from drawings by Frederic Dielman. 12mo Cloth, $1.00; paper, 50 cents

"The new edition of this familiar story, issued uniform with the latest issue of 'The Wide, Wide World,' will be gladly welcomed by thousands of old friends and by many new ones. The work has always been eagerly sought and read. The moral lessons in it will never be out of style, and its homely simplicity and rich pictures of child-life will always attract the young."

### Goldsmith's Works.

*New Edition* Published in connection with Dent & Company of London. Illustrated with etchings by Herbert Railton Six volumes 16mo. Cloth, $6.00.

This edition comprises Poems, Plays, Vicar of Wakefield, Citizen of the World, and the Bee and other Essays.

### Barabbas.

A Dream of the World's Tragedy. A new copyright novel by Marie Corelli, author of "Vendetta," etc 12mo. Cloth, $1.00.

This remarkable novel, introducing many of the characters, incidents and scenes in the great tragedy of the Crucifixion, is the latest work from the pen of a writer who has won great fame for her vivid romances upon spiritual themes The tone of the book is in all respects deeply reverential, taking no liberties with the sacred text.

*The above new publications are for sale by all booksellers. Mailed by the publishers on receipt of price.*

## JAMES G. BLAINE.

We have just secured a small quantity of James G. Blaine's 'Twenty Years in Congress.' The work is complete in two royal octavo volumes of about 700 pages each, printed from new electrotype plates on superfine book paper, bound in fine English muslin, marbled edges. Published by Henry Bill Publishing Co., Norwich, Conn. Original price, $7.50. Our price for the two volumes, $3.50.

## 'I do not Eat Pastry.'

How often you hear this expression, and the explanation that usually follows: "I am troubled with dyspepsia." The cause of this is not far to seek. In the past lard has been used as the principal shortening in pastry—the result dyspepsia. The dyspeptic need no longer be troubled, providing

# COTTOLENE

is substituted for lard in the preparation of all food. It is composed strictly of highly refined vegetable oil and beef suet. When used as a shortening, it produces wholesome and healthful pastry. Physicians and expert cooks everywhere indorse it. Give it a trial yourself.

Sold in 3 and 5 pound pails, by all grocers.

THE AMERICAN COTTON OIL CO.

D. APPLETON & CO.,
NEW YORK.

INDEX TO THE
**Popular Science Monthly,**
**Volumes I to XL, 1872-1892.**

Compiled by FREDERIK A. FERNALD. 8vo. Cloth, $2.50.

THE POPULAR SCIENCE MONTHLY is notably a magazine whose contents are of permanent value. Any one who is reading up a subject in natural, social, or ethical science will seldom fail to find a valuable store of information among its resources. Its first twenty years form an especially important and interesting period in the spread of scientific thought and the progress of the scientific arts. As new advances have been made they have been explained by competent writers in the MONTHLY, so that the forty volumes of the magazine form A TREASURE-HOUSE OF SCIENTIFIC KNOWLEDGE. The new Index is a key to this treasure house, and should be owned by all who have back volumes of the magazine. Persons who depend on a public library for the use of the volumes will find it a great convenience to have the Index at home. Each alternate page is left blank, to give space for notes and additions.

*For sale by all booksellers, or will be sent by mail on receipt of price by the publishers.*

D. APPLETON & CO.,
1, 3, AND 5 BOND ST., NEW YORK.

## D. Appleton & Co.'s New Books.

### Methods and Results.

By THOMAS H. HUXLEY, author of "Physiography," "Manual of the Anatomy of Invertebrated Animals," etc. 12mo. Cloth, $1.25.

This is the first of nine volumes to be issued at short intervals, comprising the more important of Prof. Huxley's previously published essays. It includes a brief autobiography.

### The Inadequacy of "Natural Selection."

By HERBERT SPENCER. 12mo. Paper. 30 cents.

This essay, in which Prof. Weismann's theories are criticised, is reprinted from the *Contemporary Review*, and comprises a forcible presentation of Mr. Spencer's views upon the general subject indicated in the title.

### Picciola.

By X. B. SAINTINE. With 130 Illustrations by J. F. Gueldry. 8vo. Cloth, gilt, $1.50.

"Picciola; The Prisoner of Fenestrella, or Captivity Captive," is one of the most charming and popular of French classics. The artist has thoroughly sympathized with the delicacy and beauty of this tender and touching story, and the publishers believe that this edition will take a permanent place as the standard illustrated "Picciola." It is uniform with the illustrated editions of "Colette" and "An Attic Philosopher in Paris."

### Memoirs.

By CHARLES GODFREY LELAND (Hans Breitmann). With Portrait. 12mo. Cloth, $2.00.

"An American who won golden opinions from Longfellow and others for his advocacy of the cause of emancipation in the early days of the agitation, who saw active service during the civil war, who has long been identified with the literature of the United States, who has devoted many years to European travel, and who has made himself familiar with gypsy life and lore wherever he has encountered them, could scarcely fail to have a career worth chronicling."—*Edinburgh Scotsman.*

"In a way, Mr. Leland's 'Memoirs' carry with them the same joy as Sir Richard Burton's, in that they combine the charms of the man of intellect and the man of action. Happily they differ in that Mr. Leland is still alive. Mr. Leland's stories about the American war are interesting. If anything were needed to enlarge one's ideas of that tremendous struggle, Mr. Leland's stories would do it."—*Pall Mall Gazette.*

### The Gilded Man
**(El Dorado),**

And other Pictures of the Spanish Occupancy of America. By A. F. BANDELIER. 12mo. Cloth, $1 50.

"As Mr Bandelier is an acknowledged authority on the subjects discussed in this volume, historical students will see that it is well worth a careful perusal. Nor does it appeal to them alone; every lover of tales of adventure will find entertainment in its pages."—*Chicago Journal.*

"A volume which cannot fail to possess unusual attractions for those interested in the romantic story of the Spanish conquest and occupation of North and South America."—*San Francisco Chronicle.*

### The Art of Music.

By C. HUBERT H. PARRY, M.A. 12mo. Cloth, $4.00.

A concise and admirable exposition of the growth and development of musical art, full of the kind of information which persons desiring to cultivate a taste in music ought to have.

### The Country School in New England.

By CLIFTON JOHNSON. With 60 Illustrations from Photographs and Drawings made by the Author. Square 8vo. Cloth, gilt edges, $2.50.

This volume is so delightfully novel, quaint, picturesque, and so thoroughly infused with the fresh and unsophisticated spirit of childhood, that it inspires instant sympathy and appreciation. The author describes successive periods of the country school—the winter and summer terms, the scholars in their classes and at the blackboard their punishments, their fishing and coasting, their duties and amusements on the farm—in short, the every-day life of the boys and girls of rural New England in the days of our fathers and our own. Every phase of his subject is aptly illustrated with pictures from life.

### Louisa Muhlbach's Historical Novels.

New edition, 18 vols. Illustrated. 12mo. Cloth, per volume, $1.00.

In offering to the public our *new and illustrated 12mo edition* of Louisa Mühlbach's celebrated historical romances we wish to call attention to the continued and increasing popularity of these books for over thirty years. These romances are as well known in England and America as in the author's native country, Germany, and it has been the unanimous verdict that no other romances reproduce so vividly the spirit and social life of the times which are described. In the vividness of style, abundance of dramatic incidents, and the distinctness of the characters portrayed, these books offer exceptional entertainment, while at the same time they familiarize the reader with the events and personages of great historical epochs.

*RECENT ISSUES IN*

### Appletons' Town and Country Library.

Each 12mo, paper, 50 cents; cloth, $1.00.

**DIANA TEMPEST.** By Miss CHOLMONDELEY.

**A WOMAN OF FORTY.** By ESMÉ STUART.

**DODO.** By E. F. BENSON.

**FOR SALE.**
PROUT'S NECK, MAINE. Two lots, beautifully situated on the Marginal Way, overlooking beach and ocean. Address F. MOSS,
37 West 22d St., New York.

*25c. each.—Hugo's 'Notre Dame,' 'Ninety-*Three,' 'Laughing Man,' 'Sea Toilers,' 'Hans of Iceland,' 'History of a Crime,' etc. 50c.—'Les Misérables.' Mailed promptly. PRATT, 155 6th Ave, N. Y.

**Longmans, Green, & Co.'s**
*NEW BOOKS.*

**Human Physiology:**
Being the Substance of Lectures Delivered at the St. Mary's Hospital Medical School from 1885 to 1890. By AUGUSTUS D. WALLER. *Second Edition.* With 304 Figures in the text, Bibliography, and Index. 8vo, pages xvi–632, $4.00.

**Manual of Bacteriology.**
For Practitioners and Students. With Especial Reference to Practical Methods. By Dr. S. L. SCHENK, Professor Extraordinary in the University of Vienna. Translated from the German, with an Appendix, by W. R. DAWSON, B.A., M.D., University of Dublin. With 100 Illustrations, some of which are colored. 8vo, $3.00 *net.*

**Diseases and Injuries of the Teeth,**
Including Pathology and Treatment: A Manual of Practical Dentistry for Students and Practitioners. By MORTON SMALE, M.R.C.S., etc., Dental Surgeon to St. Mary's Hospital, etc., and J. F. COLYER, L.R.C.P., etc., Assistant Dental Surgeon to Charing Cross Hospital, etc. With numerous Illustrations. 8vo, $4.00.

**Essentials of Chemical Physiology.**
By W. D. HALLIBURTON, M.D., F.R.S., Professor of Physiology, King's College, London. With 74 Illustrations. 8vo, $1.50.
*** This is a small book, suitable for medical students. It treats of the subject in the same way as Prof. Schäfer's "Essentials" treats of Histology It contains a number of elementary and advanced practical lessons, followed in each case by a brief descriptive account of the facts related to the exercises which are intended to be performed by each member of the class.

**The Diseases of Children, Medical and Surgical.**
By HENRY ASHBY, M D., Lond., and G. A. WRIGHT, B.A., Eng. *SECOND EDITION.* Edited for American Students by WILLIAM PERRY NORTHRUP, A.M., M.D., Attending Physician to the Presbyterian Hospital, Pathologist to the N. Y. Foundling Hospital, etc. 8vo, 795 pages, with 183 Illustrations and full Index, $5.00.

## The Week.

PRESIDENT CLEVELAND'S decision in the Hawaiian case is the only just one possible. He has simply undone the wrong which Minister Stevens, acting without authority, committed in the name of the Harrison Administration, and which that Administration itself was forced to disavow after it had made thoroughly discreditable use of it. Secretary Gresham gives a clear and straightforward statement of all the disgraceful episodes in this most un-American proceeding, showing, what was made plain long ago, that the conduct of Mr. Stevens was indefensible in every particular, and was sustained by him with misrepresentation and falsehood. As Secretary Gresham says:

> "Should not the great wrong done to a feeble, but independent State, by an abuse of the authority of the United States, be undone by restoring the legitimate government? Anything short of that will not, I respectfully submit, satisfy the demands of justice. Can the United States consistently insist that other nations shall respect the independence of Hawaii while not respecting it themselves? Our government was the first to recognize the independence of the Islands, and it should be the last to acquire sovereignty over them by force and fraud."

There is no other answer to these questions than the one which the Cleveland Administration has given. President Harrison's course in the matter was scarcely less discreditable than that of Stevens. The Queen of Hawaii issued a proclamation after the Stevens seizure by force and fraud, in which she said she had yielded her authority to force and under protest, *pending an appeal of her case to the United States.* She then sent to this country a commission to present her case to the President. Without granting the very ordinary courtesy of awaiting the arrival of her envoys, the President closed the case without hearing the Queen's side at all, and hurried a message to Congress, with a treaty of annexation, saying that the "restoration of Queen Liliuokalani to her throne is undesirable, if not impossible." Nothing more disgraceful than this has ever happened in our international dealings. We observe that the annexationists are now denouncing President Cleveland's simple undoing of Harrison's wrong as a concession to "monarchy," as if a monarchy were not entitled to be treated with either decency or courtesy. We have no fear as to the popular judgment in this matter. There has never been any real sentiment in favor of annexation, as the condemnation of the Union League Club, uttered shortly after Harrison sent in his treaty, gave conclusive evidence. The American people are too sensible to believe that grabbing an island by force and fraud is the true way to vindicate our "Americanism."

The horror felt by the Republican press, and particularly the *Tribune*, over the restoration of an "idolatrous" monarch in Hawaii has not been equalled since Bill Nye discovered that he was being cheated by "a heathen Chinee." The remedy for it is to remember that, when you rob a man, you, *ipso facto*, condone the badness of his character. If, for instance, you steal his watch, you cannot plead that he is not a church member, or that he ill-treats his wife or gets drunk once a week. If we admit that we unlawfully dethroned the Queen in order to help the commercial speculations of certain people, we waive our objections both to her religion and to her morality. She is, from all we hear, quite as good a Christian as the bulk of her subjects, who are pretty steady in ordinary times, although they do now and then, when the Mauna Loa volcano is very violent, sacrifice a black pig or two by way of extra precaution. But our colored citizens in South Carolina and Mississippi are quite capable of the same thing if they had frequently to face alarming natural phenomena. Does any one suppose that if tornadoes or earthquakes became very frequent in those parts, the colored citizens would rely solely on prayer-meetings for deliverance? Moreover, we are dealing with heathen monarchs every day. The Emperor of China is a heathen; so is the Emperor of Japan, and the King of Siam, and certainly the Sultan of Morocco and of Turkey might as well be. The way the Emperor of Russia carries on before the "sacred images," too, is well calculated to draw on him the attention of the American Board. As to the Queen's morals, we do not say they leave nothing to be desired, but then is there a single moral ruler in the world, except Queen Victoria, or ex-ruler, except Benjamin Harrison? Are we to employ the army and navy to place moral rulers on the thrones of the earth, considering the kind of rulers we ourselves sit down under? Have the subjects of King Croker any right to complain of the evil behavior of other potentates? Would we allow any foreign power to land troops to deliver us from Gilroy and Paddy Divver?

We are greatly surprised at the absence in this discussion of all allusion to the virtues of universal suffrage. The *Tribune* on Tuesday had some mention of a certain "free and intelligent people" in Hawaii, whom this wicked Administration is forcing to submit to "a corrupt, idolatrous, and barbarous despotism." But it does not say of what this "free and intelligent people" consists. It cannot be possible that it consists of the 637 white Americans resident in the capital in a total registered vote of 13,593 (we quote from President Harrison's message submitting the annexation treaty), and that the term excludes the bulk of the population simply because they are native-born and colored. If this should prove true, we should all die of shame. Where would it leave the colored citizens of the Southern States, and the federal-election bill, and the wicked Democrats, and the "great work of reconstruction," and the Union League Club? What would "the Committee on Political Reform" of that institution say? Why, the very dogs in the *Tribune* office would arise and howl over such a view. We take it for granted that the *Tribune* means by "the free and intelligent people" the native-born citizens of Hawaii, without distinction of race or color, and that it is under the impression, formed through misleading reports, that they are furiously opposed to the Queen's government and would overthrow it but for Secretary Gresham and Mr. Blount. When it learns the true state of the case, it will come round, and will denounce the prejudice against color just as we do, and demand an equal voice in the government for the colored Hawaiians as it does for the colored Americans.

The current opinion is that the logical candidate of the Republicans for the Presidency in 1896 is William McKinley, jr., of Ohio. This is our opinion also. The Republican party believes in protection. Formerly it believed in protection only for infant industries. Now it believes in protecting aged ones as well, and this it learned from McKinley. Formerly it believed in moderate protection, now it believes in extreme protection. This, too, it learned from McKinley. Formerly it believed in protection for a time, now it believes in protection for eternity. This, too, it learned from McKinley. It is true that McKinley led the party to the most disastrous defeats in its history in 1890 and 1892, yet he has led it, or has seemed to lead it, to a remarkable and quite unexpected victory in 1893. His own majority is unprecedented in Ohio since the Vallandigham campaign which took place during the war. All these things point to McKinley as the logical and proper nominee of his party in 1896. Yet it is not probable that he will be nominated—for one reason, because the logical candidate of a party seldom is nominated. Yet we think that all tariff-reformers, if they could be

consulted, would vote unanimously for the nomination of McKinley. They want to meet a candidate who represents the most extreme views on the subject of the tariff.

---

The Ways and Means Committee is going steadily on with its work during the recess, and the new tariff bill will be ready for presentation early in the next session. The theory that the result of the elections would cause the Democrats to abandon the policy of tariff reform has been dropped almost as soon as it was broached. The Philadelphia *Press* points out that in all our political history the party in power has gone on and executed its policy without reference to such elections, as the Republicans passed the resumption act after the "tidal wave" of 1874, and the tariff of 1883 after the next "tidal wave" in 1882. The business community will be pleased with the assurance of early action and the consequent end of the existing uncertainty as to what the new tariff rates are to be. The *Dry Goods Economist* says upon this point:

"The worst of a tariff change is the uncertainty of its period of incubation. A portion of this uncertainty we have already undergone; the remainder we are in a better position to endure than we have been for many years. Let the tariff bill be pushed vigorously, and let a date be early fixed upon and announced on which the new bill shall take effect. This is the only sensible and honest course, and, we firmly believe, the only popular one for Congress to pursue."

---

It will be noticed that the price of silver bullion, which surprised many observers by advancing 3 cents per ounce immediately after the repeal bill passed into law, has subsequently fallen off again. On Thursday last the price touched 71½ cents per ounce, against 68¼ in the week before repeal. Last week it closed at 69¾. The later reaction, curiously enough, is, neither in New York nor in London, ascribed to the stopping of our Government's purchases. The explanation volunteered from London is a temporary slackening in the Oriental demand for bullion, such as caused similar reactions in August and in September. If, as is now very generally believed, the repeal of our silver-purchase law was "discounted" in advance by the July break in silver's price, the key to the situation rests very largely with this Eastern market. The silver imports into India and China have this year been of extraordinary magnitude. China has already thus far taken $7,617,580 from London, or $7,055,435 more than last year's import, and more than the full annual record for any preceding year. India has imported $29,644,255 worth, and will probably before the year is over have equalled its own largest annual record.

---

In our rejoicings over the downfall of the Democratic bosses in the East, we have not given sufficient attention to another result of the recent elections which is also cause for great satisfaction. That is, the collapse of Populism in the West. Wherever this party has manifested any strength of late years—in Iowa, Kansas, Nebraska, South Dakota, and Virginia—it lost ground this fall; this, too, although its leaders in Congress prophesied that the repeal of the silver-purchase act would swell their party's vote everywhere to immense proportions, as the only way in which the masses could utter their rebuke of the "gold-bugs" and the "money power." It is evident that this latest embodiment of financial lunacy has had its day, and will soon be laid in the political tomb along with greenbackism, grangerism, and the rest. It seems to be our fate to have a succession of these crazes from time to time, but it is encouraging to find that the area of disturbance is steadily moving westward. Since Gen. Butler, soon after the close of the war, proposed to pay the Government bonds in greenbacks, no public man on the Atlantic seaboard has lent these schemes any favor. "The Ohio idea" of greenbackism in a few years became so intolerable to Ohioans that they would not hear more of it. Kansas, Nebraska, and the Dakotas are already tiring of Populism. A few years more should sweep the remnants of this folly across the thinly settled mountain States and dump them in the Pacific Ocean.

---

The money which the corporations of this city have been paying as blackmail to the Croker gang will not be called for next year, as the Legislature has passed into Republican hands. In the aggregate, it must have amounted to a considerable sum, and we would now respectfully suggest that it be paid over to any organization which may be occupied with the task of overthrowing the boss system in this city and State. That this tax should have been almost openly levied and paid is surely one of the most astounding incidents of the present crisis. To find a parallel for it, one has to go back either to Turkey before the Crimean war or Scotland in the seventeenth century. As a tribute it would have been far more respectable if paid to avoid physical violence. Paid to avoid hostile legislation, it indicated extraordinary degradation of American institutions. It was not even paid to officers of the law, but to an outsider who controlled the officers of the law. Moreover, the recipients did not run away and hide their booty after receiving it, or spend it secretly in low debauchery. They spent it ostentatiously in horses and carriages and harness, and houses and farms, or, in other words, flaunted their plunder in the faces of their victims. If the corporations can afford the money—that is, can carry on their business at a profit while paying it—they ought to be willing to hand it over to any committee which is occupied with the work of reform.

---

The circumstantial account which Mr. Judson Lawson, the Assemblyman-elect in the Twenty-third District, gives to a *World* reporter of the Tammany system of blackmail in use in the Department of Buildings, furnishes a sufficient basis for legislative investigation. Mr. Lawson is a builder on a large scale, and has himself suffered personally many of the extortions which he enumerates. It is a notorious fact that not merely in this branch of the Tammany government, but in all other branches, the official power of the bureau is used, not to enforce the laws and protect both public and private rights, but to extort blackmail, either as the price of violating the law without interference, or as the price of freedom from constant annoyance by the underlings of the bureau. If the full truth about the way in which our laws are administered could be revealed, the people of this city would discover that they are living under a despotism more intolerable than that of the Czar of Russia, or any other civilized monarch, for it is the despotism of a band of thieves.

---

For the first time in the history of the country, the majority of the men in a State last week voted directly in favor of giving the women of that State the ballot on equal terms with themselves. The Constitution of Colorado has a provision that women suffrage shall be granted whenever the Legislature shall submit the question to the qualified voters and they shall ratify it. The last Legislature thus submitted it, and equal suffrage was carried on November 7 by a majority of several thousand. Women voted for years in the Territories of Utah, Wyoming, and Washington, but it was only by act of the Legislature; and although Wyoming came into the Union as a State with a constitution that forbids any denial or abridgment of the right to vote and hold office on account of sex, this constitution was ratified as a whole, without any separate vote on the suffrage clause. In Colorado, on the other hand, the question of extending the ballot to women was submitted at the polls as a separate proposition, and it was the only State issue which was thus submitted this year, the elections being for county officials. The result consequently expresses the deliberate judgment of the men, and equal suffrage of the two sexes must be accepted hereafter as the settled policy of that commonwealth. There has been a notable change of sentiment on this question among the men of Colorado during the past sixteen years, as in 1877 the same question was submitted and a similar proposition was rejected by a vote of two to one. A woman-suffrage amendment to the Constitution of Kansas will

be submitted to the men of that State next fall.

---

The liberal Presbyterians flung their banner to the breeze in Cleveland on Thursday. They assert, by implication, that Dr. Briggs was deposed in an illegal manner, and declare that they do not mean to accept the invitation of the church to withdraw and flock by themselves. They mean to stay and to fight for their rights and for "reasonable liberty of opinion." The character and standing as well as the numbers of the men taking part in this movement lend it importance and make it impossible to question their motives. Their action will of itself accomplish what they wish, in frightening the conservatives into dropping all further prosecutions, or else, what is more likely, will stir up the strife again with added bitterness, and lead to extreme measures. The case of Prof. Smith, which comes before the Assembly next May, will make a convenient centre for the battle to rage around. It will try the mettle of the conservative majority, as any weakening now will mean only complete surrender, while such severity as was shown in the case of Prof. Briggs will, if repeated, almost infallibly lead to a serious split in the denomination.

---

It has been reported by telegraph that the Brazilian Government had suppressed the *Rio News* and placed its editor, who is an American, Mr. A. J. Lamoureux, under arrest. The issue of the *News* for September 27 shows how much reason President Peixoto had to dread its bold utterances, even when printed in the English language. Defying the press censorship, it was printing the news about the military and political situation, and was evidently in a fair way to let the truth get to the outside world despite the lying telegrams sent out by the Government. The number of the *News* referred to shows clearly that a veritable reign of terror existed in Rio de Janeiro. All who could possibly leave the city had done so, a reasonable estimate being that one-third of the population had abandoned it. Military press-gangs were roving the streets, and, not content with seizing here and there an unemployed man, were going into factories and carrying off the whole body of operatives at a stroke. Everybody of any political standing who was suspected of coolness towards Peixoto and his schemes was clapped into jail on the charge of sedition or on no charge whatever. The defenders of the city were its greatest danger, many more people having been shot, maliciously or accidentally, by Government soldiers and officers, than had been killed by the bombardment. The *News* also published communications from the States, showing how Peixoto's performances were regarded away from the capital. For example, the students of the Sao Paulo law school had published a manifesto upholding the rights of the revolutionists, and affirming that the Brazilian revolution represents "the struggle of the law to throw off a military dictatorship." These are only a few of the signs that the intelligence of the country is against Peixoto, and that he is bound to go down sooner or later.

---

We have had some displays of Jingoism by educated men, but never anything so bad, we are happy to believe, as that seen in Paris at the wind-up of the festivities attending the visit of the Russians. Representatives of the Russian newspapers gave a banquet at which the first men of France were present—such men as De Broglie, Brunetière, Jules Simon, Paul Leroy-Beaulieu, to mention only specimen names. The keynote of the evening was set in the speech of Count Melchior de Vogüé, whose talk was all of two great races "of imagination and susceptibility, penetrated with intelligence and feeling," at last coming to know each other better, and so to love each other. According to Count de Vogüé—and no one gave utterance to a different opinion—the *entente* between France and Russia had been initiated by the "ouvriers de la pensée," and the aim of it all was, as he expressed it in his toast: "May the two countries in concert seize and preserve the true domination of the world—the domination of thought!"

---

It was shameful for such men to tolerate such a misreading of the significance of the Russian visit and fêtes. Education stands for clear thinking, if for anything, and what could be more muddled thinking than to imagine that the French people were hailing the Russians as leaders in thought? It was Russian guns and ships, and not at all the Russian novel or the Russian philosophy, that France was rejoicing over. The veriest street urchins could not have been imposed upon by the talk with which these men of culture were content to deceive themselves. And then what a farce to speak of the Russian people as having any part whatever in the affair! The only Russians concerned were the Czar and his ministers, and if it had answered their purposes to fall upon the necks of Germans, Turks, or Chinese, the Russian people would have had just as much and just as little to do with it. One can imagine the astonishment of the patient *muzhiks* if they could have been embraced bodily, as they were figuratively, by their new-found French lovers. They would not have had the faintest idea what it was all about. If French culture had to give in to the passion for revenge on Germany which was really the leading source of the enthusiasm over the Russians, it would have been better to do so with cynical openness.

---

The Italians are having a curious experience with silver. Silver is proving as false and treacherous to them as gold did to us during the war. With every inducement to stay in Italy and serve the small wants of the inhabitants, it has been steadily crossing the Alps. That is to say, the two-franc, one-franc, fifty and twenty-centime pieces have disappeared as fast as they were put in circulation during the past year. There is literally no silver "change" in Italy, and people have to use postage-stamps and resort to other expedients of what M. Leroy-Beaulieu calls the "ages before money was invented." The reason of all this is very simple. Silver has heard that it commands in Switzerland and France a premium (in Italian paper money) of eleven or twelve per cent. For the paltry gratification of its vanity, therefore, and in complete indifference to the convenience of the Italian people, it skips across the Alps, and gets itself exchanged for paper and sends the paper back into Italy and stays behind itself. The Italian Government, having borne with this as long as possible, demanded of the other powers of the Latin Union that they should gather up all the small Italian change which comes into the hands of their tax receivers and deliver it to Italy for its value. The other governments answered, however, that there would be no use in this as long as the character of silver remained unchanged; that if Italian silver had no patriotic attachment to Italian soil, of course it would run away again as soon as let loose. Italy, therefore, now demands that all the public offices of the other governments of the Union shall be closed to Italian silver so that it shall be driven out of circulation everywhere but in Italy. To secure this there will have to be a modification of the convention of November 6, 1885. It is supposed that there are $20,000,000 in small Italian change now roaming about in France, Switzerland and Belgium, which would be caught and brought back to Italy under this arrangement, but it would have to be paid for in *gold*. We can imagine how indignant our silver men will feel over the spectacle of silver actually captured, bought with gold, and delivered over to task-masters who make no pretence of sympathy or affection for it. But such is the proposed arrangement. The allowance of small change to each power under the convention is six francs a head of population—a beggarly portion, we must admit. One hundred or 1,000 francs a head would not be a cent too much. Has any one ever heard of anybody being ruined by having too much small change?

### *THE HAWAIIAN CONSPIRACY.*

THE prompt appearance of a "signed leader" in Monday's *Kennebec Journal* shows that its editor, the ex-minister to Hawaii, knows when he is hit. It was his revolution that overthrew the Hawaiian Queen, his provisional government that was set up, his scheme of annexation that President Harrison tried to put through with a Jingo whoop, and his long plotting that Commissioner Blount has now exposed and the President brought to naught. It did not need his present explosion, in the character of the baffled villain of the stage, to show his proprietorship of the combined conspiracy and speculation which is now a burst bubble. Pending the publication of Mr. Blount's report, with its detailed proofs of Secretary Gresham's assertion that Minister Stevens deceived the President and Secretary Foster, it will be instructive to review some of the evidence going to show that the annexation of the islands was steadily kept in view by the American minister for months before the "revolution" finally came.

Secretary Foster, in his letter to Congress accompanying the treaty of annexation, on February 16, said that the "change of government was entirely unexpected, so far as this Government was concerned," and that it was, "in fact, abrupt and unlooked for by the United States minister." This only shows how little attention Mr. Foster had given to Mr. Stevens's own letters to Mr. Blaine, on file in the Department, and to his leader in the *Kennebec Journal* of November 24, 1892 (not "signed" that time, but plainly enough his), and to the other articles in the American press which evidently had their inspiration from him or from some one in his confidence. Shortly after his arrival in the Islands, in November, 1889, Minister Stevens sent a despatch which showed that he was already considering how best to run up our flag over them, and his letters to Mr. Blaine in February and March, 1892, prove that he was getting ready for a revolution, and expecting to use the United States forces to help it. He specifically wrote: "I desire to know how far the present minister and naval commander may deviate from established international rules and precedents in the contingencies indicated." Further than that, long before the "unexpected" revolution, he was busily arranging the details of annexation, a certain despatch of his numbered 74 going into the matter of the sugar bounty, which he thought, in the case of the Hawaiian sugar-planters, "should be limited to six mills per pound, $12 per ton."

The first "lay" of the annexationist schemers was Anglophobia. The English were after the Islands. The Queen was a good woman and a mild sovereign, but fully under "English influence," and her niece and probable successor was actually being educated in England. Evidently this must be stopped, and to prevent England from brutally seizing the Hawaiian Islands, we must seize them ourselves. All this is set forth in the *Tribune* of October 11, 1891, along with much talk about the "open secrets" of Mr. Blaine's diplomacy, and the declaration: "It is plain that their [the Hawaiian people] almost unanimous desire for annexation to the United States must be precipitated into our councils as a practical and immediate question."

This did not work as desired, and so it was soon discovered that the Queen was a bad woman and a tyrannical ruler, against whom it was necessary to rise and establish a republic of and for aliens. That the plot was hatching for at least two months is shown by the article in Minister Stevens's paper of November 24, 1892, informing the American people that something was going to happen in Hawaii, and also by a most extraordinary article in the *Tribune* of November 20. From this we make the following extracts:

> "Events are occurring in the Hawaiian Islands which should lead the American people seriously to consider the policy of forming a closer political tie with that interesting little kingdom. It is not in the nature of things for its present government to continue much longer. Indeed, the occasion might present itself at any moment when readjustments would be unavoidable. This will happen as well because of our influence as in spite of it. . . . We are fully and absolutely responsible only when Hawaii is constituted into American territory. . . . Hawaii must become American territory. But upon the conditions of annexation hang grave and far-reaching questions of foreign policy. In considering how to complete our sovereignty over Hawaii, we shall be considering also the future of other islands that are already commercial, and are rapidly becoming political, dependencies. American statesmen should be ready for this emergency. It may arise at any moment."

All this was said absolutely without reference to current news. The public knew nothing whatever of those "events" which Mr. Stevens's paper on November 24 and the *Tribune* of November 20 knew all about. By a noteworthy coincidence, November 20 was also the date of a "confidential" despatch of Stevens's urging "bold and vigorous measures for annexation." Why these warnings to the American people to be ready for "readjustments" in "that interesting little kingdom," and why these hints to American statesmen to be prepared for an emergency that might arise at any moment? Why Minister Stevens's anxiety for authority to "deviate from established international rules and precedents"? If there is any explanation of all these mysteries except the one which Secretary Gresham charges, namely, that the American minister intrigued with a lot of other aliens to overthrow the constitutional government of Hawaii, we should be glad to have it pointed out. It is clear, at any rate, that Secretary Foster's "unexpected change of government" was not unexpected to the conspirators. As Mr. Gresham remarks, President Harrison and Secretary Foster may have been deceived, but Stevens and his allies were not. They were trying to break the news gently to the American people for two months before their plot was put in successful operation.

### *McKANE AND McKANEISM.*

THE most notorious criminal in the United States to-day is John Y. McKane, the boss of Coney Island, which forms the chief part of the town of Gravesend, in Kings County. His performances during the week before election, culminating on the day itself in his defiance of a mandate of the Supreme Court and his treatment of its lawful bearers, have been told by the telegraph all over the country. The movement to secure his punishment is in the hands of the ablest and wisest men of Kings County, who are taking every step with proper care and deliberation, in pursuance of a well-defined policy which cannot fail to end in his imprisonment. Meanwhile, it will be profitable to study his career, for it is full of instruction and warning.

McKane is a man admirably qualified by nature for the political leadership of a town which is so largely composed as is Gravesend of the lower and rougher elements of society—the men who are connected with a multitude of cheap hotels and cheaper places of amusement, together with the hostlers, drivers, stable-boys, and hangers-on of race-tracks—in short, the riff-raff of the community. "Rough and ready" in his manners, the warmest of friends and the bitterest of enemies, quick to see the opportunity for power offered by the development of Coney Island into a great watering-place for the masses of Brooklyn and New York, shrewd and fertile in methods, he gradually gathered to himself all of the important offices not only of state but of church. For this most picturesque of bosses has not only been "hail fellow well met" with the "toughs," whom as chief of police he welcomed to the building which he owned and let for prize-fights, but he has also been the chief pillar of the local Methodist church and for many years superintendent of its Sunday-school. He could teach the lessons of Christian duty to his pupils on Sunday, order his tools on Monday how to intimidate any voters who manifested signs of independence, and greet on Tuesday a distinguished citizen of his county who carried the writ of the Supreme Court with the message:

> "Injunctions don't go here; I'll take no papers. I don't care a d—n for the Supreme Court or for Judge Barnard."

This man, then, at last really considered himself above all law. In the recent campaign he was supporting Maynard and the remainder of the Demo-

cratic ticket, and most people naturally suppose that he has always been a Democrat. But it is only two years since he cast the town's vote for the Republican candidate for Governor, and five years ago he was an earnest supporter of the Republican candidate for the Presidency. In the New York *Tribune* of November 8, 1888, we find, in an article entitled "Kings County Did Well," the statement:

"The Democratic plurality in the county is reduced from 15,748 to 12,037, a falling off of 3,711. To this result the change in Gravesend from a Democratic majority of 372 in 1884 to a Republican majority of 436, due to the efforts of John Y. McKane, contributes considerably."

The Republican managers were most warm and hearty in welcoming this political bandit into their ranks. They were delighted to humor his vanity by inviting him to help in inaugurating the President whom he had helped to elect, and the *Tribune* of March 5, 1889, mentions the fact that "the John J. O'Brien and John Y. McKane Associations gave a little spice to the tail end of the pageant, and all the New York clubs were cordially recognized from the grand stand." Nor was this all. The Republican President was proud to receive this notorious boss in the White House; he consulted him as to the distribution of the patronage in Kings County; and he named McKane's man for United States marshal of the district. Even as recently as two years ago the Republican managers in this State made a bargain with him, the existence of which he openly avowed before election day, by which he was to return his town for Fassett, running on a platform of opposition to Tammany and boss rule. And he actually did turn in figures by which Fassett was credited with 1,098 votes against only 180 for Flower—although, to oblige a friend who was running for a local office, he returned on the same day an even larger majority for the county ticket of the other party!

"Who is responsible for this John Y. McKane," asks the Philadelphia *Press*, "and who encouraged him to believe that he could commit fraud with impunity and make a population of 8,418 stand for 6,218 voters?" We reply that both parties are responsible for him. Every leader of both the Republicans and the Democrats, from the lowest county politician to the highest official in the United States, who was ready to bargain with this freebooter, is responsible for him. Ex-President Harrison, who gave him federal patronage, is responsible for him. President Cleveland is responsible for him, if it be true that he has lent him any favor since he professed to turn Democrat again. The honest masses of both parties are responsible for him, who were ready to accept his stolen goods so long as he stole for them. The Methodist denomination is responsible for him, which was ready to honor him with church offices because he was powerful and made liberal contributions to its support. All of us are responsible for him who have not made unceasing war upon bossism, whatever its party label.

The country has stood aghast at McKaneism in its final development as treason against the State and revolt against the whole system of lawful authority. But this is only the normal and legitimate end of bossism. McKane was one of the type which contracts to "deliver his vote." He long delivered it to the Democrats, and secured the reward which he claimed. When he quarrelled with them, he delivered it to the Republicans, and he found a Republican President quick to give him pay in federal patronage for value received. Is it any wonder that this vulgar tyrant, who had been received with respect in the White House, should come to consider himself above a mere judge of the Supreme Court? Is it strange that he does not comprehend his crime when he was only trying to "deliver his vote" once more? Let us make no mistake about McKane. He is no mystery, no phenomenon, no accident. The only thing accidental about him is the party badge he sports at any given moment.

## *COMING INVESTIGATIONS.*

WE trust that the rumors which are in circulation concerning the determination of the new Legislature to authorize an investigation of Tammany rule in this city, and Democratic misrule in other cities also, are well founded. The Tammany authorities show their uneasiness at the prospect by declaring with unnecessary promptness and emphasis that they will welcome all inquiry gladly, and hope it will not fail to be made. They ought to be given full opportunity to vindicate their system of government, and to display before the public all its merits. The best kind of a committee, it seems to us, would be a joint one from the two houses, containing only men of good character. Not a man suspected of "striking" propensities, or who in the past had been caught in "deals" with Tammany Hall, or who has, like "Ham" Fish, been presented by Tammany with diamond shirt-studs as a reward for services rendered, ought to be allowed on it. What is wanted is a fearless and merciless inquiry, not a hunt for a basis upon which to lay a demand for hush-money or terms.

The field for investigation was never more promising than at present. There are in it so many inviting points that we can only suggest a partial list. First of all in importance and in possibilities of development is the police department. A thorough revelation of what goes on in that would not merely startle but would astound the community. If a committee were to disclose the relations of the Tammany authorities, through the police department, with the gambling-houses, liquor-saloons, dives, brothels, and other resorts of the crime and vice of the city, we should have a revelation the like of which had never been made before. Such an investigation has been threatened many times, but it has never been allowed to be pushed. The momentous consequences involved have acted as an insurmountable obstacle. It may be that such would be the case if a new attempt were to be made now, although the fact that the police department is now exclusively in the control of Tammany for the first time in its history might facilitate matters somewhat. Everybody knows that criminal resorts flourish in defiance of law, and there is a general belief that they pay liberally for their immunity. It is a matter of general belief, also, that the liquor-dealers pay handsomely for various privileges which are denied them under the law. Full light on these points would be of value in showing the sources of much of the Tammany wealth.

There might also be direct inquiry as to the sources of this Tammany wealth, especially that part of it which has been acquired with such rapidity. Mr. Croker makes no concealment of the fact that he is a very rich man. He invests to the extent of a quarter of a million dollars at a time in a stock farm, and to the extent of many thousands of dollars in race-horses. He is also about to occupy a palatial house in upper Fifth Avenue. He rides about in a luxurious carriage, of the most expensive construction, and his scale of living is that of a millionaire. Yet he has no business, holds no public office, has no visible source of wealth. Where do all his riches come from? His position, openly avowed by himself, as the real director of the city government, makes inquiry into his financial affairs not inexcusable. It should be remembered that it is only a few years ago that he was a poor man, according to his own testimony and that of his political associate, ex-Mayor Grant. During the investigation by the Fassett committee in May, 1890, the fact was brought out that Grant, while sheriff, had made one of Croker's children a present of $10,000. This gift was made in 1886. When asked what Croker's financial condition at the time was, Grant said (we quote from the official report of the testimony):

"I understood that Mr. Croker was very poor indeed; that they were not well off; he had a very large family, and I felt that as I had accepted the obligations of a godfather for this child I ought to do something for it."

When Croker himself took the stand a few weeks later, to give his account of the $10,000 gift, he said:

"I have always had very peculiar notions about putting money in banks, and I always kept money around the house; we never kept a bank account, and Mrs. Croker was always

opposed to keeping a bank account, and this money was turned right over to her.

"Q. Have you never had money out at interest? A. No, sir.

"Q. Did Mrs. Croker at that time have any money of her own out at interest? A. Not that I know of."

There are no evidences of the possession of large wealth in these disclosures. Perhaps if Mr. Croker were to be put on the stand now he might be able to explain how he, with so little in his possession in 1886 upon which to build, has succeeded in amassing his present wealth. To pass in seven years from a condition which your friends describe as "very poor indeed" to one of affluence, having during the greater part of that period no occupation and no visible source of income, is a remarkable achievement even in a country of rapidly gathered fortunes.

Mr. Croker is not the only Tammany magnate whose prosperity is based upon mysterious sources. How does it happen that municipal officials on salaries of $10,000 and $12,000 a year are able to live at the rate of $30,000 or $40,000, riding about in fine carriages, owning large studs of thoroughbred horses, and spending money like princes in various other ways? Do the rumors which fill the town of blackmail levied on corporations, contractors, and everybody else who has dealings with the city or needs the approval of the authorities, have any relation to this mystery? If the style of living were less ostentatious, it might attract less notice, and public comment upon it might be considered less justifiable; but there is no concealment about it, neither is there much doubt in the public mind as to the sources of supply.

A full and unrestrained inquiry into all branches of the municipal service upon which suspicion rests might throw a great deal of light upon the sources of Tammany wealth, especially if all persons having information upon the subject would come forward and present it. That there has been a vast sum paid in various kinds of political blackmail to somebody connected with Tammany Hall is notorious. An investigation could not fail to come across some of this, and, having once struck the trail, the hunt would be certain to run down valuable game sooner or later. Investigations are always profitable; we have never had one yet that was not a great source of gain for honest government. There has been no time since Tweed's day when one was more needed than at present, and we trust that it will be ordered, and will be put in the hands of competent persons.

## *ABOUT BRAZIL.*

WITHOUT any desire to see the President take hastily any new position regarding the conflict now raging in Brazil, we think one point in particular should be urged on his consideration, and it is a point of considerable importance for a government like ours. That is, that in all States like those of South America, or like France, or Italy, or Germany, in which the president or sovereign is also the head of a concentrated armed force, in case of disputes between the executive and the legislature the presumptions are against the executive. In Brazil the President has not dissolved the legislature, or dispersed it, but he has vetoed one of its bills making him ineligible for a second election, and he has committed a great many violent and unconstitutional acts. Moreover, there does not seem to be any way out of the difficulty through a popular vote, for although the October elections have been postponed till December, there is not the least likelihood that in December or any other month while the war is raging a fair plébiscite can be taken. The quarrel must apparently be fought out with sword and gun, until one or other of the belligerents is worn out.

But no matter how the fortune of war may go, bystanders must not forget that in semi-barbarous or military States which are striving for constitutional representative government, the man in command of the troops is naturally suspected. If trouble arises, he is in nine cases out of ten at the bottom of it. We who have inherited representative government, and have grown used to it through ages of practice, can form no idea of the difficulty which military commanders in other countries find in obeying the law. After Alexander I. had granted a constitution to Poland, the Russian Grand Duke in command of the troops in Warsaw went on arresting people and punishing them arbitrarily as before, and a remonstrance from the civil authorities was received by him and his officers with shouts of laughter. In France, in 1851, Louis Napoleon could not put up with any constitution which restrained him. When MacMahon, another soldier, came into power, he was in like manner, but under far less auspicious circumstances, on the verge of attempting a *coup d'état*. We do not need to go back to Cromwell for examples of the danger to popular liberty of having the army commanded by a man who has learned that the law may be disobeyed with impunity. Fully half of Washington's great fame with the world outside the United States was due to his not having tried to make himself a monarch or dictator. Ability to lay down power peaceably, and to obey people who cannot lock you up if you do not obey, is, in fact, learned very slowly, and cannot be said as yet to have been thoroughly learned by any race but the Anglo-Saxon.

In South American States, as a rule, the man who once gets hold of supreme power cannot reconcile himself without great difficulty to the idea of surrendering it. The very best of such men looks about a good deal before he steps down, to see whether there is no way of avoiding it. When the constitution is clear, and party spirit quiescent, when, in short, temptation is weakest, he finally reconciles himself to the inevitable. But the time when the habit of self-government is most needed is when the constitution is not clear and party spirit runs high, and this is just the time when self-renunciation is hardest. If he has the command of the army, and there are doubts about his rights, the disposition to use the army to settle the doubts in his own favor becomes very strong. This accounts in some degree for the curious revolt of the navy under somewhat the same circumstances both in Chili and in Brazil. The case against Peixoto is not as strong as the case against Balmaceda, but there is a case against him, and those who believe in it, being unable to make a stand against the army in the capital, take to the sea. The officers of the navy are probably better educated and come from a better class than the officers of the army, and are not brought into close contact with the Executive. Moreover, in cases like Chili and Brazil, where the headquarters and chief seat of the insurrection are at an immense distance from the political capital, the navy affords the readiest means of coming to close quarters with the dictator, usurper, or whatever else he may be called.

Our Government, in dealing with disputes of this kind in countries struggling slowly towards constitutional government, gives the legislature and those who act with it or for it the benefit of every doubt. Theirs is by far the most difficult rôle. The lamp of liberty is in their hands, if it is in anybody's hands. The physical force of the occasion is almost always in the hands of their enemies. In nine cases out of ten they stand for legislation by discussion and by vote, against legislation by decree. In nine cases out of ten they offer the only materials for anything better than a dictatorship based on brute force. In the case of Chili, we did just the opposite of this. We sided with Balmaceda from the outset. We set our navy to sympathize with him; we put our law in motion to discourage and oppress his enemies, and treated his pinchbeck and illegal machine as if it were the legitimate government of Chili, in the teeth of all the best traditions of our Department of State. Finally, we came near going to war with the republic, and so smashing it that the materials for a good and strong legitimate popular government would probably have been wanting for generations.

We hope this mistake will not be repeated in Brazil. We do not as yet know which side is right, but the presumption is in favor of the malcontents, of Congress, of the writers, of the orators, and one may say of the navy. The navy never

has any interest in despotism on shore. Its officers do not bask in royal or dictatorial favor. Their march is o'er the mountain waves, their home is on the deep. They do not mount guard in palaces, or "clean out" legislatures. The navy has the strongest interest in peace, quiet, and good order, because, when a country becomes poor and revolutionary, the navy is the first thing to go to decay. A despot can always keep a standing army about him, but as a rule the navies of free peoples are the best. The best navy in the world is that of England, the poorest that of Turkey.

## "GOOD AMERICANS."

AT the dinner to Mr. Clemens (Mark Twain) at the Lotos Club on Saturday night, much was made of the fact that he is a "good American," which we believe he is, in all senses of the term. But there was a lamentable want of clearness in all the definitions of "good American" there and elsewhere. In the mouths of many people a "good American" is simply a person who does not wish to go to Europe, or, having gone to Europe, spends his time there in longing to get home, on the general principle that "America is good enough for him." Other "good Americans" are persons who, having gone to Europe, cannot put up with European food, and are consumed over there with a passionate desire for fishballs, buckwheat cakes, and doughnuts. Then there are "good Americans" who qualify simply by wearing poor clothes and old neckties as a protest against "dudism" and monarchy. But there is one mark of a "good American" which never fails: he is constantly reminding you that he is a "good American," and inquiring whether you are. To be a "good American" quietly and unostentatiously is something he cannot bear, and he is equally unwilling that you should.

The odd thing about this is, that, to a rightly constituted man, patriotism, is something like filial affection—that is, a matter of course, something that "goes without saying," as the young Gallicists would remark. The right sort of man loves his country as he loves his mother, because he cannot help it. In Scott's fine eulogy on patriotism, he says, in the familiar quotation,

> "Breathes there the man with soul so dead
> Who never to himself hath said,
> This is my own, my native land!"

It will be seen here that the man makes this observation about his native land "to himself." He does not run about the town telling everybody that he loves his native land, and urging others to do likewise. If a man on every public occasion were to inform the audience that he was a good son and loved his old mother dearly; that the reason why he loved Mark Twain or William D. Howells was that he too was a good son and loved his old mother, and that everybody ought to love his old mother, the public would laugh at him and vote him a bore. We are the only nation which indulges in this protestation. There are no such things as "good Englishmen," or "good Frenchmen," or "good Germans." There are Englishmen, Frenchmen, and Germans, and each of these terms connotes love of country, pride in her history, and readiness to serve her to the death. There ought to be only one class of Americans, known simply as "Americans." If there are two—good and bad Americans—the less said about them the better.

This matter may seem unimportant, but it is really very important. We do not know of a phrase more full of corruption for the young than "good American," for we know as a positive fact that a man may be a "good American" and yet think a criminal good enough for the court of last resort, think the rule of an ignorant foreign dictator good enough for the chief city of America, think any fool or ignoramus or drunkard good enough to represent the nation in foreign countries, think murderous anarchists estimable citizens, try to pay his debts in a currency depreciated by himself, publish a newspaper filled with the filth and lies of a continent, cheat the Government in his contracts, and shout for war in order to help his private business. Every one of these things may be done, and has been done, by "good Americans."

The way to be really "good Americans" is not to keep telling people of it and urging them to imitate you, but to be the thing you say you are. A "good American" who does not, in every way in his power, labor to make America good, is a wretched fraud. As Lowell says:

> "I loved my Country so as only they
> Who love a mother fit to die for may;
> I loved her old renown, her stainless fame;
> What better proof than that I loathed her shame?"

Hurling defiances at monarchies, or ridiculing good clothes and correct speech, and calling for wars in which other men are to suffer and die, and in which weak powers are to be despoiled, is to be a bad American. It costs nobody anything to show this kind of patriotism. Much of the "genuine Americanism" of the day comes from men who are interested in and uneasy about some piece of bad government. No man is so fierce in his Americanism as "a dead beat" who has got a consulship for which he knows he is not fit, or a boss who has "delivered" the vote of his district as per contract. Americans ought not to have to go about the world proclaiming their patriotism, and ought not to have to address each other on the beauty of this particular virtue. It excites the suspicion of the rest of the world. That "good wine needs no bush" is as true in politics as in tavern-keeping. A real patriot, like a real gentleman, is a modest, self-contained man, who keeps to himself his love of his country, as he keeps his love for his mother and wife and children. When he meets the blatant variety of American in Europe, with the national flag stuck in his buttonhole, he naturally wants to creep into his shell, or pass himself off as an Englishman or something else. And it must be admitted that one meets in Europe more or less of the class of which Mr. Lowell complains in his letters, who tell you they are "travelling with two servants" and are something different from other Americans. But both these parties ought to behave better. If the blatant, noisy American who travels on his nationality would subside, the American with the "two servants" would be more willing to let his country get the credit of his retinue.

## FRANCIS PARKMAN.

THE passing away of Francis Parkman leaves vacant the first place among American writers of history. His title to this preëminence has been increasingly recognized with every new contribution to the fascinating series of volumes which bear his name. It was his felicity up to the very hour of his transit to see his star in the crescent. Whether measured by the sober estimate of the critical verifier of his facts, or by the popular approval of the way in which his facts are set forth, the historical reputation of Mr. Parkman—in a considerable degree contrasted with that of Prescott and Motley, and very strikingly in contrast with that of Bancroft—is seen to be one which steadily grows with more intimate acquaintance with his work. That this is the case is due not so much to the dignity of his theme and its aptitude for splendid workmanship upon it, though his theme lacks nothing in this regard, as to the personal qualities which Mr. Parkman himself brought to his undertaking—his absolute sincerity, his painstaking perseverance, his fine moral sense, his judicial equipoise, his wholesome uncloistered sympathy with nature and with out-door things, his self-repression, and his chaste, unexaggerating, conscientious literary taste and skill. The result is that we have in the volumes of Mr. Parkman the most graphic and most truthful of all our American historical writings, and the ones likely longest to retain a place, not alone on library shelves, but in living contact with the eyes and hearts of men.

Francis Parkman was born in Boston, September 16, 1823. He came of a line of ancestry honorably known in Massachusetts for generations. His great-grandfather, the Rev. Ebenezer Parkman, a graduate of Harvard in 1741, was a Congregational minister in Westborough fifty-eight years, a preacher of much acceptance in his day, and not without recorded evidence of historical tastes in study. His grandfather, Samuel Parkman, was a prosperous Boston merchant engaged in foreign traffic, whose beautiful home-garden on Green and Chardon Streets gave token in its possessor of those interests in floriculture which were so marked a trait of his distinguished grandson. His father, the Rev. Francis Parkman, a Harvard graduate of 1807, was a favorite student and a friend of the Rev. Dr. Channing, and became in 1813 pastor of the New North

Church in Boston, an organization at that time, and later, Unitarian in its fellowships, but which in the process of subsequent changes has ceased to exist. The Rev. Francis Parkman is remembered at his alma mater as one of the founders of the professorship of pulpit eloquence and pastoral care in Harvard College, which of late years has borne the name of Parkman professorship, and there are extant sundry volumes of sermons and addresses which attest his possession of the traits this professorship was founded to cultivate. On the maternal side, young Parkman traced back to John Cotton, the most eminent of early Massachusetts divines.

Coming thus of a line in which culture and taste were inbred, it would have been a wonder if the boy Francis had not been a student and a writer; but Providence interfered in his behalf to give unforeseen direction to the particular type and quality of his mental development. The boy's childhood was frail. He was sent, therefore, to the country home of his maternal grandfather in Medford. The town was only twelve miles from Boston, but the house where for four years he was to live was close on the border of a wild and forest tract of ground known as the Middlesex Fells, as untamed and uninhabited a region for thousands of square acres as it had been two centuries before. Here from eight to twelve years of age he roamed the woods, chased the squirrel, snared the partridge, and, as he himself always recognized, began that acquaintanceship with nature which became so marked and delightful a part of his equipment for the tasks which lay before him. From this free life of unconscious schooling in the woods and fields, the boy passed in due time to the school since known as Chauncy Hall, and thence to college. He entered Harvard in 1840, at seventeen years of age. Already, to a very unusual degree, his path in letters was defined before him. His reading in the happy days of the Middlesex Fells and afterwards had been largely the stories of early New England settlements, with their romances and hardships of pioneer and Indian struggle; so that it is not, perhaps, strange that, by the time he had reached his sophomore year, the distinct design of writing the history of the French and Indian (or the "Seven Years'") war became clear within him, or that nearly all his after doings were made tributary to the purpose which—widened and developed in the process of fulfilment—became the dominant purpose of his life. One vacation of this college period was spent in canoeing and camping on the Magalloway River in the wilds of northern Maine—an account of which youthful excursion was printed twenty-three years afterwards in *Harper's Magazine* for November, 1864. Another of these vacations was similarly spent by him on the waters of Lake George and Lake Champlain, regions destined to afford the scene of so many dramatic passages in his graver histories.

An accident in the gymnasium, sustained by young Parkman in 1843, appeared, but only appeared, to threaten the onward progress of his special training for his special work. Rather, instead, it promoted it. To recover from his injury, he took a voyage to Europe, touching at Gibraltar and Malta, places full of the memories of that great world-encompassing struggle of which the conflicts along the Champlain and the St. Lawrence were only a part; and reaching Rome he made his lodging in a monastery of the Passionist Fathers. This brought him into personal contact with one of those great religious orders, hitherto known to him only in books, which the Catholic Church has for centuries found her most efficient instruments of missionary zeal, and the achievements of some of which were to find nowhere more brilliant or sympathetic delineation than in this young visitor's own pages. Returning from this voyage of instruction, not less than recuperation, Parkman reached home in time to graduate with his class in 1844.

For some parts of the next two years Mr. Parkman studied law, but his destiny was too strong for him, and the spring of 1846 found him with his kinsman, Quincy Adams Shaw, at St. Louis, setting out for a tour of observation among the Indians of the Rocky Mountains. The tide of emigration had just begun to flow towards Oregon and California. Gold had not yet been discovered on the latter coast, but good land had, and the Mormons, driven out of Illinois, and other settlers were pressing towards a New West beyond the great hills. More or less in the line with these companies, the two college youths of Boston journeyed part of the distance across the plains, then, cutting loose, spent the rest of the summer in the camps of the Sioux Indians in the wild regions traversed by multitudinous buffalo between the Platte and the Arkansas and around the Black Hills of Dakota. Here they lived with the roving Indians, sleeping in their tents, eating with them out of their bowls, accompanying them on their hunts, listening to their legends, and witnessing their incantations and worship, and obtained an acquaintance with Indian character and manners invaluable to the destined delineator of occurrences in which the Indian share is so conspicuous a feature. This experience, however, cost the adventurer dear, and came near costing him his life. His exposure, in the absence of medical aid, and the possibility of needed rest, brought on prostrating illness, from the enervating effects of which he suffered throughout his life. The summer, however, gave him the materials for his first published volume. Printed originally as a series of sketches in the *Knickerbocker Magazine* under the title of "The Oregon Trail," the papers were at once gathered into a book issued in 1847 with a title somewhat changed by the publisher; but the change was rectified by the author in several of the later editions, the ninth of which was published in 1892. The story is graphic and interesting; doubly so as being not only a vivid and obviously truthful narration of the scenes and experiences depicted, but as a delineation of scenes and experiences impossible now for any one to repeat. The careful reader discerns, however, the hand of the youthful writer of twenty-three rather than the hand of the master of later years.

This summer's episode over, Mr. Parkman addressed himself to his self-imposed undertaking, selecting as the work to be first performed that which was really latest in historic sequence—the dramatic and stirring scenes of the dying struggle of French and English warfare on this continent, delineated in the two volumes published in 1851, entitled 'The Conspiracy of Pontiac.' He said in his preface to this first instalment of his great historic series:

"It is evident that other study than that of the closet is indispensable to success in such an attempt. Habits of early reading had greatly aided to prepare me for the task, but necessary knowledge of a more practical kind had been supplied by the indulgence of a strong natural taste, which at various intervals led me to the wild regions of the north and west. Here, by the camp-fire or in the canoe, I gained familiar acquaintance with the men and the scenery of the wilderness."

But the "closet study" is evident no less. How conscientious it was, and under what difficulties it was performed, is indicated in this further passage from the same preface, which, because it represents the method and the limitations of substantially his whole lifetime's work, may well be quoted:

"The most troublesome part of the task was the collection of the necessary documents. These consisted of letters, journals, reports, and despatches, scattered among numerous public offices in Europe and America. When brought together they amounted to about 3,400 manuscript pages. Contemporary newspapers, magazines, and pamphlets have also been examined, and careful search made for every book which, directly or indirectly, might throw light upon the subject. . . . For about three years the light of day was insupportable, and every attempt at reading or writing completely debarred. Under these circumstances the task of sifting the materials and composing the work was begun and finished. The papers were repeatedly read aloud by an amanuensis, copious notes and extracts were made, and the narrative written down from my dictation. This process, though extremely slow and laborious, was not without its advantages; and I am well convinced the authorities have been more minutely examined, more scrupulously collated, and more thoroughly digested than they would have been under other circumstances."

It was under conditions so adverse that the book was written which Mr. John Fiske has pronounced "one of the most brilliant and fascinating books that have been written since the days of Herodotus."

The condition of Mr. Parkman's health, however, made a period of comparative repose imperatively necessary. Having in 1850 married Catherine, daughter of Dr. Jacob Bigelow of Boston, he purchased in 1854 a small property on the shore of Jamaica Pond in the township of that name, and turned his immediate attention to gardening. The tastes inherited from his grandfather Samuel here found ample scope for development. He cultivated roses and paid special attention to the hybridization of flowers, originating thus several new varieties, one of which, of the lily family—his entire stock whereof was purchased by a Scotch gentleman-gardener—is known to botany as *Lilium Parkmanni*. Solicited to give others some of the fruits of his own experience in floriculture, he published at a later period (1866) a volume entitled 'The Book of Roses.' His interests in gardening, developed thus at the Jamaica home, ultimately found recognition in his election to the presidency of the Massachusetts Horticultural Society, and to his occupancy for two years of a professorship in Bussey Institute, the agricultural department of Harvard University. An episode of the earlier portion of this Jamaica residence was the publication, in 1856, of his only venture in fiction, the novel 'Vassall Morton,' a book whose success was not such as to encourage, even had he desired, a successor. Two years later than this, in 1858, a shadow fell over his home in the death of his wife, leaving behind her two little daughters. Partly to change the scene, but more to prosecute the work which his partially recovered health had now made feasible, he went the same year to Europe to collect material in the French, Spanish, and English archives for his future volumes. By this time, too, his plan had widened beyond the boyhood conception of a history of the Seven Years' war to a narration of the whole great struggle for territorial supremacy in this country of two opposing nationalities, civilizations, religions, under the one general title, "France and England in North America." This journey to Europe in 1858 was followed by others in 1868, 1872, 1880, and 1881 on the same errand.

The first fruit of this widened plan of historical narrative was given to the press in 1865 in the volume 'Pioneers of France in the New World,' setting forth the attempts toward colonial establishment by that nation in Florida, Acadia, and along the St. Lawrence. Two years later (1867) followed 'The Jesuits in North America,' a thrilling narrative of the heroic missionary labors undertaken in association with French civil enterprise in behalf of the Indians of Canada and the lake regions of New York. The volume 'The Discovery of the Great West' came in 1869, narrating the romantic efforts of La Salle, Marquette, and Hennepin to explore and take possession of the Mississippi and Great Lake regions of the far West and Northwest. This volume was succeeded, in 1874, by 'The Old Régime in Canada,' treating of the period 1653–1680 in Canada, and setting forth the efforts and failures of paternalism in government, and absolutism in religion, on the part of well-intentioned sovereigns and self-sacrificing ecclesiastics. 'Count Frontenac and New France, under Louis XIV.'—the story of the knightly soldier "under whom occurred the first serious collision of the rival powers, and the opening of the grand scheme of military occupation by which France strove to envelop and hold in check the industrial populations of the English colonies"—came next, in 1877. This was succeeded, in 1884, by 'Montcalm and Wolfe,' narrating in dramatic and affluent detail the later scenes and the tragic close of the long struggle of French and English diplomacy and arms on American soil, some passages of which had been more briefly touched upon in 'The Conspiracy of Pontiac,' published thirty-three years previously, but whose proper place in the series is at this point. To this was added, in 1892, 'A Half Century of Conflict,' announced as completing his historical series on "France and England in North America." This volume takes up the narrative at the close of 'Count Frontenac,' and fills in the gap between that volume and 'Montcalm and Wolfe,' being the story of the period from 1700 to the peace of Aix-la-Chapelle.

These seven works in nine volumes, to which must be added in their proper place the two volumes of 'Pontiac's Conspiracy,' constitute Mr. Parkman's contribution to American history; and a magnificent contribution it has been. For originality of investigation, fidelity of statement, fairness of treatment of conflicting interests, and for chaste excellence of literary style, these volumes are unsurpassed, nay, unequalled, by those of any other writer of American annals. Some of the most vivid and beautiful passages of nature description anywhere to be found illuminate Mr. Parkman's pages. Mr. Parkman had a magnificent opportunity, but no advantage of subject or material could have availed but for the rich personal endowment he brought to his work: his poet's eye, his tireless industry, his scrupulous honesty, his absolute sincerity and sanity of mind and heart.

Mr. Parkman was a not infrequent contributor to periodical literature, writing several articles for the *Christian Examiner*, and a dozen or more each for the *Atlantic Monthly* and the *North American Review*, and he was a generous friend and contributor to the *Nation*. An article in the *North American* in 1878, upon "The Failure of Universal Suffrage," is interesting in itself and as shedding light on the personal attitude of the writer towards more than one tendency of modern society. In a similar spirit Mr. Parkman published, in 1883, a pamphlet entitled 'Some of the Reasons against Woman Suffrage.' But though writing thus occasionally, and when he did trenchantly, upon some phases of current affairs, Mr. Parkman's mind dwelt in the regions of his chosen work, an interesting token of which was the fulfilment of a promise to the *Atlantic Monthly*, said to have been made long years ago, in publishing during the present year a serial paper upon "The Feudal Knights of Acadia." More than fifty years of literary activity upon substantially one theme thus marked the life of Mr. Parkman. Always interested in the Massachusetts Historical Society, and one of its most distinguished members, he put, several years ago, into its safekeeping thirty-five volumes of manuscripts gathered by him in the prosecution of his work.

In personal appearance Mr. Parkman was distinctly noticeable. He was about five feet eleven in height, square-shouldered and firm-set. He had a strong, clear-cut face, always closely shaved, with a chin and jaw of marked vigor of outline. His forehead was rugged and broad; the whole carriage and expression was that of a modest but resolute man, capable, spite of whatever drawbacks and infirmities, of hard work and the persistent prosecution of difficult undertakings. His physical suffering and disability never seemed to abate his powers of research or mar the sweetness of his temper. He belonged, like Lowell, to a generation of Boston littérateurs who never forgot that they were gentlemen as well as literary men, and upheld under all circumstances the tradition of personal dignity which came down from an earlier generation. He was a rather shy-mannered man, yet in no sense a recluse; fond of boating, horseback riding, and not averse to genial society, as his six-years' presidency of St. Botolph's Club in Boston bears witness. His increasing infirmities of late years more and more withdrew him from the social life of that city, but nobody who ever saw him in the serene simplicity of his own home will readily forget the charm of that gracious and patient presence.

After the death of his wife, Mr. Parkman was accustomed to pass his summers at his house by Jamaica Pond, and to spend his winters in the companionship of his sister at No. 50 Chestnut Street, Boston, on the western slope of Beacon Hill. Here, in the top story of the house, he had his study, and kept most of his books and papers. His daughters survive and are married. With one of them, whose home is in Portsmouth, N. H., he had of late been accustomed to spend considerable time. He was from 1868 to 1871 one of the Board of Overseers of Harvard College and from 1875 to 1888 one of the Fellows of its corporation. He received its degree of LL.D. in 1889; the same degree having previously been conferred on him by McGill University in Canada, in 1879, and by Williams College in 1885.

## JOWETT AND MANCHESTER COLLEGE.

OXFORD, October 27, 1893.

THREE weeks ago to-day in Balliol College and at St. Sepulchre's, on the 6th of October, the funeral of the late Prof. Jowett took place. Hundreds were in the chapel and followed thence to the grave, while thousands assembled in the streets. Touching and memorable though this ceremonial was, and although a characteristic discourse was subsequently delivered by the Bishop of London (Temple), yet the frequent allusions to the late Master, the invocations as it were of his generous spirit which have marked several recent and important academic acts, speak even more eloquently of the marvellous power for good which he exercised while living and which lives on in his memory.

At the conference upon secondary education—the first ever held at either university—which took place here on the 9th and 10th instants, Prof. Jebb read a letter from him giving views upon *abiturienten-examinations* to take the place of university matriculation tests, and containing in outline a scheme for granting university degrees without residence. In the place of what the Master would himself have said had he been spared to take part in the conference, an interesting paper was given by the president of Magdalen. Three days later, on the first day of term (October 14), the new Anatomical Building was formally opened by the vice-chancellor. In this assemblage of representative men of science, as in the previous meeting of representative teachers and professors, the catholic mind of the lamented Master was devoutly remembered. Prof. Burdon Sanderson spoke of the late Master's strong feeling that Oxford must not only produce scholars, mathematicians, statesmen, and men of action, but also men who were to take a foremost place in natural science and in the application of natural science to medicine. He added that at a time when he himself felt much less sanguine than at present, Prof. Jowett used to say in his quiet way: "The school of medical science in Oxford will succeed." On October 18 came the formal opening of the new buildings of Manchester College. During these interesting ceremonies, which lasted two days, mention of the late Master was constantly recurring. When "Manchester" removed to Oxford in 1889, he was among those who gave it the most cordial reception. He had promised to be present when it entered its new and permanent Oxford domicile, and, "although no speaker," to propose a welcoming toast in its honor. He was the friend of every movement tending to widen the horizon and enlarge the usefulness of the university, and so he could not but welcome to Oxford the two Nonconformist establishments of Mansfield and Manchester. As Prof. Nichol has eloquently said of him, "He did not confer favors; kindness flowed from him like wine from grapes."

Mansfield College set the example which Manchester College followed of transferring its establishment to Oxford, and a pupil of Dr. Jowett's who stayed with him in 1887 has often spoken of the delight his host took in guiding him to a point from which a view of the beautiful buildings of Mansfield, then newly completed, could be obtained. At that moment no building in Oxford had more importance in the Master's eyes than Mansfield, the newest of them all. Transference to Oxford in the case of these two institutions has not involved their legal incorporation in the University, which they remain as independent of as they were when established at Birmingham and Manchester respectively. Their status here is as nearly as possible that of the Episcopalian Divinity School in the American Cambridge, while the Harvard Divinity School stands relatively in the position of the Oxford theological faculty. Thus it will be seen that similar causes, working upon minds of widely divergent theological views in England and America, have resulted in the establishment of an Episcopalian School of Divinity at Harvard and of a Congregational college at Oxford, which has been speedily followed thither by Manchester College. This last, though, like the Harvard Divinity School, it emphatically disclaims exclusive adherence to

any sect, has been for many years and still is under Unitarian management.

On Tuesday, the 18th instant, the President, the Principal, and the Committee of Manchester College, followed by their guests from Oxford colleges and by various delegates, approached the new building, which was formally handed over. Its most successful and remarkable features are the library and the chapel—rooms of uncommonly fine proportions. The company proceeded immediately to the library, where they listened with bated breath to the letter in which the Master of Balliol promised to be present. This was followed by President Eliot's letter accrediting Dr. Everett, Dean of the Harvard Divinity School, as the Harvard delegate. The Chancellor of the Duchy of Lancaster (until lately professor at Oxford), Mr. James Bryce, wrote "as one of those who worked for the abolition of tests twenty-five years ago, and who have since striven to make the two ancient universities more generally accessible and useful to the nation." He claimed that Mansfield and Manchester brought much to Oxford, as an offset for the advantage to be derived by the clergy of the unestablished churches from an education "under the shadow of our venerable walls and amid the enobling influences which Oxford is so well fitted to inspire." Mr. H. R. Greg, the president, sketched briefly the past of Manchester College, which in its present shape went back one hundred years, and could be traced in some form nearly to the date of the Act of Uniformity, 1662. The college had always maintained "its original principle of freely imparting theological knowledge without insisting upon the adoption of particular doctrines." This undenominational position was, he said, "at once their excuse, and their strength, and their hope of final success," now that they had come to Oxford and were placed "for the first time in the full glare of light and criticism." When Principal Drummond, the resident head, arose to speak for the teaching staff and the students, there was pathos in his unaffected and unresentful allusion to former days when the college suffered persecution. From this topic thus treated he passed on to say, with a sincerity which was memorable, that the building was "almost more sumptuous than is needed for those who can only look forward to a life of comparative poverty, and who will always consider it their highest glory to deny themselves, and to endure laborious days, that they may benefit their fellow-men in the spirit of Him who had not where to lay His head."

The sermon preached at the dedication of the chapel by Dr. Dowson contained notable references to the late Master of Balliol. The welcome extended to "Manchester" by him was, the preacher said, "more than a message of good will," it was an incentive and served to point out new opportunities. The college was a theological college pure and simple, its undergraduate course existing no longer. This change was intended to leave the way open for culture under the best conditions, especially at the ancient seats of learning now for a quarter of a century accessible to students of every religious persuasion. The welcome that the revered Master of Balliol was ready to give them for the second time, and that of others in Oxford, brought the college into contact with something wider than even their own broadest and freest traditions. "Face to face with the University of Oxford," they were "in the presence of a larger life than any found within their walls."

After these ceremonies and speeches, the most remarkable utterances of the occasion were undoubtedly those of Principal Drummond and of the veteran Dr. James Martineau, which came on the second and closing day. Dr. Drummond's opening address was a luminous and scholarly picture of the play of religious opinions since the Reformation, and the resulting political proceedings so far as Nonconformists were involved. "With all its shortcomings, Puritanism," he said, "was one of the grandest uprisings of the human soul that this world had known. Never had religion been more real. Never, as Milton has testified, had the love of virtue been implanted more deeply in the human breast." The Principal spoke of the Corporation Act, by which dissenters were driven from public life; of "the Act of Uniformity passed by a majority of six, which was considered amply sufficient for trampling on the rights of an adverse party, and before which the Lords, who had wiser views of statesmanship and a higher sense of the obligation of public faith, withdrew their objections." Here many of the audience could not help thinking of a recent majority of thirty-odd before which the Lords have not withdrawn their objections. But there was evidently no thought of such an allusion in the speaker's mind, for he was thinking of "pious and faithful ancestors" of Frankland who, against persecution and in spite of legislation, founded the academy out of which Manchester Academy and College finally grew. Owing to the changes which time had brought about, it was necessary, he said, to emphasize the fact that the college was designed to be, and for considerably more than half a century actually was, a general school of higher education. When Queen's College at Manchester, with far wider means, arose to undertake the general and preparatory education, Manchester College confined itself more and more to theology. Its removal to London was "that this general work might be done for it by University College." "Gradually the class of Nonconformist laymen who used to go up to London to study at University College turned their faces toward the more ancient cities of learning, and the same reasons which prevailed on the trustees to sanction the removal to London seemed to point to a new and final removal to Oxford."

This "new and final removal" has taken place; "Manchester New College" has shortened its name to Manchester College, and is firmly established at Oxford. What Manchester College, Oxford, proposes to do can be easily learned from a speech by Dr. James Martineau, who, in spite of his eighty-nine years, seemed still to be "spoiling for an argument," and who made every point with unwavering keenness and unfailing zest. Speaking at the banquet after the whole opening ceremonial was over, he maintained that in this country the principle of Manchester College was absolutely unique in respect of the teaching of theology. If not, he would like to hear of any other institution that had such teaching in the same sense and carried it out to the same extent. He further maintained that a fixed theology was utterly impossible in a progressive society. Men must choose between a scientific theology and a progressive society on the one hand, or, if they preferred a fixed theology, they must reduce or limit the progress of society. If Manchester College was to have free teaching and free learning, it must be open to the students to accept what they were taught or to reject it, and they were not to expect to have a body of teachers turned out all with the same faith and bound to perform their clerical duties within the limits of the same church. In spite of the breezy vigor that enlivened Dr. Martineau's speech, the same sense of loss was upon him which underlay the cordial remarks made earlier by Sir William Markby. Sir William spoke for his departed friend, the late Master of Balliol. Dr. Martineau referred to the beloved Master and to the long friendship that had subsisted between them.

In closing, some notice may fitly be taken of the strong sympathy and great help given by the late Prof. Jowett to those who have succeeded in establishing services in Oxford according to the Jewish rite. The reason why every one interested in enlarging the limits of Oxford life always turned, and never in vain, to the late Master, may still be found by going to his writings, and was well expressed by Canon Ainger when he said, in a recent university sermon: "Whether he was writing of St. Paul or of Plato, whether in sermon or in comment, the reader feels himself breathing the bracing atmosphere of righteousness." Mr. Oswald Simon has done well to remind us, in an account of the late Prof. Jowett which appeared in the *Jewish Chronicle* (October 6), of the beauty and inspiration in the Master's incomparable introduction to the 'Phædo,' which contains wonderful words concerning the immortality of the soul:

> "First of all there is the thought of rest and freedom from pain; they have gone home, as the common saying is, and the cares of this world touch them no more. Secondly, we may imagine them at their best and brightest, humbly fulfilling their daily round of duties, selfless, childlike, unaffected by the world; when the eye was single and the whole body seemed to be full of light; when the mind was clear and saw into the purposes of God. Thirdly, we may think of them as possessed by a great love of God and man, working out his will at a further stage in the heavenly pilgrimage."

These words may be regarded as a part of his last message to all his friends, since he wrote them in these later years, and they are to be found only in his last edition of the translation of Plato to which he gave so much of his life.

LOUIS DYER.

## GENERAL THIÉBAULT.

PARIS, October 24, 1893.

THE success of the memoirs published, a few years since, on the period of the Revolution and of the First Empire, and especially of the memoirs of Gen. Marbot, has drawn out of their hiding-places many memoirs which perhaps had better have remained for ever in the obscurity of family archives. The publisher, Plon, has resuscitated some people who had no notoriety in their lifetime, and who did not deserve the honor of resurrection. Still, there is always, in my opinion, something worth attention in reality; there are always, to use the vulgar expression, some plums in a pudding. It is difficult to imagine a man more devoid of the qualities of an historian than Gen. Baron Thiébault, whose memoirs are just now published by his daughter, Mlle. Claire Thiébault; or more devoid also of the qualities of a writer. The name of Thiébault was quite unfamiliar; but so was, though perhaps not to the same degree, the name of Gen. Marbot. This last name will now for ever be associated with the history of Napoleon. What will be the fate of Gen. Thiébault? We cannot yet say exactly, as we have only the first volume of his memoirs, which extends from 1769 to 1795, and I have been told that there will be three other volumes. There is a law of development in man,

as there is in a plant; the Thiébault of later years most probably improved upon the Thiébault of this first volume, in which he appears the very type of what we call a *gobe-mouche*—the man who has not the slightest critical faculty in his nature, who is open to every impression, without the power to analyze them, or to choose among the multiplicity of impressions what is worth remembering.

I confess having been discouraged by the first chapters of Thiébault's memoirs; they seemed to me so vapid, so futile. Still, the circumstances of the author's early years were interesting in themselves. He was born in Berlin, December 14, 1769; his father, Dieudonné Thiébault, was professor of French at the military school of Berlin founded by the great Frederick, and a member of the Academy of Berlin. The elder Thiébault remained twenty years in the capital of Prussia, and his 'Souvenirs de vingt ans de séjour à Berlin,' published in 1804, are among the valuable documents which concern the reign of Frederick II. The son was educated in a Prussian military and philosophical atmosphere; his greatest amusements were the grand reviews of the Tempelhof, the autumn manœuvres at Gesundbrunnen:

"Imagine," says he, "36,000 superb soldiers, and among them the regiment of giants, which was the regiment of the Guards; the gendarmes, with their scarlet uniforms; the hussars of death, a body of 2,000 men. . . . Add to this magnificent and moving spectacle the presence of a King placed by his genius and his exploits at the head of the philosophers, the legislators, and the warriors of his time, and followed by a crowd of officers of all the countries of Europe, who came to render him homage and to instruct themselves at these reviews; surround him with illustrious generals, formed in his school; represent to yourselves his white hair, which recalled and ennobled forty years of glory; and you will conceive that there was no bound to my admiration."

The anecdotes which Thiébault tells of Berlin and its society are not all interesting. I note one which concerns Voltaire. Those who have read his correspondence all know his quarrels with Maupertuis. Somebody was trying to reconcile the two philosophers, whom Frederick had called to his court, and said to Voltaire, at the end of a long remonstrance: "Don't you feel what, in your position, two Frenchmen owe to each other?" Voltaire rose from his chair, and burst out: "Two Frenchmen! Know you, sir, that if two Frenchmen met at the extremities of the world, it would be necessary for one to eat the other; it is the law of nature."

Dieudonné Thiébault, seeing Frederick growing very old, and knowing that his successor would remain a stranger to art and literature, resolved in 1784 to leave Berlin. He sold his library, under pretext of making a profitable investment, and sent secretly all his money to Paris. He took his family with him, and, travelling by short stages, arrived in Paris at the end of the year. Animal magnetism had become the ruling passion, and, when Dieudonné Thiébault asked for a leave of absence from Berlin, he not only had for his object to settle his family in France, he wished to try magnetism on one of his daughters, who was deaf, and whose deafness had resisted all the treatment tried in Germany. Thiébault gives us an elaborate description of Mesmer's famous *baquet*, and has very wild stories about the effects of magnetism and about its adepts. The stories are mixed up with the first impressions which young Thiébault received from the events that preceded and prepared the French Revolution. The chapters which relate to his father's acquaintances and his own might have been suppressed without inconvenience. Thiébault becomes really interesting only when he begins to be involved in the great revolutionary drama.

If we had to make headings to his chapters, we should call one "How a Quiet Citizen Becomes a Revolutionist." Thiébault was enjoying himself at a picnic with a number of people in the forest of Vincennes on the 12th of July, when his father arrived with a friend. He was dancing a contradance, and his father allowed it to come to an end, when he told his son that Paris was in full insurrection, that the barriers of the city were guarded by the people, that nobody could go in or out; that the busts of the Duke of Orleans and of M. Necker were carried in the streets, that blood had already been shed. A revolution during a quadrille! What was to be done? Dieudonné Thiébault held a Government office; he was in what was called the Direction of the *Librairie*, being lodged by the State in the Garde-Meuble (now the Ministry of the Navy, in the Place de la Concorde). The journey from Vincennes to the Garde-Meuble was not an easy one; it was eleven o'clock at night when the father and the son arrived after having been arrested and cross-examined several times by sentries. On the morning of the 13th all Paris belonged to the insurgents; the Arsenal had been searched by the people, and it was announced that some patriots were marching on the Garde-Meuble, where there was a depot of arms. The elder Thiébault had only time to take his family, his money, and his papers to the house of a friend when the Garde-Meuble was invaded. Meanwhile a municipality was organized; the sixty districts of Paris convoked their inhabitants and armed them. Such was the origin of the national guard of Paris, which soon numbered nearly 100,000 men. Each district had its battalion. On the evening of the 13th, Paris was illuminated, and, on the 14th, young Thiébault bought a tricolor cockade. He was wandering through Paris when he met a troop of 500 men. A friend of his, who was in its ranks, told him they were going to take the guns of the *invalides;* young Thiébault felt a sudden impulse and joined the assailants. It is useless to say that the poor old *invalides* did not offer much resistance.

"Such was," says Thiébault, "the first expedition in which I took part—an expedition which had not much that was military in it, but which made me an actor in one of those circumstances when force is mightier than right. Forty-eight hours before, I little thought of disarming the *invalides*. This is a proof of the commotion which was taking place in all ideas and positions; my zeal was so much inflamed that from that time there was not at the Feuillants a more ardent soldier than myself."

Lafayette had to occupy himself with the organization of the national guard of Paris; he was its commander-in-chief, and formed as many as six divisions of ten battalions each. Among these companies, there were some which had as many as 1,200 to 1,500 men. This national guard, which was by no means a contemptible force, elected its own officers. Young Thiébault was, as a national guardsman, mixed up with the events of the 5th of October. He became a sergeant of the company of grenadiers of his section and entered upon his functions with a truly military spirit; he played his part, in his fine uniform, in the famous feast of the Federation. Once when on guard at the Tuileries, he saw Louis XVI. walking in the garden.

"When he reached the little door of the passage which led through the Convent of the Feuillants from the Place Vendôme to the Tuileries and from there to the Constituent Assembly, a young lady was coming out with a pretty young spaniel, which approached the King. As soon as the lady recognized the King, she hastened to recall her dog, and made a deep bow; at once the dog turned round to join his mistress, but Louis XVI., who had in his hand an enormous cane, broke the back of the dog with it, and, while the lady screamed and wept as the poor beast was expiring, the King continued his promenade, enchanted with what he had just done, and laughing as a big peasant would have done."

Thiébault was scandalized, and nobody will wonder at it. I believe that, even at the present time, dogs are not allowed in the garden of the Tuileries; at any rate, this was the case not long ago. But it is difficult and painful to think of Louis XVI. as a "tueur de chiens."

Thiébault became a member of the "Club of the Constitution," having among his colleagues Mirabeau, the brothers Lameth, Barnave, the Prince de Broglie, the Duc de Chartres, who became Louis-Philippe. Thiébault's memoirs show us all the transformations of the French mind at the beginning of the Revolution. See, for instance, what he says on hearing of the flight of the King: "I jump from my bed, and open my window on hearing the drum beating. I hear the screams, 'The King is gone, the King is gone!' repeated from mouth to mouth. This clandestine departure gave a chief to the emigration; it deprived France of one of its guarantees; it could not, as far as the parties were concerned, do otherwise than push everything to extremes and excite civil war." The news of the flight of the King filled everybody with anxiety; it was felt first that the sovereigns of Europe had nothing more to restrain them, and that they could march their armies against France without fearing to injure the royal family. The capture of Louis XVI. and his return to Paris, as a prisoner, did not improve the situation; the King was no longer a King, and France was like a ship without a compass. Thiébault's father lost his situation, and the Garde-Meuble, where he lived, became the Ministry of the Navy. He accepted an office in the provinces, and left Paris for Épinal, in the Vosges.

Thiébault himself, after a short journey to the Vosges, returned to Paris and continued to do service in the national guard. He describes the invasion of the Tuileries on the 10th of August. This famous day was "the definitive triumph of crime and assassination"; and Thiébault adds that the Revolution ceased to be the Revolution which he had intended to serve. The national guard had to change its uniform: the grenadiers changed theirs for a miserable *Carmagnole* and a bad hat with a cockade. Thiébault felt almost dishonored, and we shall see him now in a new character. The massacres of September became for him, with the 10th of August, a sort of turning-point: "those September days, the most hideous of the Revolution, made on me an indescribable impression." He was now brought face to face with terrible facts and realities, and from that moment his memoirs become more serious, more important, as he soon had to exchange his uniform of a civic guard for the uniform of a soldier.

# Correspondence.

## GRANT AND RAWLINS.

To the Editor of The Nation:

Sir: All candid students of Rebellion history will thank you for your recent review of Piatt

and Boynton's 'Life of Gen. George H. Thomas.' I have neither purchased nor read the work referred to, nor do I propose to do so, but enough quotations appear in your article to show that time and experience have not cured the constitutional perversity of these authors.

In your review, the now celebrated letter written by Gen. Rawlins at midnight in the trenches at Vicksburgh is adverted to. It is a momentous document from a subordinate to his commander. Not the least among Gen. Grant's claims to greatness is the fact that he selected Rawlins and kept him where he was, and allowed him to write such a letter and profited by its admonitions. You say justly that the letter bears internal evidence that Gen. Grant did not indulge in the habit of drinking to the extent of injuring the cause he served. While this is true, I wish to add that Gen. Rawlins himself, of record, certified to the same effect. When the latter went East in 1864 to assume the duties of chief of staff to the commander of the United States armies, he left many of his papers in the care of his neighbor and friend, Gen. John E. Smith of Galena, Ill., the first colonel of the celebrated "Lead Mine Regiment," who by genuine military talent and personal worth attained the position of brigadier and brevet major-general during the war. The same qualities preserved for him the friendship of Generals Grant and Rawlins till their death. Gen. Smith now resides in Chicago, a colonel upon the retired list of the regular army. The very fact that he was the depositary selected by Gen. Rawlins for his private papers indicates his nearness to the "chief of staff"; and all who know him will justify such confidence. I have seen, read, and copied this letter, all of which is in the handwriting of Gen. Rawlins. Upon the back of it is an endorsement in the same handwriting, as follows:

"This is an exact copy of a letter to the person addressed, and delivered at its date about four miles from our headquarters in rear of Vicksburgh. Its admonitions were heeded, and all went well. RAWLINS."

This proves conclusively that, at some subsequent time to the date of the letter, and before May 1, 1864, Gen. Rawlins asserted, with his own pen and under his own signature, that Gen. Grant did not drink during such period. It proves, also, that while all men may not be liars, some are.—Very respectfully,

L. B. CROOKER.

MENDOTA, ILL., November 6, 1893.

## MR. QUINCY AND THE PRESIDENT.

TO THE EDITOR OF THE NATION:

SIR: Is there no other side to the question discussed in your editorial on page 338 of this week's issue? Mr. Maxwell was not noted as a spoilsman before his appointment, was he? Did Mr. Dayton declare his preference for Tammany men until after his confirmation? Was Mr. Quincy the citizen recognized as a fit successor of Higgins the official?

The last case requires more than a passing word, for Mr. Cleveland came into the very holy of holies of the civil-service-reform gospel and called Mr. Quincy, theretofore a professor of the faith. Is the evangelist responsible for every backslider? Mr. Cleveland could hardly know intuitively what few people have learned, even here in his home, that Mr. Quincy is weak as cold. He took him at face value, without "ringing" him, and was deceived. Since June surely the President's time has been fully occupied with matters of more importance than Maxwell and Dayton, or even Quincy.

In a word, cannot the harm done by Mr. Quincy's treachery to the cause of civil-service reform be more quickly remedied by putting him, where he belongs, with the Hills, Sheehans, Platts, and Murphys, than by charging all the "false doctrine, heresy, and schism" to the President's account? Give the devil his due and start a column for Mr. Quincy. H.

UNIVERSITY CLUB, BOSTON, November 9, 1893.

## ADMISSION TO SOUTHERN COLLEGES.

TO THE EDITOR OF THE NATION:

SIR: The two articles on the above subject that have appeared in recent numbers of the *Nation* open a chapter of Southern educational history which affords us no room for boasting. The general inferiority of college training in the South is clear, and it can hardly be claimed that the signs of improvement are many or marked. The tabulated statements of your correspondent from New Orleans tell their own story, but the saddest part is that even the published requirements are upheld in very few colleges with any degree of strictness. A few words of conversation between the professor and student are often considered sufficient to determine the class of the applicant, and it usually makes but little difference whether the published requirements have been complied with or not. The vagueness of statement that is frequently met with in the published requirements of Southern colleges differs materially from the growing tendency visible in Northern institutions towards indefiniteness in the prescribed requirements for admission to college. The one is the vagueness of chaos, the other the brevity of conceded facts. A simple card with the inscription "At home" may be sufficient to bring together in New York a brilliant gathering of men and women with shining silks and flashing pins, but this effect could hardly be produced by so simple a means in Zululand. The published requirements of Harvard in Latin, to wit, "The translation at sight of average passages from Cicero and Virgil, with questions," may be plain enough for Boston, but such words would be understood very differently a few degrees nearer the equator.

The only hope for Southern education is that the colleges may in some way be brought together, and may come to some agreement as to the amount necessary for admission to the freshman class. Then schools would spring up to do the necessary work, and improvement in every grade of instruction might be confidently expected. For this reason the suggestion of Mr. Harrington that there be formed a Southern Association of Colleges and Preparatory Schools is most timely and commendable. The way is being prepared for such an association by State organizations, such as the one that has existed in North Carolina for two years. I am glad to say that Tennessee is not behind North Carolina in this respect. Six years ago, through the efforts of Vanderbilt University, an association of this kind was formed in this State, and the last annual meeting has just been held at Bellbuckle. Only five of the colleges in the State have taken an active part in this work, and it cannot be claimed that any decided effect has as yet been produced in the elevation of standard or in securing unanimity of requirements. On the schools, however, the effect has been more marked. Every year new schools apply for membership, and their masters show an earnest desire to bring their work into harmony with the requirements of the best college of their section. If the best colleges of the South could unite in a larger association of this kind, great good would undoubtedly result. Even weaker colleges would soon see that it would pay them to elevate their standard, to cut off preparatory classes, or, if such work must be done, to turn it over to a preparatory school wholly distinct from the regular college organization.

The experience of Vanderbilt University for the past six years has demonstrated beyond a doubt that, even with the present lack of training-schools, it is possible for an institution to maintain strict requirements for entrance. How much easier would this be if several or all of the leading colleges of the South would unite and stand together in the demands made on the schools. The responsibility in this matter rests on the stronger colleges, on those that have some endowment or derive their income from State appropriations. The weaker institutions, which are largely dependent on their tuition fees for support, will make no further advance than is forced upon them by the pressure of public opinion and the odium of comparison.

## CONUNDRUM.

TO THE EDITOR OF THE NATION:

SIR: Part VII. of Murray's Dictionary seems to afford the derivation of the word *conundrum*, though the editor fails to notice it. As he says, there is evidence that it is an Oxford word, and he gives the following from Bedell, 1651:

"These *conimbrums*, whether Reall or Nominall, went down with Erasmus like chopt hay."

There surely can be no doubt what this word is. The reference to realists and nominalists shows that something in the scholastic philosophy is referred to; and "conimbrum" is easily recognized as meaning *argumentum Conimbricum*. The doctors of Coimbra, in their celebrated commentaries published in the sixteenth century, have in all cases a great deal to say of the "multiplex significatio" of one word and another. Indeed, such remarks are their great weapon. They used it for all it was worth, and a little more. Accordingly, a dealer in verbal quibbles might naturally have been called by Oxford students a *Conimbricus*, and his quillet *Conimbricum argumentum*. The original *c*, which this hypothesis requires, is preserved in another old form of the word, "conuncrum." *Conimbrica* was in the sixteenth century the most usual Latin form of the name Coimbra, though Conimbria is also common. Colimbria was obsolete.

C. S. P.

# Notes.

IT is now announced by his publishers, Macmillan & Co., that Prof. Goldwin Smith will, on his return from England, take up the foreshadowed second volume of his political history of the United States; but he has also in preparation for the press a book of essays setting forth his well-known and often unpopular views on questions of the day, such as the Jewish question, the Irish question, woman suffrage, prohibition, etc. The same firm have

nearly ready a new rhymed translation of Dante's 'Divine Comedy,' by George Musgrave.

Harper & Bros. make a holiday book of 'The Masters and Masterpieces of Engraving,' by Willis O. Chapin, illustrated with sixty examples from Dürer to representative American engravers; also of Charles A. Platt's 'Italian Gardens,' with many additions to the cuts which accompanied Mr. Platt's articles in *Harper's Magazine;* and finally of Charles Reade's 'The Cloister and the Hearth,' in two volumes, with 550 illustrations by William Martin Johnson.

Holiday editions of 'Poems of Nature,' selected from Bryant, with nearly a hundred "pictorial accompaniments" designed by Paul de Longpré, and of 'Picciola,' similarly treated by another French artist, J. F. Gueldry, are to be brought out by D. Appleton & Co. They will publish immediately 'The Brontës in Ireland,' by Dr. William Wright, with many illustrations.

Dodd, Mead & Co. are preparing a new edition, the fifth, of Mr. H. W. Mabie's volumes, 'My Study Fire,' 'Under the Trees and Elsewhere,' 'Short Studies in Literature,' and 'Essays in Literary Interpretation.' These have all been revised and added to, and each volume will contain three photogravures and be attractively bound. For the manufacture, recourse has been had to the press of J. M. Dent & Co., England.

G. P. Putnam's Sons announce 'Social England,' a record of popular progress from the earliest times to the present, edited in six volumes by H. D. Traill, D.C.L.; 'The Religion of a Literary Man,' by Richard Le Gallienne; 'James Henry Chapin of Connecticut,' a study by George Sumner Weaver, D.D.; and 'Wah-Kee-Nah, and Her People,' a study of the customs, traditions, and legends of the North American Indians, by Gen. James C. Strong.

Six doctors of divinity at least have collaborated in the volume about to be issued by Hunt & Eaton, bearing the title 'Anti-Higher Criticism.'

'The Child and the Bishop,' memorabilia of the late Phillips Brooks, and 'Gentle Thoughts for Gentle Women,' edited from the writings of the late Dinah Mulock Craik, are in the press of J. G. Cupples & Co., Boston.

The first four books of Goethe's 'Dichtung und Wahrheit,' edited for schools by Prof. C. A. Buchheim, will form a volume which D. C. Heath & Co. are bringing out.

Charles L. Webster & Co. desire it to be known that, contrary to report, no change has been made in the personnel of the firm, and that it will not retire from the book-publishing business. While it has sold out its subscription department, it will more than ever devote itself to general publication.

"The new is old, the old is new," we must still sing with Whittier as we look at the mass of the publications of the present season. The ideally attractive and handy Dent series of Jane Austen, the Brontë sisters, and Fielding, has received a fresh extension in a reprint of Maria Edgeworth's tales, beginning with 'Leonora' and 'Ennui,' each in a single volume bound most tastefully in green cloth stamped with the shamrock and with Erin's harp in gold. The same emblem has been used for the pretty ex-libris which Dent has had the happy thought to place on each cover. For the rest we need only note that the illustrations are old steel engravings reduced, instead of the customary photogravure, and that the American co-publishers in this instance are Dodd, Mead & Co. The same firm's neat uniform edition of Anthony Trollope's novels proceeds with 'Phineas Redux,' 'The Prime Minister,' and 'The Duke's Children,' each in three volumes, according to the English convention, bound tastefully in wine-colored cloth. A medley of drawings in wash, line and color, by Theodore Hampe, irregularly embellish their new edition of Mrs. Barr's 'Bow of Orange Ribbon' (a romance of Dutch New York), with a total effect more showy than elegant.

The Messrs. Putnam, too, confirm the saying about old and new. Here is their latest (the Van Twiller) edition of the classic 'Knickerbocker's History of New York,' in two volumes, illustrated by Edward W. Kemble. Each page has a colored border repeating the same design, and it is a very happy and decorative one; and like praise may be given to the windmill figure on the inner covers. These are really, besides the handsome letter-press, the chief successes, for Mr. Kemble's humorous pen-drawings are agreeable but not great as art. The outer covers, in white, stamped with blue and gold, are perhaps a little too elaborate; but as a whole, these are very handsome volumes indeed and will make their way.

A delightfully proportioned page and general quiet good taste, without any pictorial ornament, mark Houghton, Mifflin & Co.'s reissue of Mr. T. B. Aldrich's 'An Old Town by the Sea.' Both externally and internally it seems to us leagues ahead of Miss Jewett's 'Deephaven' redivivus, with illustrations by Charles and Marcia Woodbury, of which the binding is a sad thing and the paper too glossy. The illustrations, on the other hand, are decidedly meritorious, the lady's by no means the worst, as witness her "Mrs. Kew" and "Miss Brandon at the Piano."

'Olympe de Clèves' has just been added to the taking edition of Dumas, senior, which we owe to Little, Brown & Co.; it begins the line of historical romances. The two volumes are well printed and richly bound; a spirited etching and a vignette portrait are the frontispieces. The same firm send us 'The Life of Shakespeare, Copied from the Best Sources, without Comment,' by Daniel W. Wilder, a modest attempt at a brief and trustworthy compendium of what is actually known about the poet. The book is in the main excerpted from Halliwell-Phillipps's 'Outlines,' to which references are duly given, and it will certainly be very useful to readers who do not possess the larger work. Mr. Wilder has done his excerpting cleverly, and his publishers have presented the result in an attractive form. The defects of the undertaking come chiefly from the compiler's having overlooked or ignored the 'Life of Shakespeare' by the exasperating but indispensable Mr. Fleay.

Mr. Edward Maunde Thompson's 'Handbook of Greek and Latin Palæography,' in the International Scientific Series (D. Appleton & Co.), is a masterly outline of a subject replete with difficulty, interesting to the few who will actually use this book as a primer of research. The preliminary chapters, however, on the alphabet, early writing and writing materials, forms of books, punctuation, contractions, etc.—say the first 117 pages—ought to be common knowledge, and would bear separate publication. They would supplement, without much overlapping, Mr. Falconer Madan's lucid work on 'Books in Manuscript' in the "Books about Books" series, and deserve as handsome typography. Beauty of manufacture does not distinguish the International Scientific Series, and the defect is especially felt in the case of a knotty theme like the present. The size of the page, too, has necessitated arbitrary shearing of the copious MS. examples reproduced in facsimile. Finally, the index might well have been made more elaborate. It is remarkable how much use is made of the recent discoveries of MSS. in Egypt, like the Herodas and the 'Constitution of Athens'; and it is certain that future finds are likely to affect considerably the generalizations about early Greek MSS. The closing pages of the 'Handbook' are devoted to the English book-hand in the middle ages. An appendix deals with systems of dating, or eras and calendars; and there is an important list of the principal palæographical works referred to, the use of which Mr. Thompson has aimed to facilitate by his learned compendium.

In the midst of elaborate and enigmatic literary criticism, it is a pleasure to read the nine essays that compose Mr. Arthur D. Innes's 'Seers and Singers' (London: A. D. Innes & Co.). The poets treated are Wordsworth, Tennyson, Arnold, and the two Brownings. The manner is almost colloquial; no stress is laid on "new" points of view; there is no philology, no searching for sources, no attempting scientific criticism, no trying to be witty. What the reader does get is a judicious and temperate comparison of the qualities and characteristics of the poets mentioned, without any flourishes and with much soundness and charm of style and thought.

'Within College Walls' (New York: The Baker & Taylor Co.) is a collection of ten diffuse essays—or, perhaps, sermons—on college life and education, by President Thwing of Western Reserve University. The college, it appears, is not a place where the student, during four years of comparative seclusion from the world of commerce and society, may give himself over, under trained and experienced teachers, to obtaining a thorough grounding in some of the most important branches of learning and investigation. It is, on the contrary, a compound of the academy, the home, and the Sunday-school, where the development of the spiritual part of character is of prime importance, where revivals are expected with periodic regularity, where scepticism is smothered or diverted, and where young ministers are appointed to departments of which they have no knowledge because they are supposed to be men of strong character. A book which could paint the college as the student, the professor, and the executive officer really see it would be full of interest and value. Charges are continually made against the habits and methods of college life, organization, and administration. These need discussion and investigation, but do not find them in President Thwing's pages. The questions he treats are usually of minor importance: if by chance he stumbles on a critical problem, it is only to pronounce upon it dogmatically, or to show in other ways that he has not mastered the facts upon which decision must depend.

J. G. Bartholomew's 'Tourist's Atlas Guide to the Continent of Europe' (London: Geo. Philip & Son; New York: Charles Scribner's Sons) is convenient enough and useful enough to be kept at home as well as taken abroad. Of a size fitted for the pocket, with rounded corners, it contains non-folded general maps of the whole of the Continent, aptly subdivided, and plans of most of the great cities (in the case of Paris two); the Rhine and the fjords of Norway are shown in sections, and even Iceland is thrown in. The British Isles, except for a small railway map, are excluded. Opposite each city plan is a summary enumeration

of hotels, stations, cafés, theatres, churches, museums, monuments, etc. No one who has once used such a companion will consent to be without it. In the map of Southeastern France, the western color boundary of Switzerland has receded, in glacial fashion, so as to throw Geneva and other territory into the latter country.

Along with the foregoing may well be carried the little English-German dictionary by Jäschke (Boston: Carl Schoenhof), which is uncommonly well conceived. Interspersed with the mere vocabulary and its phrases are titles such as *lavatory*, *railway*, *hotel*, *money*, *washing*, *tailor*, under which are set down very natural and practical questions and directions in the German idiom; and a select little German-English vocabulary at the end furnishes what aid it can to understand the responses to the traveller's remarks. The author's ingenuity has overlooked, under *railway*, a very important question in some parts of Europe—"Is this a through train?" or "Do we have to change cars before reaching such a place?"

In this day of innumerable books any one deserves gratitude who publishes a full list, or a discriminating list, of books in any department of literature; and so we turn with a cheerful hope to Haferkorn's 'Handy List of Books on Fine Arts and Architecture' (Milwaukee), to be disappointed by finding it merely a voluminous trade-list of the books in English which are current in the market to-day, with a very scanty sprinkling of such books, published before 1880, as are most commonly known. It may be handy to salesmen who have to answer the calls of ordinary buyers, but is of no value to any one who is trying to follow the literature of its subject. The "three years of persistent work" claimed for it apparently mean the labor of some one working from booksellers' catalogues without acquaintance with the literature. The same labor, with some discriminating knowledge, covering the foreign languages in which the most important part of this literature is printed, might have made the catalogue very valuable, for it has no substitute. Unfortunately, every time such a work is imperfectly done the way is blocked for something better.

The first edition of Henry William Watson's 'Treatise on the Kinetic Theory of Gases' (Macmillan) was published in 1876, and it was then, we believe, the only treatise on the subject which could lay any claim to completeness. Almost all the text-books on thermodynamics devoted one or two chapters to the kinetic theory, which were little more than introductions to the subject, and, even as such, incomplete and often wanting in strict logical precision. In the first edition of this treatise the author followed for the most part the methods of Boltzmann, with, however, some important variations. In the present edition the ground is covered in much greater detail, the statistical method of treatment due to Maxwell being kept in view. The mathematical investigation of the subject leads finally to the conclusion that, with the assumed premises, the properties of the gaseous medium will correspond perfectly with those of an ideally perfect gas. In spite, however, of the very elaborate and on the whole successful treatment, no physicist will, we think, admit that the work, good as it is, is more than a first approximation towards a satisfactory solution of the extremely difficult problems involved.

Lecène, Oudin & Cie., Paris, have just published a new volume, the seventh of M. Jules Lemaître's 'Impressions de Théâtre.' The most striking fact one notes, on completing the reading of the brilliant pages of the impressionist critic, is the absence of any really remarkable work among the absolutely contemporary pieces, and the unconscious tendency of authors and critics to seek new forms of vice and sin as subjects. M. Lemaître speaks of the most noted works only: there is not one which, from its subject or its treatment, appears destined to outlast its brief popularity, not one which seems to have opened new roads to dramatists. This is all the more remarkable because, beside these "moderns," figure the names of classics whose works, notwithstanding the changes in taste and fashion, wear well and satisfy the cultured mind. It is only justice to M. Lemaître to add that, while he suggests how much more abominable (though he does not so qualify it) the conduct of some of the characters might have been made—*e. g.*, that of the younger Dumas's 'Père Prodigue'—and consequently more soulfully interesting, the coarse vileness of the Théâtre Libre comes in for condemnation at his hands; and the delicate grace of Maxime Bouchor's work is duly praised and the genius of Ibsen recognized.

A small book, in French, with a preface in English by an Italian countess, English by birth, Evelyn Martinengo-Cesaresco, forms the eleventh volume of the collection of "La Tradition Populaire," known to folk-lorists, and published by Lechevalier (Paris). The subject of this volume is 'La Poésie Populaire,' and a short historical study is followed by an interesting chapter on the idea of Fate in southern tradition.

In the November number of the *Educational Review* the editor has published statements from a dozen universities and colleges as to the effect of the present business depression on their attendance for this year. The statements themselves are somewhat vague, but it can be plainly seen that in most cases the numbers are very much the same as last year, or only slightly increased. Prof. James, in answering for the University of Pennsylvania, propounds the theory that, in general, "financial depression, where it is not continued for too long a time, is rather favorable than otherwise to an increase of attendance at higher institutions of learning," for the reason that boys who would naturally drift into business find it hard to get places and so continue their education. If this be so, we should expect to find this year the largest gains in scientific and technical schools, whose aims would naturally attract such boys. The statements given are not sufficiently definite to confirm this supposition, but it is interesting to notice that the gain in the case of the only scientific school for which figures are given, that of Harvard University, has been 50 per cent.

A report of progress on the surface geology of New Jersey, by Prof. R. D. Salisbury of the University of Chicago, appears in the recent annual report of the State geologist, Prof. Smock. The specialist in this subject will find Salisbury's account much more explicit in regard to the washed drift than any of its predecessors have been. Dictionary-makers should take notice of a new term, "aggradation," applied by him to the filling up of valleys by heavily loaded streams, in contrast to "degradation." Most of the valleys of middle New Jersey were "aggraded" by the rivers that ran from the melting ice sheet at the close of the glacial period. Speaking of new terms, we may mention the adoption by an Austrian geologist, Dr. Robert Sieger of Vienna, of the term, *drumlin*, introduced into our glacial literature some years ago from Ireland as a name for rounded hills of drift, shaped under the ice sheet. Sieger uses it in his account of similar hills near Lake Constance, where they seem to be numerous, although generally unmentioned in descriptions of continental European geology. Sieger's essay is a contribution to the Richthofen *Festschrift* of the current year.

Messrs. Putnam think our description of their illustrated edition of Mrs. Gatty's 'Parables' liable to misconception. They say: "The illustrations in question were designed specially for this edition, by Mr. Paul de Longpré, an artist resident in this city, who has devoted himself largely to nature subjects, and whose previous work has won for itself very high commendation." We had no intention of depreciating these examples of it.

—It is refreshing to see the editor of the *Virginia Magazine of History and Biography* bringing all the wealth of his antiquarian knowledge to dispel those old and widespread notions of his countrymen that the early Virginians were for the most part Cavaliers, that they lived in superb mansions, and that they engaged in frequent duels. Mr. Moncure D. Conway, in his 'Barons of the Potomac and Rappahannock,' recently published, has given additional currency to these antiquated views, and it is in a review of this book, contained in the second number of the magazine, that we find a distinct denial made of the alleged fact that any considerable number of the "Virginia gentry were descended from men of high rank who had adhered to the King's side." The reviewer adds that all genealogists having any competent acquaintance with the subject are agreed that but few scions of great English houses came to any of the colonies. As to the size of the houses of the Virginian colonists, inventories exist among the county records, furnishing abundant evidence that six or seven rooms were the limit in the case of the houses of planters of means having social and political consequence, and seventeen rooms in the case of the greatest houses, such as Rosewell, Rosegill, or Westover. In the 'Recollections of Rear-Admiral Ralph Randolph Wormeley,' published in 1879, the authors give thirty bedrooms alone to "Rosegill," in Middlesex County, Virginia, the old residence of the admiral's family. In this review Ralph Wormeley's inventory, dated 1701, is produced, showing that the rooms in the house, exclusive of kitchen, dairy, etc., were exactly nine in all. The comment upon duelling is particularly interesting. Mr. Conway has declared that duels in colonial Virginia about sweethearts were not infrequent. In this review, however, the origin of the appeals to the code is ascribed to the long war of the Revolution and to French influence, the fact being that while the "records [of Virginia] mention a few—very few—challenges, so far as they show or as can be learned from other sources, no duel was fought in the colonial period about wives, or sweethearts, or any one else."

—As the fourteenth volume of Dr. Billings's grand 'Index Catalogue of the Library of the Surgeon-General's Office' reaches Universally, we suppose another will close the series. By far the amplest title in the one before us is Syphilis, which fills 118 of these two-column quarto pages, the earliest treatise on the subject that we have observed being Leonicenus's 'Libellus de epidemia quam vulgo morbum gallicum vocant' (1497). A tenth part of the space is devoted to congenital, hereditary, and infantile syphilis; a tenth likewise to treat-

ment by mercury (in the midst of other remedies), and if Chicoyneau demonstrates salivating to be of no use, Goris shows us 'Mercurius Triumphator.' Another melancholy chapter is Tubercle and Tuberculosis, in 55 pages; Tetanus requires 43, Therapeutics 38, Tumors 35, the Teeth 27, etc. Tobacco is more interesting in a briefer compass (11 pages), a third of which is concerned with the evil effects of this narcotic. The earliest entry about the weed is Neander's 'Tabacologia' (1626), followed in 1744 by Schulze's 'De masticatione foliorum tabaci, of chawing tobacco, in Anglia usitata'; and in our own very recent time we have a French 'Cri d'alarme du tabac' (Paris, 1878), upon the heels of a founding in 1877 of a society against the abuse of tobacco, with a journal, and this perhaps leading to an international congress having the same end (Paris, 1890). As far back as 1750 Languth of Wittenberg wrote warningly 'De immoderatiori tabaci abusione communi juvenilis ætatis pernicie'; and here we find bills prohibiting the sale of tobacco to minors introduced in the Michigan Legislature in 1879, and in Congress in 1888, 1890, 1891—this last in response to a memorial from citizens of the District of Columbia. James Parton's 'Smoking and Drinking' occurs on the same page with his royal British namesake's 'Counterblast to Tobacco.'

—It would be hard to say what may not be found in this section of the Catalogue—Swedenborg and his 'Animal Kingdom'; Bishop Berkeley and his Tar-water; Sir Kenelm Digby and his "powder of sympathy," "touching the cure of wounds" thereby, "with instructions how to make the said powder"; Swaim's Panacea, and the Thomsonian system, both blossoming into print in 1822; Sweet's 'Bone-setting' (1829); Daniel Turner's "particular account of Monsieur Bellost's pill compared with the author's, and the case of Barton Booth, esq., the late famous tragedian, as the same was communicated to the author by Mr. Alexander Small, surgeon, who open'd the body in the presence of Sir Hans Sloan" (1733); 'Observations on the state of the dispute between a physician and an apothecary concerning a prescription of Sydenham,' with a vindication of Sydenham's "method of curing the dysentery by injections of milk and Venice treacle" (1765); Dean Swift's 'Right of precedence between physicians and civilians enquir'd into' (1720); Stevens's 'Homographia: an essay on the proportions of man's body, hitherto unknown, or undescribed; exhibiting the prescience and reflection of the Deity, and the origin and harmony of numbers; with an appendix on the monuments of the ancients, etc.' (1806); 'Trial of William Bushnell [and others], all of Boston, for practising homœopathy while they were members of the Massachusetts Medical Society'; the Tichborne trial; and, to have an end, the case of Miss Marianne Woods and Miss Jane Pirie against Lady Gordon Cumming (1811–19), the latter having accused the plaintiffs, who kept a young ladies' school, of a practice known only by a French name, though here anglicised (and so to be commended to Dr. Murray's attention). May we not also note the appearance on the scene of three Tartarins, one an antiquarian at Vienne if not quite "sur les Alpes"? Certainly we ought to mention that the United States has 52 pages, in which will be found an analysis of the contents of the Sanitary Commission's 'Collection of Original Documents.'

—Not long before his death, Mr. Darwin stated to Sir Joseph Hooker that he desired to do for biological science something in addition to what he had already accomplished. To carry out this desire he devoted a considerable sum to the preparing and publishing of a general reference-index to the names and places of original publication of all known flowering plants, saying that the difficulties he had experienced in accurately designating the many plants he had studied, and in ascertaining their native countries, had suggested to him the importance of a work which should give these particulars. He requested Sir Joseph Hooker to take general charge of the work, and it has been under the supervision of this master in botanical science that the task of compilation and arrangement has been accomplished at Kew by Mr. B. Daydon Jackson. The first volume accordingly comes from the Clarendon Press (New York: Macmillan), under the title of 'Index Kewensis,' and with the names of Hooker and Jackson on the cover. It is a quarto volume of over seven hundred pages, three columns to a page, and contains by rough estimate not far from one hundred and sixteen thousand references. The limits chosen are from Linnæus to the year 1885; each recognized genus is referred to its proper page of Bentham and Hooker's 'Genera Plantarum,' and with each species is named its native country. A glance at a few names of species is enough to show that the classic conservatism of Bentham and Hooker and Gray has governed the choice of names. Thus, under *Acer* the proper name for our sugar maple is recognized to be *Acer saccharinum* of Wangenheim; and *Acer saccharinum* of Linnæus, the older name, but one imposed on our silver maple through some error, is made a synonym of *Acer dasycarpum* of Ehrhart. Brongniart's emendation of Gray's *Agatea*, changing it to *Agation*, is adopted, showing that the law of priority is considered inferior to what may be called the law of common sense, and that one of the best friends of our own conservative Gray could even accept the correction of what may perhaps not have been an error after all. This volume includes the names of genera from *A* to *Dendrobium*, and covers about a fourth part of the whole, so that three more volumes may be looked for in good time. This 'Index' cannot fail to be of the greatest use to botanists, who will naturally look upon it as a loving legacy from one of the most distinguished of naturalists.

—The 'Lettres de Cecil Standish,' privately printed by Lemerre at Paris during the present year, possess so curious an interest that one must regret the limited circulation of the book. The letters are by turns in French and in English, the writer, whose high-born English connections speak for themselves in his name, having been of French descent (allied with the Noailles) on his mother's side, and having been bred a Catholic in France. His means and his delicate constitution together deprived him of the incentive to settled work, and, after many journeys in many lands in search of health, he ended his brief thirty-eight years with a single literary achievement, a story in the *Revue des Deux Mondes*. The affectionate correspondence with his friends, among them an American fellow-student at Oxford, Louis Dyer, ranges from 1874 to 1891, the year of his death, with gaps in the series for 1880, 1883, and 1886. It opens in Colorado, where Standish spent two years, but to us this is the least attractive period of his wanderings, and it even requires some effort to follow the development of the youth of twenty-one. After his two years at Balliol his growth is obvious, and his letters become very finished specimens of the art. Those from Spain and Italy in particular show a fine descriptive power, and together would make a valuable addition to any tourist's guide-books for either peninsula. See, for example, his elaborate "programme pour les promenades de Mme. de Talleyrand" in Rome, with its first, second, third, and fourth days, and a hint of the theatre where Duse (this was in 1888) was playing, as he remarked, only French plays, save one piece of Goldoni's, doubtless "La Locandiera," which Standish had seen at Palermo the year before. He would have been embarrassed had Madame desired to accompany him to the Bellini Theatre in Palermo on occasion of the representation of Macchiavelli's "Mandragora," when it was publicly advertised that women spectators must come masked. Half-a-dozen shameless girls ventured unmasked, and were treated to hootings and foul-mouthed speech such as Pepys never witnessed at the play. They were "interpell es par les gens du parterre et des fauteuils: on leur criait des horreurs," says Standish. Quite other scenes are those of the Papal court and ceremony of Leo XIII., intimately and humorously touched off by this Anglo-Frenchman, who had been appointed *cameriere segreto di cappa e spada* and was costumed accordingly. Still, the collection has, perhaps, a greater attraction for the student of mankind, in the person of Standish, than for the lover either of foreign ways or of letters. Copies of the daintily printed book are at hand in the Astor Library, the Newberry Library at Chicago, the Harvard College Library, and the Boston Public.

—A suggestion for American educational experts is contained in the letter of a Welsh correspondent who sends an account of the way in which some friends of co-education in Bangor have solved its domestic side, a phase of the problem which our British cousins have always regarded as complicated. A stock company of ladies and gentlemen have provided "The Women's Hostel for Students, in connection with the University College of North Wales, Bangor," for such young women as do not prefer to live in lodgings. The enterprise is controlled by eleven directors, of whom four are officers of the college, and Miss Mary Maude, the lady superintendent, is also a newly-created member of the college board, "with supervision over all women students." The fees for board and residence in this uniquely named dormitory, for the three terms of the college year, vary from one hundred and fifty to two hundred dollars. The College Hostel opened last month with fourteen students, and some of the rules for the guidance of both superintendent and students illustrate international differences in custom and point of view. Miss Maude is required to accompany the girl students to the meetings of such college organizations as the choral and debating societies; there are daily prayers, and students are expected to attend regularly a place of worship, "though the Hostel is non-denominational." Students must consult the lady superintendent before accepting invitations of any kind from friends, nor can they "be out in the evening without leave." The Hostel is beautifully located in full view of the Snowdonian range of mountains, about twenty minutes' walk from University College. Moreover, the college provides a room for its women students, where they can rest, take lunch, or wait between classes, etc., and "no talking or loitering is allowed" in the halls or corridors.

RECENT NOVELS.

*Pietro Ghisleri.* By F. Marion Crawford. Macmillan & Co.

*The Complaining Millions of Men.* By Edward Fuller. Harper & Bros.

*An Innocent Impostor*, and Other Stories. By Maxwell Grey. D. Appleton & Co.

*Not Angels Quite.* By Nathan Haskell Dole. Boston: Lee & Shepard.

*The Heavenly Twins.* By Mme. Sarah Grand. Cassell Publishing Co.

*Ideala.* By Sarah Grand. D. Appleton & Co.

PIETRO GHISLERI is one of the Romans who move in the Saracinesca set. We meet them now as summer friends meet, intermittently but familiarly. As with summer friends, too, an interest grows up in all their affairs, great or small, based less on the importance of the affairs than on the old acquaintanceship. Like the pleasure of reading poetry in a foreign tongue, or Browning, which is said by the cynic to arise from the mere satisfaction of finding, after search, that it has a meaning, so the simple fact that San Giacinto gave Don Orsino sage counsel in money matters in an earlier volume of Mr. Crawford's, now makes it positively pleasurable that it should be the same San Giacinto who befriends Pietro Ghisleri, the hero of the present story. That the famous and melancholy duellist, Spicca, interested himself profoundly in Maria's fortunes last year, now adds pungency to the page wherein the same Spicca says that no one could possibly be as good as this year's Laura Carlyon looked. The wit of Gouache, the painter, too, borrows a little of its lustre from the fact that he has been witty before; but for this spiritual ancestry we are inclined to think that Gouache's studio party in the new novel, a varied function of tableaux and blank verse, would not have had quite the success ascribed to it. There are dangers as well as attractions in introducing us to the same society year after year. If Mr. Crawford has touched this danger, however, it is only on its margin, for he has made an interesting book and shown us his old friends and ours of the gay Roman world of society in new lights. A Roman society woman may not only be revengeful—that sounds very familiar—but, under sufficient provocation, she may read scientific works, and, borrowing the wisdom of this end of the age, may, for her purpose, summon bacilli from the vasty deep. The bacilli play her true, but the weak points of her intricate scheme of blackmail seriously need the explanation given that the plotter was half insane from the use of morphine.

It is not alone the Roman woman who is thus touched with the modern idea. A Roman society man may not only carry on his intrigues in the face of the world—that sounds very familiar—but he may turn teacher, and counsel virtue to the mistress he is forsaking. The complicated man is Mr. Crawford's specialty. Pietro Ghisleri is constantly spoken of as one. All his friends call him so, including his friend the author; but in reality he is not so much complicated as contradictory—what he says contradicts what he does; what is said of him contradicts both. The author describes him as a great sinner, and is explicit as to some of his worst sins, but contrives also to make him get tired of his sins in so chivalrous a fashion that one begins to dread the evolution, in fiction, of the knightly cad; nor, less, of the over-tolerant heroine, since it is she who talks away Pietro's dissatisfaction with himself and at last convinces him that he is good enough to marry her. His charm, the charm which never fails to reach the heart of woman, in or out of a book, is that, whatever may be said of him to the contrary, he always controls the situation of the moment, be it intrigue, athletics, finance, or love.

'The Complaining Millions of Men' have one more cause for complaint in the novel where they play the title rôle. They and their cause are made the ostensible theme in a story whereof it is hard to say whether the alleged socialism is more superficial or the alleged high life more dingy. The book is distinctly grimy, not as to morals, but in its literary atmosphere. We shall not quarrel, now or ever, with a book on socialism because it does not offer new schemes of reform to an attentive world, but we must have a decent literary marriage between the motive and the execution, or we must murmur. If the knightly cad is to be dreaded, what shall we say of the unknightly one? The novel of which he is hero shall surely die. It is impossible to care what Francis Baretta does, says, or thinks, whom he loves, whom he forsakes, because his contemptible insincerity as a man and a composition puts him beyond the pale of human interest. We defy any one to remember, one hour after closing the book, whether or no he blew his brains out at last. The lower social stratum of the two in which he moved has no reality, not from its lowness but from the nervelessness with which it is presented; the Beacon Street half of the book (for its scenes are laid out in Boston) is even more depressingly penny-valentine-like. There is in the style an exasperating trick which consists in eternal questions asked by nobody and answered by the querist. The most nearly redeeming work is the portrait of the girl from the slums, who fatiguingly, but faithfully, loved the cad unto the welcome end.

Maxwell Grey's volume of stories, to judge by internal evidence, must have been written at a less experienced time of literary life than the novels which made their author's fame. They show some liveliness of invention and no little readiness of pen, but are crude in their form and substance. The plots are not content to thicken; they open and shut, like jack-knives, with a jerk and a click. Here, one says, is slender work which may develop on the brighter side and become original, or on the slighter, and become vapid. It is needless to particularize, since the same qualities pervade all the stories, whether they be of persons exchanging their identity by accident, or of other persons doing the same on purpose—personating some one else being the prevailing topic of the book. The topic, however, matters little, for the interest, such as it is, is more often in the graces of telling than in the thing told.

Mr. Dole's novel contains a small story of love and a legacy, with a great many opinions, theories, verses, stories, and quotations. It is indeed a curious collection of paragraphs on numerous subjects woven into the conversation of a dozen persons, whose story is outweighed by their convictions. They all have ardent convictions on all subjects, and all talk about them. A very few of their topics are socialism, prevention of cruelty, belief in a future life, spiritualism, proof-reading, the elective system, cremation, spelling-reform, music and composers, the metric system, centralization, nationalism, and the management of periodicals. There are lunch parties, dinner parties, supper parties, with the attendant menus; there are psychic-research meetings and ritualistic services and concerts and press-club meetings; there are cruel teamsters and car-ticketless Irish, and Jew newspaper-owners and Malaprop widows, besides the principals of the plot, and there is much punning. Strange to say, the book is not particularly unreadable. As a novel it is harum-scarum, but as a collection of "ana" it is rather bright.

'The Heavenly Twins' and 'Ideala' have the merit of originality, whatever else they have or lack. They are large-purposed books, dealing with the greatest problems of life. The very vastness of the object interferes with their effectiveness as works of fiction. The genius of George Eliot was needed to save her didacticism from overwhelming her novel. Mrs. Humphry Ward escaped even more narrowly, and Mme. Grand—"may profit by their example," we will say, in anticipation of cries of "Treason!" In 'The Heavenly Twins' the moralizing well-nigh swamps the moral, particularly at the outset, where the swinging to and fro of both motive and treatment is so ponderous and so sluggish that the reader has no soothing premonition of the dash and velocity into which they work up later. In the early chapters, moreover, the warfare against injustice is waged with snarling—a lance which may prick but cannot slay; but later this is laid down in exchange for the worthier weapon of a glowing and impersonal wrath. Thus the last impressions of the book are the best, as to its tone and purpose, but the same can hardly be said of its construction, which is a tangle of themes and counter-themes worked out to a tangle of conclusions. The account of the twins and their diabolically mischievous pranks from the cradle to the grave has nothing to do with the life-history of Evadne; the two stories clash like dissonances on the ear. The twins, with the fantastic idyl of the Tenor and the Boy, should have made a separate chronicle. The great questions treated in the book are the deepest questions of life, but the dominant motive, which may be dryly stated as the elevation of man's moral status to that of woman, is zealously, even thrillingly, dealt with in the story of Evadne. Her theory is that the different standards for men and women can be equalized only by the steady refusal of women to marry men whose previous lives have been questionable; a necessary part of the plan being that women should not shirk a full knowledge of the world, its evil as well as its good. Ignorance is set forth as vice in some sententious pleadings, as, for example, this, of certain "gentle-mannered, pure-minded women":

"They kept their tempers even and unruffled by never allowing themselves to think or know . . . anything that is evil of anybody. . . . They seemed to think that by ignoring the existence of sin, by refusing to obtain any knowledge of it, they somehow helped to check it; and they could not have conceived that their attitude made it safe to sin, so that when they refused to know and to resist, they were actually countenancing evil and encouraging it. The kind of Christian charity from which they suffered was a vice in itself."

The false principles on which woman is educated—her feeling over-developed, her reason under-trained—perhaps needed public attention a few years ago more than to-day; but that side of the question which bears upon woman's culpability in encouraging a low standard for man, negatively if not positively, has rarely received more original or intelligent discussion than in Madame Grand's books.

With the carrying out of her idea, however, we have a serious quarrel. Evadne, finding as she is setting forth upon her wedding journey that her husband's past has been an evil one, runs away and refuses to live with him, giving

consistent reasons for her conduct to her parents. With her absolute views on this subject she could do nothing else; therefore her final yielding to her mother's tears and prayers to return to a mere appearance of wedded life with her husband, that her family and the world may not be scandalized, is wholly inconsistent with the character of the high-strung but coldly logical Evadne, and the whole struggle loses its significance. It is true that a new struggle begins, which is worked out to a fitting end, but the original question, for which the soil has been carefully prepared, for which Evadne has fitted herself by her whole way of living and reading and thinking, falls to the ground. Often nothing is so true to nature as inconsistency of character; but it is fair to say that Evadne's inconsistency in this particular, as the heroine of a novel of reform, is a breach of trust with the reader. To a girl of her uncompromising truthfulness, seeming to yield the point would have been one shade more disgraceful than really doing so.

'Ideala,' which is a far slighter work, is, to our thinking, a more perfect one. Obviously by the same hand, its weaknesses are the same —the tendency to what Disraeli calls anecdotage, the desultoriness, the quotations, the original poems. Its virtues, too, of high purpose and of daring and original statement are the same, but, in this self-declared "study," the faults sit lighter and the moral marches straighter to its goal. Both books are noticeable far beyond the ordinary. Their author stands in some peril, as a reformer, of trying to cure all maladies with one medicine, the higher (and lower) education of woman; and, as a novelist, of overloading her pages with irrelevant incident and wilful boldness where business-like calm would say more.

## FOUR BOOKS ON OLD NEW ENGLAND.

*Some Old Puritan Love Letters:* John and Margaret Winthrop, 1618-1638. Edited by Joseph Hopkins Twichell. Dodd, Mead & Co. 1893.

*Thomas Hazard*, Son of Robert, called "College Tom": A Study of Life in Narragansett in the XVIIIth Century. By his grandson's granddaughter, Caroline Hazard. Boston: Houghton, Mifflin & Co. 1893.

*The Old Colony Town*, the Ambit of Buzzard's Bay, and Other Sketches. By William Root Bliss, author of 'Colonial Times on Buzzard's Bay.' Boston: Houghton, Mifflin & Co. 1893.

*Customs and Fashions in Old New England.* By Alice Morse Earle. Charles Scribner's Sons. 1893.

In the old Winthrop love-letters two notable founders of New England poured out their hearts as lovers of our day would, if they knew how. The epistles run through twenty years. Their number is fifty-eight, of which sixteen were written by the lady—the earliest specimens, we think, of such writing by an American Puritan woman. Born in 1591, this Puritan girl was nearly coeval with Shakspere's daughters, who could not write. But her chirography as we have it in facsimile is a fine round Roman hand, showing contempt of those "statists who held it a baseness to write fair." The substance, too, is throughout worthy of the fair show. Her style, as well as that of Mr. Winthrop, would now be censured as sentimental and suffused with religious cant; but it was natural in an age when all expressions of feeling were effusive, when the Bible was the Puritan library, and when religious controversy was all in all in social no less than in political relations. Inside the letters, such a style shocks modern taste no more than it must to see them superscribed on the outside—*To my very deare and lovinge Husband these deliver.* Winthrop at least, reading lines that beg pardon for themselves as "liveless," could never have said with *Hamlet's* mother, "The lady doth protest too much, methinks." Again, the unconscious autobiography which is the chief charm of familiar letters—above all of those scribbled in haste—pervades this correspondence from first to last. Nor do the letters fail to throw side-lights on the vicissitudes of English domestic life in the early decades of the seventeenth century. Daily food, luxuries, medical nostrums, dress, modes of travel, meanings of words, all receive illustration.

Margaret Winthrop died in 1647. A little less than a century afterward "College Tom" began his distinctive struggle as an anti-slavery pioneer in Rhode Island. This reformer, born in 1720, whose family name was Hazard, was son of one of the wealthiest Quakers just north of Point Judith. Going in 1742 to buy a cow in a corner of Connecticut where slavery had not penetrated, he was shocked to hear a deacon there assert that Quakers could not be Christians because they held their fellow-men as slaves. Thenceforth he began to till a farm his father had given him with free labor while a thousand slaves were held in the county where he lived, very many of them by his relatives, some of whom were Guinea slave-traders, and though his rich father threatened to disinherit him. Years before he had felt some scruples about slavery. The question had arisen: Ought slaves to be baptized? Many said that, being chattels bought and sold like sheep and oxen, they ought not to be baptized any more than those beasts. Some, however, argued that negroes, having souls, had a right to freedom. Bishop Berkeley endeavored to settle the question by procuring and publishing a formal opinion from his Majesty's attorney-general that slave baptism was right. But official authority had no weight with "College Tom." Freeing first his own slaves, he set an object-lesson before his neighbors which they could not disregard. His leaven was not long hid. In the outset it leavened the monthly and then the yearly meeting of Quakers, and finally the Rhode Island Legislature, which, but for the impending Revolution, might have abolished "the detestable practice of enslaving" ten years sooner than it did in 1784. He lived fourteen years after that.

It has been well said that every man's account-book shows what manner of man he is. "College Tom's" books of that sort show his character and many things besides. Their disclosures are especially edifying in relation to fiat money during forty years while it had free course and was glorified around him. How it depreciated till a dollar was not worth a cent; how it led to the fixing on corn or wool or meat as a standard of value; how it forced trade to become barter, and clogged every wheel of business, is revealed on multitudinous pages. The last third of the volume is composed of official documents illustrative of what had preceded, but intended to be referred to rather than read. The first two hundred pages are a narrative in artless Quaker fashion by "College Tom's" grandson's granddaughter. They were penned on the self-same estate where he flourished and which his descendants still possess. The story is so well told, and gives so many glimpses of colonial life, that no one who reads one page will find it easy to leave any page unread.

Half of Mr. Bliss's title, namely, "The Ambit of Buzzard's Bay," must have been chosen from President Cleveland's making Gray Gables his summer retreat. The other half, "The Old Colony Town," may be due to a desire to secure a sale among summer boarders who resort for their outing to the Old Plymouth region. The book deserves the patronage of all such health and pleasure-seekers. It gives them what they both need and lack—an excellent topographical description of all the natural features they will encounter in their walks, drives, and water parties, besides mention of the old landmarks with something of their history and legends. But those who buy Mr. Bliss's sketches merely as a local guide will get more than they bargained for—more than they ever dreamed of concerning lighthouse life on the coast of Maine, for example. Again, Mr. Bliss dwells for about forty pages with affectionate minuteness on "the mind of his dog" and on "society in the menagerie." Every man who cares for his dog or for any animal, from a mouse to an elephant, both included, will here find something he will be glad to know. Mr. Bliss's sketches stretch not only through the animal kingdom, but so much further that "the Ambit of Buzzard's Bay" is a world too narrow for them. They ought rather to be called "the ambit of the terraqueous earth," for they include hairbreadth 'scapes in stormful voyages across both the Atlantic and Pacific, as well as adventures in India, China, and Japan. His experience in the farthest East a long time ago was much of a piece with the present writer's in more recent years. In Shanghai both rode in jinrikishas, but Mr. Bliss makes no mention of spacious wheelbarrows which are now very generally used there in place of cabs. On unbeaten paths in Japan, Mr. Bliss found "no envious rivalry between jinrikisha-men who were travelling in the same train"; the present writer saw much of it. Mr. Bliss speaks of "small lacquered *tables* on which supper was spread." Those the writer met with, being not more than three inches high and a foot long, it were more fitting to call salvers. Both were guests at the same Kiyoto hotel, which Mr. Bliss calls Maruyama, but which was known to the other traveller as Yaammeh. The passports of both had odd clauses: that of Mr. Bliss was forfeited in case "he committed matrimony," that of the writer if he were caught "appearing at a fire on horseback."

Mrs. Earle paints for us the ancient Yankee from his birth and baptism to his burial and gravestones, in fifteen chapters, each presenting a distinct colonial phase. The picture or panorama is drawn to the life and full of realistic traits. Many of Mrs. Earle's most racy details she owes to the colonial gazettes which Isaiah Thomas began to gather more than a century ago in Worcester, and which have been sought for ever since by the Antiquarian Society he founded. She has also made the most of ancient wills, inventories, mercantile day books, and court records; nor has she failed to resort to museums of colonial relics in Deerfield, Hartford, Plymouth, Boston, and Salem. It is very noticeable how impossible it would have been to write her descriptions twenty years ago. Then the Journal and Letters of Judge Sewall were inaccessible; since then they have been deciphered and printed with excellent annotations and indexes. But for his private records concerning his multitudinous courtships, the chapter on

colonial love-making must have lacked half its sap and savor. Mrs. Earle mentions various colonial houses, but is silent about one, still well preserved, of which Sewall loved to write. This is the house of his cousin Quincy, already old in Sewall's time, beside a brook flowing down from the Adams estate to the sea. Here, in Tutor Flynt's chamber next the brook, Sewall lodged March 28, 1712. One may see there a fine specimen of pre-Revolutionary paper-hangings—the pattern, Venus and Cupid. This paper was put on for the wedding of John Hancock in 1775, which was prevented from consummation there by the Concord fight. But few indeed are the sources of information that have not been deeply drawn from by Mrs. Earle. Her account of domestic service will be a revelation, perhaps a consolation, to housekeepers. Their predecessors—changing Irish help for Indian, and Indian for African, and still served worse and worse—were by no means to be envied. Mrs. Earle also shows how, after generations had known no diverting spectacles save executions and funerals, "Othello," while play-acting was prohibited by law, managed to sneak in on the stage at Newport in 1762, under the disguise of "a moral dialogue, in five parts." We wish space would allow us to copy the playbill, which Mrs. Earle pronounces "the most amusing example of specious and sanctimonious truckling extant."

## WILLIAM BLAKE.

*William Blake:* His Life, Character, and Genius. By Alfred T. Story, author of the 'Life of John Linnell,' etc. London: Swan Sonnenschein & Co.; New York: Macmillan & Co. 1893.

THERE is a great fascination in the incomplete, and a glory in understanding the misunderstood and admiring the unappreciated. When any man has fully and clearly expressed himself—when what he had to do or say in the world is thoroughly done and unmistakably said—why bother one's self to explain the clear or interpret the known? But the half-articulate genius whose message the people have not heard or comprehended, the fire of whose inspiration is smothered in its own smoke—the man of fitful force and unbalanced power—he furnishes to the discerning critic his true opportunity. There is little credit to be had in praising what all the world admires, and little need for ingenuity to read what is plainly written; but it needs a penetrating mind to discern the beauties of what most of the world despises, and to find or invent a meaning in what men take for madness. So there is more written of William Blake than of Veronese, and almost as much as of Michelangelo.

The present work is in some ways a singular one. Its external appearance is not pleasant. There are no illustrations save a portrait of Blake as frontispiece. The small page is crowded and the margins are unduly narrow, and the dirt-colored cloth cover is stamped in a meaningless and ugly imitation of alligator-skin. It is a curious dress for the life of an artist, and one soon finds that it is not as an artist or even as a poet that this book deals with its subject. It is of Blake as prophet and seer, the inspired revealer of new truths and a new morality and religion, that Mr. Story writes. It is doubtless so that Blake would have preferred to be considered, but it is not so that the world will consent to consider him. It seems to us much like considering Turner mainly as the author of 'The Fallacies of Hope.'

The facts of Blake's life, to which Mr. Story devotes considerably less than half his 164 pages, are so familiar that it is hardly necessary to recount them here. The recurring question as to whether or no Blake was "mad" seems to us one for professional alienists to decide; nor does its answer seem to us important. In any case it is only a question of degree. A "lack of mental balance" Mr. Story himself admits; and whether this lack of balance was great enough to deserve the name of insanity is largely a question of names. Perfect sanity Blake certainly had not. He spoke constantly of his "visions" as having objective reality; but whether this was hallucination or mystification, who can tell? He was incoherent to the verge of raving, vainglorious to a degree that suggests the *folie des grandeurs*, and suspicious and unjust to an extent which reminds one of the mania of persecution. Whether he was or was not mad, his was assuredly a singularly ill-regulated, unbalanced, and untrained mind. In art his education was little enough, but it was, fortunately for him, of the right kind. In literature he had almost no education at all, and a good deal of what he had was of the wrong kind. Mr. Story laments his apprenticeship to Basire, "whose style of engraving was hard and dry and conventional, the result being to cramp and fetter the genius of the pupil." We cannot help thinking that these "fetters" were eminently salutary to Blake as an artist. In spite of his strange genius he was technically a convinced classicist. He was amusingly bigoted in his denunciation of the colorists and of "that infernal machine called Chiaroscuro," and maintained that "the great and golden rule of art, as well as of life, is this: That the more distinct, sharp, and wiry the bounding-line, the more perfect the work of art; and the less keen and sharp, the greater is the evidence of weak imitation, plagiarism, and bungling."

Of course this is silly and one-sided, and largely the result of ignorance and prejudice; but there is an element of truth in it. In the first place, it must be remembered that "nature put him out"; that, as he said of himself, "natural objects always did . . . weaken, deaden, and obliterate imagination" in him. Now *painting*, as we understand it since the Venetians, requires for its perfection the direct study of nature, and, therefore, was not for him who found that the posed model "smelt of mortality," and who was not strong enough (as the truly great artists have been) to make nature serve him rather than allow nature to master him. Michelangelo did not find even the "mortality" of the dissecting-room deadening to his imagination. Yet Blake felt that in art mere vagueness was death. The highest imagination is always the most definite, and "a spirit and a vision are not, as the modern philosophy supposes, a cloudy vapor or a nothing; they are organized and minutely articulated beyond all that the mortal and perishing nature can produce. . . . Spirits are organized men." Debarred from great realization, he found safety in that very hardness and dryness of style that Mr. Story laments, which gives a sense of accuracy even when accuracy is absent, and makes even false drawing look marvellously sure and vivid. His wildest creations seem as if they must have been really observed, because his method of statement is so precise; and they owe half their effect to that cause. His style "fitted him," and gives the same reality to his apocalyptic visions which those of Dürer possess.

In literature, however, Blake had nothing answering to the training in clarity and precision which, as a draughtsman, he had gained from his long practice of engraving and of drawing Gothic monuments. He was altogether self-educated, and ignorant even of grammar. He shared in the admiration for Ossian that was common in his time, and retained it after the rest of the world had outgrown it. He always maintained that both Ossian and Chatterton's "Rowley" were genuine beings, and "owned himself an admirer of Ossian equally with any other poet whatever." His early "Songs of Innocence and Experience," in spite of grammatical and metrical stumbles, contain, as we all know, much lyrical power and true beauty; but when he began to occupy himself with religion and philosophy, to form a theory of the universe and of good and evil, and to make myths which should convey his notions on these subjects, both his thinking and his style were those of an untrained and unbalanced mind. The so-called "prophetic books" are "full of sound and fury, signifying nothing."

It is to these books that Mr. Story devotes more than half his volume, trying manfully to make sense of them and to explain Blake's thought, though he has often to confess that he cannot do so and to admit a "vast overplus of words utterly without meaning." "Yet, in spite of all," he says, "there burned through this incoherent windy drift, and for ever stands revealed as in golden letters of light, a treasury of thought so rich that it constitutes a veritable and almost unparalleled intellectual heritage for all the ages to come." The style, too, he admires. He calls it "unrhymed verse," and considers it "a very powerful instrument for the expression of his thought, and a decided addition to our poetical forms. With all the force and simplicity of prose, it is yet capable of the metrical sweetness and flow, and more than the charm and variety, of ordinary blank verse." In support of these contentions he gives many long extracts, and it is fair to suppose that they are the best he could find. If what he does not quote is any more "windy" and formless and unintelligible than what he quotes, it must be astonishing indeed. As to the "unrhymed verse," we cannot see that it is verse at all, or has any other vestige of versification than the arbitrary division into lines with a capital at the head of each. We shall try the experiment of giving one short passage, and by no means the worst, without the line division, and let the reader judge. Blake is speaking of "Beulah"—

> "Where every female delights to give her maiden to her husband: the female searches sea and land for gratification of the male genius, who in return clothes her in gems and gold, and feeds her with the food of Eden."

This has a certain rhythm, but it is distinctly the rhythm of what is known as poetical prose. It has no line structure; and we defy any one who does not know the original to divide it as Blake did.

We shall decline to discuss the value of the ideas, in themselves, which Mr. Story tells us Blake meant to convey. They seem to us, as we have intimated, as much the outcome of an untrained mind as is the poetry in which they are conveyed. But were they as valuable as Mr. Story thinks them, it would matter little. After all, what the world most loves is art. Thought has never long saved a work not plastically beautiful, and it is William Blake the artist that the world will care for as long as it cares at all for William Blake.

It is, then, to some examination of Blake's claims to remembrance as an artist that we

shall devote our remaining space. A painter, in any just sense of the word, he never was at all. As an illustrator in black and white, whether of his own ideas or of the works of others, he displayed undoubted ability. His knowledge of the figure was far from complete, and his anatomy is often impossible, while his taste was sometimes faulty and his ornamental flourishings are frequently mean and trivial. On the other hand, he had a strong imaginative sense of the weird and awful, a feeling for grandeur of style and an ability to suggest space and movement. Some of the "Inventions to the Book of Job" reach a very high level of dignity and beauty, and are more essentially *large* in their small dimensions than many a twenty-foot canvas or fresco. Due distance guarded and allowance made for their inferior completeness, they are almost worthy of comparison with Michelangelo, of whom they contain many reminiscences. To say of them, as Mr. Story does of the less well-known illustrations to Dante, his last works, that, "in comparison with them, Flaxman's designs are puny, and Doré's grotesque and feeble," is weak praise. Neither of these men is worthy to be compared for an instant to Blake. It should be remarked as bearing on the sanity of these works and Blake's consciousness of rational adaptation of means to ends in their production, that he never attributed their authorship, as he did that of his later poems, to supernatural inspiration. The spirit of his brother suggested the methods of engraving some of his designs, and St. Joseph told him how to mix his colors, while "Flemish and Venetian demons" interfered with him; but he never seems to have doubted that the drawings were his own. The visions posed for him, but they did not draw for him.

## SUNDRY LAW BOOKS.

'The Law of Insurance,' by Arthur Biddle (Philadelphia: Kay & Brother), is an exhaustive and valuable treatise upon all branches of insurance law not marine. The different forms of risks are not treated separately, but the arrangement of the book is based upon the contract of insurance in its successive stages, and deals in order with its formation; the rights of the parties before the occurrence of the contingency insured against; the avoidance and performance of the contract; its breach; and the measure of damages—an arrangement which more than compensates, by its opportunity for scientific treatment, for an occasional lack in convenience. Mr. Biddle's method is careful and thorough, and the book gives every evidence of painstaking labor. The number of cases cited is very large, and while the text never departs far from a treatment of the actual authorities into the realm of original discussion, it is nevertheless far more than a mere digest. On the contrary, much is done throughout to reconcile and explain the cases and to simplify and systematize the general principles of insurance law; and there can be no doubt that the book is an important addition to the literature of the subject. Among other interesting things are the discussion of the difference between life and fire insurance, good chapters on the difficult subjects of fraud and estoppel, and an excellent statement of the true nature of the so-called "parol evidence rule."

'The Law of Incorporated Companies Operating under Municipal Franchises,' by Allen Ripley Foote and Charles E. Everett (Cincinnati: Robert Clarke & Co.), is a work which, so far as our experience goes, entirely justifies the claim made by the authors to novelty of conception and plan. A doubt which arises at first sight as to the object of the book is not altogether removed by the statement of the preface that the aim has been "to elucidate principles and clearly to define strategic points, in order to measure by fundamental rules the progress made by the several States in aligning legislation with the requirements of such rules." In substance the compilation seems not to be a law book in the ordinary sense, but rather a comparison of the legislation of the various States and Territories upon the subject of corporations exercising franchises of various kinds in the highways and other public places of municipalities. The laws of each jurisdiction upon this head are treated separately, after a preliminary "Discussion of the Economic Principles Involved"—a singular compound of ethics, philosophy, political and economic science, and other things—which sets forth the authors' plan for a system of industrial corporations operating under State control. There is also a statement of the general principles of law applicable to such corporations.

Thomas Carl Spelling's 'Treatise on Extraordinary Relief in Equity and at Law' (Boston: Little Brown & Co.), deals fully with the law of injunction (to which the largest part of the book is given), habeas corpus, mandamus, prohibition, quo warranto, and certiorari. It is likely to prove a useful text-book on all these heads, some of which have never, to our knowledge, been so thoroughly and systematically treated.

The 'American Digest' for 1893 (St Paul: West Publishing Co.) is a remarkable volume. Its more than twenty-eight hundred pages of closely printed matter is sufficient evidence of the appalling rapidity with which the accumulation of case law is going on. But while this continues, and while all efforts to emancipate the legal profession from their dependence upon the cases are so far from success, there can be no doubt of the service which the West Publishing Company is doing by its National Reporter system and this annual index to its publications. The assistance thus given in finding the latest decisions on any subject is partly indicated by the fact that this one volume, prepared with much attention to detail and arrangement, and with every mechanical aid, contains references to every decision for a year past of the highest court in any State or Territory, and of many other courts besides. It must be said, however, that the bulk of the Digest might have been greatly reduced, and its convenience increased, by a more careful condensation of statement.

*Letters of Asa Gray.* Edited by Jane Loring Gray. Boston: Houghton, Mifflin & Co. 1893. 2 vols. 8vo.

It must have been a task of extraordinary difficulty to select from Dr. Gray's voluminous correspondence the handful of letters here given. Every one who knew Dr. Gray recognized in him an eminent botanist, a patriotic citizen, a defender of the faith, and a lovable man. Doubtless the greater part of the correspondence at the service of the one who has edited these volumes could have been utilized to present in strong light, and in all these phases of activity, the beautiful character of Prof. Gray. And the loving hand which has chosen with consummate judgment the few letters now before us, must have often lingered with regret over the hundreds of notes and letters which had to be discarded in favor of these. The first volume opens with a short autobiography which brings Dr. Gray's life down to the date of his first vacation after he had fairly entered on the duties of the professorship at Harvard (1843). From this time on, the letters are linked together by occasional remarks explanatory of the sequence, where such remarks have seemed necessary. Few persons have ever put more of themselves into their letters than did the writer of these, and therefore the chain of correspondence is in itself almost autobiographical. Sundry journals, introduced from time to time, add to this effect, so that the volumes might well be called the Life of Asa Gray.

Besides a few engravings illustrating the Garden and home where most of his scientific work was done after he came to Cambridge, there are three portraits taken at the ages of thirty-one, fifty-seven, and seventy-six. The first of these, belonging to the time when the art of the photographer demanded for the portrait many minutes of constrained attention, has no suggestion of the face as it was later known. Dr. Gray appears to have been devoting the time necessary for the portraiture to the perusal of some such work as the photographers of those days kept for their patients. The likeness at fifty-seven, taken in 1868, brings Dr. Gray before us in all his marvellous alertness. It may fairly be called a speaking likeness, for it is ready to speak. One can fancy that it represents him in an animated scientific discussion at the very moment he has discovered a weak point in his antagonist's armor, and there is beginning at the corners of the mouth the gentle smile which promises that his opponent will actually enjoy the adroitness of the thrust as much as he. No portrait could better show the character of Dr. Gray at this period of his life. After almost twenty years of untiring activity, he sits for another portrait. In this his beard shades the mouth somewhat, but the kindly smile finds full expression in the twinkle of the eye. The strong and gentle character is revealed as clearly in these two portraits as in the letters themselves.

Of course, the letters give special prominence to the nature and scope of the botanical researches and discoveries on which his fame securely rests, but these letters have been chosen so skilfully that they can be read even by a layman with pleasure and profit. They cover a period of more than fifty years of successful labors appreciated from the very first by all of his contemporaries. They show that from the very outset he became not merely the correspondent but the intimate and affectionate friend of the leading botanists in all countries. The only interruptions to his toil were his occasional journeys, but these were all made tributary to his work. In these journeys, as soon as he had fairly thrown off the vexations of administrative service, he entered on new scenes with the glee of a boy, and records his impressions of delight without restraint or reserve. We shall be mistaken if the charming journals of travel only lightly freighted with botanical lore but rich in friendly gossip, botanical and other, do not prove welcome to many a reader who does not know one plant from another. Mrs. Gray has made these volumes of great interest to all botanists by her judicious choice of letters written at critical periods or on most timely subjects, but she has done well not to overload the work by matters too technical. Annotations in footnotes supply all needed explanations.

The letters written during the civil war

show how deeply this assiduous student was concerned as to the issue of the struggle. He seems to have seen early that the war would result in the destruction of slavery and in a new South, and he cannot conceal his joy that the South which he loved so well, and where he had passed so many happy days in exploration, had thrown off its burden of slavery.

On page 117 of the first volume is an account of a visit in 1839 to the College of Surgeons, London, to see Prof. Owen. "We there met Mr. Darwin, the naturalist who accompanied Capt. King in the *Beagle*." This was Gray's first personal acquaintance with Charles Darwin. It is well known to our readers that his hearty interest in Mr. Darwin's speculations led, shortly after the publication of the 'Origin of Species,' to the closest intimacy between these naturalists. It is also widely known that Dr. Gray's attitude towards Darwinism conciliated many persons who were concerned chiefly for the effect which the hypothesis might have on religious thought. From first to last, Dr. Gray saw nothing in Darwinism, as he understood it, which was inconsistent with his religious belief. In none of these letters are Dr. Gray's religious views brought obtrusively forward, but enough is stated to give in his own language an expression of his belief.

Throughout the volumes, one comes suddenly upon gleams of humor and sharp critical points, but there is no suggestion of malice or cynicism; there is no trace of petulance or jealousy. That Dr. Gray was at times wholesomely impatient is clear. Many a touch in the letters and in the notes by Mrs. Gray will bring the great botanist very near to the readers of these volumes—the fondness for his pets; his dismay at certain college duties; and his deep interest in activities lying far from his own field of labor. But there is a pathetic side, of which we catch glimpses, which brings him nearer still—the crushing weight of trivial questions, all of which he answered conscientiously with his own hand; anxieties about the preservation and care of the noble collections which he had brought together; the discouraging magnitude of the ever-growing task before him, rendered almost hopeless by the scanty means at his disposal, when large means were needed most for largest ends. We must close this notice by an extract from a letter written to Mrs. Gray by Dean Church, after Dr. Gray's death. It is printed immediately after the last letter written by Dr. Gray to Dean Church, who was for many years a cherished correspondent: "The sweetness and charity which we remember so well in living converse is always on the lookout for some pleasant feature in the people of whom he writes, and to give kindliness and equity to his judgment."

---

*The Life and Writings of Jared Sparks:* Comprising Selections from his Journals and Correspondence. By Herbert B. Adams. Boston: Houghton, Mifflin & Co. 1893.

THE life of Jared Sparks deserved to be told, but it is a pity that the telling of it has not fallen to a biographer who holds a different idea of what biography should be from that held by Prof. Adams. He believes in the method of compilation, in "letting his subject speak for himself." This is all well enough when the subject is a lively or original letter-writer; but Sparks was neither. His letters are singularly devoid of ease, directness, and interest. Though he saw, during the course of fifty very busy years, the most eminent men in American public and literary life, and many of the politicians and writers of England and France, his correspondence and journals, so far as Prof. Adams quotes from them, noticeably lack those personal pictures, those salient traits, which make the illustrious dead seem alive again. To Sparks, Jefferson and Madison and Lafayette appear to have been merely the possessors of documents which he wished to copy and publish; that they were historic personages in the flesh, notable then and there as such, was a minor consideration to him, or, at any rate, he had no power of delineating them. Had plain Jones and Smith possessed the coveted manuscripts, their individuality could not have been a matter of more indifference to him. If we misjudge him in this respect, let the blame fall on his biographer, who has shown us only this side of Sparks's life. Evidently the correspondence of a collector of historical material wanting in all the qualities which make letters entertaining, should have been sparingly quoted. The fact that on a given day Sparks wrote three or four foolscap pages to ask some one to lend him a package of Washington's letters, may well enough be recorded in his biography, but to fill the better part of two thick octavo volumes with such epistles is to tie a millstone to them.

This result is hardly to be avoided when a biographer adopts the method which Prof. Adams has chosen. The mere heaping together of documents, though it lightens the author's task to a minimum, does not, cannot, produce a satisfactory historical work. We have an old-fashioned prejudice that the mind, and not a shovel, should be the historian's chief instrument. The mind should have judgment, a sense of proportion and fitness, which it would be idle to look for in a poor inanimate shovel. The biographer, endowed with such a mind, should determine how he can best represent the person whose life he has undertaken to write; what attitude is the most characteristic, what light the most favorable for a truthful, vivid portrait. Assuming that the biographer possesses this indispensable equipment and uses this method, there is still another quality without which his work cannot hope to endure. What that quality is we may learn from the following advice given by Alexander H. Everett to Sparks in 1826, when the latter proposed to write a history of the American Revolution. The proposed history, says Everett, "furnishes a glorious subject. As respects the probability of success, the great point is *style*. Precision and accuracy in dates and facts, correct views of morals and politics, are taken for granted, but contribute very little to the popularity of the work. A history would have no value without them, but even with them will have no success unless the author narrate his events and state his reflections in such a way as to please the taste and ear" (i., 288). Prof. Adams will probably deem it a compliment when we say with regret that we have failed to discover any trace of style in these volumes; because he more than once speaks scornfully of historians who write narratives instead of stating facts.

Having thus briefly indicated the general grounds for pronouncing this work unsatisfactory, it remains for us to remind the present generation of some of the points in Jared Sparks's career which deserve to be commemorated in a biography of proper size. In the first place, his early life was that of the typical scholarly New Englander at the beginning of this century. A poor boy, with a strong love of study, he worked his way from his village home to the academy at Exeter; thence he went to Harvard and partly supported himself by teaching school in vacation; then, like Everett and others, he entered the ministry, which was still the chosen profession of earnest young men with a leaning towards literature. He felt the full exhilarating influence of Unitarianism, and went to Baltimore as the apostle of liberalism in religion. Gradually, however, his talent for historical work preponderated, and this, combined with ill-health, led him to resign the ministry and assume the editorship of the *North American Review*. His services to American letters in that position can hardly be overestimated. He attracted to the *Review* contributors of recognized ability, and still more those whose ability first had a chance to display itself through that medium, and thus he made the *Review* not only the representative periodical in America, but the exponent before European readers of the best American thought of the time. His editorial duties fixed his attention on American historical subjects, and finally he resolved to fit himself to become the historian of the Revolution. His researches in this field opened to him vast quantities of documentary material which had not only not been previously used, but not even properly arranged and indexed. He conceived the difficult project of printing Washington's correspondence and official papers, and to accomplish this he visited all the archives in this country, went to London and Paris to consult the state papers there, and persisted during ten years, with infinite patience, until his work was completed. In similar fashion, he edited the correspondence of Franklin and of Gouverneur Morris, and drew from obscurity the manuscript material of many other of the less conspicuous actors in our Revolutionary and constitutional history.

This we take to be the distinctive achievement of his life. He was a pioneer in the almost unbroken jungle of American historical data, as surely as Otfried Müller was in the excavations in Greece, or Layard in Mesopotamia. By his unwearied perseverance he not only brought to light many documents of prime importance, but also inspired other explorers with similar zeal, which has resulted in the collection and preservation of innumerable manuscripts that might otherwise have been lost. For this he merits the gratitude of posterity, irrespective of the fact that his own historical writings are now but little read, or that his editions of Washington and Franklin are superseded by others more nearly complete. Nor should it be forgotten that he gave an immense impetus to the study of the first half century of our national life, and so helped to bring about the recognition that for Americans their own history is most interesting. Add to these claims to remembrance the fact that, for ten years as professor of history at Harvard, Jared Sparks exerted a wide influence on the methods of historical teaching in American colleges, and that he was for four years president of Harvard; remember, also, that he was a man of strong personal character, unflinching in his discharge of duties, magnanimous to his literary critics, alive to many interests beyond the somewhat narrow pale of his editorial work, and it will be seen that he furnishes a fair subject for a skilful biographer.

Weitzmann, C. F. A History of Pianoforte-Playing and Pianoforte-Literature. G. Schirmer.
Wheeler, Preserved. From Side Streets and Boulevards: A Collection of Chicago Stories. Chicago: R. R. Donnelly & Sons.
Winter, J. S. Aunt Johnnie, M. J. Ivers & Co. 25 cents.
Woods, Henry. Elementary Palæontology. Cambridge: University Press; New York: Macmillan. $1.60.

## HENRY HOLT & CO., N. Y.

HAVE JUST PUBLISHED:

**Heine's Life Told in His Own Words.** Translated from Karpeles by ARTHUR DEXTER. A biography compiled from the poet's writings, and told with the poet's own unapproachable charm. With portrait. Red top and rough edges. 12mo, cloth. $1.75.

**The Days of Lamb and Coleridge.** Based almost entirely on the writings of these poets and their intimates. By ALICE E. LORD. 12mo, cloth. $1.25.

**Jerome K. Jerome's Novel Notes.** Thought to be the author's best work. Recalls, by his keen burlesque of the world pictured by novelists, the delightful Satire of "Stageland." Displays a marked power in the handling of the grotesque and terrible that his earlier books give no hint of. With 140 illustrations, mostly half tone. Cloth, 12mo. $1.25.

*The second edition revised of*

**Invertebrate Zoology.** A laboratory course. By PROF. H. C. BUMPUS of Brown. 163 pp. 12mo. Teacher's price, $1; postage 8c. additional.

**Zimmerman's Botanical Microtechnique.** Translated by J. E. HUMPHREY. A laboratory manual. 308 pp. 8vo. Teacher's price, $2.50; postage 15c. additional.

**A First Course in Science,** by Prof. JOHN F. WOODHULL of the N. Y. Teachers' College. I. Book of Experiments, Ill'd. With blank pages for notes. 93 pp. 8vo, paper. Teacher's price, 50c.; postage 5c. additional. II. Text-book. Ill'd. 148 pp. 12mo. Teacher's price, 65c.; postage 5c. additional. Box of apparatus $1.50 *net;* postage 32c. additional.

Complete material for a brief but thorough course in light. Each student performs his own experiments without darkening the room, and directions are given in such a way as to make him do his own thinking.

A GENTLEMAN'S SMOKE.

# Yale Mixture.

**A Delightful Blend of** St. James Parish, Louisiana Perique, Genuine Imported Turkish, Extra Bright Plug Cut, Extra Bright Long Cut, and Marburg Bros.' Celebrated Brand "Pickings."

**Marburg Bros., Baltimore, Md.**

# HATCHARDS.

This is the favorite BOOKSTORE, and for 100 years the resort of the smartest people in London. It is visited and patronized by all who love books. London is the great market for books, and all the best as well as the cheapest editions can be had by writing to us. Special collections formed, and fuller information supplied than from any other house. Books both old and new, and relating to any subject, can readily be supplied at very moderate prices.

Agents for Clubs, Libraries, and all private Collectors.

187 PICCADILLY, LONDON, W.

## A NOTABLE BOOK.

### Life and Works of Alexander Anderson, the First American Wood Engraver.

By FREDERIC M. BURR, M.A. With three Portraits of Dr. Anderson, and numerous Illustrations by himself. To which are added copious extracts from Dr. Anderson's diary for the years 1795–1798.

The edition is printed from TYPE on extra heavy super-finished paper, and is limited to 725 numbered and signed copies. Royal 8vo, half Russia, gilt top, $4.00.

*Special Edition de Luxe* limited to 25 numbered and signed copies. Printed on Crane's parchment vellum paper, and bound in parchment, antique style, stamped with gold, $12.50.

*Only Seven copies of this Edition remain unsold.*

"The illustrations chosen for this volume are many in number and generally are interesting. They impress us again and again with the superior excellence of Anderson's work."—*New York Times.*

"The Diary is curious for its picture of the time, as well as interesting for its personal revelations of a worthy character."—*Nation.*

# J. B. Lippincott Company's
## NEW BOOKS.

## Barabbas.

A DREAM OF THE WORLD'S TRAGEDY. By MARIE CORELLI, author of "Vendetta." 12mo. Cloth, $1.00.

"It is a strong story; strong in description, strong in feeling. The simple conception of 'Barabbas' raises it to a high level, and the tone of the whole, exalted and passionate, makes it an impressive tale—impressive for the good."—*Chicago Interior.*

## A Third Person.

By B. M. CROKER, author of "To Let," "A Family Likeness," "Two Masters," etc. Issued in LIPPINCOTT'S SERIES OF SELECT NOVELS. 12mo. Paper, 50 cents; cloth, $1.00.

The author of "A Third Person" possesses a characteristic raciness of style which makes all her books eagerly sought for. This is the tale of a young Indian captain, who loves and finally wins the granddaughter of an elderly officer, degenerated into a postage-stamp collector. He and a naughty parrot lead Captain Hope a miserable existence, which he gladly submits to for the sake of his sweetheart.

## Queechy.

By ELIZABETH WETHERELL, author of "The Wide, Wide World," "Dollars and Cents," etc. *New Edition.* Uniform with "The Wide, Wide World." Printed from new plates and illustrated with thirty new pictures in the text from drawings by FREDERIC DIELMAN. 12mo. Cloth, $1.00; paper, 50 cents.

"The new edition of this familiar story, issued uniform with the latest issue of 'The Wide, Wide World,' will be gladly welcomed by thousands of old friends and by many new ones. The work has always been eagerly sought and read. The moral lessons in it will never be out of style, and its homely simplicity and rich pictures of child-life will always attract the young."

*READY NOVEMBER 13.*

## My Child and I.

A Woman's Story. By FLORENCE WARDEN. 12mo, Cloth, $1.00; paper, 50 cents.

Perdita's career, from the days when she lived in her father's fine country house and was the pet of Lord Wallinghurst, to the more mature years when as Mrs. Keen she leads the gay life of a woman of fashion, is full of the most exhilarating episodes we have recently encountered in fiction. The story contains a deal of smart writing about horse-racing and the adventures of fast young London swells.

## At Long and Short Range.

By WILLIAM ARMSTRONG COLLINS. 12mo With ornamental title. Cloth, rough edges, $1 25.

These charming and original essays in miniature have about them all the genial spirit of Lamb and Leigh Hunt, and in their treatment of men, women, and things show a wealth of experience and winning wisdom crystallized into paragraphs and essays never more than two or three pages long. A fascinating book for presentation or the shelves of the book-lover.

## Seven Christmas Eves.

The Romance of a Social Evolution. By Seven Authors. With Illustrations by DUDLEY HARDY. 12mo. Cloth, $1.00.

A story of the lives of two little waifs picked up from the streets of London, told in seven chapters by as many different authors Their childish troubles were not imaginary, as it so often happens, but there was an abundance of sunshine to dispel the sorrow. It is a good book for young folks, and even mature readers will find much entertainment in the story of Nan and Nick.

# A WOMAN'S YEAR NEAR THE NORTH POLE

READY NOVEMBER 17TH.

# MY ARCTIC JOURNAL.

## A Year Among Ice-Fields and Eskimos.

**By JOSEPHINE DIEBITSCH-PEARY.**

With an Account of THE GREAT WHITE JOURNEY Across Greenland, by ROBERT E. PEARY, U. S. Navy.

IT IS SAFE to say that the narrative of no traveller has been looked forward to with greater interest than that of the remarkable woman who, first among white women, braved the terrors of the dark Arctic night in the vast northern wilderness of snow and ice. A woman's account of her experiences among a people who had never before seen a white woman could hardly fail to be of transcendent interest. As a fitting rounding off of his wife's narrative, Lieutenant Peary appends an account of the "Great White Journey," the discovery of the north-eastern shores of Greenland and of unknown lands beyond.

This handsome volume, which issues from the De Vinne Press, contains 21 full-page plates (including four in tint), besides numerous cuts in the text.

*Price, $2.00. A superb Holiday Gift to Young and Old. Autograph Edition on large paper, bearing Mrs. Peary's Signature on the Frontispiece, gilt top, rough edges, ornamental binding, price $5.00.*

For sale by all booksellers, or will be sent, postpaid, on receipt of price by

THE CONTEMPORARY PUBLISHING COMPANY, 5 Beekman Street, New York.

## There's nothing SO GOOD AS Cottolene

The new vegetable shortening.
Wherever introduced, it drives lard from the kitchen, and indigestion from the household.
It has been tried by every test, and has met every requirement.
It is as much superior to lard as the electric light is to the tallow-dip.
The only question now is, will *you* give *your* family the benefits which its use bestows?

## There's nothing LIKE Cottolene

In composition, in healthfulness, in flavor, or in economy.
Its success has called out a lot of imitations and counterfeits made for the sole purpose of selling in the place and on the merits of Cottolene.
Avoid them all. They are made to sell and they are a sell.
Get the genuine COTTOLENE.

Sold in 3 and 5 pound pails.

Made only by
**N. K. FAIRBANK & CO.,**
**CHICAGO,**
St. Louis, Montreal, New York, Boston, Philadelphia, San Francisco, &c.

# New Juveniles.

### My Dark Companions

And Their Strange Stories. By HENRY M. STANLEY. With 64 Illustrations. 8vo, $2.00.

"The following legends," says Mr. Stanley in his introduction, "are the choicest and most curious of those that were related to me during seventeen years, and which have not been hitherto published in any of my books of travel."

"Destined to be one of the most popular of Stanley's books."—*Boston Beacon.*

### Robert Grant's Books for Boys.

**Jack Hall** and **Jack in the Bush.** Each Illustrated. 12mo. $1.25.

"In the above volumes Mr. Grant has shown that he has not forgotten what it is to be and feel like a boy, and that he understands the audience he is addressing. The moral tone of the books is wholesome and the literary quality excellent."—*Boston Courier.*

### New Stories by G. A. Henty.

"Probably the most popular writer of boys' books in England to-day is G. A. Henty."—*Boston Transcript.*

**The Sikh War.** A Tale of the Conquest of the Punjaub.

**St. Bartholomew's Eve.** A Tale of the Huguenot Wars.

**A Jacobite Exile,** Being the Adventures of a Young Englishman in the service of Charles XII. of Sweden. Each crown 8vo. Illustrated. $1.50.

### The White Conquerors.

A Tale of Toltec and Aztec. By KIRK MUNROE. Illustrated. Crown 8vo, $1.25.

"A fascinating volume."—*Boston Beacon.*

### Evening Tales.

Done into English from the French of FREDERIC ORTOLI by JOEL CHANDLER HARRIS. 12mo, $1.00.

Charming, new, original fairy tales, having in this free translation the added raciness of Mr. Harris' style.

### Westward with Columbus.

By GORDON STABLES. Illustrated. 12mo, $1.50.

"It tells the story in a vivid, picturesque fashion."—*Christian Register.*

### The Wreck of the Golden Fleece,

By ROBERT LEIGHTON. Illustrated. Crown 8vo, $1.50.

"A boy's book of adventure, in which life on the North Sea is vividly described."—*Hartford Courant.*

### The Making of Virginia

And the Middle Colonies, 1578-1701. By SAMUEL ADAMS DRAKE. Illustrated. 12mo, $1.50.

"A valuable historical study. Well adapted to the wants of the general reader"—*Chicago Herald.*

*** *SCRIBNER'S ILLUSTRATED LIST OF BOOKS FOR THE YOUNG, containing many attractive works by popular authors, will be sent to any address.*

**Charles Scribner's Sons,**
**743-745 Broadway, New York.**

# Scribner's Magazine Announcements.

(SEE CHRISTMAS NUMBER FOR FULL PROSPECTUS.)

## CHRISTMAS NUMBER

**A SUPERB MAGAZINE.**

STORIES BY ROBERT GRANT: "The Bachelor's Christmas. Illustrations by IRVING R. WILES. THOMAS NELSON PAGE: "How the Captain Made Christmas." HERBERT D. WARD: "The Semaphore." Illustrations by A. B. FROST. HENRY VAN DYKE: "The Source," an Allegory. Illustrations by J. R. WEGUELIN. EDITH WHARTON: "The Fullness of Life."

F. MARION CRAWFORD writes of "Constantinople." Illustrations by EDWIN LORD WEEKS.

AN UNPUBLISHED WORK OF SIR WALTER SCOTT. Recently discovered and now first printed, with an Introduction by ANDREW LANG.

DELLA ROBBIAS. A search for new works by the great artist and his pupils in Italy. By ALLAN MARQUAND. Printed in tint.

DESIGNS BY HOWARD PYLE. "JANUARY AND MAY," a song without words. Music by GILCHRIST.

AN ARTIST AMONG ANIMALS. A delightful article by F. S. CHURCH. With illustrations by the author.

POEMS by THOMAS BAILEY ALDRICH, RICHARD HENRY STODDARD, GRAHAM R. TOMSON, EDITH M. THOMAS.

**PRICE, 25 CENTS.**

**GEORGE W. CABLE** will contribute, beginning with the January number, a romance, entitled **John March, Southerner,** the first novel written by him for many years.

Two other important serials have been engaged:

**J. M. BARRIE,** Author of **"The Little Minister,"** has written for SCRIBNER'S MAGAZINE a characteristic novel, the first since that famous story.

**GEORGE MEREDITH** will contribute a vivid and strong novel, entitled **"The Amazing Marriage."**

**PHILIP GILBERT HAMERTON** has selected the frontispieces for 1894. These will not be drawn from articles in the Magazine, but will form an artistic feature in themselves, each picture illustrating some tendency of contemporary art, and accompanied by an article by Mr. Hamerton. The first will be Manet's "Fifer."

**NOTABLE STORIES** will be, as always, a feature of the year, including stories extending over more than one number by **W. D. Howells, W. H. Bishop,** and **Miss Elliott,** the author of "Jerry," and short stories by **Ludovic Halevy, Joel Chandler Harris, Paul Bourget, Thomas Nelson Page, George A. Hibbard,** and many new writers.

**F. MARION CRAWFORD and EDWIN L. WEEKS,** the celebrated painter, have coöperated in preparing articles on **"Constantinople."**

**LIFE AT NEWPORT, LENOX, BAR HARBOR,** and the **North Shore of Massachusetts** will form a group of clever social studies by four bright authors and artists working in coöperation. A series of exceptional interest and artistic importance.

**CLEVER SOCIAL STUDIES BY OCTAVE THANET,** being sketches of many American types, especially of the West.

**DOMESTICATED ANIMALS,** the **Dog,** the **Horse, Beasts of Burden,** and **Domesticated Birds,** by Prof. SHALER, illustrated by distinguished artists of animal life. The articles will be an important feature of the year.

**ON PIRATICAL SEAS, A Narrative of Peter Grotjan,** a Philadelphia merchant in the beginning of the century, will extend through several numbers.

*SUBSCRIBE NOW, BEGINNING WITH THE CHRISTMAS NUMBER.*

**CHARLES SCRIBNER'S SONS,**
**743 Broadway, New York.**

**TERMS:** $3.00 a Year, 25c. a Number.

**SPECIAL OFFER.**

The numbers for 1893 and a subscription for 1894... **$4.50**

The same, with back numbers bound in cloth..... **6.00**

# The Price-McGill Co.'s Holiday List.

## *Important New Novels*

### JOHN HOLDEN, UNIONIST.

By T. C. De Leon and Erwin Ledyard. Illustrated by Charles Edward Boutwood. 12mo, cloth, $1.50.

"There was need of such a story as this, and there was need that it should be written by one who could understand the peculiarities of the Southern loyalist mountaineers as no man of Northern birth and rearing could hope to. . . . The book is of great interest and, from whatever point of view considered, well worth perusal."—*Public Opinion.*

"An addition of merit to the literature of the war."—*Chicago Times.*

"It is a book that appeals to every one."—*Book Chat.*

### HONOR.

A Story of New York Society. By Maud Howe. Illustrated by Charles Edward Boutwood. 12mo, cloth, $1.25.

"It's a strong book."—*New York Recorder.*

"A spirited and agreeable story."—*Boston Transcript.*

"The most interesting story this author has written."—*Baltimore American.*

### SIX CENT SAM'S.

Stories of Metropolitan Life. By Julian Hawthorne. Illustrated by John Henderson Garnsey. 12mo, cloth, $1.25.

"They are all admirable."—*New York Recorder.*

"It has some of the author's finest touches."—*Brooklyn Eagle.*

"A more genuinely enjoyable collection has not appeared in a long time."—*Boston Ideas.*

"In these stories Mr. Hawthorne appears in his happiest vein."—*Baltimore American.*

"Bright, original, and interesting."—*Public Opinion.*

### BROADOAKS.

A romance of Virginia. By M. G. McClelland. Illustrated by Charles Edward Boutwood. 12mo, cloth, $1.00.

"The theme is wholly original, and the story ranks among the best of this author."—*Boston Transcript.*

"The characters are well studied, speak out their character consistently, and act as such men and women should."—*Portland Argus.*

"The story is well told and charmingly written."—*Chicago Times.*

### HOLIDAY STORIES,

Delightful sketches. By Stephen Fiske. 12mo, cloth, $1.00.

"Simple, sweet, and natural."—*Detroit News.*

### SYLVESTER ROMAINE.

A dramatic novel of our time. By Charles Pelletreau, B.D. 12mo, cloth, $1.00.

"A story of special interest for its study of types."—*Boston Ideas.*

## *BOOKS FOR THE YOUNG.*

### THE TALKING HANDKERCHIEF.

By Thos. W. Knox, author of "The Boy Travellers," etc. Illustrated by John Henderson Garnsey. 12mo, cloth, $1.50.

"It is a regular boys' book."—*Public Opinion.*

"Col. Knox knows the way to a boy's heart, and the healthy spirit of adventure which he appeals to has no connection with dime novels."—*Literary World.*

"Thos. W. Knox has long since made a name for himself as a writer of boyish adventures, . . . and this collection of short sketches is a decided success."—*Book News.*

### TOM AND THE MONEY KING.

By W. O. Stoddard, author of "Dab Kinzer," "Saltillo Boys," etc. Illustrated by Charles Edward Boutwood. 12mo, cloth, $1.50.

Mr. Stoddard has become one of the most successful and popular authors of books for boys in this country, and this story will certainly add to his reputation. His youthful admirers will find this book, the scenes of which are laid in New York, much to their liking.

### THE ROMANCE OF A SCHOOLBOY

By Mary A. Dennison. Illustrated by John Henderson Garnsey. 12mo, cloth, $1.50.

All lovers of the higher order of juvenile literature will hail with delight the latest book from the pen of this entertaining writer. Mrs. Dennison has written so much that is good that she scarcely needs an introduction to the reading public, which will welcome and admire this story of schoolboy life. In this field, which affords so many opportunities, she is thoroughly at home and never fails to please.

### MARKING THE BOUNDARY.

By Edward E. Billings. Illustrated by John Henderson Garnsey. 12mo, cloth, $1.50.

A more interesting history of the survey of the forty-ninth parallel of latitude under the direction of the United States was never written. It is the recital, by one who accompanied the expedition, of the adventures of two boys who accompanied the boundary-markers, and will undoubtedly please both old and young, because of the general interest of the book.

### THE RIVER AND WILDERNESS SERIES.

12mo, cloth, three volumes in a box, $3.75.

**VOL. I. THE RIVER FUGITIVES.**

By Edward S. Ellis, author of "Young Pioneer" Series, etc. Illustrated.

**VOL. II. THE WILDERNESS FUGITIVES.**

A sequel to "The River Fugitives." By Edward S. Ellis. Illustrated.

**VOL. III. LENA-WINGO, THE MOHAWK.**

A sequel to "The Wilderness Fugitives." By Edward S. Ellis. Illustrated.

These stories deal with the adventures of two young Americans while seeking to secure for the sister of one of them a haven at Wilkesbarre after the terrible massacre of Revolutionary days, when the fair Wyoming valley was laid waste. Mr. Ellis has a wide fame as the writer of a class of stories always dear to a boy's heart, and in this series he has surpassed his previous efforts.

### LOST IN THE WILDERNESS.

"War Whoop" Series No. I. By Lieut. R. H. Jayne, author of "The White Mustang," etc. Illustrated. 12mo, $1.50.

"Will be read with interest by young people."—*Boston Transcript.*

### THROUGH APACHE LAND.

"War Whoop" Series No. II. By Lieut. R. H. Jayne, author of "The White Mustang," etc. Illustrated. 12mo, $1.00.

"It is one of those rare books that do not fail to interest young and old alike."—*Boston Ideas.*

### A CLOSE SHAVE.

By Thos. W. Knox, author of "The Boy Travellers," etc. 12mo, cloth, $1.00.

"Young readers will find it a book to get their heads together over while they go breathlessly through the pages."—*New York Independent.*

*For sale by all Booksellers, or sent, postpaid, on receipt of price by*

THE PRICE-McGILL CO., Publishers, St. Paul, Minn.

## The Thoughtful Citizen

Looks back of the present condition of national life in the United States, knowing that a right knowledge of the complex forces that have contributed to the growth of the nation is essential to any but a half-blind exercise of citizenship.

The historian who can best aid him must be keen aad sympathetic and just; he must be logical and thorough; he must show not only effects but causes; he must show the life of the nation, and then his work may be rightfully be called a history. Such a history is

## Von Holst's Constitutional and Political History of the United States.

Few, if any, works in the field of American History are so frequently cited and so highly commended in the Universities of our land as this. A pamphlet descriptive of it will be sent you on request.

*A FEW CRITICAL OPINIONS.*

Its reflections are always astute and incisive — *Harper's Monthly.*

Written for all time.—*New Orleans Picayune.*

Learned ingenious, subtle, brilliant, dashing, and sometimes almost rollicking in his lively and glowing style.—*New York Herald.*

The peculiarities of Von Holst's historical clinics are, first, a multitude of side-lights which he throws on them from every quarter, and, second, the remorseless pertinacity with which he follows up every nerve and muscle to its end.—*Alexander Johnston.*

Masterly analysis of events.—*The Nation.*

Omits no significant detail.—*David Swing.*

In the front rank of American histories.—*H. C. Lodge.*

Marked by comprehensiveness of statement, amplitude of detail, and clearness of exposition. —*New York Tribune.*

We seem to feel, from page to page, the onward march of destiny.—*The Independent.*

It is perfectly just and impartial in weighing argument and estimating character. Young America may well read and ponder this graphic narrative.—*Harper's Weekly.*

*Complete in Eight large octavo volumes containing nearly 4,000 pages. Prices, in cloth, $25; sheep, $30; half calf, $38. Sold by leading booksellers everywhere.*

**CALLAGHAN & CO., 114 Monroe St., Chicago.**

# Charles Scribner's Sons' New Books

**THE ONE I KNEW THE BEST OF ALL.** By Mrs. BURNETT.

A Memory of the Mind of a Child. Fully illustrated by R. B. Birch. 12mo, $2.00.

Mrs. Burnett's story is unique in literature, being the frankly autobiographical narrative of the experiences of a child up to girlhood, with its sensations and emotions as each new phase and problem of life opens to it.

"It has the engaging candor and transparency of all sincere autobiography, yet it is revealed with such exquisite delicacy and absence of self-consciousness we forget that the child heroine is Mrs. Burnett *in petto*."—Mrs. KATE DOUGLAS WIGGIN.

**Nibsy's Christmas.**

By JACOB A. RIIS. Illustrated. 12mo, 50 cents.

Three Stories, founded upon facts in the experience of the author, whose acquaintance with every phase of the life of the poor is well known They are told with graphic force and have intense human and pathetic interest.

**Meh Lady.**

A Story of the War. By THOMAS NELSON PAGE. Illustrated by C. S. Reinhart. Small folio, $1.50.

A new and beautifully illustrated edition of this charming Southern classic in uniform style with the illustrated edition of "Marse Chan," issued last year.

**CUSTOMS AND FASHIONS IN OLD NEW ENGLAND.**

By Mrs. ALICE MORSE EARLE, author of "Sabbath in Puritan New England." 12mo, $1.25.

"Thanks to Mrs. Earle's investigations, we may follow the Puritan child from his cradle through his life. There is not one of the chapters which is not full of interest."—*N. Y. Sun.*

**The Land of Poco Tiempo.**

By CHARLES F. LUMMIS. Illustrated. 8vo, $2.50.

Mr. Lummis has made the land of Poco Tiempo —New Mexico and adjacent regions—his own subject; and in this volume he describes its social customs, racial types, its prodigious ruins and sublime landscapes in his well-known vivid and picturesque style.

**With Thackeray in America.**

By EYRE CROWE, A.R.A. With 121 Illustrations from sketches by the author. Small 4to, $2.00.

"It is a book that no lover of Thackeray will be willing to leave unread. Not only is it interesting for the near view it gives of the author of 'Vanity Fair,' but for the p cture it paints of the United States forty years ago."—*Critic.*

## PAN MICHAEL.

An Historical Novel of Poland, the Ukraine and Turkey. By Henryk Sienkiewicz. Translated from the Polish by Jeremiah Curtin. Crown 8vo, Cloth, $2.00.

*A Sequel to "With Fire and Sword" and "The Deluge."*

This great historical romance completes the remarkable series of historical novels by Sienkiewicz, of which "With Fire and Sword" and its sequel, "The Deluge," have been so successful. Their publication has been received throughout the United States by readers and critics as an event in literature. Charles Dudley Warner in Harper's Magazine affirms that the great Polish author has, in the character of Zagloba, *given to literature a* new creation.

*By the Same Author.*

*YANKO THE MUSICIAN, and Other Stories. Illustrated by Edmund H. Garrett. 16mo, white and gold, $1.25.*

*WITHOUT DOGMA, a Novel of Modern Poland. Crown 8vo, Cloth, $1.50.*

*WITH FIRE AND SWORD. Crown 8vo Cloth, $2.00.*

*THE DELUGE. 2 vols., Crown 8vo, Cloth, $3.00.*

## Cuthbert Bede's College Stories.

THE ADVENTURES OF MR. VERDANT GREEN, AN OXFORD FRESHMAN. 2 vols.

LITTLE MR. BOUNCER AND HIS FRIEND VERDANT GREEN, ALSO TALES OF COLLEGE LIFE. 1 vol. The series illustrated with six etched titles and frontispieces and over 250 illustrations by the author. *New Library Editions of these favorite Oxford stories, printed in large, clear type,* 3 vols., 12mo, cloth extra, gilt top, $5.00.

*A New Story by Dumas never before translated.*

## OLYMPE DE CLEVÈS.

A ROMANCE OF THE COURT OF LOUIS XV. By Alexandre Dumas. With etched frontispieces, 2 vols., 12mo, cloth extra, gilt top, $3.00.

This remarkable romance, one of the greatest ever written by the greatest of all romantic writers, is termed a *masterpiece* by William Ernest Henley, the eminent critic. It deals with the Jesuit Novitiate at Avignon and the French court during the early days of the reign of Louis XV.; and introduces, besides the young king, such characters as Cardinal Fleury, Marechal de Richelieu, Queen Marie Leczinska, Comtesse de Mailly, Mademoiselle de Charolais, etc.

*Popular Edition of Francis Parkman's latest work.*

## A HALF-CENTURY OF CONFLICT.

By Francis Parkman. Popular Edition, with 3 Maps. 2 volumes, 12mo, cloth, $3.00.

His place is *alongside of the greatest historians,* whose works are English classics.—*London Athenæum.*

## Little, Brown & Co., Publishers,

*254 Washington Street, Boston.*

NEW YORK, THURSDAY, NOVEMBER 23, 1893.

## The Week.

THERE can hardly be a doubt that the dethronement of the Queen of the Sandwich Islands was, as an enterprise, first conceived by Mr. Blaine, whose history as a diplomatist we need not recall. His selection of Mr. Stevens, the editor of the *Kennebec Journal*, his own old paper, to go to Hawaii as United States minister was, for his purpose, a wise step. That Stevens had fully caught his idea was shown as early as February and March, 1892, in his correspondence with the Department. In his oration at Honolulu, July 4, he politely spoke of the country to which he was accredited as "a monarch-cursed country." The "tip" as to what was going to happen was distributed among various persons, including the editor of the New York *Tribune*. This gentleman was able to say in November, 1892, that "events" were occurring in Hawaii which were likely to turn the thoughts of our people towards annexation. In that same month, as appears by the correspondence, Stevens was clamoring for annexation. Another recipient of the "tip" was Secretary Tracy. When Admiral Skerrett called on him before going to Hawaii in December, he asked him what was the policy of the Government about annexation, reminding him that it had formerly been opposed to it. The secretary calmly informed him that "the wishes of the Government had changed. They will be glad to annex Hawaii." This gentleman's passion for international complications seems to have been almost as insatiable as Blaine's, and his knowledge of international law about as great.

---

President Cleveland did what President Harrison ought to have done, viz., send out a commissioner to ascertain the facts on the spot, and, above all, to hear the Queen's side of the story. His report shows clearly that the revolution was a "put-up job" of Stevens's, probably to some degree a commercial speculation, as nearly all Blaine's diplomatic enterprises were. Every stage in it reflected the highest discredit on the Government and public service of the United States, and we cannot be too thankful that the Cleveland Administration came in in time to protect and reëstablish our character for fair dealing with all the nations of the earth. We can recall nothing in modern history quite so mean and tricky as this transaction. Other nations, particularly Great Britain, have seized and annexed foreign possessions with a high hand, boldly declaring their intention to take and keep them for their own use and behoof. But we cannot recall a single case before Stevens's in which a foreign minister has been the centre of a conspiracy for the overthrow of the government to which he was accredited, and has set up a sham government in its place, with the aid of his own navy, under false and fraudulent pretences. Mr. Blount's report ought to be issued far and wide in a pamphlet form. It is a striking lesson in morals.

---

There is a great deal of squirming over Secretary Gresham's declaration that a majority of the men who set up the Hawaiian Provisional Government were "aliens." Were they not all voters under the Constitution of 1887? it is indignantly asked. They were, but were aliens nevertheless, taking advantage of a clause giving them the right to vote in Hawaii without renouncing their allegiance to their own country. Indeed, everybody knows that the great argument for annexation was the duty of the American Government to protect "American citizens" in Hawaii. There they were, just as much entitled to the protection of the flag in Honolulu as in San Francisco, and had our country sunk so low that it would not care for its own citizens? But now, when Mr. Gresham has drawn the simple inference that citizens of the United States are aliens in Hawaii, there is a great rush on their part to say how completely their affections and civic interests are bound up with the Islands. The revolutionists themselves ought to know what they are, and they have all along represented themselves as the party of the foreigners versus the natives. If any one doubts this, let him read the annexationist *Hawaiian Gazette* of October 24. In an article on "The Government's Backing," it made the thing clear as noonday, as the following citations will show:

> "The great mass-meeting which preceded the overthrow of the monarchy represented the *foreigners* of Honolulu. . . . As to the present intent and purpose of the *foreigners* of Hawaii, there is no doubt. They did not go into the annexation movement with any idea of ever taking a hand from the plough. . . . The movement is backed by Englishmen, Germans, Portuguese, and Americans, whose investments and homes are here. . . . So long as the provisional government carries out the trust placed in its hands, it will receive the political and moral support of the *foreigners* of Hawaii. . . . On the question of annexation the *foreigners* are virtually a unit."

---

Senator "Bill" Chandler gives the President a dreadful scoring for his "provinciality" and inability to grasp the "true continental policy of the United States." For the full realization of that policy, "Bill" says, we shall have to wait for the return of the Republican party to power, but meanwhile he kindly explains what it is and involves. He imagines a wicked doubter rising to ask: "If we begin with Hawaii, where shall we stop?" and then puts him down severely with the following "easy reply": "We shall stop on the west with the Sandwich Islands and on the east at the West Indies." The wicked doubter still wants to know what and how many of the West Indies, and gets the crushing answer, "A reasonable and sufficient number." After that, all is clear sailing for "Bill," and he draws a beautiful picture of what will come when the Republicans are restored. But, after all, he leaves a horrid uncertainty as to what kind of Republicans he means, as he pauses to give a sharp rebuke to the Arthur Administration for cutting short Mr. Blaine's performances in Chili and Peru. It might easily be that Republican secretaries of state like Mr. Evarts and Mr. Frelinghuysen would turn out fully as provincial as Mr. Gresham. "Bill" does not say so, but it is evident that he is the only man of really continental proportions left in the party.

---

President Cleveland should lose no time in calling off the Commissioner of Indian Affairs from his meddling with the civil-service regulations governing appointments in that department. It was a great step in advance when even a part of the offices in the Indian service were put under the civil-service law, and, instead of asking for exemptions from the working of that law, the demand ought to be that it should be greatly extended. The Indian service has for years been the dumping-ground for all sorts of political refuse, and as it was only the Indians who had to suffer directly from it, the abuse was one of the most difficult to remedy in the whole public service. This is no time to let go a particle of the progress that has been made. Commissioner Browning's assertion that the civil-service examinations do not yield him candidates of "business capacity" has the true spoilsman's flavor about it, and is thoroughly disposed of by Mr. Herbert Welsh in a recent letter. The President has it in his power to put an immediate end to the whole disreputable business, and he cannot set about it too quickly.

---

Senator Teller appears to have fully recovered from his terrible fit of the dumps. At a reception which was given him in Denver last week, he said that, while the State "will suffer somewhat by the repeal of the silver-purchase act, yet Colorado, thank God, is not destroyed, nor, even, is it in any way seriously injured." He characterized it as "a magnificent State," possessing "the natural wealth

that two States have," and, besides, "what is more important, a population of intelligent, aggressive, enterprising people." As for the future, he advised the people to address themselves to the task of making good the losses they had sustained by adverse legislation, and continued: "If we cannot mine silver at a profit—as I trust we may be able, to some extent, to do still—we can mine iron, coal, and gold, and we will have prosperity and riches; and we will maintain the intelligence and culture with which we have commenced in this State." This is a thousand times more sensible than making speeches days long, "with tears in his voice," to show that Colorado would be utterly ruined if the repeal bill were passed.

---

The interest in the promised investigations by a committee of the new Legislature is increasing steadily, and may be said truthfully to be commanding absorbing attention in all political circles, especially those intimately or otherwise connected with Tammany Hall. It must be apparent to the Republicans that, the higher the character of the committee, the greater the possibility of securing revelations which will be of value both to the cause of good government and to the welfare of the Republican party. The selection of a committee which was even suspected of being dominated by "Tom" Platt would be fatal to the success of the inquiry. All Platt's intimates or favorites in the past should be kept off the committee, and should be permitted to have no part in its work. What is wanted is a fearless and honest investigation, and if such a one can be authorized, we shall see a flood of voluntary evidence appear before it that will cause a "yawning of penitentiary doors" for more than one eminent public character who is at present rolling in stolen riches obtained by blackmail and other forbidden practices.

---

The differences between city and country ways have been illustrated in a curious manner by an experiment of the Post-office Department. Under the last Administration about fifty villages and small towns, ranging in population from 800 to 4,000 inhabitants, were picked out for a trial of the system of distributing mail matter by carrier, as in large cities. At first general satisfaction was manifested, and the receipts of many of the offices for a while showed an increase, indicating that the convenience stimulated correspondence; but, as the novelty wore off, the residents very generally tired of the change, and returned to the old practice of going to the office themselves for their mail. A majority of the people would apparently rather have their letters lie in the office until they call for them, and thus have an excuse for frequent visits to the centre of local activity, than have their mail delivered every day at their houses. The carrier in such places is really a foe to social activity, as "going to the post-office" has always been a recognized means of mixing with men, and its occasional inconvenience is preferable to the loss of what is often only a pretext for making a break in the monotony of a retired life. In view of the evidence that there is not "a long-felt want" to be met by this system of free delivery in small communities, and of the fact that its general adoption would involve an annual expense of at least $10,000,000, the first assistant postmaster-general wisely advises a suspension of the experiment.

---

A graphic picture of football as a game for young gentlemen is drawn in a despatch from Philadelphia which gives an interview with the captain of the University of Pennsylvania team as to stories which have been current accusing them of "roughness" and "brutality." He declared that there was no foundation for the charges, and when asked about the treatment his own men had received, said that he had no complaint to make. To be sure, he himself had a bad contusion of the eye from a blow of an opponent's fist; every one on the field saw another opponent strike a Pennsylvania man with no provocation from the latter except that he had made a "touchdown," and jump with his knees on the neck of still another after the latter had called "down"; and in another case a member of one team "repeatedly struck a member of the other about the face and head, and pulled off deliberately the protecting bandage from his swollen and inflamed ear, although doing so caused agonizing pain." But the young gentlemen of the Pennsylvania university have "no complaint to make" of such performances, and of course the young gentlemen of the university at New Haven would take the same ground about similar performances by the other team.

---

Another young man has lost his life from injuries suffered while playing a game of football. This makes the fourth case reported this autumn—one each in New Jersey, Indiana, Ohio, and Wisconsin. The latest is perhaps the most shocking of all. It occurred during a game between the elevens of the Toledo (O.) High School and the Adrian (Mich.) College, which was played at Adrian on Saturday. A Toledo player, Carew, says the report, "had the ball, and downed to save it. Three Toledo boys dropped to save him, and in an instant the Adrian team was upon them. When the struggle was over, Carew remained motionless upon the ground. The crowd cried, 'Fake!' but it was soon discovered that the young man's neck was dislocated." Upon examination it was found that his body was paralyzed from the chest down, and his spinal column injured, and he died the next morning without having recovered consciousness. Another member of the Toledo team was kicked in the groin, and injured so badly that he could not return to his home. A third player suffered serious injury to his right leg. English newspapers just received mention the death of a football player in West Hartlepool "from the effect of injuries received in a football match, when he was kicked severely in the stomach."

---

Last week's extraordinary scandal in the Bank of England's management has happily "blown over," as the expression is, without serious effect on public confidence. The most remarkable, indeed, of all phases of the episode was the fact that the cashier's improper and dishonorable use of the bank's lending facilities, although made public in the very way suited to rouse uneasiness, had absolutely no effect upon the outside stock market. This may be called a proof of perfect confidence in the bank or of great stability in the market; in either case the result is reassuring, especially when it is recalled how vague and comparatively trivial were the rumors which upset prices in London last summer. The incident is certainly new in the Bank of England's history. "I do not know," says Walter Bagehot in his work on Lombard Street, "that its name has ever been connected with a single large and discreditable bad debt; there has never been a suspicion that it was 'worked' for the benefit of any one man or any combination of men." This reputation last week stood the institution in good stead; for though the fair name of its officers has now been in a measure blemished, the suspicion that the governors themselves were concerned in the transaction was instantly dismissed by all intelligent observers.

---

The incident has, however, revived one criticism that has often in the past been raised against the bank. The management of this institution is unique. Its directors are continuous in office only during a limited official term; the governor of the bank, who stands responsible for its policy, is chosen in rotation according to seniority of service on the board, and, what to our ideas is still more singular, nobody whose private business is the same as that conducted by the bank is eligible to the director's office. These are three radical defects, according to the principles of modern banking. That the Bank of England's business should, under such a handicap, have been conducted so successfully and

wisely, is explained only by the very great conservatism exercised in the choice of city merchants to its membership. Bagehot himself admits that the bank has been at times a victim of bad policy, and that "at such times the defects of its government have aggravated if not caused its calamities." But to point out the defect is easier than to produce a remedy, and the remedy might be worse than the complaint.

---

The defeat of the English ministry on a clause of the parish-councils bill is not serious, because it was agreed at the outset that it should be treated as a "non-contentious measure." In fact, this bill is drawn on the lines of one brought in by the Tories. The proposal was to admit to a vote for the council all women who, if men, would be entitled to vote for members of Parliament—a very wise and indeed almost necessary provision, considering the nature of the affairs with which parish councils are to be called on to deal. There is a general determination on all sides to push the bill through, in order if possible to keep the rural population in the country; the desertion of the villages by the able-bodied men having become a very serious phenomenon. The only active opposition comes from the clergy, whom the bill deprives of a good of deal the authority they formerly exercised in parish affairs, but even their opposition is offered with great caution. There is to-day in England a shrinking from anything like opposition to a democratic movement which ought to make "Bob" Lowe, the great opponent of the bill of 1867, turn in his grave. The explanation of the continued drift of population to the towns, and of the continued growth of the towns, is that the growth of towns is no longer, as in the days before railways and compound marine engines, regulated by the capacity of the country in their immediate neighborhood to feed them. Towns can now be fed from the uttermost ends of the earth. London grows on Chicago beef and Dakotan or Indian wheat, and therefore easily absorbs the English agriculturists who find village life dreary.

---

France had her attempt to settle a strike of coal-miners by arbitration ten days before the determination of the English Government to seek to compose the differences between men and masters which have been paralyzing English coal-mining. It was not the French Government, however, that was to do the arbitrating, but the French press. It was an idea of Clémenceau's, who, since his defeat for reëlection to the Chamber, has been sorely put to it to keep himself properly in the public gaze. He took up the cry that it was the duty of the French press to interfere to put an end to the Pas-de-Calais troubles. The press had received the ambassadors of the Czar, it had secured the peace of Europe, why not go ahead and secure the industrial peace of France? What surer or simpler way could there be of bringing workingmen and employers into accord than to have "deux journalistes d'opinions opposées" go and listen to their complaints and deal out justice on the spot? With a deference to the wishes of a brother and a generous recognition of his "scoop" such as it would be hard to parallel in this country, the editors of Paris actually called a meeting on November 4 in furtherance of his suggestion. Nearly every prominent paper was represented, and Clémenceau was about to unfold his plan when a thoughtful editor interposed to observe that he had just received a despatch saying that the Pas-de-Calais strike was ended. Thereupon Clémenceau moved that the meeting adjourn, thus leaving the world in ignorance of the true method of journalistic arbitration. That there is something wonderful in it may be inferred from the fact that the strike was broken as soon as wind of the proposed arbitration reached the scene of strife.

---

M. Leroy-Beaulieu has an unpleasant way, when the French are very much excited about something, of bringing them down to the hard facts of the case. He has been performing this office with regard to the recent wonderful "rapprochement" between the French people and the Russian navy, over which the Parisians seem to have gone nearly crazy. There is no religious sympathy between the French and Russians. There are few or no social relations. The French do not travel, and neither do the Russian people. There is no sort of resemblance between their political institutions. In order, therefore, to make the present *entente cordiale* at all lasting, there must be, M. Leroy-Beaulieu thinks, some closeness of commercial relations; but here the facts are very depressing. In 1891 Russia stood seventh in the list of countries exporting to France. She was surpassed by England, Belgium, the United States, Spain, Germany, and British India. In the five years from 1887 to 1891 she stood only in the sixth place. But, perhaps, if she does not export much to France, she imports a great deal from France. Error again, as the French say. In 1891 she stood twenty-fourth in the list of customers for French goods. In that year the 110,000,000 of Russians bought only $2,700,000 worth of French goods! That is, each Russian consumed French products to the value of 12 centimes, the centime being the hundredth part of a franc. In the five years from 1887 to 1891, the French exports to Russia once reached $3,700,000, but on the other hand in 1889 they fell to $2,000,000. Portugal, Greece, Denmark, the United States, Brazil, the Argentine Republic, Colombia, Mexico, Uruguay, and Chili all buy more French goods than Russia. It is true that a new commercial convention has been adopted between the two countries, by which some reductions in the duties were made on both sides, but not enough to encourage the hope of any great increase of commercial relations. What, then, is to keep up the present furious affection? The French papers are now raging fiercely against England, but in 1891 England bought $200,000,000 worth of French goods, to say nothing of the sums spent by English residents and travellers. Little Belgium bought $100,000,000 worth in the same year; Germany $70,000,000 worth; and poor Italy, whom they are loading with abuse, also $25,000,000 worth.

---

It is evident that the measures taken for the suppression of the slave trade have brought about a crisis in Central Africa, and it is possible that we are on the eve of a general war between the Arabs and the Europeans. According to an exceptionally well-informed writer in the London *Times*, the immediate cause of the hostility which now prevails is the mysterious expedition of Mr. Van den Kerckhoven. Notwithstanding the secrecy maintained in regard to its movements, there can be little reason to doubt that, during the passage from the Congo to the Nile, several Arab settlements of the slave-hunters were attacked, numbers of the slavers were killed, and their property in slaves and ivory confiscated. From this resulted the hitherto unexplained massacre of M. Hodister and his companions on the upper Congo, and, in all probability, though the *Times* is silent on this point, the murder of Emin Pasha, who seems to have fallen into the hands of the Arabs when they were smarting under the injuries inflicted by Mr. Van den Kerckhoven. As soon as a sufficient force could be collected, Capt. Dhanis of the Free State routed an Arab army on a tributary of the Congo, and then, after a siege of six weeks, captured the important town of Nyangwe on the Lualaba on the 4th of March. At the end of April he had taken Kasongo, the station of Tippu Tib. It remains to be seen whether the Arab traders, many of whom are men of great intelligence, will band together for the purpose of driving the Europeans from Central Africa. This depends largely upon the action of Rumaliza, the Arab chief of Ujiji, and the most powerful in the country, with the possible exception of Tippu Tib. It is to be hoped that he will coöperate with the whites in developing a legitimate commerce. This is actually being done on Lake Nyassa, where Mr. Crawshay, a British official, is fighting the slave-traders at the north end of the lake with men lent him by the great Arab Sultan, Jumbe, on the west coast.

### *GENERAL HARRISON ON HAWAII.*

GREAT difficulty has been experienced in getting Gen. Harrison to talk about the Hawaiian matter, but a correspondent of the Cincinnati *Enquirer* did succeed in extracting one or two views from him on (we regret to say) Sunday afternoon (November 12). What he said was this :

"Then, speaking slowly and carefully, the General said: 'It has always seemed to me a grave misfortune that our diplomacy and the plan of our foreign relations should fluctuate with the change of parties and of administrations. Continuity is absolutely essential to success in that respect. What we need is continuity. We have had it with regard to Hawaii in the past. It is no new doctrine that the interests of the United States in those islands should be most jealously preserved. I remember myself, when I was in the Senate, taking that position in connection with Senator Edmunds and with many others. England is very apt in seizing strategic positions and "points of observation." ' This last phrase he dwelt upon several times. 'She holds the St. Lawrence, has the Azores, watches the Caribbean Sea from the Bermudas, and has one foot upon the Isthmus.' Then, looking toward our Pacific coast, he called attention to her hold upon the mouth of Puget Sound and her great navy-yard at Esquimault; spoke of her recent movement upon the Florida Islands, and then solemnly and impressively added: 'And if she gets Hawaii also, as another "point of observation," it seems to me that we shall be pretty much surrounded.' "

There are two points to be considered here. One is the absence of "continuity." Gen. Harrison prepared for this himself by his failure to collect the facts before acting, and above all by his failure to hear the Queen. His decision in the case, if he were a judge, would be set aside by any court of last resort for these two capital defects. He acted without evidence, and he heard only one party to the cause. We believe we are within the truth when we say that Queen Liliuokalani was the first monarch who was ever deposed by superior foreign force without being heard in her own defence, and America is the last country in the world to begin the practice.

Continuity in foreign policy is a good thing if it be continuity in justice and fair dealing, but continuity in crime and outrage, Gen. Harrison will himself admit, would be a mistake. If he will ask himself some Sunday afternoon why he was in such a hurry to get the treaty of annexation before the Senate, his conscience, we are sure, will throw much light on this very weighty problem. Moreover, we deny *in toto* that there has been any want of continuity in American foreign policy. On the contrary, we think it has been, from the foundation of the government down to 1880, the most continuous and consistent foreign policy in the world, partly owing to the strong traditions of good faith and good feeling left by the founders of the government, and partly to the fact that we had no conquests and no colonies. If we strike from our history the slaveholders' treatment of Mexico and Hayti, there was little in our foreign relations of which we could not be proud until Mr. Blaine appeared on the scene as foreign minister, and got up a rumpus with England about the Isthmus canal. Continuity was broken in that affair by the exposure of his ignorance by Lord Granville; and, soon after, his dealings with Chili were found by President Arthur to be marked by so much bad law and bad faith that they had in common decency to be cut short, and his envoy brought home. This Hawaiian trouble was also of Blaine's brewing. He undoubtedly knew the "revolution" was coming, and sent out his successor in the chair of the *Kennebec Journal* to hasten it, and his successor in the Department of State has again to break his continuity.

As regards England, we do not hesitate to say that it is to her failure to protest against President Harrison's doings that we owe President Cleveland's ability to undo them. We feel morally certain that such a protest was counted on by the conspirators as the main element in the success of their plans. Had it come simultaneously with the "revolution," we greatly fear the popular excitement would have been so great that the voice of reason and justice would have been drowned. The proof of this is that the very first thing done by their organs in the press was to announce despatches from Lord Rosebery and Sir Julian Pauncefote, asking us to withdraw from the Islands. Some of them kept the press ready for the "protest" for days, and, when nothing came, began to load these diplomatists with abuse. In fact, some of them would have justified President Harrison in sending Pauncefote home on account of his guilty silence. But the truth is that England cares nothing about the Islands, has never thought of protesting, and that the expectation of a protest causes unseemly mirth both in the embassy at Washington and in the Foreign Office in London.

Gen. Harrison's sea strategy is no better than his diplomacy. The reason why Great Britain has so many islands and foreign stations is that she has a great navy. As soon as she ceases to have a great navy, she will lose her islands and foreign stations, and lose her access to the Suez Canal. An island is of no use to any power which cannot approach it in time of war. A coaling station is of no use if the enemy will not let you coal at it. The whole apparatus of foreign islands, stations, and garrisons, in which England rejoices, is a concomitant of the mastery of the sea. Without the mastery of the sea it is of no use whatever. Whenever we have a navy large enough to destroy the navies of two other powers, we can have all the islands we want. Until then we are perfectly happy without any island at all. The notion that some other power can "surround" us 2,000 miles away over the ocean is one against which it is hardly worth while to argue. If there be any foundation for it, our case is hopeless, for England, France, and Portugal and Spain "surround" us only 2,800 miles away, and Japan is looming up dangerously on our right flank.

The history of this Hawaiian affair offers a good illustration of the danger to us of colonies and dependencies under our present form of government and with our present class of public men. Rome fell under the weight of her provinces, with a constitution ten times better fitted than ours for the management of distant conquests, for the Senate was filled with the ablest and most experienced men of the empire. But the Senate was gradually broken down by the intrigues and bribes of the generals and proconsuls. We, at the very outset of our career of annexation, in the very first case of it, start an intrigue in our own State Department for the overthrow of a friendly power, allow our minister on the spot to land troops to assist in what was really his personal conquest, annex the Islands without hearing the ruler in her own defence, and denounce everybody who objects to these proceedings as an enemy of the United States. If these things are done in the green tree, what would be done in the dry? Suppose we had half-a-dozen islands like Hawaii, and half-a-dozen States like Cuba, San Domingo, Costa Rica, and Guatemala to administer, with our Senators intriguing for proconsulships and the members of the House casting anchors to windward and seeking out channels of usefulness: how long would the government of Washington and Jefferson and Lincoln last?

### *TWO REMAINING POINTS.*

THE semi-humorous proposal of the *Tribune* that, if President Cleveland is undoing a wrong in Hawaii, he ought to undo another by restoring their lands to the North American Indians, shows that the discussion of the Hawaiian affair is practically closed. But there are two points on which there is still some trouble in the minds of some of those who approve of the President's policy, and about them we propose to say a few words. One is the fact that so much time has elapsed since the Queen's dethronement without any protest or resistance on her part, and the provisional government is so firmly established that it is not worth while, or not expedient, if worth while, to set her government up again. The answer to this is, that the existing government is in fact and in form "provisional"—that is, something of a temporary or interregnal character. It calls itself provisional, and formally announced in the beginning that it was to last only until Hawaii was annexed by treaty to the United States—a con-

summation of which the conspirators then felt quite sure. Hawaii has not been annexed by treaty and is not going to be. Consequently the present government continues to be "provisional," or, as Webster says, a "partial or temporary arrangement." Consequently, again, the Queen's rights would not have been extinguished even if President Cleveland had taken no action looking to her restoration. But he has taken such action. His withdrawal of the treaty from the Senate as soon as he got into power, and the despatch of Mr. Blount to Hawaii, and the recall of Mr. Stevens, would of themselves be a sufficient warrant to the Queen to wait patiently for the result. As long as the President had announced no decision and an inquiry was pending, the case was not closed.

The other point, to which we see Mr. Kasson has lent some semblance of authority, is that we have no right or authority to set up the Queen's government again; that all that we can or ought to do is to withdraw our troops and other representatives of our power, and let the Queen fight it out as best she can with the provisional government. To this some add that in any case we ought not to restore a monarchy, monarchy being especially objectionable to a large class of Americans.

Those who make these objections seem to forget what international law is. International law, according to all the books and according to the practice of all civilized nations, is simply the application of the Golden Rule to international relations—that is, the rule of doing to others as you would they should do to you. When Woolsey asks, "What are the rational and moral grounds of international law?" and answers, "They are the same in general with those on which the rights and obligations of individuals in the state, and of the single state towards the individual of which it consists, repose" (p. 14), he covers the whole ground. We grant that had the members of the provisional government risen against the Queen of their own motion, and in reliance on their own powers of either combat or persuasion, and succeeded in overthrowing her, it might well be argued that, in spite of our quasi-protectorate over the Islands, we must let her get back her throne in her own way. But the cardinal fact in the case is, that the conspiracy for her overthrow was in part, at least, organized by our minister, and was successfully carried out by the use of our ships and troops as a menacing force, and the new government was organized under our flag. This plainly fixes our responsibility and furnishes the rule of our conduct.

If an individual be wrongfully ejected from an estate, and the courts decree that his ejectment was wrongful, he is not left to get back again as best he can. The sheriff puts him back. He turns out the wrongdoer and puts the rightful owner again in possession. To expel a sovereign from his dominions and hand over all the instruments of government, the army, the navy, and the treasury, to his enemies, and then, after repenting of the wrong we had done him, bid him recover his throne as best he could, would be an extraordinary proceeding. Yet this is almost what we have done here—for we must admit that Stevens's unlawful use of the navy and President Harrison's stealthy treaty with the trespassers were the acts of our Government. International law, like municipal law, requires that when you have done a man a wrong, you must either restore him to the situation which you destroyed, or, if you cannot do that, pay him damages.

The plea that we ought not to restore a monarch is really a plea for taking possession of the island as United States territory. As a plea for the present "provisional government"—a small oligarchy composed almost entirely of foreigners—it is worthless. Such a government is as un-American, as much opposed to the spirit and purpose of our institutions, as any monarchy can possibly be, and one far more dangerous to our polity. Monarchy is everywhere a waning force, but little oligarchies of plutocrats and speculators seem to be the evil against which the world will, during the next hundred years at least, have most frequently to contend. Moreover, we are in this matter, as we understand it, acting under the rules of international law, and international law recognizes monarchy, whatever we may think of it, as a fit and proper form of government, and the only one adapted to peoples in certain stages of political growth. It would probably be as unfair to impose a republic on the Hawaiians as a monarchy on the French. We recognize monarchies in Europe without hesitation, and even pay royal honors to the members of royal families who visit us, and it would, therefore, never do, when we upset a monarchy, to refuse to set it on its legs again because monarchy was odious to us.

---

### *THE CONSPIRACY PROVED.*

THE documentary evidence contained in Mr. Blount's report justifies to the full Secretary Gresham's assertion that the overthrow of the Hawaiian Government last January was the result of a conspiracy in which the American minister was a leading figure. Mr. Blount's testimony cannot be dismissed as "perjured affidavits" obtained from the "slums of Honolulu" at $2 each, as Mr. Stevens hastened to say it would be, in advance of publication. It consists largely of the evidence given by members of the committee of safety and of the provisional government, and by officers of the navy and other eye-witnesses whose character is vouched for by the annexationists themselves. Many of these men were unwilling witnesses, but their admissions put it beyond any question that the revolution would not even have been attempted but for the connivance of Mr. Stevens.

To go back to events prior to the actual landing of the troops, we find the American minister unwarrantably interfering in a matter of purely domestic legislation on Saturday, January 14. Informed that the Queen had signed the lottery bill, in the presence of two of her cabinet and other witnesses, he exclaimed again and again: "Gentlemen, this is a direct attack on the United States Government." What possible right he had to say this, or what possible object he had, except to show that he was prepared to pledge the aid of his Government to the revolutionary movement already talked of, but not yet on foot, does not appear. That he had, in fact, secretly assured the revolutionary agitators, in advance of any overt action on their part, that he would support them, is proved by the testimony of a member of the Queen's cabinet, who made oath that

> "On Sunday morning, January 15, Mr. Thurston, the head of the revolutionary party, called upon my colleagues, Ministers Colburn and Patterson, and asked them to join with himself and others in deposing the Queen, assuring them that such movement would be perfectly safe, as Minister Stevens had promised them the support of the United States forces, and also that he would recognize and support a provisional government as soon as such a step could be taken."

The American minister's conduct on Monday, January 16, was in perfect keeping with this. According to the testimony of Mr. Wunderberg, whom the annexationist papers declare to be a man "of strict integrity and high reputation," the committee of safety, of which Mr. Wunderberg was himself a member, tried to get Stevens to delay landing the *Boston's* troops until their plans were in better shape. They sent a delegation to him, headed by Mr. Thurston, for that purpose, but it soon brought back Stevens's Napoleonic answer: "Gentlemen, the troops of the *Boston* will land at five o'clock this afternoon, whether you are ready or not." The same evening there was a meeting of the committee to talk over plans for a provisional government, and it was thought necessary to have a "commander-in-chief of the forces." The position was offered to Mr. Soper, an American citizen, but he declined it until assured that he would be supported by the troops of the *Boston*.

> "Mr. Soper still doubted, so a couple of the committee escorted him over to the legation, which, by the way, was in the adjoining premises, and the three came back after a time, reporting that Mr. Stevens had given them full assurance that any proclamation of the Government put forward at the Government Building, or any other building at Honolulu, for that matter, would receive his immediate recognition and the support of the forces of the *Boston*."

The next day the provisional government was proclaimed, and how it was

done is well described by one of the members of it, Mr. S. A. Damon. "About eighteen men" started out from "Smith's office" to do the work. They divided into two parties on the way to the Government House, for fear of "being interfered with by the police." Then they read their proclamation, in the presence of "the porters and officials employed there," and began to look about for the American troops. Mr. Damon says he was "perfectly nonplussed" because the troops were not forthcoming according to promise. The Government House, the station-house, and the barracks were all in peaceable possession of the Queen. The conspirators had let off their proclamation into the empty air, but were not in possession of any Government building, or in control of more than a handful of men "running in with rifles" in their hands. But Stevens promptly recognized them as the Hawaiian Government.

Here comes in what Stevens considers a petty "dispute as to the hour by the clock at which I gave recognition." But as it happens that the hour by the clock makes all the difference between a government on paper and a *de facto* government, the point is, after all, of some importance. Mr. Blount has conclusive testimony that Stevens recognized the provisional government very early in the afternoon, before the Queen or any of her ministers had heard that there was such a thing, and that this recognition was the only thing which prevented the Queen from calling upon her troops to put the revolutionists under arrest, as it is admitted by all that she might easily have done. In fact, Mr. Blount says that Stevens admitted to him personally that he had recognized the new government before the barracks and station-house had been surrendered; "that he did not consider their surrender of any importance." When the Queen's ministers were called upon to surrender, they refused to do so, asserting that they had ample force to deal with the disaffection, and it was only when they were told that the American minister had recognized the revolutionists, and would support them, that they said, as Mr. Damon testifies hearing one of them say: "We are all prepared to resist, but I will never fight against the American flag."

These are the main points in the evidence thus far made public, showing the "force and fraud" employed by an American minister to overthrow the government to which he was accredited. That this great wrong ought to be righted, all honest men will agree. Just how it is to be done the Administration has not yet shown; but, from the tenor of Minister Willis's speech, it would seem that those who have been anxious to see the Queen restored to her rights through a sea of blood are likely to be disappointed. The conspiracy was executed by force, but there is every reason to think the crime of it may be rebuked and frustrated by the peaceful methods of diplomacy.

## *SPRINGER ON BANKING.*

When the silver question was disposed of, it became inevitable that the banking question should be the uppermost of all financial topics in the national councils. Silver purchases had been favored in the West and South by reason of a supposed shortage of currency. People thought that they could see an increase of money if the mints were at work coining dollars on Government account, or if the Treasury was printing legal-tender notes based upon silver bullion. They did not see that the silver so purchased merely displaced gold, leaving the total amount of circulation unchanged except as we parted with a superior kind of money to make room for an inferior kind.

The idea that we must have additional supplies of money remains as potent as ever, and this idea is founded in reason. We must have additional supplies of money *when* they are wanted. We must have them *as* they are wanted. Moreover, we *shall* have them when and as they are wanted. If nothing else is offered, we shall take gold. We have imported $61,000,000 of that metal during the present year. It is true that we had previously exported $70,000,000. Both movements are copious illustrations of the fact that a nation can get all the money it needs, even if it has a stiff, inflexible, antiquated banking system. Therefore we need not be alarmed if Congress does not favor us with an improved banking system in a hurry. We shall still have the world's gold reservoir to draw from—the same from which England draws her supplies. But the demand for something different, the demand for a paper currency at par with gold, which shall accommodate itself to the wants of the business community, will continue and will become more and more urgent until it is complied with.

In a recent interview Mr. Springer of Illinois, the chairman of the House committee on banking and currency, gave his views of what ought to be done in order to secure for the country an elastic and abundant currency. It is perhaps not surprising that Mr. Springer should have completely missed the thing he was searching for, viz., elasticity. The present national banking system is not elastic. Its currency does not expand when expansion is needed. On the contrary, it shrinks when expansion is needed. Now, Mr. Springer thinks that the system is non-elastic because the national bonds are a diminishing quantity and because they are at a high premium in the market—the rate of interest which they pay being accordingly very low. So he proposes to take as a basis of circulation an inferior kind of bonds, such as those of counties and municipalities. This change, he thinks, would bring into existence an elastic currency.

Mr. Springer has missed the point completely in this, that it is bond security, and not the *kind* of bond security, that makes the bank currency stiff and inflexible. The testimony of bank officers and experts on this point is now almost unanimous. We take the first which comes to hand. In the current number of *Rhodes's Journal of Banking* is a thoroughly good discussion of this question by the Hon. A. B. Hepburn, ex-comptroller of the currency. The article is entitled "Substitutes for Money." Touching the matter of elasticity Mr. Hepburn says:

> "But no currency can be elastic which is based upon stocks or bonds. If, before issuing notes, a bank is compelled to invest *as much or more money* in the purchase of securities, as a basis for its note issue, as the bank-notes which it is in turn authorized to issue amount to, then elasticity is destroyed. In order to respond to the increased demands of the people, banks should be allowed to create money—to issue notes against credit," etc.

There is the whole question in a nutshell. A bank is started to lend money to the public. Bond security implies that this money shall be locked up in permanence by the purchase of stock-exchange securities. Elasticity is destroyed *ipso facto*. But, says somebody, bonds are necessary as security for the notes. Ah, it is a question of security, is it? Then we have to choose between one kind of security and another kind; and if we can somewhere find security plus elasticity, we should give it the preference over security joined to stiffness and inflexibility. Now, Mr. Hepburn, in the article from which we have quoted, adds his testimony to that of many other authorities by advocating the safety-fund plan. "An annual tax," he says, "of one-half of one per cent. imposed on the outstanding circulation of the national banks from the time of their organization would have redeemed every note of every failed bank and paid the entire cost of the national banking system during a period of thirty years, with something of a margin over. The experience of thirty years ought to be, and is, a safe criterion on which to base legislation as to the future."

At the recent bankers' convention at Chicago the opinion was nearly unanimous that the safety-fund plan was the right way to supply a currency which should be both flexible and secure. We are not by any means sure that Congress will agree to the views of experts, or even think it necessary to inquire what they are. The doctrine is pretty well fixed in the heads of politicians that financial science comes by nature, just as reading and writing did to *Dogberry*. This conceit was the cause of the fifteen years' wrangle over the silver question. Perhaps we shall have as much over the banking question. We have little fear, however, that Con-

gress will adopt the ideas sketched by Mr. Springer. We even doubt whether his own committee will adopt them. Mr. Springer is opposed to State bank-notes. If he succeeds in neutralizing those who favor that system, and if they succeed in neutralizing him, that is perhaps as much as we can expect at the present time.

## A MOUNTAIN PARADISE.

VENICE, October 31, 1893.

THIS morning, as I took my early walk to the Fondamenta Nuova, and looked northwards across the lagoons, there stood out in the distance a clear, marble-like parapet, extending from east to west for forty miles. The sight recalled the pallid peaks in the background of Titian's "Presentation of the Virgin"; it brought back also a recent delightful month spent in the midst of those magnificent and little visited mountains, among which Titian was born. The Dolomite Alps were before me. That there should be anything left to say in praise of that magnificent region is a proof of the existence of great currents of travel. The Gulf Stream of Americans flows across England to Belgium and France, up the Rhine or the Rhone to Switzerland, into certain valleys, such as Interlaken, Chamounix, and Zermatt, and thence southward across three or four passes—the Simplon, Gotthard, or Brenner—into Italy. Sometimes a traveller is caught by an eddy and drawn into the Vosges, or the Black Forest, or the Engadine; a few drift into a region only sixty miles or so from Innsbruck or Verona or Venice, yet still not unaptly described by the title of Miss Edwards's well-known book, 'Untrodden Peaks and Unfrequented Valleys.' That book, written twenty-five years ago, called the attention of English travellers to the Dolomites; Ball's and Tuckett's guides drew the climbers; Gilbert and Churchill's beautifully illustrated volume attracted artists; the Germans descend upon it; the Austrians are proud of it; but if the testimony of inn registers and of personal experience in five journeys at different times may be accepted, the even monotony of the American cadence is almost unheard in the land. The few compatriots whom one meets are nearly all either artists or members of the American colony in Florence or Rome, who come up rather as Italians in *villeggiatura* than as Americans. Even our geologists have neglected a region in which both mountain-building and erosion have most significant illustration, and in which the modern "base-level" theory might be applied to the confutation of the old belief that the Dolomites are the ruins of a prodigious coral reef.

Without going into the question of the precise extent of the "true dolomitic" or magnesian limestone formation, the term Dolomites is by residents and travellers applied to a part of the southern slope of the Eastern Alps, occupying about sixty miles square, not far from the size of the Adirondacks. This region is cut off from the neighboring mountains by the deep valleys of the Eisack and Adige, the Drave and the Piave, on the west, north, and east respectively, and breaks off on the south into the lowlands of Venetia. Its mountains are visible from the usual highways only on the line from Verona to Venice and Pontebba, and at Botzen on the Brenner route; from the latter place one gets a view of the beautiful Rosengarten and the sister peaks. The Dolomite region is drained by a system of south-flowing rivers, in form not unlike the extended right hand: the thumb and forefinger are the Piave valley, with its main branches leading up to Cortina and Auronzo; the three other fingers are the Caprile, Primiero, and Sugana valleys. Between and beyond these streams and their affluents rise the mighty Dolomites.

The inexperienced traveller who supposes that a mountain is a mountain, learns his mistake as soon as he enters the Dolomites. In many respects they are unlike any of the other European or American groups. In the first place, they rise from a lower base than most of the high Alps; the valleys are cut deep, yet are seldom mere clefts in the rock, like the gorges of Switzerland; they are wide enough to furnish a contrast to their walls. Hence it is not uncommon to find what appear to be perpendicular peaks rising five, six, or seven thousand feet above their bases. In the second place, there are usually low taluses, clad with beautiful dense forest, sweeping up both sides of the valley. Above them shoot up mountains so strange, so fantastic, and so beautiful that the most blasé Alpinist is refreshed by them. Instead of the mighty sloping shoulders of the Swiss giants, rising like the roofs of a crystal city, we have here the perpendicular and horizontal elements, mountains built up in terraces, counterscarps, and towers. Almost every one of them, when seen at the proper angle, looks like a great organ, with pipes arranged in balanced wings, the longer in the centre. Unfortunately, few of them carry considerable glaciers; but one hardly misses the ice because of the splendid colors. Orange, red, golden yellow, creamy white, pink, and a soft gray are the prevailing colors—but each large group has its characteristic tint. The effect of the clusters of pinnacles soaring up out of the woods which hide their bases, is much enhanced by the separation of the great mountains from each other; they do not run into ranges, but stand each for itself. There is not one of them which a first-rate walker might not "circumnavigate" between sunrise and sunset; they stand as the Matterhorn stands, each one a monument. Hence, an individuality which makes them seem quite like friends as soon as one gets acquainted with them. Their very names are strange and imposing. Where else could one find such lofty titles as Duron, Cornon, Antelao, Sorapiss, Tofana, Nuvolau, Pomogagnon, Marmolada, Popena, or Cridola?

The people well correspond to the strength and picturesqueness of their surroundings. The Dolomite region has for centuries been a borderland in race, language, and government; and on each side something has been gained from the other. The boundary between Austria-Hungary and Italy zigzags through the mountains, although Italian is the language of most of the Tyrolese Dolomites. As elsewhere within the borders of the old Venetian Republic, the people are by tradition accustomed to peace and good order. Although the Italians have lately fortified nearly every pass on their side, and the Austrians are following their example, there are in the region over which the Lion of Saint Mark looked from his pillars only three or four castles or ruins of castles. Everybody knows that a mountain people is passionately devoted to liberty, tends to democracy and toleration, and is attached to the soil, but not to a dynasty. Has it not been so with the Greeks, the Welsh, and the Swiss? In the Austrian Dolomites, as in other parts of the Tyrol, we find an annoying disproof of these commonplaces. Here is a country very like Switzerland in topography, like Switzerland thrust between northern and southern civilizations, having an early history much like that of Switzerland; yet the Tyrol is the most monarchical country in Europe, and the most sternly Catholic. Even the Sette Communi, a little further to the south, a German-speaking republic for centuries, has lost both its language and its individuality; and when I visited it in 1885, it had become a matter-of-fact and loyal part of the kingdom of Italy. The contrast between the mountain Swiss and the mountain Tyrolese is shown also in the superior thrift and cleanliness of the latter. No Tyrolese village that I have ever visited shows the filth, squalor, and discomfort of the houses in Zermatt or Visp; and the detached peasants' farmsteads are larger, better, cleaner, and freer from intimate association with the cattle. In manners and appearance there is also an advantage: the Tyrolese are comfortably dressed, civil and genial; they have taken some good qualities from their southern neighbors.

Across the Italian border, the people seem to have borrowed less from the Tyrolese. Perhaps to an infusion of northern blood is due the remarkable beauty of many of the people; rosy children, comely maidens, even lithe and handsome old men and women may be found everywhere. But the Italian villages are dark and dirty; the old timber houses, however attractive to the photographer or artist, are dens of filth, blackened by the smoke of unchimneyed hearths. There are more people in the high valleys than the land can well support; hence emigration to America has set in. (This efflux is taking away the last remnants of a once thriving and still artistic industry. The gondola prows and fire-dogs and cranes of bright hammered iron continue to be made in Dont di Zoldo.) Even in remote and dirty villages one meets everywhere with civility and often with cordiality. Strangers are too few to be looked upon (as they are in Switzerland) as a kind of money on deposit for the benefit of the natives.

If travellers eventually destroy this seclusion, the increasing ease of access to the Dolomites will be a misfortune. From Toblach on the Pusterthalbahn, between Franzensfeste and Villach, it is three hours' easy driving to Cortina; from Feltre to Primiero, or from Belluno to Pieve di Cadoro, is but four or five hours, and a railroad to Cortina and another into the Val Sugana from Trent are now projected. Into the Dolomites one ought only to drive or walk. The few chaussées are well kept, and while nowhere, except just below Primiero, equalling the Swiss passes in grandeur, they all command superb views. As one drives, the great individual mountains rise, change, and fall behind, each as distinct as the Rock of Gibraltar. The few cross-roads penetrate up to the faces of the finest mountains, but they are uncomfortable for driving.

Roads are less necessary in a country in which nature so encourages the pedestrian. Between any two adjacent mountains is always a pass, sometimes steep, but seldom difficult; the views are but little inferior to those from the summits; and it is easy to arrange "round trips" ending at the point of departure. Sometimes the inns are unattractive; at Auronzo the cattle had the lower story, the kitchen and dining-room were above them, and the guests lodged still one story higher. Indeed, in all the Dolomites there are but three places—Landro, San Martino, and Cortina—in which there are comfortable hotels suitable for a long stay. But the traveller, even in remote valleys, usually finds plain but kindly inns.

Such was that at Fusine, in the Zoldo valley, to which I came one night in September, tired with a long tramp round about Pelmo, and where I found a large, reasonably clean building, provided with the delightful chimney-corner common on the Italian border. Around three sides of a hearth six feet square were benches; a hood caught the smoke from the fire of long sticks and conducted it into the chimney. In the middle stood a great pair of those splendid hammered iron fire-dogs which I had come into the valley to seek, tall, gracefully formed, and hung with a panoply of fire-tools. In a few minutes my supper was cooking in a pot hanging over the fire, aided by the hostess and her family of ten handsome children. The Juno-like eldest daughter brought the coals to a flame with the blow-pipe, the usual substitute for the bellows; the older children furnished wood; the younger ones gazed; the stately mother tasted; the host amiably conversed with the guest, and, finding him deficient in Italian, sent for the village doctor, who could talk German. Agreeable warmth, the smell of *pollo con riso*, and conversation with an educated and genial man combined to make it a place of grateful memory. For supper, lodging, and breakfast, each as good as the house could afford, the host thought three lire a sufficient charge. It was no more reasonable in proportion than the rates at some of the more pretentious houses. Three gulden a day—about eight dollars and a half a week—is the rate at the best houses in the region, for guests who spend some time.

Even for mountain-climbers the Dolomites have many attractions. The ascents are not very long and rarely lead over snow; but the rock work is "interesting"—that is, dangerous. A noted Alpinist told us that it was "shocking" to see the precipices up which the leading guide made his way; and the Kleine Zinne is said to be more difficult than the Matterhorn. Perhaps, after all, those get almost as much enjoyment who simply sit upon their terraces and watch the lights shift along the cliffs. From Cortina one sees grouped about him eight of the greatest Dolomites, and even thence there is no view of Pelmo, Civetta, and Marmolada, king, queen, and prime minister of the realm. Whoever once gets within the magic region as geologist, tourist, pedestrian, climber, or simple lover of nature will surely come again. ALBERT BUSHNELL HART.

## PASQUIER'S NAPOLEONIC MEMOIRS.—IV.

PARIS, November 7, 1893.

IT is a bad habit of publishers to issue historical memoirs in separate volumes at different dates. It will be time enough to return to General Thiébault's Memoirs when the second volume makes its appearance. I have now before me the second volume of the Memoirs of Chancellor Pasquier, a volume full of interest, as it covers the extraordinary, I might almost say the epic, period of the Russian war and the first invasion of France in 1814. During this period, from 1812 to 1814, Pasquier was prefect of police; he had, therefore, the best means of information, and he became one of the most important witnesses and actors in a great historic drama.

The second volume opens with the account of the conspiracy of Gen. Malet, an event which showed to the astonished world on what a shallow basis the power of Napoleon rested. The Emperor was in Russia, and the French heard of his operations only through the rare and brief bulletins which he sent from time to time. Paris was uneasy; the ministers were tormented with fears, and one of them, Decrès, Minister of the Navy, said one day to Pasquier: "The Emperor doesn't see what everybody sees. . . . Marmont has been beaten in Spain by Wellington; Spain will be lost in six months. . . . All this will have no effect; the Emperor will merely ask for new conscripts. The Senate has just given him 140,000; that makes 440,000 for this year. Do you think the cord will long resist? . . . No; I tell you, he is a lost man." Pasquier adds, with some simplicity: "My position was difficult on hearing such words from the mouth of a personage with whom I had no real intimacy; I offered some objections *pro forma*."

Gen. Malet had served first in the mousquetaires. During the Revolution he showed himself an ardent revolutionist; none of the horrors of the Revolution had discouraged him; he was one of the Terrorists of the army. He had seen with much displeasure the substitution of the Empire for the Republic, and had entered into various plots against the Emperor. He was a member of a secret society, the "Philadelphes," composed of republicans and of Chouans. In 1812 he was imprisoned, but, on pretext of his health, was allowed to go from the prison of La Force to a *maison de santé* in the Faubourg St.-Antoine. He found there M. de Polignac, and several royalists, among whom were a certain Abbé Lafon and M. de Puyvert.

Malet's plot was as audacious as it was simple—to put on his uniform of general, to present himself at the door of two barracks, to announce the death of Napoleon in Russia, to read a supposed senatus-consultum abolishing the Empire, establishing a provisional government, giving full powers to Gen. Malet, and placing all the troops at his disposition. Such were the main features of a plan conceived by Malet and M. Lafon, and executed by them, with the help of two or three persons, for there were only five persons in the secret.

In the middle of the night Malet succeeded in forming a force of 1,200 men, and marched on La Force, where he delivered some political prisoners, among whom was a Gen. Lahorie. He then proceeded to the Place Vendôme, and, finding that Gen. Hulin would not believe him, he fired a pistol shot at him with his own hand. He was on the point of firing at another general, the chief of staff, when he was arrested by the guard of the hôtel. Meanwhile Lahorie had arrested Pasquier and the Duke of Rovigo; a detachment had gone to the Prefect of the Seine, Frochot, who for a moment was completely taken in and offered no resistance whatever. A military commission was appointed. Pasquier confesses that all the researches made in order to find accomplices among republicans or royalists were vain. Five men were condemned and executed, as well as eight officers or non-commissioned officers who had followed Malet too readily. Malet and Lahorie both died with the greatest courage.

The impression made on Napoleon by this unexpected event was very great. It was not easy to persuade him that the imperial police was not at fault, but Malet had really taken very few people into his confidence. Napoleon returned from Russia, after the evacuation of Moscow, and arrived on the 18th of December, 1812; he received the next day the Senate and the Council of State. He appeared greatly incensed at the idea that when the rumors of his own death had been spread abroad, the rights of his infant child, the King of Rome, had been forgotten. "Our fathers," said he, "had for their cry: 'Le Roi est mort, vive le Roi!' In these few words were contained the chief advantages of monarchy." M. Frochot, who had not made even a show of resistance to the conspirators, lost his office of Councillor of State and of Prefect of the Seine. Napoleon manifested no severity towards Pasquier; he merely remarked to him, "Well, Mr. Prefect, you, too, have had your bad day; there are such days in life."

The coalition was forming after the disasters of the Russian campaign. Napoleon had to create new armies.

"In this year, 1813, from the 11th of January to the 7th of October, 840,000 men had been drafted in France. I have already told of the sacrifice of the preceding year, which was enormous. Never, I believe, in any country was the like ever seen; never had a nation been asked in this way to be led to butchery. France could do it no more; that is the truth, and therein is the secret and the explanation of what happened afterwards. With these successive appeals to conscription, past, present, and future, with these brevets of lieutenants imposed on the young men of the best families, even when they had escaped conscription or bought substitutes in accordance with the law, there was not a family left which was not in alarm when it was not in tears."

"What happened afterwards," to use Pasquier's words, was the invasion of France. When the Corps Législatif met on the 19th of December, 1813, a new decree was made, organizing 160,000 men of the national guard in cohorts; in that year as many as 1,300,000 men had been called under arms. Pasquier tells us that inscriptions were beginning to appear on the walls of Paris of "À bas le tyran!" When Napoleon left the Tuileries, a man said, "Will nobody deliver us from this rascal?" The man was arrested; his name was Bassompierre, an historical name. There was but one witness, a gendarme, to testify against him. Bassompierre denied having said anything, and pretended that the gendarme had made a mistake. Pasquier put the case before Napoleon, who contented himself with sending Bassompierre to Tours, where he was to remain free, but under the eye of the police.

On the 3d of January, 1814, Pasquier was alone with the Emperor.

"Well, what do they say in Paris? Do they know that the enemy's armies have positively crossed the Rhine?" "Yes, Sire; they learned it yesterday." "How numerous do people suppose that they are?" "They speak of 200,000 men." "They are many more—from three to four hundred thousand, and they have crossed the Rhine at seven or eight different points. What do people expect of me?" "They do not doubt that your Majesty will at once put yourself at the head of the troops and march against the enemy." "My troops! my troops! Do they think that I still have an army? Almost all the men whom I brought from Germany have fallen victims to this terrible disease which has been the culmination of my disasters. An army! I shall be very fortunate if, three weeks hence, I succeed in bringing thirty to forty thousand men together."

Napoleon, in the midst of all his cares, was haunted with the idea that the return of the house of Bourbon had become a possibility: "I am not far," says Pasquier, "from believing that his pride was flattered by the thought that he could be displaced only by this ancient dynasty. This preoccupation must have been very strong, for twice he spoke of them to me. 'You are too young to have really known the house of Bourbon; you had hardly come into the world when the Revolution began.' I answered him that three years ago I was already a councillor in the Parlement of Paris." At another time Napoleon put him questions about the princes, especially about Monsieur. Napoleon

often put such questions to the Duc de Vicence (Caulaincourt), who had been in the household of the Condés. The Emperor had given to Talleyrand a place in the Council of Regency which he instituted when he took the field. He had lost confidence in him, but he dreaded him; he had thought for a moment of shutting him up in the prison of Vincennes before leaving Paris. M. de Talleyrand had been preserved from this danger by the representations which were made to Napoleon by M. de Cambacérès, the Duc de Vicence, and even the Duc de Rovigo. Napoleon's instinct was right, for Talleyrand became the chief instrument in the restoration of the Bourbons. The princes entered France; the royalist party in Paris sent M. de Vitrolles to the headquarters of the Allies. Bordeaux opened its doors to the Duc d'Angoulême. All these events are well known, as well as the incidents of the short campaign, during which Napoleon showed himself the greatest strategist of his time. All was vain; the Allies marched on Paris, and the battle before the capital ended in its capitulation.

At this critical moment Pasquier becomes very interesting, almost dramatic. As prefect of police, he had to go to the Russian headquarters, in order to settle a number of details connected with the entrance of Alexander and his army into Paris. Alexander was at the château of Bondy.

"This château was occupied by my grandfather at the time of my early infancy. . . . I was brought back to it by one of the greatest events which had taken place since the beginning of the monarchy. I brought the submission of the city of Paris to a sovereign whose states a century ago were hardly known to our fathers, and who, advancing from the borders of Asia, dragging the whole of Germany after him, came to impose his law on the France of Clovis, of Charlemagne, of Henri IV., of Louis XIV., of Napoleon! And we had ourselves gone to seek him in his cold domain; we had brought him and his Tartars on our tracks by the light of his burning capital and cities."

It is not often that the generally prosaic Pasquier becomes grandiloquent, but the circumstances were such as would have moved even a colder heart.

Nesselrode showed Pasquier a proclamation of Schwarzenberg, in which it was said that "the allied sovereigns were looking in good faith for a salutary authority in France which could unite itself with all nations and governments." The city of Paris was expected to express what it meant by a "salutary authority." Alexander was waiting only for the expression of the wishes of Paris. Napoleon, however, was excluded. When Alexander received Pasquier and the representatives of the Municipal Council who accompanied him, he did not conceal his sentiments with regard to Napoleon. "I have," said he, "but one enemy in France; it is the man who has unworthily deceived me, who has violated all his oaths to me, who has waged in my states the most unjust and impious war. All reconciliation between him and me is impossible." This was repeated in twenty different ways. The Emperor, in order to enforce his views, granted to Pasquier all he asked; the national guard of Paris was to keep its arms and to continue its service; all public and private properties were to be respected.

The Emperor Alexander entered Paris the next day. He heard some royalist acclamations, "Vivent les Bourbons," but only in the quarter of the Boulevard de la Madeleine; the great majority of the Parisians remained silent. A council was held at Talleyrand's hôtel, where Alexander took up his quarters. Talleyrand used his persuasive powers and his influence in order that in a new proclamation the allied sovereigns should declare that they would not treat with Napoleon nor with any member of his family. "This was easily accepted; in great affairs, when a certain point is gained, nobody cares to discuss the rest." The great point was Napoleon's exclusion; his family was the rest. "Prince Schwarzenberg and Prince Lichtenstein thus formally consented to exclude from the throne of France the son of the Archduchess Marie Louise. . . . Most certainly they had no authorization from their sovereign for entering into such an engagement." The crisis was now coming to its end. The Allies were in Paris; they refused to treat with Napoleon, and Napoleon was in the rear of their armies and approaching Fontainebleau.

## THE AMERICAN PROTECTIVE ASSOCIATION AND McKINLEY.

To the Editor of The Nation:

Sir: My former letter, published in your issue of November 9, called attention to the American Protective Association. There can be little doubt that this movement contributed not a little to the phenomenal majority of McKinley in the campaign just closed—how much, of course, cannot be told. We have to deal with the often intangible influence of a secret society, and he would be a daring man who should endeavor to discover the exact number of votes lost to Neal and gained to McKinley by it. The principal reason for McKinley's great triumph was doubtless the prevailing hard times and lack of employment. The Governor conducted a splendid campaign. Almost every part of the State was visited, and he made sometimes three or four speeches a day. He remembered, no doubt, that at his door had been laid the responsibility for the two most crushing defeats ever sustained by his party, and he determined to retrieve his political fortunes. His knock-down argument was: "These are Democratic times; how do you like them?" The party in power was blamed for the distress. Then there was the usual apathy following a Presidential election, with its horde of disappointed office-seekers. Neal's following is hardly in entire sympathy with Cleveland's administration. Many felt a desire to rebuke the party for the long and shameful obstruction in the Senate on the repeal of the silver-purchase clause of the Sherman law.

In addition to all this I am persuaded that the anti-Catholic movement had a weighty influence. This county (Franklin) is usually Democratic, but this year the Republicans carried all the offices but one. It is said that most of the Republican candidates are members of the A. P. A. Quite a number of Democrats are members of this secret organization, and have therefore taken an oath not to countenance the nomination or election of any Roman Catholic. Their votes were in all probability cast for McKinley. I am informed that representatives of that society approached one of the Democratic candidates for reëlection with the promise of the support of the order if he would agree to join it, and to discharge his Roman Catholic clerks. He refused and was beaten. The one Democrat elected is reported to have joined the A. P. A. This is certainly true, that, a few days before election, the Columbus *Record*, the organ of the anti-Catholic movement, came out advising support of him.

At the beginning of the campaign, the *Catholic Telegraph*, published in Cincinnati, in an editorial asked both McKinley and Neal where they stood as regards the attempt of the A. P. A. "to abridge and destroy their civil and religious liberties." Copies of the paper were sent to both candidates. McKinley's private secretary acknowledged receiving it, and promised to bring the matter to the Governor's attention when he returned home. Nothing further was heard from Mr. McKinley. The Governor evidently knew on which side his bread was buttered, and, like a long-headed politician, kept a judicious silence. Mr. Neal responded at once, that he had no sympathy with any organization that sought to restrict the civil and religious liberties of the Catholic citizens of Ohio. Doubtless this courageous answer cost Mr. Neal many votes. Gov. McKinley led the ticket, receiving a total of 15,960 votes, being 1,089 more than the least number received by a winning candidate, and 225 more than the one who stood next to him. There was but one Roman Catholic in the field, the Democratic nominee for auditor. His competitor came next to McKinley in the number of votes received. There can be little doubt that a goodly number of otherwise Republican voters scratched the county ticket in opposition to the A. P. A. I heard several declare their intention so to do, and one paper on election day reported that business men were doing it to some extent. This accounts for McKinley's lead. He received the total vote of his party and, in addition, all Democrats members of, or in sympathy with, the A. P. A.

Respectfully yours, Alexander Milne.

Columbus, O., November 14, 1893.

## PRESIDENT CLEVELAND'S COMPLICITY.

To the Editor of The Nation:

Sir: Before acceding to the request of Mr. "H." of the University Club at Boston to acquit President Cleveland of responsibility for the axe-swinging performances of Messrs. Quincy and Maxwell at Washington, I would ask you to investigate and consider the question of his complicity in similar but more aggravated performances still going on at the capital, particularly in the Departments of the Interior and the Treasury. The field is too broad a one to be surveyed in full within the compass of this letter, but I will confine myself to the single class of men, or the widows or daughters of men, who, having served their country honorably on its battlefields, are daily being turned out of their little places in the public offices here, in their declining years, on the verge of a distressful winter, without impeachment of their character or capacity or of their political inoffensiveness.

I suspect there are many readers of the *Nation* besides myself who would be glad to know, or believe, that President Cleveland is in blissful ignorance of the stain that some of the men he has chosen to be heads of departments and bureaus at Washington are putting on their and our country's name, by practices that no civilized people could honestly sanction or defend. C. F. B.

Washington, D. C., November 17, 1893.

## HIGHFALUTIN IN THE DEPARTMENT OF PUBLIC INSTRUCTION.

To the Editor of The Nation:

Sir: One of the curiosities displayed by the State of New York at the World's Fair was a pamphlet entitled 'The Schools of New York,'

and professing to be a portion of the "New York State Educational Exhibit." It bears the arms of the State on the cover, and is prepared by the "Department of Public Instruction." Your readers, I am sure, will be interested in a specimen of this document, and I shall ask space for only one "elegant extract," which represents very fairly the purpose, the taste, and the rhetoric of the modest anonymous writer. I quote from page 70:

"The sunrise of education in this State, over two centuries ago, was full of cloud and doubt and uncertain presages. But the glorious orb has now mounted to the top of its noonday tower, and all clouds are melted away into the blue, while in every part of this broad land, from Lake Erie to Montauk, from the North woods to the Pennsylvania line, the light of education falls on thousands of schoolhouses with their million pupils. But wonderful as the advance in New York in two centuries and a half has been in all educational departments, the exceptional productive and vivifying power that seems to permeate this State in everything it essays in the line of progress, cannot fail to bring forth, ere the twentieth century is well advanced, such results in public instruction as will make the ignorant man in New York as extinct as the dodo. The wonderful possibilities of education and the far-distant heights yet unclimbed by our educators, are mirrored with faithful distinctness in the translucent lake of our common-school system. We look forward confidently to the day when the system shall pervade every part of the State, *as the sole representative of the intellectual needs of the people, controlling colleges as well as country schools*, inspiring all within the commonwealth, gathering in all the children of school age, filling the entire territory of the State with schools—to which, as architectural features alone, each locality will point with pride to the inquiring stranger—supplying even the humblest country schools with a corps of trained, zealous teachers, who will look upon teaching as a noble profession, not as a makeshift or stepping-stone to something else, filling the land with normal schools, teachers' institutes, training classes, and educational conventions and societies, and acting as an invigorating elixir to every branch of industrial development within the State. Grand as the present prospect is, when we look around the educational horizon, it is but a small area compared with that which the schools of the future in the Empire State will occupy."

This dithyrambic peroration requires very little commentary. The lines I have underscored allude to a favorite scheme of the author, that all the departments of education in the State should be merged into one, viz., "the Department of Public Instruction," for which he apparently speaks. By this process, of course, the "Board of Regents" would be abolished; though, curiously enough, almost every distinguished man whom the author mentions as connected with the advancement of education in the State was a member of this Board. As to the present methods of the Department of Public Instruction, your readers may be glad to know (page 47) that "no military system of supervision, even in the Napoleonic era, was more complete and more readily managed by an individual head than is the Department of Public Instruction of the State of New York."

As to the present attitude of this Department—"which is to control colleges as well as country schools"—towards the higher university education, the author quotes with approval the Chadbandish declaration of a former superintendent, "Advanced study is not to be despised, *when well grounded*." (The italics are mine.) He also speaks of "the impuberal [*sic*] condition of the common schools," and remarks that "the policy of the Stuarts, and their successors, the Guelphs, was to discourage popular education, etc."

These excerpts suggest the general tone of a pamphlet which was circulated widely at the Exposition. I offer them practically without comment, because they have a natural eloquence which I cannot improve. But I wonder how the document struck the people at Chicago. I wonder how it struck M. Gabriel Compayré, for instance, and the other distinguished gentlemen who assembled there to investigate our system of education. The Chicago people are proverbially sanguine, but I believe that even they will shake their heads sceptically over the date assigned for the extinction of the dodo-ignoramus in the State of New York. They may ask us, "How are you going to do it? Will you rely exclusively upon the Napoleonic aid of the Department of Public Instruction? And if so, does this pamphlet represent, or does it misrepresent, the culture and the spirit of the administration which supervises your common schools?" A TEACHER.

NOVEMBER 13, 1893.

## WHAT IS THE DIFFERENCE?

TO THE EDITOR OF THE NATION:

SIR: It is with some misgiving that I send this letter lest I write myself down a hopeless reactionist; yet it is because I would fain *not* be such a reactionist that I venture this prayer for light, and modestly ask the question: What is the real difference between a prize-fight and a game of football? I have been interested in the noble ardor of the Brooklyn clergy in their attempt to stay proceedings in the meeting between Mr. Mitchell and Mr. Corbett, and I understand that the objections to a prize-fight are three in number: (*a*) It is brutal; men are injured and blood is spilled. (*b*) It encourages gambling. (*c*) It tends to over-much hilarity and disorderly conduct. During this season I have kept a list of some of the results of football as follows: Under head (*a*): The team of ——— College so disabled that only two men were able to appear for some days. A man so injured in his side that he was obliged to play in a steel corset or cuirass. Three broken legs. Two broken arms. Man carried from the field with a terrible cut in his head and blood running profusely over his clothing. One nose broken. One man now hanging between life and death. One man killed. Under (*b*): One needs only to talk with men interested in such matters to learn, and even see for himself if he cares to, that large sums of money change hands with every important game. The irresistible desire which college men have to see a good game leads many to wager money in hopes of paying their expenses to the grounds. If they lose—what new moral complications are introduced into their lives? Under (*c*): We remember when, at the last Yale-Princeton game, New York was "painted red." The same thing happened with possibly a somewhat subdued color in other cities. We read in our papers yesterday that some disorderly students were arrested after last Saturday's game. The faculty of a certain college have been obliged to order their men after the next great game to be at home before midnight, lest disorderly conduct be repeated. Possibly some of us have seen this disorder and know what it means.

Now, in a prize-fight, the people injured are those whom society can manage to do without. Our football players, on the contrary, are fine educated young fellows, on whom the country is to depend. The crowd who bet and carouse at a prize-fight belong to a set who gamble and drink on every occasion, and the fight is simply an opportunity, not a temptation. The men (and women too) who lose control of themselves during and after a football game are accustomed to lead reasonably respectable lives, and find in the wild excitement of the time a temptation as well as an occasion for sin. Why is one so disreputable, the other permitted if not encouraged by the leading institutions of the land? If it be said that men fight for money and kick football for fun, it might be replied that the gate receipts of a game bring thousands of dollars to the competing teams, and I am informed that any first-rate baseball or football player can have all his college expenses paid. This, however, may be a "campaign lie."

I am not writing as a judge, nor that I may condemn what public sentiment seems to condone. I am simply curious to know what subtle distinction exists which makes Mitchell's cake vicious and Princeton's ale virtuous. Let there be light. E. L. STODDARD.

ST. JOHN'S RECTORY,
JERSEY CITY HEIGHTS, Nov. 13, 1893.

## DILÎP SINH.

TO THE EDITOR OF THE NATION:

SIR: In the obituary notice of this erratic person just published in the London *Times* there are two points which seem to deserve brief comment. We there read:

"Doubts have been raised as to Dhuleep Singh's parentage; but it is needless to consider the question. First Runjeet Singh, and then the British Government, recognized him as legitimate; and, for all practical purposes, that decides the matter."

In the article *Sikhs*, in the first edition of 'Chambers's Enclopædia,' we read, also:

"Every loyal Sikh is still confident that his people is suffering but a transitory depression, and that it is destined to retrieve, and even to surpass, its bygone glory. In the meantime, the reputed son of a wife or concubine of Ranjît Sinh, Dilîp Sinh, is a pensioner of the British Government, has professed Christianity, and has taken up his abode in England."

After a good deal of research, it was found impossible to arrive at any other conclusion than that which I thus expressed. The fact is, that, as regards Dilîp Sinh's father and mother, there is not the slightest evidence who or what they were. Presumably, one or other of them was dark-skinned; and that is about all that we can even conjecture about them.

"Of his own free will," the *Times* further states, Dilîp Sinh "came to reside in England, and adopted the Christian religion." This will certainly be taken to mean that first he came to England, and embraced Christianity subsequently. It so happens that I had a slight acquaintance with him in India, shortly after he had been baptized by an American missionary in the Panjâb. The name of the missionary I have forgotten; but some one of your readers can, I have no doubt, furnish it.

Of Dilîp Sinh the *Times* says: "Even after the folly of the rulers and the military ardour of the Sikhs had brought about the loss of his crown, he might, with ordinary prudence, have procured, for himself and his family, a prominent and permanent position among the British aristocracy." To old-fashioned Englishmen this must suggest an admirable method of reinforcing, at need, the ranks of those who would check the pestilent progress of liberalism. The method may be formulated as follows: "Catch a semi-barbarian of large possessions and influence, who passes for a Christian; relieve him of the burden of his patrimonial wealth and power; pretend that he once had a title, the very memory of which is venerable, to the sacred attribute of regality; pension

him liberally out of the spoils of unscrupulously selfish conquest; and accept him as pretty much on an equality with the notabilities who stand nearest to the throne." The effect of such a device on the swinish democracy can be safely predicted.

In the third volume of the *Missionary*, published at Calcutta in 1853, appeared an enthusiastic article, by its editor, the Rev. Dr. William Kay, on "The Baptism of Maharaja Dulleep Singh." It begins: "The baptism of an Indian prince may be celebrated as a new era in the annals of the church. There are but few instances, in the whole history of Christianity, of crowned heads' being washed by the waters of regeneration, after the deliberate renouncement of paganism and conviction of evangelical truth." Mention being premised of Alfred and Guthrum, Clovis of France, and Ethelbert of Kent, the learned and hopeful divine continues:

"We venture, however, to think that the case of the convert Dulleep Singh contains in it elements of greater interest than any of these. . . . The veneration naturally due to the memory of an illustrious father, whose greatness, as a king, was consistent with his antipathy to Christianity, had to be corrected. . . . Man had deprived him of his *Koh-i-noor;* God has given him 'the pearl of great price,' the *true mountain of Light*. . . . He was placed under circumstances which were sanctified by Divine grace to lead to his conversion. . . . Such an event is, no doubt, intended, in the counsels of God, to give a more than ordinary impulse to the progress of the Gospel in India. But it is not in man to lift up the veil which shrouds the future."

And, if it could have been lifted up, Dilip Sinh would have been revealed as abjuring, in his ignorant maturity, for Sikhism, the Christian profession of his ignorant boyhood; for he was baptized at the age of fifteen. That he abjured his abjuration is, however, to be presumed, seeing that, when he was buried, two days ago, in the Elveden churchyard, the local clergy officiated at his funeral. The occasion was signalized by wreaths and deputy mourners sent by the Queen and the Prince of Wales, and what not. And so ended the career of a man who, for all his £40,000 a year, existed to no discoverable good purpose whatever.

F. H.

MARLESFORD, ENGLAND, October 30, 1893.

# Notes.

FLEMING H. REVELL CO. will issue on December 1 'Reality versus Romance in South Central Africa,' an account by Dr. James Johnston of his west-east transcontinental journey from Benguela to the mouth of the Zambesi three years ago. Its large and numerous photographic illustrations promise to be highly valuable.

Fords, Howard & Hulbert have nearly ready 'Two German Giants: Frederic the Great and Bismarck,' by John Lord, D.D., and 'The Sistine Madonna: A Christmas Meditation,' by Amory H. Bradford.

Prof. Ely's new book on 'Socialism' is in the press of T. Y. Crowell & Co., for publication in the spring.

Merrill & Baker announce 'Apprentices to Destiny,' a novel of the cultured West, by Lily A. Long.

J. Selwin Tait & Sons have in press Memoirs of the late Mrs. Botta, edited by Prof. Vincenzo Botta, with a portrait; and a story of the Lincolnshire fens, 'Cheap-Jack Zita,' by S. Baring-Gould.

Three books announced in London by Mr. Elliot Stock are likely to be interesting to lovers of books as books. One is an English translation of M. Octave Uzanne's belated volume on the Parisian book-stalls, with an introduction by Mr. Birrell. Another is a 'History of the Art of Book-Binding,' by Mr. W. Salt Brassington, to be elaborately illustrated. The third is 'Book-Song: An Anthology of Poems of Books and Bookmen,' which seems to be an attempt to do over again the American selection known as 'Ballads of Books.'

Estes & Lauriat issue, in the style of 'The Lily of the Arno' and of Houghton, Mifflin & Co.'s 'Marble Faun,' Mrs. Clement's 'Queen of the Adriatic.' The text is a rambling mixture of compilation and impressions, and the photogravures give as good an idea of Venice as photographs can, which is not very good. Venice without color is not Venice.

Some of Walter Crane's illustrative designs for Mrs. Deland's 'Old Garden' (Houghton, Mifflin & Co.) are fanciful and graceful, but all together they do not reach his highest level. They are printed in colors on one side only of the paper, which is folded in the Japanese way. The old-English type may be in harmony with the designs, but is cruel to the eyes, and makes it certain that the book will be looked at, not read.

To a large proportion of the readers of Mr. Barrett Wendell's 'Stelligeri, and Other Essays concerning America' (Charles Scribner's Sons) the first part of the title will not be enlightening. According to the old nomenclature of the Harvard quinquennial catalogue, the *stelligeri* were, it seems, those members of each class who were reported as dead. Their names were marked with an asterisk, and a comment at the end of the roll stated in regard to them: *E vivis cesserunt.* Star-bearers, indeed, by right of death or fame, are those of whom Mr. Wendell's essays treat, for two are on Lowell and Whittier, and almost all of the others have to do with the emotional and spiritual life of the Puritans. The latter, Mr. Wendell asserts, were men of more imagination than they are credited with, in that their test of election, the power of exerting the will in harmony with that of God, forced on them a life of passionate idealism. In another essay he ingeniously suggests that some of the Salem witches were, after all, guilty, not of the crimes of which they were accused, but of habitually exercising, for evil purposes, an hypnotic influence over weak creatures about them. The longest essay in the volume is that on American literature, which the author finds non-existent; the best is a vivid portrait of Lowell as he seemed to one of his pupils. Throughout the book Mr. Wendell has much to say that is worth listening to about the permanent and impermanent elements of Puritanism, and the degree to which both should contribute to our treatment of the new problems which America has now to solve.

Dr. Albert Palmberg's 'Treatise on Public Health and its Applications in Different Countries' (London: Swan Sonnenschein & Co.; New York: Macmillan) is a unique and valuable collection of facts, comparisons, and commentaries. This edition is a translation from the French, the original work being in Swedish; and the translator, Dr. Arthur Newsholme, is also the editor, and has made it complete so far as English legislation and comment thereon are concerned. The author is the medical officer of health for Helsingfors, Finland. He starts with the fundamental idea that public hygiene is the most empirical of sciences, and that a competent knowledge of sanitary arrangements is best acquired by studying the practical working of those that have been enforced by statute or regulation. For this purpose Great Britain, Belgium, France, Germany, Austria, Sweden, and Finland have been drawn upon, and the result might well be called Commentaries on Comparative Sanitary Law. England confessedly leads in general practical sanitation, and it is therefore satisfactory to find about two-fifths of the book to be given up to that kingdom and Scotland, and the editor's comments to be uniformly intelligent and practical. A great deal of the English law is of no importance to us in its municipal dress, but nearly the whole of the results that bear on public health is of value. Detailed criticism properly belongs to the technical periodicals, but the general character of the work is good. We may express our surprise, however, that, with London's superb ambulance service for its infectious hospitals, it should rest content with the meagre transportation by stretcher for its sudden casualties by injury or disease.

"In 1892 occurred the publication and sale of the first edition of 10,000 copies of 'King's Handbook of New York City.'" This entry we find among the notable events of the past year as recorded in the second edition of the above work, which has been enlarged by one-tenth as to pages and one-quarter as to cuts, and now offers a very solid mass of information well-arranged and well-indexed (Boston: Moses King). It is without a rival.

The Western eagle screams aloud in 'Shepp's World's Fair Photographed' (Chicago: Globe Publishing Co.) This is a stout album of plates commemorating the main aspects of the Fair, without and within, and, incomplete as it is, probably containing views of some objects overlooked by almost any visitor. The process prints are rather dead, but they serve their purpose; the text, as we have intimated, abounds in superlative laudation and glorification. It repeats the old fable as to the original of the New York State Building.

Profs. Williams and Clark of Johns Hopkins University have shown their usual enterprise and public spirit in the preparation of an excellent account of the Geology and Physical Features of Maryland for the 'World's Fair Book' of that State. It includes chapters on the topography, climate, and geology; this last divided under the Piedmont plateau, the Appalachian mountain region, and the coastal plain. There are several climatic charts, an excellent geological map, and a number of views of characteristic scenery. Among the latter, the beautiful view looking west over the Cumberland valley from the crest of the Blue Ridge deserves especial mention. These chapters have been separately reprinted, and are for sale by the university at the very moderate price of a dollar.

Among the many other World's Fair books, mention may be made of an attractive little pamphlet distributed from the North Dakota State Building. It presents some admirable views of the great wheat fields of the Red River valley, the cattle ranges of the uplands, and the dairy farms of the Missouri valley. The changes wrought in ten years of our rapid civilization are shown by views of the shanties in which the "early settlers" of 1882 first made their homes, and of the comfortable modern houses and commodious barns which now succeed them.

The approaching close of the year is attended with the usual crop of calendars. The largest and most showy yet to hand is the "Times and Seasons Calendar for 1894," from E. P.

Dutton & Co. These hinged sheets are decorated in quiet good taste if without any originality of design, the color printing having been done in Bavaria. The drawings and the text have a religious motive. Mary A. Lathbury's "Good Cheer Calendar" (Boston: De Wolfe, Fiske & Co.) makes child-life the subject of its colored vignettes, and offers extracts from the greater and the minor poets along with Miss Lathbury's own verse, all with a view to the infant mind. In book form, and very dainty in every way, is the 'Calendar of Verse' (Thos. Whittaker), to which Mr. George Saintsbury furnishes an introduction that, in spite of some affectation and exaggeration, may be read with profit. The novelty of the selections, which are decidedly to be praised in point of taste, lies in the assigning of each month to a separate poet, beginning with Shakspere. William Morris is the only living poet admitted. Last of all we mention here a second collection by Mr. Horace P. Chandler under the title of 'The Lover's Year-Book of Poetry,' in two volumes (Boston: Roberts Bros.). "Married Life and Child-Life" is the principle of selection, and American minor poetry the most noticeable source. The standard is not high, if the cultivation of anything but sentiment is in view.

We have received from the *Librairie de l'Art* (Paris: G. Pierson & Cie.) a fresh budget of collected material for art study. Two folio brochures embrace respectively examples of the work of sculptors and animal-painters of many schools, the French preponderating, especially in the former. We miss here altogether any hint of the American school which the World's Fair proved must hereafter be reckoned with. Perhaps the most striking piece is Deloye's grim bust of Littré. The sketchy character of these memoranda lends itself better to the animal designs than to the statuary. Another and smaller series is called "Bibliothèque d'Éducation Artistique," in six-penny numbers. One section is devoted to alphabets, a second to decorative *motifs*. Three of the alphabets are from pen-drawings by Jules Habert-Dys, and are useful as warning examples; so are his three "motives." In both lots the exemplary designs are very few in number. Finally there is *L'Imagerie d'Art*, a Sunday penny "journal of popular instruction," without text save the legends of the heterogeneous plates and a line of biography of the artist in each case. The press-work in all these issues corresponds to the low price.

Lecène, Oudin & Cie. have added two more volumes to their collection of "Classiques Populaires," both excellent and full of matter and both written by men well acquainted with their subject. M. Léon Clédat's 'La Poésie au Moyen-Âge' will be consulted by others than the lovers of popularized literature. It is a clear exposition of that interesting literature, so long unknown and so ignorantly disdained, which is adorned by many a name now well known to every student of French letters. Systematically planned and intelligently wrought out, fully illustrated with specimens of mediæval poetry, modernized merely enough to make the meaning plain, M. Clédat's book gives the right kind of information which the well-bred man desires to possess without having to make a special study of the subject. The preliminary chapter on French versification and poetic forms, especially in the middle ages, is a fit preface to the review of the southern and northern poets which follows. To those who have read the monograph on Rutebeuf in Hachette's collection, M. Clédat's name will be sufficient warrant for the excellence of this latest work of his.

The other volume, on 'Chateaubriand,' is from the pen of M. Agénor Bardoux, whose name is familiar to readers of the *Revue des Deux Mondes*. The book is opportune, Chateaubriand's name and influence having come to the front again of late in the discussions aroused by M. de Vogüé's writings. Chateaubriand has suffered from the unduly severe judgment of Ste.-Beuve, too often quoted and relied on, and from the reaction against the exaggerations of the Romantic school of which he was the founder and Rousseau the precursor. M. Bardoux's work is that of a lifelong admirer of the great writer, and it is well done. Written in most captivating style, it sets Chateaubriand before the reader not in one aspect only, but in all phases of his character. M. Bardoux renders an especial service by showing how urgent was the need for the change which Chateaubriand wrought in French letters, how logical was the outburst of lyric passion he gave voice to, and how valuable to the full development of the language and the literature. The book is serious, not flimsy, but it will be popular as it deserves to be.

It is a good sign for the future of the drama that it is again becoming fashionable to publish plays. In France the habit has always obtained. In England Mr. Pinero, Mr. Gilbert, Mr. Jones, and Mr. O. Wilde are now publishing their plays, and in Germany the dramatic section of the catalogue of the marvellously cheap "Universal-Bibliothek" of Reclam is large and growing larger. It contains, besides the dramatic masterpieces of all nations, by Augier, Björnsen, Calderon, Corneille, Goldoni, Goethe, Hugo, Ibsen, etc., many plays by contemporary German dramatists such as Blumenthal, Fulda, Schönthan, Strindberg, and Voss.

*L'Art* for October 1 (Macmillan) opens with the first of a series of letters on the American painters at the Columbian Exposition by Léopold Lefebvre. It is unillustrated save by a poor cut after a portrait exhibited at the Salon of 1882 by Kenyon Cox, and by views of some of the Fair buildings.

Three women, two Americans and one Englishwoman, have been, "by way of exception," fully admitted into the University of Göttingen, by the authority of the Prussian Minister of Education. Two of them are in Mathematics, pupils of Prof. Klein, and one is in Physics. It is fitting that the first official recognition of the presence of women in a Prussian university in recent times should occur at Göttingen, which gave the degree of Doctor of Philosophy to Sophie Kovalevski some twenty years ago.

Another manifestation of interest, on the part of the Göttingen faculty, in the advancement of women's education is furnished by the special courses for women given outside the university by university professors. This year, as last, a considerable number of such courses has been offered, and the work already done by those attending them has received hearty commendation from the instructors.

Houghton, Mifflin & Co. write to us as follows:

"We notice that in your last number you spoke of Mr. Aldrich's 'Old Town by the Sea' as a reissue, thereby, of course, giving the impression that it is merely a new edition of a book previously published. The book is wholly new as a book, and indeed a considerable portion of it is entirely new, some portions of it which have appeared in periodicals having been very considerably enlarged and to no small extent rewritten. It will gratify Mr. Aldrich, and be an act of justice, if you will kindly correct the impression given by your remark."

—Seven years ago we noticed the seventh edition of the Fiction Catalogue of the Boston Public Library, and we now have the pleasure of calling our readers' attention to the eighth issue of this work, which must prove of great use everywhere, since the collection to which it is an index contains nearly all the books which any of our popular libraries are likely to have. We are pleased, also, to notice that the cataloguer has come round to our view of the futility of placing George Sand's books elsewhere than under the name by which this author is universally known, and that, in a few cases where we pointed out that names assumed to be genuine were really pseudonyms, the cataloguer has made the needed corrections. We regret, however, to see that many old errors are reproduced; and as the work serves as a bibliography as well as model catalogue to innumerable smaller libraries, we think it worth while to mention some of them. The error most likely to cause confusion arises from an author's works being separated under two or more names (without cross-reference), or entered under their title only, not with his other works under his name. Of this we have marked several instances. Thus, under "Alcott, Harriet H.," is found 'Isora's Child,' while under "Olcott, Harriet A." (the correct spelling), appears 'The Torchlight.' Two stories by Elizabeth W. Bellamy are divided between herself and an imaginary Emily W. Bellamy; of three by J. B. Gilman one falls to his name, while two are entered only under "Walter Wentworth," and Mrs. Lincoln likewise appears as the author of only one work, though the library has another, catalogued under "Gould, Jeanie T." Two of Eleanor C. Price's books are found under her name, but not her 'French Heiress.' Mrs. MacDonnell's 'Martin's Vineyard' appears only under her maiden name. Mrs. F. A. Humphrey's three volumes are denied the companionship of 'A New England Cactus'; Henry Jackson is allowed to be the author of 'A First Friendship,' but his 'Gilbert Rugge' is treated as anonymous. Mme. Reybaud is deprived of 'The Portrait in My Uncle's Dining-room' and 'The Old M'sieur's Secret' (both translations of her 'Mlle. de Malepeire'). Mrs. Marie Field, who was only the translator, is said to be the author of George Sand's 'Wings of Courage.' Mrs. Mary [Lowell] Putnam—who ought to receive honor in her own city if anywhere—is credited with only one of two books. 'Thornicroft's Model' should be restored to Mrs. Margaret Hunt, 'Diane Coryval' to the late Kathleen O'Meara. Under Linda Villari we find no mention of 'European Relations,' though it is entered under its title, nor under Souvestre do we find 'The Slave, the Serf, and the Freeman.'

—A similar class of errors is exemplified by the occurrence under Prof. Hardy's name of two novels written by the late Mrs. Sophy Weitzel; and, again, under that of Ellen *Olney* Kirk of a novel by Mary *Olney*, an Englishwoman. Still stranger is the entering of a single book under "Paul, Margaret A[gnes]," followed, after intervening titles, by "Paull, Margaret A.," with eleven books, of which five belong to Mrs. Paull and six to Mary Anna (Paull) Ripley, who is not mentioned. Miss Lucretia Hale's 'The Spider's Eye' is said to be by Fitz-James O'Brien. Miss Yonge's long list is swelled by one title ('The Gain of a Loss') which belongs to Rose Piddington. 'Gemini' is ascribed to a Mrs. Fox, though its publishers

have repeatedly denied that it was written by her. The author of 'The Rectory of Moreland' is correctly given as Clara M. Thompson, but 'The Chapel of St. Mary,' "by the author of 'The Rectory of Moreland,'" is put down to Mary Evans. 'Mary Evans' is elsewhere entered as a book by C. M. Thompson, though 'Evans, Mary,' is an author. Isabella Harwood, who died in 1883, after writing two novels which had a great run, is not mentioned, though her books are entered by title. The catalogue is further defective in omitting cross-references to works like 'Gil Blas,' 'David Grieve,' 'Huckleberry Finn,' 'Joseph Andrews,' 'Verdant Green,' etc., which are universally known by these abbreviated titles. In this respect it might profitably have imitated the practice of the excellent fiction catalogue of the San Francisco Free Public Library, published in 1891.

—'Field-Marshal Count Helmuth von Moltke as a Correspondent' (Harpers) is a second instalment of the letters of the Prussian general, and is a translation of the first 225 pages of the fifth volume of his collected works, the remainder of that volume consisting of personal recollections contributed by various friends. The letters to his mother and to two of his brothers, which make up the fourth volume of the German edition, were published in English last year and noticed in these columns. The present collection has a more varied interest, in so far as it covers a greater number of topics, and will serve to deepen the impression that Moltke, quite apart from his greatness as a warrior, was a man worthy of admiration for the sterling qualities of head and heart which are unconsciously betrayed in letters never intended for print. If the letters which he wrote to his wife before and after their marriage, and which fill the sixth and largest volume of his works, are ever translated, English readers will have such a picture of the man as will show that his rise in the world was but the natural product of the faithful employment of unusual intellectual and moral gifts. The translation of the present volume is by a new hand. It reads smoothly enough, and, while it renders the sense of the original fairly well, is not always as close as it might have been. The translator appears to have lightened her task a little by skipping the hard words or going around them. The outward dress of the book is very attractive in the matter of print, paper, and binding.

—'Dante's Comedy in English Prose—*Hell*,' by Sir Edward Sullivan, Bart. (London: Elliot Stock), requires no detailed criticism. It reads fluently, and is nearly always intelligible, but when we compare any passage with the original, we find that Sir E. Sullivan is never very exact. The inaccurate temperament which led him to call his translation Dante's "Comedy" instead of "Divine Comedy" shows itself throughout. No one who understood the deep significance of Dante's epic would omit the epithet "Divine" from the title; such an omission is as unjustifiable as would be that of the qualifying adjective "Lost" from Milton's 'Paradise Lost.' So far as we have observed, the translator throws no new light on and gives no felicitous renderings of the many test words and phrases of the text. Often he misses the meaning, as in the lines

> "Quando leggemmo, il disiato riso
> Esser baciato da cotanto amante," (v, 133-4);

which he translates, "When that we came to read of how the smiling lips he loved were kissed by lover such as he." "The smiling lips he loved" is certainly a poor paraphrase of "il disiato riso," and "cotanto amante" does not represent "by lover such as he." We have noted many instances similar to this, but it is not necessary to discuss these. In no sense can Sullivan's version compete with that of John Carlyle or of Prof. Norton. Only readers who wish to get a blurred reproduction of Dante's vivid pictures will be satisfied with this translation; others will object not only to the inaccuracy, but to affectations wholly contrary to Dante's genius. At times, Sir E. Sullivan seems to choose a poor word because he fears that by choosing a good one he might be charged with borrowing from previous translators who have already used it. His translation has no explanatory notes.

—Though privately printed (by A. S. McClurg & Co., Chicago), and not, therefore, seeking criticism or public scrutiny, we cannot let pass without notice an attractive and informing pamphlet, of one hundred and fifty-nine pages, entitled "Japanese Women." It has been compiled by the Japanese Woman's Commission for the World's Columbian Exposition. The aim has been "to present to the World's [World's Fair?] public, however briefly, the true condition of the Japanese woman, ancient and modern." The eight chapters are the work of native authoresses, "each chapter being undertaken by a different lady who is especially interested in and perfectly informed of the subject assigned her." While bearing unmistakable marks both of the presence of the native censor and of the absence of purists in English, the discussion and presentation of the Japanese woman in politics, literature, religion, domestic life, industrial occupations, accomplishments, and in the charities and education of the present, or Meiji era, are highly creditable to the editor and contributors. The illustrations are simple but accurate. Biographical outlines and details of famous women are numerous. One sees clearly how much higher, in ancient Japan of the pre-Confucian ages, was the position of woman than after the dominance of Chinese ethics and philosophy. Yet it must not be forgotten that, while ten empresses have sat on the throne, while the early national literature is almost wholly the creation of Japanese women, and while female exemplars of courage, ability, and devotion, as pictured in tradition, art, literature, and sober history, are numerous, yet these were almost wholly within the court circle. The ultra-patriotic devotee of "Japan for the Japanese," or the radical Shintōist, would have hard work, we imagine, to prove that the introduction of Chinese ethics did not greatly improve the status of Japanese women in general. Most frankly, the authoresses acknowledge the good influence in every walk of life of Buddhism. Christianity, though still the religion of only a small minority, is treated as one of the settled faiths of the people. The chapters on domestic life and industrial occupations are of especial value for their contemporaneous interest. Since by the Constitution of 1889 the imperial succession is in the male line only, the words by which it is signified that Japanese women will not henceforth, as so frequently in centuries past, be publicly active in matters of state, are of interest. They show, what other parts of the work abundantly prove, that female energies are to have all the greater outlet in the new life of the nation. Resisting the temptation to quote or hint further, we can only add that the pamphlet, despite its interest, does but reflect credit indirectly upon the foreign scholars who, years ago, set forth so much of the substance of these chapters. On the final page, it is shown in the tabulated statistics, that in 1891 there were, besides the great number of private technical, professional, language, and ordinary schools, the kindergartens, and the higher normal and female schools, 917,270 female students and 4,149 female teachers in the public or common schools.

—Apropos of our note, in No. 1480, that, according to the last report of the Japanese Department for Education, the city library of Tokyo contains 2,332 foreign works in a total of 31,629 volumes, a traveller writes:

"Visiting the Tokyo public library on September 29, 1890, although the entirest stranger and ignorant of the Japanese tongue, I was readily allowed by officials almost as ignorant of mine to wander among the stacks. What I understood to be the American quarter consisted of seven rather long shelves. On these I observed the works of Irving, Webster, Bancroft, Prescott, Motley, some of the Abbott histories, etc. What I especially noted was two copies of Milton and six editions of Shakspere. Probably there were other shelves which escaped my eye. One of the first books I opened was an English Bible published by the American Bible Society, on the first fly-leaf of which I read, written in a fair hand, these words, 'Presented to St. Nicholas Hotel, New York City.' Was it an American or a Japanese guest who held it for a pious fraud to steal the Holy Book? or did the proprietor of the hotel think that he placed it where it would do the most good by sending it to the heathen? The library building, said to have once been a temple of Confucius, is spacious and well-lighted, with trees and an open space around it. Some readers were seated at the tables, but the books, as I understood, were mostly taken out for perusal at home."

## RITCHIE'S DARWIN AND HEGEL.

*Darwin and Hegel*, with Other Philosophical Studies. By David G. Ritchie, M.A., Fellow and Tutor of Jesus College, Oxford. London: Swan Sonnenschein & Co.; New York: Macmillan & Co. 1893.

AN undeniable knack for clear analysis of questions has Mr. Ritchie. He shows symptoms, too, of a power of grasping and handling very broad philosophical arguments, without which power it would be useless to attack such a problem as he has set himself. His greatest fault is no doubt plain to himself, and should correct itself with time: it is that he has not thought enough. His own suggestions are not thoroughly worked out; and there are very pertinent questions that do not seem to have occurred to him.

The object of Mr. Ritchie's studies has been to determine how far the conceptions of Hegel can advantageously be applied in Darwinian speculation. But he does not pretend to offer any definite answer to the question, speaking, indeed, of his "philosophic creed" as "but partially formulated." Everybody qualified to form even a rudimentary judgment upon Hegel has long ago recognized in his 'Phenomenology' and 'Logic' rich mines of philosophic thought, whose ore, however, is intimately combined with the gangue of error—some say with more, some with less—from which we hardly know how to separate it. Germany, after following with docility the Hegelian method, was certainly in the best possible situation to judge it by its fruits. The outcome, as all the world knows, was an overpowering disgust; so much so that not the slightest attention is any longer paid in Germany to any of the Hegelian ideas. But by this revolution the Germans unconsciously confess their own weakness in logic—a weakness that has always

been evident enough to foreigners. Even without that awful warning, American and English thought could never have been caught in Hegel's too easily detected traps. Not going in so blindly as did German thought, it will be able to derive more good from Hegel's endeavors. However, the world still awaits a satisfactory criticism of Hegel; and towards that Mr. Ritchie helps us little.

The author adopts provisionally the hypothesis of materialism. He speaks of "that materialistic monism which is nowadays the working hypothesis of every scientific explorer in every department." This attitude is certainly very much more moderate than that of the ardent Büchnerites and Haeckelites with whom Germany and the German parts of this country swarm, who inscribe Materialistic Monism upon their banners. Yet Mr. Ritchie unquestionably goes too far in saying that materialism is the working hypothesis of all explorers. For what is a working hypothesis? It is a problematic proposition that touches a question of fact, and from which can be deduced definite consequences which the inquirer is engaged in testing by comparing them with observations. Now it would be absurd to say that an astronomer, a physicist, or a chemist is engaged in testing the consequences of materialism; for even if materialism be false, nobody doubts that the phenomena with which those men deal are the same as if it were true. Equally ridiculous would it be to say that a geometrician, or an historian, or an economist, or a student of jurisprudence is engaged in testing the consequences of materialism. Indeed, the only inquirers whom the question of materialism at all concerns are a certain class of biologists and a certain class of psychologists. Now there cannot be the slightest question that the initial working hypothesis of these inquirers must be the hypothesis of materialism. *Entia non sunt multiplicanda*, etc.; and their first business must be to see whether they can get along without supposing a second kind of substance and a second order of laws, or not. Therefore, to say that materialism remains the working hypothesis of those whom the question concerns is, after all, merely to say that nothing decisively fatal to that hypothesis has yet been brought to light. Even now, there are eminent biologists who hold that the hypothesis is refuted, and at least half the psychologists are of the same opinion—and this, although the question is whether the facts *can be made to fit* that hypothesis. Were the question simply whether the facts seem on the whole to be favorable or unfavorable to materialism, the vote against it would, of course, be larger.

Wherein do materialistic monism and idealistic monism differ? Only in this, that the former makes the laws of mind a special result of the laws of matter, while the latter makes the laws of matter a special result of the laws of mind. Now, one of the Hegelian ideas that Mr. Ritchie wishes to introduce (though it would be needless to raise the ghost of Hegel merely for this suggestion) is that of teleology —that states of things are to be explained, not by instantaneous conditions, nor by what went before, but by what is to result later. Indeed, Hegel or no Hegel, the materialist is plainly confronted with the following problem: The laws of matter are entirely blind, or non-teleological, only prescribing that in given relative positions the motions of particles shall have given accelerations: now, mind does not act blindly, but pursues purposes; therefore the problem is how teleological or purposed action can be a secondary effect of non-teleological action. This problem, says Mr. Ritchie, Darwinism solves. The tendency to an end, according to generalized Darwinism, or the tendency towards the production of definite forms of phenomena, is due to the combination of two agencies, the first being fortuitous insensible variation, or the gradual diversification of forms, and the second the destruction of forms whose modification shall have carried them over certain limits. This second agency may undoubtedly be supposed to be of the nature of mechanical law; but whether the phenomenon of diversification can be explained by the action of unyielding law is a question which Mr. Ritchie has yet to consider.

That which conferred upon the Darwinian hypothesis its sovereignty over subsequent thought was its power of explaining what seemed so mysterious by conceptions mathematically definite. The conception of fortuitous variation is so exact that it can be expressed by a mathematical equation. In fact, it is expressed by the formula which expresses the conduction of heat, the action of viscosity, and the diffusion of gases. All these phenomena are explained by physicists as results of Bernouilli's law of high numbers, where the same idea of multitude reappears which is directly involved in the Darwinian hypothesis. The same formula shows itself in the doctrine of chances, in the theory of errors of observation, and in the logic of inductive reasoning. As well as we can make it out, the law of mental association, which is at least strongly analogous to induction, is probably of the same form. All these things seem to be connected. These considerations serve to illustrate, what can be shown in many ways, how the perfect definiteness of the conceptions which enter into a theory contribute to its fruitfulness. One of the worst faults of the Hegelian philosophy is that its conceptions are wanting in this definiteness, and that its consequences are not unmistakable. When Mr. Ritchie undertakes to "Hegelianize natural selection" by the remark that "Heredity and Variation are just particular forms of the categories of Identity and Difference, whose union and interaction produce the actually existing kinds of living beings," he makes us think that Hegelianism needs to be Darwinized much more than Darwinism needs to be Hegelianized.

The first essay in the book is entitled "Origin and Validity." Its purpose is to show that it is one thing to ask how a belief has arisen and another to ask how it is justified. Surely, we are not justified in believing a proposition not yet sufficiently proved. But no doubt that which suggests a proposition is one thing and that which proves it is another; and the formula of generalized Darwinianism would make this to be so. A theory arises by some slight original modification of an idea already in our possession. It is not yet justified, but it is provisionally allowed a place among the possibilities as a "working hypothesis." After that it has to fight its way, and it is by its results that it is destined sooner or later to be condemned or modified. But whether this is a complete and accurate formulation of the universal history of science is a question that it were best to be in no haste to answer.

But no sooner have we made the innocent admission that the question of origin is one thing and the question of validity another, than we find Mr. Ritchie purposes to use our concession as a gate at which Kant's transcendental proof and Hegel's idealism may gain entrance. If we wish to avoid the terrible loss of time from which Germany suffered during the Hegelian period, we shall do well to be very cautious here. A metaphysical philosophy, in the sense of that which is to be definitively accepted in advance of scientific inquiry, is, or should be, a system of pigeon-holes in which facts are to be filed away. Its first merit is to give a place to every possible fact. Whatever could conceivably be settled by experiment, metaphysics should abstain from settling in advance. Mr. Ritchie professes a readiness to admit all that Auguste Comte said in condemnation of what he called "metaphysics." What Comte called "metaphysics" was unverifiable hypothesis—unverifiable, not in the sense of supposing a fact not capable of being directly observed, for many indispensable hypotheses do that, but unverifiable in the sense of leading to no unmistakable consequences capable of being put to the test of comparison with observation. An a-priori philosophy ought not to pronounce in advance upon the truth of anything which is capable of verification or refutation by subsequent experience. But beyond the realm of verification truth and falsity lose their meanings. Hence the moment a philosopher, upon a-priori or epistemological grounds, enunciates any proposition whatever as true, we are warned to be upon our guard against some jugglery. Where we have no scientifically observed facts to go upon, the prudent thing is to confess our downright ignorance. Even where we have such facts, we are subject to a probable error. From this pregnant fact, if one only takes it to heart, can be developed a whole Darwinianized Hegelism, having fruitful suggestions and indications for the prosecution of science and for the conduct of life.

## MORE FICTION.

*The Coast of Bohemia.* By William Dean Howells. Harpers.

*Duffels.* By Edward Eggleston. D. Appleton & Co.

*The One I Knew the Best of All.* By Frances Hodgson Burnett. Charles Scribner's Sons.

*A Liberal Education.* By Mrs. George Martyn. Frederick Warne & Co.

*Seraph:* A Tale of Hungary. By Sacher-Masoch. Translated by Emma M. Phelps. Geo. M. Allen Co.

"If people only kept to what they knew," says one of the characters in Mr. Howells's latest novel, "and didn't do what they divined, there would be very little art or literature left, it seems to me." And the hero answers, with the true realistic doctrine, "Perhaps the less the better. What was left would certainly be the best." This is the condemnation of the book. It is only the *coast* of Bohemia that our author pretends to visit, but one feels that even the coast has been seen only from the decks of an excursion steamer, and that the observer never really landed on the shores of that, for him, still undiscovered country. In a word, Mr. Howells blunders constantly as to the facts of the life of an art-student in New York. His mistakes are both general and particular, and we shall take the pains to point out a few of each.

In the first place, he shares with the romantic novelist the peculiarity of making his hero and heroine preposterously young. There are exceptions to all rules, but the artist who should return to this country, after years of study abroad, and take a position as a man of some importance and an exhibitor at the Academy and the Society of American Artists at the ripe age of twenty-two, would be little less than an infant prodigy. After that, the fact

that he should be courted by lion-hunters and called, if only by an enthusiastic young lady, "the greatest artist in New York" at twenty-seven, ceases to be astonishing. That "art is long" Mr. Howells does indeed seem to recognize in a passage in which one student tells another that ten years of school is needed; but apparently he thinks it is different with "geniuses," and he does not hesitate to make a young girl from the country who has had no previous training whatever, and who is drawing "block-hands" at "the Synthesis," paint, before the end of her first season, a portrait so good that two eminent painters discuss it gravely, and are indignant with the blundering Jury of the Academy for refusing it! Could the most arrant of romancers be more inconsequent?

To come to particulars, it is evident that "the Synthesis" is intended for the Art Students' League, though what is the humor of calling such a practical and business-like association by such a high-sounding name we cannot see. After one week in the Preparatory, Cornelia, the heroine, is taken to lunch with the girls of the Life Class, and Charmian, another Preparatory student, having "reported everywhere that she had genius," the Life Class accepts her as if she had, and makes her at home among them. Now, if Mr. Howells did not know, we are surprised that he did not "divine," that this is quite impossible. He surely has heard of the sophomore's contempt for a freshman, and this is as nothing to the old student's contempt for a "nouveau" in a foreign studio or a "Prep" in the League. But still ranker impossibilities are to follow. Charmian is shown to us a little later organizing the masquerade of the Synthesis, and heading a party and gravely debating the policy to be adopted. Now these questions are decided in the League, as in other bodies, by the members, and no student is eligible for membership without having studied in the Life Class for a certain length of time. Then the student's name must be duly proposed, his drawings must be examined by the Board of Control and his candidacy approved, and finally he must be elected at a general meeting of the League. A student not yet a member has nothing to do with the policy of the League, and would be tolerated at one of its costume parties (they are not "masquerades," and are never called so) only as the personal guest of a member. Thus it is with Mr. Howells's realism throughout. The book does not deal at all with the real life of the real art student, and the scene is either "society" or the sham studio of a sham Bohemian who poses as an artist for her own amusement. This romantic and silly young woman is cleverly drawn. For the rest, there is love-making that might take place anywhere, and an artist who might be anything else, and there is a good deal of rather bright talk. Finally, there is a rather coarse sketch of one of those disgusting insects whom Mr. Howells describes so well, and who this time is called Mr. J. B. Dickerson, traveller in art goods

There is small danger that Dr. Eggleston's stories will ever prove caviare to the general. He keeps his eye continually on the reader, and seems, as it were, to come forward to meet him rubbing his hands and wearing the jovial air of good-fellowship that makes no mystery of his art, but promises a full and frank confession of all there is about it. That both his manner and matter will prove as popular in this volume as they have in his others need not be doubted. We should not, for our own part, have considered it entirely fair to form from it an opinion of Dr. Eggleston's powers, but he himself states in the preface his willingness to be judged by the later-written of the eleven stories that compose it. One of these, "Huldah the Help," is the first story, worthy of a name as such, ever written by Dr. Eggleston. It is democratic in spirit and not exciting in substance. Others of the eleven were written in the next succeeding year, 1871. The first in order in the volume, "Sister Tabea," seems to us far and away the most attractive of them all. It has not, perhaps, the hearty familiarity that characterizes the others, but this breach of custom is more than atoned for by an attractive mingling of subdued humor and unusual delicacy of sentiment. Like two or three more of the collection, it deals with a phase of early American settlement, while "The Christmas Club" is noteworthy as setting forth the most advanced ideas of present-day workers and settlers in slums. Most readers, except those who are familiar with the vernacular of Adirondack guides, will, we fancy, find their vocabularies increased by a word after learning from Dr. Eggleston's preface the meaning and etymology of the name "Duffels."

The tissue of Mrs. Burnett's autobiographical sketch has seemed from its first appearance in periodical instalments to be woven of the opposing strands first intermingled in the classic 'Dichtung und Wahrheit.' This impression is confirmed by her own suggestion, in the preface, of "The Story of *any* Child with an Imagination" as a possible sub-title for the volume. Naturally the world at large is ready enough to be taken into Mrs. Burnett's confidence to any degree, or on any terms on which she is willing to admit it. Moreover, the story of the small Manchester girl who grew old enough to have an experience of a cotton famine, and who came finally to live among the mountains of Tennessee and North Carolina because there were openings in the New World for big brothers, contains many pretty episodes gayly and fluently told. The narrative, too, rises to a climax at its close in nothing less than the acceptance by an editor of two stories by a girl of fifteen, a more juvenile success than even Miss Alcott could boast. But books follow close upon the heels of one another nowadays; and when the echo of one has hardly had time to die away from the mind before another comes, it is almost impossible to avoid comparisons. Thus, this volume inevitably recalls another composed in much the same vein, and forces the admission that of the exquisite charm of the story of childhood in 'Peter Ibbetson' it falls far short. The history of Gogo Pasquier is contained in as few as eighty pages, while Mrs. Burnett allows herself no less than three hundred and twenty-five. Expansiveness, here as elsewhere, is seriously akin to diluteness, and both are, it must be admitted, too apt to distinguish the work of the sex to which Mrs. Burnett belongs. A very easy and quite sufficient explanation of the frequency of this association of qualities and sex may be found in the record of the typical girl's education enjoyed in Manchester, and afterwards, by the very talented "Small Person," as she here dubs herself, who lived to become the author of 'That Lass o' Lowrie's' and 'Little Lord Fauntleroy.'

It seems not unlikely that if Mr. Ruskin had ever read 'A Liberal Education,' he might have found for it some of the praise he once dealt with such lavish hand to "Francesca's" sketches of Italian peasants. Not that this story has to do with either Italy or *contadini*. Its scenes shift from Aldershot to the downs of the lovely English west country, thence to India, and back again to the downs. But the unity of atmosphere is well kept up, notwithstanding the "large leagues of land" traversed, and the artlessness of the presentment of persons and incidents leaves nothing to be desired by the most confirmed pre-Raphaelite in literature. A goodish lad, so the story runs, becomes by stages a good, a better, and at last an altogether exemplary young man. He gets the sweetest of all possible girls for his sweetheart; his trials melt away one by one, and in the end all goes merry as his marriage bell. Only one dash of sadness is left to cloud the blue. That such a story is not mawkish is merely another proof of the lasting power of simplicity, sincerity, and directness of expression. The descriptions of nature are delicate in feeling and charming, and one puts down the little volume with the unapt title rather surprised at not having been bored by so much naturalness and naïveté, but with a pleasant sense, on the contrary, of having been not unprofitably entertained.

Once in a while one comes across that rare thing, a happily inspired novel which seems to give a new reading of life. Then a corner of the dark curtain is pulled back, and the end whither instincts and dispositions are drifting or driving their possessors is made clear to the inner vision. By the light thus flashed into the obscure places of character it even becomes possible to pick one's way for a time more safely among the gins and snares of the spoiler. But such is precisely the effect that the story of 'Seraph,' a young man unkindly destined by his mother to be the Nemesis of her wrongs, has not. In these pages persons are jerked hither and thither after the fashion of puppets in a show. Between themselves and their actions there is none of that obvious intimacy that strikes even the tyro in observation. Grapes, they seem to imply, *are* gathered of thorns and figs of thistles. This is all the more a pity because the material for a good story is at hand, and the promise of the spirited opening scene is for one. The Carpathian mountains, too, are, together with their traditions, terra incognita to most readers, and the dark waif Magdalina, who flashes like a will-o'-the-wisp about the castle of Honoriec, seemed at first glance a creature formed to make situations. But, with the best will in the world to be entertained by an old-world romance, it is not easy work to make either rhyme or reason out of this chapter of Hungarian domestic tragedy.

## COLLEGE SPORTS.

*University Football:* The Play of each Position Treated by a College Expert. Edited by James R. Church. Charles Scribner's Sons. 1893.

*Walter Camp's Book of College Sports.* The Century Co. 1893.

MR. CHURCH'S little book is intended more especially for the use of players, and gives very little information available for the general reader. It is a series of short essays, each treating of some special feature of the game or the play of some position on the team. The papers in the main are well written, and the book will, no doubt, serve the purpose for which it was intended. One must not turn to it for answers to the many grave questions which old lovers of the game as well as anxious parents are asking themselves. The latter, indeed, will meet with statements calculated to confirm their worst fears. They are told "that the shoving wedge 'broke up' too many men, and its use was discontinued" until

Yale revived it in 1888 "and used it with telling effect, especially against Harvard" (p. 18). The University of Pennsylvania, "by constantly bumping the centre men of the opposite line, destroyed the wedge. The only other way to stop the pushing wedge was to lie down in front of it" (p. 21). Further on we find set forth, as one of the duties of the end-rusher, that "when he thinks his opponents are going to kick, . . . he follows down after his opposing end and bunts him over as he slows up to tackle the full-back" (p. 40). In fact, the work of the end-rusher "is all fast, hard, and rough." Of the tackle we read (p. 44) that "the chief feature of this [play], however, is the very slight attention given to the elbows, or the places they may strike; except in extreme cases it is hardly to be resorted to." We find, also, that "one of the best ways to make a hole in the line is to play very low and slightly back from the line, jumping forward quickly, getting the opponent a little below the hip with the shoulder. It is seldom that an adequate opening cannot be made in this manner" (p. 47). We are told that "in tackling, a guard, as well as all players, should tackle low wherever it is possible; but there are many times in the guard's position when a low tackle is impossible on account of close quarters, and he should never hesitate to tackle his man wherever he can take him" (p. 55). It is interesting in this connection to read in rule 27 that, "for the offence of intentional tackling below the knees," there shall be a forfeit of twenty-five yards or a free kick to the opponents. Apropos of another clause in the same rule, which says that "a player shall be disqualified for unnecessary roughness," we read (p. 76): "In fact, nothing affords greater pleasure on the football field than bowling over some big opponent just as he is bracing himself for a tackle." In view of statements like these from professed champions of the game, is it to be wondered at that anxious parents dread the return of autumn?

It is true that football is, has always been, and of necessity must always be, a rough game. There is a line, however, which separates roughness from brutality, and there are many lovers of the game who, after watching its recent developments with grave concern, believe that that line has been crossed. It is to them a matter of regret that the objections which have been urged against the game from the outset, have now such a solid foundation that they cannot be overlooked. In fact, we find in this very book (p. 29) the following frank admission that football has deteriorated:

> "With the introduction of the wedge much of the picturesqueness of football passed away. Many a regret is heard because the days of long passes, open play, free running, and repeated kicking are gone. The wedge contracts the play; it huddles the players; it removes the brilliancy and effect of individual effort; it injures too many players, a dozen ankles and knees being sprained to-day to one ten years ago. These disadvantages have called forth adverse criticism relative to the wedge."

Now the wedge is the great feature of the present game, and, although it is undoubtedly a very interesting feature, it ought to be eliminated as dangerous to life and limb. Moreover, while the "science" of the game has been developed in a way which would not have been thought possible ten years ago, yet had that development been along slightly different lines, it would have been quite as interesting to the players, far more interesting to the spectators, and much more satisfactory to parents and guardians. This might have been brought about if an intelligent and effective body of graduate opinion could have been brought directly to bear upon the game. Hearty praise is certainly due to Mr. Walter Camp for the interest he has shown in football and the care and study he has bestowed upon it; but it is not good for such a game to owe too much to any one man. The absolute control of one man over legislation of any kind is not salutary, as it is apt to take the color of his defects as well as his virtues; and "in a multitude of counsellors there is wisdom." Mr. Camp would probably be the first to welcome the suggestions and advice of such a body as has been suggested.

The weakness or inefficiency of umpires and referees has been a crying evil from the first. It is a very difficult task to umpire a game of football properly, and the lack of care in selecting these important officers has led directly to those developments of the game most open to criticism. In old days when a man was ahead of the ball, he was, for the time being, out of the game. His duty was to move towards the ball without interfering in any way with the other players. Offside play was unfair play. It was manifestly difficult to enforce this rule—difficult, but not impossible. Undergraduate public opinion unfortunately allowed the college elevens to adopt offside play, on the principle that anything was fair that the umpire could not or would not see. It was natural that a college team, after trying to play fairly and according to rule, on finding itself beaten by continued unfair play and a careless umpire, should decide that it was better to recognize offside play frankly and squarely so that both sides should be on an even footing. So the rule forbidding offside play was altered, thereby changing the whole game, and changing it for the worse. From this has followed the whole system of interference and wedge playing, which is so characteristic of the modern game and which arouses such severe and just criticism. The game has almost ceased to be *foot*ball. It is far less interesting to watch; it is far more dangerous to play. The old rule against offside play must be put in force again before the game can recover the confidence of those who have the right to be the judges, regain its interest and its brilliancy, and be relieved of its brutality. But even then it must be supported by the feeling among all undergraduates that rules are made to be obeyed and not to be broken, and that a man who is not honest enough to play strictly within the rules is not fit to represent his college.

Mr. Camp is probably the best-known authority on college sports in this country, and, taking for his text track athletics, rowing, baseball, and football, he gives us in the handsome volume issued by the Century Company not only a full account of these sports, but a wealth of anecdote connected with remarkable and historical games that makes his book a new departure and is sure to delight his readers. It is often and truly said that young people take very little interest in the achievements of earlier generations, but, while this may be true of poetry or politics or philanthropy, it is not true of athletics. Success in public life or in literature may entirely fail to arouse the enthusiasm of the young, but it is safe to say that no college man of to-day can read unmoved Mr. Camp's description of Lamar's run in 1885, Bull's goals from the field in 1888, or the Yale-Atalanta boat-race in 1890.

Owing to the season of the year, the athletic reader, whose name is legion, will probably turn first to Mr. Camp's remarks on football. Apart from the admirable accounts of particular games that have passed into football history, these eager readers will find Mr. Camp's pages somewhat barren of novelty. This is due in part to the fact that he has already covered the ground pretty thoroughly in a previous volume, and partly also to the frequent changes that are being introduced into the game. Mr. Camp very truly remarks that it is further from the limit of its development than any other college sport. He is popularly supposed to preside over the birth of certain improvements each year at New Haven, while Mr. Deland is similarly employed behind a high fence at Cambridge. And so, while the game is theoretically like a somewhat violent form of chess, the "openings" have not yet assumed definite shape, and therefore the writer on football treats last season's novelties with a certain reserve, feeling sure that they will be supplanted by others before the great games are over. In the other branches of college sport there is no such difficulty. In track athletics, for instance, the only changes from year to year are the steady cutting down of records, due to improved methods of training and practice, and the most important point that Mr. Camp insists upon is, that no man knows what he can do until he tries. The least promising material sometimes finds its natural development in one of the many branches of this division of sport, and excellent general results may be attained by young men who could never expect to reach championship form.

To baseball Mr. Camp devotes a large part of his space, and he seems to have left nothing needful unsaid in regard to the theory and practice of this excellent game. Moreover, this part of the book is especially rich in anecdotes that recall the stirring struggles of the past. On the whole, Mr. Camp has produced a book that will certainly take high rank, and the manly tone of his introductory remarks on professionalism and kindred subjects cannot be too highly commended at the present time.

## BOOKS ABOUT THE STAGE.

*Life and Art of Edwin Booth.* By William Winter. Macmillan & Co.

*Leaves from the Autobiography of Tommaso Salvini.* The Century Co.

*Songs of a Strolling Player.* By Robert George Legge. London: A. D. Innes & Co.; New York: Charles Scribner's Sons.

EVER since there have been any books about the stage, a very large proportion of them have been biographies, and, as Lowell declared four or five years ago, "biography in these communicative days has become so voluminous that it might seem calculated rather for the ninefold vitality of another domestic animal than for the less lavish allotment of man." It is with pleasure, therefore, that the reader takes up the single volume in which Mr. Winter has told the story of the life of the greatest actor yet born in America; and the pleasure is enhanced by the directness with which Mr. Winter gets to work, and by the sincerity of his handling of difficult topics. Booth has indeed been fortunate in his biographers and in his critics. Even his death did not call forth a single one of the catchpenny compilations, compounded of myth and malignity, of which there are so many on the shelves of the theatrical collector. Two of the many magazine articles (which in the nineteenth century have taken the place held in the eighteenth century by the occasional pamphlets) were of unusual value. One, in the *Forum*, by Mr. John Malone, formerly an actor in Booth's company, gave a most welcome glimpse into his work-

shop on the stage itself, and the other, in the *Atlantic*, by Mr. Clapp, was one of the best pieces of theatrical criticism ever written in this country. Then came Mr. Laurence Hutton's simple and sympathetic sketch, and now we have this memorial of Mr. Winter's.

Mr. Winter tells the story of Booth's life succinctly and yet with sufficient fulness. His frankness in regard to the tendency towards intemperance which Booth inherited from his father, and which he did not wholly overcome until after the death of his first wife, will help to kill the exaggerated tales still current to Booth's disadvantage. And equally frank is Mr. Winter's discussion of the causes of the failure of Booth's Theatre, which was not because the public would not support a playhouse devoted to the higher drama, but because Booth had not the firmness and the skill which the management of such a theatre demanded. Mr. Winter quotes a letter in which Booth frankly acknowledges this (p. 80). Yet it was a noble effort. "Booth's Theatre," said Mr. Jefferson, "is conducted as a theatre should be—like a church behind the curtain and like a counting-house in front of it." There is in Mr. Alger's elaborate biography of Edwin Forrest an account of the dignified rebuke that actor administered to a clergyman who wished to see a performance in the theatre, himself unseen; and Mr. Winter records here the lofty reply of Edwin Booth to a clergyman who desired to be admitted privately to the playhouse that his parishioners might not see him —"There is no door in my theatre through which God cannot see." Booth twice made an attempt to confer substantial benefit on the art he loved. The first time was when he built Booth's Theatre; the second time was when he founded The Players, and in this second attempt he was abundantly successful. Despite pain and failing memory, the last years of the tragedian were happy, and to this happiness the success of The Players contributed much. Mr. Winter's account of this club (p. 134) is not quite accurate. He notes Booth's wish that at least 10 per cent. of the members should be actors, and it might therefore have been well to record that about two hundred and fifty of the eight hundred members to-day are actors, managers, or dramatists. As a whole, Mr. Winter's book is most accurate; it abounds in facts which it was desirable to have preserved, and it is rich in the sympathy which understands and explains.

Satisfactory and delightful as it is, however, it is to be regretted that Booth did not write his autobiography. He told a story admirably, with a keen sense of humor; and when he wrote he had command of a very Shaksperian vocabulary. The brief papers on his father and on Edmund Kean, as well as the pregnant notes written for Mr. Furness, remain to suggest to us what Booth might have written had he chosen. As Longfellow declared, "autobiography is what biography ought to be"; and if Booth did not take this to heart, the great Italian actor to whose *Othello* he once played *Iago* has done so. We understand that this English translation contains but a selection from the much longer Italian original still unpublished; it embraces the incidents and criticisms of other performers most likely to interest readers of English. It enables us to become acquainted with a character almost as transparent as Booth's, although far from being as simple. Booth was singularly modest, while Signor Salvini avails himself fully of the privileges of egotism and garrulity allowed to every autobiographer. In fact, the frankness of Signor Salvini's interest in himself is its own excuse; he is right in believing himself so great an actor that what interests him shall interest us also. So we are not offended when we read that the performance of "La Morte Civile" in Paris in 1877 was "a real revelation to the Parisians. It would be tedious to repeat all that the greatest artistic and literary luminaries wrote of it. Victor Hugo, La Pommeraye, Zola, Gautier, Vitu, elevated to the stars both composition and interpretation." Gautier's opinion it would be curious to have, as he died five years before this performance took place in Paris. Signor Salvini tells us of his youth, of his first humble appearance on the stage, of his early successes, of his later triumphs, and of his stellar wanderings. He gives us his impressions, not only of his compatriots, Modena, Rossi, and Ristori, but also of Rachel, Sarah Bernhardt, Coquelin, Mounet-Sully, Edwin Booth, and Henry Irving. In none of these valuable appreciations is there anything niggardly; Signor Salvini praises like a sovereign secure on his throne, and like an artist from whom no secret of his art is hidden. Entertaining, also, is his account of his service with Garibaldi and of his relations with Dom Pedro. The book contains eight illustrations, of which the most striking is "Ristori as *Mary Stuart*"; but it has no index—a deficiency to be noted also in Mr. Winter's volume.

There are many poems upon the great players of the past, but there are very few verses by the players of the present. The latest book of stage stanzas before Mr. Legge's is a dozen years old at least; it was the 'Sous les Frises' of M. Jules Truffier of the Comédie Française—more polished than these 'Songs of a Strolling Player,' and more literary. But Mr. Legge has caught the flavor of the playhouse better than his French predecessor. The 'Ballad of the Low Comedian' is perhaps a little obvious and commonplace, yet the incident on which it is based is common enough. "Retired," with its nostalgia for the abandoned stage, is true to the facts of life, and so are "Art" and "Our Amateur."

## FIVE BOOKS ON THE PIANO.

*A Pedal Method for the Piano.* By A. F. Venino. E. Schuberth.

*A History of Pianoforte Playing and Pianoforte Literature.* By C. Weitzmann. G. Schirmer.

*The Æsthetics of Pianoforte Playing.* By A. Kullak. G. Schirmer.

*The Pianist's Art.* By A. Carpé. Chicago: Lyon & Healy.

*The Steinert Collection of Keyed and Stringed Instruments.* C. F. Tretbar.

LAST year Messrs. Scribner issued a 'Musical Literature List' of 64 pages, cataloguing not only their own publications in this line, but other important works. This year a new edition has been issued, enlarged to 104 pages. This does not indicate that musical literature has almost doubled in volume since last year, but merely that the collection has been made more complete. Nevertheless, there is a remarkable activity in the publishing of books on musical topics. Scribner's list contains nineteen books relating to the pianoforte and its literature, and to-day we have before us for review five more in this one branch.

When he was engaged in revising his transcriptions of Beethoven's symphonies, Liszt wrote to his publisher that there was one point on which he would insist, to the verge of rebellion, namely, on his numerous pedal marks. Strict attention to the pedal and persistent use of it formed one of the chief distinctions between the Chopin-Liszt method of playing and that of their predecessors. We know, too, that Rubinstein and Paderewski, the greatest of living pianists, not only have followed in the footsteps of Chopin and Liszt, but have revealed still more subtle and varied charms obtainable by a skilful use of the pedal. Strange to say, the piano teachers have hitherto been so busy with their scales and arpeggios and five-finger exercises that they have found little or no time to attend to the pedalling, leaving their pupils to find out its secrets for themselves. Composers, too, have been careless in their pedal marks, and editors have often made confusion worse confounded. It may be truly said, therefore, that the greatest desideratum in piano literature has been a treatise on the use of the pedal, thoroughly up to date. Such a book is Mr. Venino's 'Pedal Method,' which no student of the piano should fail to procure, and which will prove suggestive to teachers and even to professional concert pianists, many of whom (including such an eminent man as D'Albert) often use the pedal incorrectly or carelessly.

Mr. Venino's book contains many illustrations in musical type, in which the superiority of his new method of indicating the use and cessation of the pedal over the one now in vogue is so obvious at a glance that it is to be hoped it will be at once adopted in all printed music. It will complicate the notation somewhat, but the gain will more than compensate for that, since the pedal regulates not only the loudness and softness of tone, but the duration, and, above all, enriches and beautifies the tone, thus constituting two-thirds of what is commonly called a pianist's "touch," which is to him what the natural quality of the voice is to a singer. The same piano sounds very differently under different hands, and this is very largely a matter of pedalling. The author considers the pedal from every point of view, as governed by tempo, duration, the harmonic and melodic elements, and the pitch. He is a pupil of Leschetizky (Paderewski's teacher), and introduces some useful hints by his master, with others by Paderewski and Dr. William Mason. There are remarks, too, on the danger of using the pedal too constantly; on the "half-pedal"; and on the modern middle pedal, which Paderewski, strange to say, does not use, but which is extremely valuable for sustaining special tones, and which, as the author remarks, will doubtless suggest special effects to future composers.

Weitzmann's history of pianoforte-playing and pianoforte literature has long been esteemed an indispensable handbook by all students who can read German. Those who cannot do so will be extremely indebted to Dr. Th. Baker for making it accessible to them in an excellent English version. We have in this book a series of clear and concise sketches of the earliest clavier-playing in Italy, France, and Germany; the lyrical style, the dramatic, the brilliant, and the romantic styles. If this classification is somewhat artificial and arbitrary, it serves perhaps as well as any other as a string to collect the facts upon. Weitzmann is just to all schools, and touches rather upon the virtues of the masters than on their shortcomings. He is thoroughly in sympathy with the modern schools of music, is a great champion of Liszt and Wagner, and is also the author of two books on harmony in which he treats that science from the modern point of view, to the great disgust of the pedants. Several chapters

have been added by Otto Lessman, who also supplies a biographical sketch. The plan followed by Weitzmann is to give a few biographic facts in the case of each composer, followed by a critical estimate, and a complete list of his works. These lists are very useful as a compendium of piano-literature, but they should have been printed apart from the text, in smaller type. The second half of the book contains an elaborate history of the pianoforte, and there is an appendix with a copious selection of clavier compositions of the sixteenth, seventeenth, and eighteenth centuries.

Another well-known German treatise translated by Dr. Baker is Kullak's 'Æsthetics of Pianoforte Playing.' The name of Kullak is household in Germany, and the fact that his book has reached its third edition there argues its utility. Its value to serious students must be conceded; in its practical parts it contains many useful hints regarding touch and execution, and the important matter of expression is ponderously dealt with in the second part. But the style is too dry, abstruse, Hegelian, and tiresome to commend it very highly to American readers, who usually have not the patience of Germans in putting up with arduous and transcendental writing. However, we would not discourage serious students from reading this book, which, we repeat, is a useful one, and often suggestive.

Adolp Karpé's work is divided into five sections, headed Technic, Fingering, Expression, Character, Outline of Piano Literature. It is a compilation of no particular value or originality, its chief merit being its brevity, which may commend it to those who want a mere bird's-eye view of the subject.

Morris Steinert's account of his rare and unique collection of keyed and stringed instruments appeals, of course, to but a limited class. It contains brief histories of the pianoforte and the violin, and there are many valuable illustrations of instruments of former eras, the comparison of which serves as a lesson in Darwinian development as applied to music. Mr. Steinert is a thorough Bach scholar, and his remarks on that master's instruments and style are worth reading.

## CHILDREN'S BOOKS.—II.

As of books in general, so of translations of Hans Christian Andersen in particular, there is no end to their making, and while generations of children exist it is safe to assert that they will still continue to be made. The multiplicity of translations, however, is possibly at bottom to no small extent owing to an inherent characteristic of the tales themselves, rather than to an inordinate demand for new renditions. They belong, in short, to that class of literature apparently so simple that, if it is in the vernacular, it is a matter of wonder that one has not written it one's self, or, if in a foreign language, that one should not sit down immediately and translate it off-hand. There is scarcely a schoolboy or a schoolgirl who has read Andersen in the smooth German versions, as many do, who has not felt this almost uncontrollable desire to put the easy sentences into fluent English. Where, in later life, there is the reasonable hope of a publisher at the end of one's labors, the desire becomes irresistible, and another translation is added to the already long list.

The very simplicity, however, of the tales is their principal difficulty. Their latest translator, Mr. R. Nisbet Bain, notes, in his preface to 'The Little Mermaid, and Other Stories' (Putnams), the transparency of meaning and the unaffectedness and straightforwardness of Andersen's language. If it be true, as is asserted, that nobody but a poet can translate a poet, it may be equally well maintained that nobody who is not at heart a child can translate Andersen. Of all the versions, good, bad, and indifferent, we are inclined to think with the author of this, that the ten tales translated by Mary Howitt in 1846 are to be considered as having best caught the spirit of the original. Mr. Bain's translation is, however, to be commended. If it is not better than the best of its predecessors, it very far surpasses most of them, and well deserves a place in the front rank of English versions of the tales. Occasionally we are conscious that we are reading a translation, and sometimes, as when the little tin soldier exclaims of the pretty little dancer, "But she's a swell!" we know that the translator is not quite in touch with his original; but in most places it is really Andersen who speaks.

The illustrations of the book are very uneven, but many of them are excellent. The broad margins and typography leave nothing to be desired. The selection of stories is sufficiently varied to give the author in most of his many moods. All are of that perennial kind that never grows old-fashioned, and the tales in the present volume might have been written yesterday, although some of them first saw the light more than fifty years ago. The new Andersen should be one of the favorite children's books of the season.

"Uncle Remus" appears in a new rôle in his 'Evening Tales done into English from the French of Frédéric Ortoli' (Scribners). What attracted Mr. Harris to this collection, whose affinity is mostly to Grimm, was the Frenchman's independent version of his own negro story of the Tar-Baby; Brer Goat replacing Brer Fox. As this interesting variant was illustrated in Ortoli's 'Contes de la Veillée,' we should have been tempted to borrow the cut as a vignette for the title-page of this pretty volume. Perhaps the publishers can manage it for a second edition, when certain usurping *wills* for *shalls* on pages 62, 81, 119, 129, and 140 might well be deposed, and "thou who *gave*," on page 66, be mended. For the rest, the literary skill for which Mr. Harris is famous has enabled him to adapt the original with great success. Incidentally, too, he gives his child readers an inkling of comparative folk-lore.

The story told by Blanche Willis Howard in 'No Heroes' (Houghton, Mifflin & Co.) of a boy's unconscious but none the less very real piece of heroism, raises again the question which books written for the express delectation of boys and girls have so often raised before. It is happily not a question of morals, for the moral of this chapter out of a boy's life is the wholly admirable one that not even the opportunity of fulfilling the fondest of one's dreams (in this case a voyage to foreign parts) is worth seizing if it involves the sacrifice of an obvious and immediate duty—here coming to the assistance of a father (unsuspectedly a hero) in a sudden outbreak of smallpox. No less unexceptionable in sentiment is the discovery Bob Rea—an unwitting disciple of Dickens in this respect—makes for himself that the glaring and eccentric features of a character are seen first, and the softer traits found out only on closer acquaintance. This disclosure Miss Howard (Frau von Teuffel) has made for Bob's patient, old Jerry, with delicate and tender feeling. The query as to the entire fitness of her book for young hands is one of diction merely. Because boys, especially our own embryo citizens, are supposed to be of necessity clumsy, uncouth, and inelegant in speech, does it therefore follow that those who write for them must fall into the same strain? Miss Howard, even when pursuing the thread of her narrative, does so to the following extent: "Not another boy of Bob's acquaintance had ever nursed a miser, and in all Dole's Mills not a mother's son of them had been polished off in the tiptop style with which he had distinguished Jerry." This is a fairly representative specimen of the sort of hap-hazard writing that disfigures every page of an attractive and thoroughly readable story. To be vivid at the expense of deference to one's mother-tongue hardly seems an admissible way to set about winning the juvenile mind.

The French author, at least, of 'The History of a Bearskin' (Dodd, Mead & Co.) does not share the indifference to standard of expression shown by so many of our own writers for youth. His style, seen even through the medium of a translation, has not only sprightliness, it has distinction also. And if any one is inclined to argue that this latter quality is wasted, on the ground that lads and lasses are impervious to niceties of language no less than of appearance, he needs but to be reminded of some of the criticisms on person and manner with which they now and then astound their unguarded elders. The title of M. de Marthold's artistically managed story is a trifle misleading, a sort of *jeu d'esprit* which the reader is, however, not displeased at being made partner to. The real history is that of a bumpkin conscript in the Napoleonic wars, who presently won his grenadier's bearskin, and who lived to see his son win other coveted honors at which he himself never arrived. The young mind most obstinately opposed to receiving information can hardly resent the historical outline so delightfully and insidiously infused with the adventures of this Norman Tartarin, who, in spite of his gasconading, was also a good enough fellow at bottom. The overflowing measure of freakish and fascinating illustrations are enough in themselves to put any boy into a good humor with the author and his volume. As for moral, there is none in particular, unless it be that of excellent and skilful workmanship, which is perhaps as desirable a one in this day and generation as any the severest preacher could find to dilate on.

To make a really agreeable harmony, Mrs. Laura E. Richards's 'Melody' (Estes & Lauriat) should have an accompaniment borrowed from some meridional country, instead of from New England, where her highly emotional personages seem misplaced and sometimes ridiculous. How the blind little singer, Melody, came by her too appropriate name is not explained, but this is, after all, only in keeping with much else that is unreal and exotic in the book.

A pair of indistinguishable twins, such as Mary Lee Etheridge's 'Dick and Joe' (Boston: De Wolfe, Fiske & Co.), could give rise to enough confusion, one would think, without the admixture of a third boy not to be told from them even by his own father. It will require unexacting children, however, to be amused with *Dromio*-work of this kind when so tiresomely executed.

The evolution of the Rollo books is a curious study. The enormous increase in pictorial resources and the advance in fine typography have not been attended by improvement in the art of writing simply and naturally of "personally conducted" young people. The author's old single-mindedness is gone, and the desire to amuse has betrayed him into playing to the gallery of elders. Mr. Tudor Jenks's smart and punning conversations in 'The

World's Fair Book for Boys and Girls' (The Century Company) are an instance in point. In the more serious portions his language is often above the heads of his proper audience, as when, referring to a painting of Christ talking to the woman at the well, he says: "Philip felt that this picture had put him in a receptive frame of mind, such as one should have when listening to a sermon." Still, Mr. Jenks's style is generally that of a cultivated writer, and the rest must be pardoned or overlooked by one who buys this pretty volume, full of interesting illustrations of Fair and city.

For much smaller people the same firm has taken over Mr. Palmer Cox's 'The Brownies at Home,' to keep company with two similar books by this artist-rhymester; and it also issues an ingenious set of reversible plates in color, 'Topsys and Turvys,' in which, within a narrow range, there is a considerable variety of metamorphoses, which will tickle the childish mind that has the least ray of humor in it.

---

*Thomas Chalmers*, Preacher, Philosopher, and Statesman. By Mrs. Oliphant. Houghton, Mifflin & Co. 1893.

THE title of Mrs. Oliphant's sketch of Dr. Chalmers prepares the reader for the looseness of her narrative throughout; for that he was either a philosopher or a statesman there is nothing in her book to show, and nothing in Hanna's 'Life of Chalmers,' on which she has so liberally drawn. Her literary productiveness is so great that perhaps the wonder is that she has written so good a book. But if her easy writing has not made hard reading in this instance, it has made reading that is much less instructive than it should have been. Even if the series of which this biography is the latest issue is intended to be more a series of studies than one of detailed accounts of the different subjects, yet should there have been no difficulty consistently with this idea in giving much more of a definite framework than we have here, and a good many more facts and dates. To dates Mrs. Oliphant would seem to have a particular aversion, and the effect is to give her narrative an appearance of inaccuracy which does not actually belong to it. For example, when Chalmers left Glasgow to take a professor's chair in Edinburgh, one of the reasons that he gave for his strange course was his desire to write a work on political economy. Once in Edinburgh, he thought no more about it, we are told, and yet a few paragraphs or pages further on we find him putting out the promised book. The apparent inconsistency is owing to the fact that Mrs. Oliphant has left his Edinburgh professorship a void, and suddenly advanced a dozen years or more in her recital of events.

Something is clearly gained by having a writer of Mrs. Oliphant's skill produce a sketch of Chalmers's life, but it may be questioned if more is not lost by her lack of large acquaintance with her subject and her lack of sympathy with Chalmers's character and aims. Had she been frankly critical, that would have been another matter. But there is a damning with faint praise, and an insinuation of doubts as to his motives and his aims, that constitute a serious drawback to one's enjoyment of the book. Chalmers was especially entitled to have his part in the great Free Kirk secession of 1843 treated with sympathy, but it is evident that Mrs. Oliphant has none to give. *Cui bono?* is her epitaph for the whole of that business. She has no appreciation of its magnitude and importance. Because twenty years later the Established Church of Scotland arrived at the same principle of non-intrusion of the local patron in the settlement of ministers, she seems to question whether the protest and secession of 1843 were not unfortunate events—as if their object-lesson did not furnish the Established Church with the best reason for the course which it refused in 1843 and accepted long afterwards.

It is evident that, from a very early age, Chalmers's ideas rushed into expression with a remarkable spontaneity and force. It is also evident that he was a protestant, a protester, from his youth up. His sense of personal importance was at first extreme, and afterwards the complete identification of himself with whatever cause he took up gave volume and momentum to his conduct and his speech. He was for demolishing the aristocracy when he failed to get a certain living. To such extent was the child father of the man that it would not be irrational to look for something of that early disappointment in the vehemence of his assault upon the principle of aristocratic patronage in the Free Kirk movement. There was ever something hasty, unexpected, in his course of life. To his first parish work he joined that of a mathematical tutor in St. Andrews University. At the public examination he made an assault on his professor and was forthwith dismissed. He came back and set up his private classes under the shadow of the University, still keeping up his parish work. Then he went to Glasgow and made his great reputation as a pulpit orator, and became a tremendous social force as the organizer of a system of parochial charity and education, with a parish of 11,000 souls. At the climax of his influence and reputation he broke away to be a professor of moral philosophy at St. Andrews. The consternation of Beecher's people and the community could not have been greater if, at the height of his success in Brooklyn, he had taken a professorship in Amherst College, than was the consternation of Chalmers's people and the community in Glasgow. The psychology of such a course of action might have afforded

> "Robert Browning, you writer of plays,
> A subject made to your hand."

But Mrs. Oliphant is needlessly mystified about it, for she herself offers the most obvious solution. It is that in a professor's chair he was again at work upon "the plan that pleased his boyish thought" when he added the labors of a mathematical tutor to those of a parish minister. It is still sufficiently remarkable that the splendor of his oratorical success did not wean him from his youthful passion. Afterwards he was made professor of theology, and found himself much more at home. Mrs. Oliphant makes no attempt to set forth the significance of his religious teaching. When it is remembered that his astronomical discourses were the most famous that he ever preached, it would appear that he was among the first of those who found in scientific truth some confirmation of their religious hopes and aspirations. If he endeavored to subject that truth to the exigencies of an inherited creed, he was not alone in this respect.

---

*American Big Game Hunting.* The Book of the Boone and Crockett Club: Edited by Theodore Roosevelt and George Bird Grinnell. New York: *Forest and Stream* Publishing Co.

IF the visitor at the World's Fair crossed one of the great bridges from the wonderful white buildings to the Wooded Island, and wandered down a little shady path, he came to what one might call the foundation-stone of all the magnificence just across the lagoon—a log cabin, the "Hunter's Cabin." What one first noticed was the peculiar and characteristic smell of the place. The old "prairie-schooner" outside, the bleached elk-horns over the door, the hunting trophies and evidences of free out-door life littering the interior, all brought to mind the woods and plains, but the smell was the genuine article. It was a combination of the odors of skins, old saddles, guns, blended by the scent arising from the bright wood-fire. This cabin, erected by the Boone and Crockett Club, was the proper forerunner of the book which the club has lately published.

'American Big Game Hunting' is a collection of articles by different members of the club, not only on hunting big game, but on the associated subjects of habits and preservation, and is an interesting exposition of the club's aims, which are "to promote manly sport with the rifle," "to promote travel and exploration in the wild and unknown or but partially known portions of the country," "to work for the preservation of the large game of this country, etc.," "to promote inquiry into and to record observations on the habits and natural history of the various wild animals," and finally "to bring about among the members the interchange of opinions and ideas on hunting, travel, exploration, etc." No one is eligible for membership who has not "killed with the rifle in fair chase . . . at least one individual of one of the various kinds of American large game," and the Constitution further explains that "the term 'fair chase' shall not be held to include killing bear, wolf, or cougar in traps, nor 'fire-hunting,' nor crusting moose, elk, or deer in deep snow, nor killing game from a boat while it is swimming in the water" (*i. e.*, the game swimming, not the boat). These various objects and qualifications the book sets forth, first in a straightforward and manly preface by the editors, perhaps the most pleasing thing in the volume, and second by a number of short articles, ranging in subject from bear and buffalo-hunting to photography of game, and in authors from the veterans of all the dangers and excitements of early Western life to those who have some items of interest to detail gleaned from a few short trips to the "happy hunting-grounds" of the West. This diversity of subject and authorship gives to the book a welcome variety of style, relieves it from the danger of prolixity, and affords an opportunity for personal narration of hunting scenes covering widely separated times, places, and species of game.

Some idea of the articles composing the volume may be gained from their titles. Commencing with "A Buffalo Story," which aptly illustrates one purpose of the club, story-telling, the author describes a buffalo hunt in his back yard, where he killed the quarry through his window without rising from bed. Next comes "The White Goat and his Country," written half successfully in a humorous style, followed by "A Day with the Elk," "After Wapiti in Wyoming," and "Blacktails in the Bad Lands." "Old Times in the Black Hills," "Big Game in the Rockies," and "Nights with the Grizzlies" bear the stamp of veteran hunters. Mr. Roosevelt has contented himself with a short sketch entitled, "Coursing the Prong-buck," which is rather unsatisfactory, as it bears too close a resemblance to remarks made by him on the same subject in his latest book; but his associate, Mr. Grinnell, contributes a much longer article, "In Buffalo Days," full of

the melancholy interest attaching to the extermination of what was once the most numerous and distinctive of our wild animals. "A Mountain Fraud" is largely devoted to the description of a character showing his birth by his name, Lanahan, who proves that not all mountain men are fearless and truthful, as is generally supposed; but his figure is hardly central enough to justify the title of the article. "The Yellowstone Park" treats of the adaptability of this domain for game and forest preservation. "Photographing Wild Game" shows that quite as much skill is needed in stalking game for this purpose as for a more bloody one, and opens up a field of sport in which the results will be more pleasing than the most magnificent of hunting trophies. The book closes with chapters on "Literature of American Big Game Hunting" and "Our Forest Reservations," with a short description of the exhibit at the World's Fair.

As will be seen, this is not in any way a great book. Few of the articles rise to any degree of literary excellence, and neither in paper, illustration, nor general make-up is the publication the work of art it might have been. But it is calculated to subserve its worthy purpose.

BOOKS OF THE WEEK.

Adequate Travel-Atlas of the United States. Buffalo: Matthews-Northrup Co.
Bangs, J. K. Half-Hours with Jimmieboy. R. H. Russell & Son.
Bede, Cuthbert. The Adventures of Mr. Verdant Green, an Oxford Freshman. 3 vols. Boston: Little, Brown & Co. $5.

*Now Ready.*

**Poems by William Watson.**

New Edition. Revised and rearranged, with Additions and new photogravure Portrait. 12mo. Gilt top, $1.25. In ornamental silk $1.50.

Also *Édition de Luxe*, limited to one hundred copies, printed on John Dickinson & Co.'s English hand-made paper. 8vo, price $3.50.

*A New Book by "Q."*

**The Delectable Duchy.**

STORIES, STUDIES, AND SKETCHES. By A. T. QUILLER-COUCH, author of "Noughts and Crosses," "The Blue Pavilions," etc. 12mo, $1.00. In the Series of Macmillan's Dollar Novels.

*Mr. F. Marion Crawford's New Novel.*

**Marion Darche.**

A STORY WITHOUT COMMENT. By F. MARION CRAWFORD. In the uniform series of Mr. Crawford's novels. 12mo, Cloth. Price $1.00.

Mr. Crawford's "new work, 'Marion Darche,' is destined to have a great popularity. It is in a new vein. In its scenes and incidents it is American through and through. The situations described are almost sensationally dramatic, and the plot . . . is skilfully developed. 'Marion Darche' is, like all of Mr. Crawford's women, a pure, exalted, noble character. Incidentally, we have a discussion of the question of divorce which is suggestive. The average reader will find this a most readable novel."—*Boston Daily Advertiser.*

*Completion of New Edition of Fielding's Works.*

**The Works of Henry Fielding.**

Edited, with an Introductory Memoir, by GEORGE SAINTSBURY. Portrait and Illustrations by HERBERT RAILTON and E. J. WHEELER. In twelve volumes. *Uniform with Editions of Jane Austen and the Brontës.* 16mo, each $1.00. The set, twelve volumes in box, $12.00.

**Joseph Andrews.** 2 vols, | **Amelia.** 3 vols.
**Tom Jones.** 4 vols. | **Jonathan Wild.** 1 vol.
**Miscellanies.** 2 vols.

Also a large-paper, limited edition on hand-made paper, at $3 00 per volume.

"The convenient form of the volumes, the taste displayed in their typography, binding, and illustration, are features which must commend these editions to a wide circle of book-lovers; while their inexpensiveness puts them within the reach of thousands to whom *Editions de Luxe*, in the ordinary sense, are inaccessible."—*The Dial.*

*A New Story for the Young. By Mrs. Molesworth.*

**Mary.**

12mo, cloth, $1.00. In New Uniform Edition of Mrs. Molesworth's Stories for Children.

*Now Ready. Volume I. Number III.*

**The Physical Review.**

*A Journal of Experimental and Theoretical Physics.*

Conducted by
EDWARD L. NICHOLS and ERNEST MERRITT.
November-December, 1893.

*TABLE OF CONTENTS.*

**On the Electric Strength of the Solid, Liquid, and Gaseous Dielectrics.** Alexander Macfarlane and G. W. Pierce.

HOUGHTON, MIFFLIN & CO.'S

## NEW BOOKS.

### Familiar Letters of Sir Walter Scott.

With a fine Steel Portrait of Scott and an Autographic Plan of Abbotsford. 2 vols. 8vo, $6.00.

These Letters antedate Scott's Journal recently published. They are full of interest, and the fact that they are written to intimate friends lends them a familiar tone and a playfulness altogether delightful.

### Greek Lines and other Architectural Essays.

By HENRY VAN BRUNT. With illustrations. Crown 8vo, $1.50.

These essays, taken together, form a full and interesting illustration of the growth of architecture in its two great divisions, Greek and Gothic, with special reference to the development of architecture in America, and its application to the needs of the American people.

### White Memories.

Three characteristic poems on Bishop Brooks, Mr. Whittier, and Miss Larcom, by Mrs. A. D. T. WHITNEY. With three fine portraits. Daintily bound. Square 8vo, $1.00

### Twenty Years at Sea.

By FREDERIC STANHOPE HILL. 16mo, $1.00. A book of great interest for boys, describing naval adventures before the War for the Union, and experiences under Admiral Farragut during the war.

### The Natural History of Intellect, and Other Papers.

A new volume of Essays, now first collected, by RALPH WALDO EMERSON. *Riverside Edition.* With an Index to Emerson's Works. 12mo, gilt top, $1.75. *Little Classic Edition.* 18mo, $1.25.

### Longfellow's Poetical Works.

New *Cambridge Edition.* From new plates, large type, opaque paper, and attractively bound. With a Steel Portrait. Crown 8vo, $2.00.

A beautiful volume containing Longfellow's complete poems, including Christus.

*Sold by all Booksellers. Sent, postpaid, by*

# Letters of Travel.

By PHILLIPS BROOKS.

**8vo, 392 pages, cloth, gilt top, $2.00**

CONTENTS.

**First Journey Abroad. 1865-1866.**
**In the Tyrol and Switzerland. 1870.**
**Summer in Northern Europe. 1872.**
**From London to Venice 1874.**
**England and the Continent. 1877.**
**In Paris, England, Scotland, and Ireland 1880.**
**A Year in Europe and India. 1882-1883.**
**England and Europe. 1885**
**Across the Continent to San Francisco. 1886.**
**A Summer in Japan 1889.**
**Summer of 1890. Last Journey Abroad.**

These Letters have been selected from his correspondence with members of his family, and are a record of his travel and experiences. A few of them were printed in the August and September numbers of the *Century*, and were read with very general interest. One paper in noticing them, said: "Nothing reveals so impressively the 'great heart' of this unique man as these letters, written of course with no thought of publication. In a single paragraph he tells us more of the people whom he visited and the practices and customs which he saw than others do in a volume."

Another says: "Mr Brooks describes his experiences with that winning artlessness characteristic of his conversation, and many little expressive phrases will be found to delight the reader."

## The Phillips Brooks Calendar.

A BLOCK CALENDAR FOR 1894.

With a leaf to tear off for every day, giving a short selection. 75 cents.

*Ninth Thousand.*

# Phillips Brooks Year Book.

Selections from the Writings of the

RT. REV. PHILLIPS BROOKS, D.D.

By H. L. S. and L. H. S.

*16mo, 372 pages, gilt top, $1.25.*

"I am so much impressed with its wonderful insight and the spiritual fitness of the quotations that I desire to express my personal gratitude to the editors for the spiritual help which they have given to me and to thousands of others, by the rare discrimination and excellent taste which they have shown in their happy work. No complaint can be made to the effect that this book does not fairly represent Bishop Brooks. It gives us a great many of his best thoughts, his communion with the Master, his spiritual insights, and his highest aspirations."

A NEW VOLUME OF

# SERMONS.

*Sixth Series.*

By BISHOP PHILLIPS BROOKS.

12mo. 20 Sermons, 368 pages, cloth, $1.75.

"These sermons, in their spirituality of temper, their breadth of sympathy, their insight, and their beautiful literary quality, are quite on a level with any earlier sermons from the same hand. . . . Like its predecessors it is full not only of consolation but also of spiritual stimulus."—*The Outlook.*

## PHILLIPS BROOKS'S SERMONS,

*Each volume 50 cents in paper. Cloth, $1.75.*

# The Nation

Is published every week at Broadway and Fulton Street. It was founded by E. L. Godkin in 1865, and Mr. Godkin is still the editor.

THE NATION is an independent weekly review of literature, science, art, and politics, with a serial commentary on the most important American and foreign events, special and occasional correspondence, editorial and miscellaneous articles on prominent political and social topics, and thoroughly competent criticism of the latest developments of literature, science, art, music and the drama. The two hundred contributors who prepare this feast for the scholar and the thinker include the foremost names in American literature and thought, besides many famous men in England and France, Germany and Italy, South America and Japan. THE NATION has been pronounced by the *Saturday Review* to be "on the intellectual level of the best European periodicals." It has a large and widely distributed circulation in all the States of the Union and in foreign ports. The development of that class of independent voters who control the balance of power in several Northern States is largely the work of THE NATION, which has always fought for purity, wisdom, and independence in public life, and for honesty and integrity in legislation.

*Subscription, $3.00 a year, postpaid; shorter term at a proportionate rate. Sample copy sent free on application.*

## TO ADVERTISERS.

The weekly circulation of THE NATION is about 10,000 copies. This number represents, however, but a portion of the actual readers of the journal, as it goes to all the leading libraries and reading-rooms throughout the country, and to the homes of people of intelligence and means everywhere. It stands alone in its field. The announcements of the leading publishers are a feature of THE NATION, which contains more book-advertising than any other weekly paper. Prominent financial houses, the best schools, and other high-class advertisers of all kinds use its columns constantly. The utmost care is taken to exclude all unpleasant or unworthy advertising.

*Advertising rates or other information given on application.*

**206 to 210 Broadway, New York City.**

# J. Selwin Tait & Sons'

## NEW HOLIDAY BOOKS.

### *The Soul of the Bishop.*

By JOHN STRANGE WINTER, author of "Bootles' Baby," "The Other Man's Wife," etc. Handsomely illustrated, with frontispiece portrait of the author. 12mo, cloth, price $1.25.

"'Robert Elsmere,' 'John Ward, Preacher,' and 'The Soul of the Bishop' are all thoroughly worth reading, and they all find their central motive in the conflict of a supersensitive conscience, which detracts not a whit from the value of each. 'The Soul of the Bishop' is a strong book, and the questions which it asks are too pertinent to be permanently evaded."—*Evening Bulletin, Philadelphia.*

### *The Larger Life.*

By HENRY AUSTIN ADAMS, M.A., with portrait of the author. Cloth, 12mo, price $1.00.

This is Father Adams's reply to the cry of criticism which broke over him upon his becoming a Catholic. Dedicated "To My Former Parishioners."

### *The Curb of Honor.*

By M. BETHAM-EDWARDS, author of "The Romance of a French Parsonage." Cloth, 12mo, price $1.00.

A romantic story of the Pyrenees, with that peculiarly French atmosphere with which the talented author alone of English writers can endow a picture of French life.

### *Fragments in Baskets.*

By Mrs. BOYD CARPENTER (Wife of the Bishop of Ripon). Cloth, pp. 224, 12mo, $1.00.

These fragments comprise a series of twelve exquisite apologues, attractive alike to youth and age. A daintily illustrated volume, admirably adapted for presentation.

### *At the Rising of the Moon.*

By FRANK MATTHEW. Illustrated. 12mo, cloth, price $1.25.

"As true of Irish life as the songs of Tom Moore."—*Literary World.*

"The Rev. Peter Flannery might have been one of Charles Lever's characters."—*The Churchman.*

"The book will find a quick place in the hearts of all."—*Boston Times.*

### *The Celebrated Pseudonym Library.*

A daintily bound and printed long 16mo pocket edition of the best new fiction. Cloth bound, gilt top, price 50 cents per volume.

Vol. 1, Makar's Dream; Vol. 2, Herb of Love; Vol. 3, Heavy Laden.

**READY DECEMBER 15.**

### *Memoirs of Anne C. L. Botta.*

Written by Her Friends. Edited by Professor Vincenzo Botta. (With portrait engraving of Mrs. Botta.) Handsomely bound, gilt top, 12mo, $4.00.

### *Tait's National Library of Best 200 Books.*

| | | |
|---|---|---|
| BRET HARTE'S POEMS, | . . . | $2 50 |
| WHITTIER'S | " . . . | 2 50 |
| HOLMES'S | " . . . | 2 50 |
| TENNYSON'S | " . . . | 2 50 |
| LONGFELLOW'S | " . . . | 2 50 |
| LOWELL'S | " . . . | 2 50 |

This exquisite presentation edition is sumptuously bound in blue cloth and white vellum, with gold tracery. Gilt top and handsomely illustrated. Boxed.

*Sold by all booksellers, or sent, postpaid, on receipt of price by the publishers,*

J. Selwin Tait & Sons, 31 East 17th St., New York

## MEISTERSCHAFT SUPERSEDED

*BY ITS OWN AUTHOR,*

**DR. RICHARD S. ROSENTHAL.**

Dr. Rosenthal's name has become a household word wherever foreign languages are studied. A new work,

## The Rosenthal Method of Practical Linguistry

has just been issued by him, which does not only supersede his former system, published 20 years ago, but will be found superior to any method. It is the mature outcome of 25 years' experience of "the greatest linguist and foremost teacher of the age," enabling any one to learn to

*Speak Fluently and Correctly*

with scarcely an effort and without a teacher,

GERMAN, FRENCH, or SPANISH,

within a marvellously short time.

"Next to living in a foreign country, this is undoubtedly the best of all methods for learning modern languages."—*The Dial.*

Exact pronunciation given. All subscribers become actual pupils of Dr. Rosenthal, who answers all questions and corrects all exercises free of charge. Terms of membership $5.00 for each language. Part I., each language, 50 cents.

**POLYGLOT BOOK COMPANY,**

*45 Lafayette Bldg., Chicago, Ill.*

**KINDERGARTEN SUPPLIES**

*at Schermerhorn's, 3 East 14th St., N. Y.*

## *Back Numbers of "The Nation."*

In response to frequent inquiries from subscribers:

*An incomplete set* of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

*Complete sets*, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

*Single numbers* not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street, New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LVII. comprising the last half-year of 1893.]

# TIMELY BOOKS.

*Our Complete Catalogue FREE on Application*

"Puts the reader at once on the track of the best thoughts of thinking men of all ages on a given topic."—*The Boston Herald.*

*Just Ready. In 1 vol., 668 pages, Demy 8vo, cloth, $2.50. Half calf, $4.50. Half levant morocco, $5.50.*

**Dictionary of Quotations from Ancient and Modern English and Foreign Sources.**

Including Phrases, Mottoes, Maxims, Proverbs Definitions, Aphorisms, and Sayings of Wise Men in their Bearing on Life, Literature, Speculation, Science, Art, Religion, and Morals, especially in the Modern Aspects of Them. The whole made easily available by the subject index, and a novel method of paging and numbering the quotations. Selected and compiled by the Rev. JAMES WOOD, editor of "Nuttall's Standard Dictionary," 1893.

"The effort has not been to make a collection of 'familiar quotations,' but rather to mass so large a quantity of pithy and wise sayings that the apt word for any occasion may readily be found. . . . A really valuable addition to the reference library."—*The Outlook, New York.*

"He has collected good, quotable matter which has not been put in a dictionary before."—*The Independent*

"Mr. Wood's book is particularly rich in proverbs, and in sayings or 'thoughts' of maxim-makers, such as La Bruyère, Joubert, Pascal, Chamfort, Goethe."—*Saturday Review, London.*

"Mr. Wood shows two chief merits—accuracy in quotations and comprehensiveness."—*Literary World, Boston.*

*A Novel. By Sir Henry Thompson, F.R.C.S. In 12mo, cloth, $1.00.*

**Charley Kingston's Aunt.**

A Study of Medical Life and Experience (*Revised Edition.*) By PENN OLIVER, F.R.C.S.

# *HOLIDAY BOOKS:*

## *Tales from Shakspeare.*

By CHARLES and MARY LAMB, with a continuation by HARRISON S. MORRIS, author of "Tales from Ten Poets," etc. Four volumes. 16*mo*. *Illustrated, cloth extra*, $4.00; *half calf or half morocco*, $8.00; *three-quarters calf*, $10.00. *Edition de Luxe* (limited to 150 copies). *Four volumes. Small* 8*vo. Cloth*, $12.00 *net.*

The twenty tales from the plays of Shakspeare by Charles and Mary Lamb are the most useful and agreeable companions to an understanding of Shakspeare that have ever been produced. They are included in the first two volumes of this edition. In the two remaining volumes, Mr. Morris completes the plays, and in a brief space presents each plot and story in a most engaging manner

## *Historical Tales.*

THE ROMANCE OF REALITY. By CHARLES MORRIS, author of "Half-Hour Series," "Tales from the Dramatists," etc. America, England, France, Germany. *Illustrated.* 12*mo. Cloth*, $1.25 *per volume. Each work sold separately or in sets in boxes.* $5.00 *per set; half calf*, $10.00.

"The Romance of Reality," the sub-title of the work, admirably indicates its character, for within its pages may be found grouped the scene of those romantic and eventful incidents which form the pith of the history of the leading modern nations, and many of which have long been favorites in popular lore. The half tone illustrations, twelve in each volume, add to the beauty and historical value of an otherwise attractive work.

## *History of the Consulate and the Empire of France.*

By L. A. THIERS, Ex-Prime Minister of France. Translated from the French, with the sanction of the author, by D. Forbes Campbell. An entirely new edition, printed from new type and illustrated with thirty-six steel plates printed from the French originals. Twelve octavo volumes. *Cloth*, $3.00 *per volume.* Two volumes now ready.

## *Queechy.*

By ELIZABETH WETHERELL, author of "The Wide, Wide World," "Dollars and Cents," etc. *New Edition.* Uniform with "The Wide, Wide World." Printed from new plates and illustrated with thirty new pictures in the text from drawings by FREDERICK DIELMAN. 12*mo. Cloth*, $1.00; *paper*, 50 *cents.*

"The new edition of this familiar story, issued uniform with the latest issue of 'The Wide, Wide World,' will be gladly welcomed by thousands of old friends and by many new ones. The work has always been eagerly sought and read. The moral lessons in it will never be out of style, and its homely simplicity and rich pictures of child-life will always attract the young."

## *De Luxe Edition of the Works of William H. Prescott.*

(Limited to 250 sets.)

Containing all the steel plates on India paper and maps that appeared in former editions, together with 165 new phototype illustrations. Complete in twelve large octavo volumes:

HISTORY OF THE REIGN OF FERDINAND AND ISABELLA. Two volumes.
HISTORY OF THE CONQUEST OF MEXICO. Two volumes.
HISTORY OF THE CONQUEST OF PERU, Two volumes.
HISTORY OF THE REIGN OF PHILIP II. Three volumes.
HISTORY OF THE REIGN OF THE EMPEROR CHARLES V. Two volumes.
BIOGRAPHICAL AND CRITICAL MISCELLANIES. One volume.

*Handsomely bound in half morocco, gilt top*, $5.00 *net per volume.*

## *Barabbas.*

A DREAM OF THE WORLD'S TRAGEDY. A new copyright novel by MARIE CORELLI, author of "Vendetta," etc 12*mo. Cloth*, $1.00.

"It is a strong story; strong in descriptive, strong in feeling. The single conception of 'Barabbas' raises it to a high level, and the tone of the whole, exalted and passionate, makes it an impressive tale—impressive for the good."—*Chicago Interior.*

## *Two Offenders.*

By OUIDA. 12mo, cloth $1.00. Ready early in December.

This work is characterized by the author's usual sprightliness, wit, and dramatic power.

## *A Dog of Flanders,*

AND OTHER STORIES, by OUIDA, is a collection of four charming sketches for young readers. Illustrated with engravings after drawings by EDMUND H. GARRETT. *Small* 4*to. Cloth*, $1.50.

## *Seven Christmas Eves,*

The Romance of a Social Evolution. By seven authors. With illustrations by DUDLEY HARDY. 12*mo. Cloth*, $1.00.

A story of the lives of two little waifs picked up from the streets of London, told in seven chapters by as many different authors.

## *Twenty Little Maidens.*

By AMY E. BLANCHARD. Illustrated by IDA WAUGH. *Small* 4*to. Cloth extra*, $1.50.

An attractive book for the little folks. It contains twenty distinct stories of as many little girls, and is told in a way that cannot fail to please the children.

The above new publications are for sale by all booksellers. Mailed by the publishers on receipt of price.

## Longmans, Green, & Co.'s

*NEW BOOKS.*

### Eskimo Life.

By FRIDTJOF NANSEN, author of "The First Crossing of Greenland." Translated by WILLIAM ARCHER. An account of Greenland and the Eskimo: Their Appearance and Dress—The Kaiak and its Appurtenances—Winter—Houses, Tents, etc.—Cookery and Dainties—Character—Social Conditions—Love and Marriage—Morals—Mental Gifts—Art, Music, etc.—Religious Ideas, etc., etc. 8vo, with 16 plates and 15 illustrations in the text. $4.00.

### The Ruined Cities of Mashonaland.

Being a Record of Excavation and Exploration in 1891. By J. THEODORE BENT, F.S.A., F.R.G.S. With a chapter on the Orientation and Mensuration of the Temples, by R. M. W. SWAN. New and Cheaper Edition, WITH NEW APPENDIX HAVING SPECIAL REFERENCE TO THE PRESENT CONDITION OF MASHONALAND. With map, 13 plates, and 104 illustrations in the text. Crown 8vo, $2.50.

### Where Three Empires Meet:

A Narrative of Recent Travel in Kashmir, Western Tibet, Baltistan, Ladak, Gilgit, and the adjoining Countries. By E. F. KNIGHT, author of "The Cruise of the *Falcon*," etc. With a map and 54 illustrations. Crown 8vo, $2.50.

### Life with Trans-Siberian Savages.

By B. DOUGLAS HOWARD, M.A. This work contains a description of the manners, customs, and daily life of the unchanged remnants of the oldest historic savages in Asia, as recently shared by the author in the interior of the Sakhalin forests, now rendered unapproachable by military exile guards. This, the only account for nearly 300 years of the life of the Sakhalin Ainos by an observer, combines native hunting and other adventures with scientific observation. 12mo, 219 pages, $1.75.

# A. C. McClurg & Co.'s New Books.

**The Complete Angler.** (Limited Edition). By Izaak Walton. Edited, with an Introduction, by Edward Gilpin Johnson. With Original Border Illustrations Printed in Color. Edition limited to 500 numbered copies. *Net* $4.00.

Among the many and beautiful editions of this old classic which have been issued, this one will have a place of its own It is certainly original in the decorative illustrations which almost cover the wide borders surrounding the text. The 500 copies issued will scarcely be enough to supply the many enthusiastic lovers of the genial old philosopher and fisherman.

**Pictures from Nature and Life.** Poems by Kate Raworth Holmes. With half-tone illustrations by Helen E. Stevenson. Small quarto, $2.50.

The holiday season will scarcely furnish a more attractive gift-book than this, in which the delicate sentiment of the verse is matched by the letterpress and the unusual illustrations. The opening poem, "One Fair Day," is one of those delightful, sunshiny reminiscences whose romance, sung in musical numbers, haunts the memory like a chapter from one's own experience. The bright fulfilment of that "fair day" is told in the poem entitled "The Bride."

**Rumour.** By Elizabeth Sheppard. With an Introduction and Notes by Harriot Prescott Spofford. With two portraits. 2 vols., 12mo, gilt tops, $2.50.

"Rumour" was the last of Miss Sheppard's three most popular romances. Apart from the intrinsic merit of the story, it derives especial interest from the fact that Beethoven stands as the model of one of its characters, just as Mendelssohn was portrayed in "Charles Auchester" The complete series—"Charles Auchester," "Counterparts," and "Rumour" (six vols , uniformly bound, $7.50)—stand alone as romances suffused with the spirit of music and largely concerned with the lives of musicians.

**A Book of Thoughts** **Linked with Memories of John Bright.** Compiled by Mary Bright Curry. 12mo, gilt top, $1.25.

In this work the compiler, the daughter of John Bright, has collected from various authors some of those passages that were particular favorites of her father, and has included with them a few quotations from his own speeches and writings The uniformly high and noble character of the selections indicates the well-springs whence this pure-minded, generous-hearted statesman drew inspiration to sustain him in his struggles for truth and justice.

**The Bailiff of Tewkesbury.** By C. E. D. Phelps and Leigh North. Illustrated. 12mo, $1.00.

This is an unusually clever and attractive story of English life in the last half of the sixteenth century, the scene being laid in and about Tewkesbury and Stratford-on-Avon. Shakespeare as a young man is introduced as one of the characters with much skill and with perfect propriety It is a story of incident. The action is vigorous, the descriptions are vivid and truthful, the interest is well sustained, and the atmosphere is sweet and wholesome.

**Garrick's Pupil.** By Augustus Filon. Translated by J. V. Prichard. Illustrated. 12mo, $1.00.

This story is a faithful and brilliant study of London life in the latter half of the eighteenth century. The times of Reynolds and Garrick, of Johnson and Burke, have been carefully studied and skilfully reproduced. The author, with a fine historic sense, has succeeded in conveying a true idea of the social and political forces that fermented in the society of London during that remarkable period.

**The Lost Canyon of the Toltecs.** An Account of Strange Adventures in Central America. By CHARLES SUMNER SEELEY, author of "The Spanish Galleon." 12mo, $1.00.

A vivid story of adventure among the Cliff-Dwellers of Central America The interest of the reader is held unflaggingly from the beginning to the end by the variety of incidents and the vividness of the narrative. It is filled with thrilling adventures, which are intricately involved with an attractive love story. It is even more absorbing than "The Spanish Galleon," and is told in the same direct and simple style.

**The English Humorists.** By William M. Thackeray. Finely printed and bound. 16mo, gilt top, $1.00.

**Sartor Resartus.** By Thomas Carlyle. Finely printed and bound. 16mo, gilt top, $1.00.

These two volumes have been issued in the same attractive style—fine paper, clear type, handy size, and tasteful binding—in which we have issued "Heroes and Hero Worship," "Sesame and Lilies," "Bacon's Essays," "The Complete Angler," and are uniform with them.

*For sale by booksellers generally, or will be sent, postpaid, on receipt of the price by the publishers,*

IF YOU ARE GOING TO FLORIDA you will probably be interested in "Flitting to Florida." in THE TOURIST, Utica, New York.

# Books in Season

## Roman and Medieval Art.
(JUST PUBLISHED.)
By Prof. WM. H. GOODYEAR. With 150 illustrations. Library Edition. 12mo, gilt top, $2.00.

Rarely has a more beautifully illustrated volume come from the press. Prof. Goodyear's reputation as an authority and writer upon art is a guarantee of faithful, accurate, and appreciative treatment. The text is richly illustrated with pictures of famous art treasures, several of which are reproductions of early Christian paintings only recently discovered. This Library Edition is printed upon a heavy coated paper, which enhances to a remarkable degree the artistic value of the pictures.

## The Four Georges.
By WM. MAKEPEACE THACKERAY. Price, $3.00.

The text is embellished with decorations, portraits, and vignettes of beautiful design by Mr. George Wharton Edwards. Printed in two colors. Large 8 vo, richly bound in buff and white vellum, stamped in gold, with wide margins, flat back, rough edges, and gilt top.

## Log of a Japanese Journey.
By TSURAYUKI. 12mo, 50 cents.

Translated from the Japanese by Mrs. Flora Best Harris. Twelve original photogravure illustrations by the Japanese artist, Toshio Aoki. Printed and bound in close imitation of the books issued in Yokohama.

## Callias: An Historical Romance.
By ALFRED J. CHURCH, M.A. 12mo, cloth, illustrated, $1.50.

*Callias*, undoubtedly the most important of Mr. Church's writings, is printed originally in the United States, direct from the author's manuscript. The novel is intensely interesting; the plot is not subordinated to the historical and biographical matter.

## All He Knew. A Story.
By JOHN HABBERTON. 12mo, cloth, $1.00.

"Its purpose and spirit, and its practical adaptation to the great spiritual needs of mankind, are so admirable that it deserves to be read and re-read and circulated widely."—*The Congregationalist.*

## The Golden Calf.
By H. H. BOYESEN. 12mo, cloth, $1.00.

Prof. Boyesen has left his favorite Scandinavian scenes to tell a story of modern American life.

"A strong novel containing a story interestingly told with an unmistakable purpose."—*Saturday Spectator.*

## The United States and Foreign Powers.
By W. E. CURTIS. 12mo, $1.00.

Mr. Curtis, a prominent official of the State Department, has prepared a book which treats in a popular way the relations which have existed and are now maintained between the United States and the principal nations of the world. This is a distinct addition to American historical literature, by reason of its compactness and its combination of widely scattered material.

## The Story of Gottlieb.
By Dr. WM. F. WARREN, president of Boston University. 16mo, white vellum, 60 cents.

It describes the struggle of a refined young German for the true ideal of life.

"It is a strong book—strong in its simplicity, its truthfulness, in the impression it makes."—*Presbyterian Observer.*

## The Busy Man's Bible.
By GEORGE W. CABLE. 16mo, cloth, 75 cents.

"It is hoped that this bright and helpful book will have a large circulation."—*National Baptist.*

"An admirable exposition of the way to study and teach the Bible."—*Boston Budget.*

*** For sale by all booksellers, or sent postpaid on receipt of price by the publishers,*

**FLOOD & VINCENT,**

# HOUGHTON, MIFFLIN & COMPANY.

## BOOKS OF HISTORY.

### American Commonwealths.

The History of such States of the Union as have a striking political, social, or economical history. With Maps and Indexes. Each volume, uniform, 16mo, gilt top, $1.25.

Virginia. By JOHN ESTEN COOKE.
Oregon. By WILLIAM BARROWS.
Maryland. By WILLIAM HAND BROWNE.
Kentucky. By NATHANIEL S. SHALER.
Michigan. By THOMAS M. COOLEY.
Kansas. By LEVERETT W. SPRING.
California. By JOSIAH ROYCE.
New York. By ELLIS H. ROBERTS. (2 vols.)
Connecticut. By ALEXANDER JOHNSTON.
Missouri. By LUCIEN CARR.
Indiana. By J. P. DUNN, JR.
Ohio. By RUFUS KING.
Vermont. By ROWLAND E. ROBINSON.

### Charles Francis Adams.

Three Episodes of Massachusetts History. I. The Settlement of Boston Bay. II. The Antinomian Controversy. III. A Study of Church and Town Government. With two Maps. 2 vols., crown 8vo, gilt top, $4.00.

The volumes will surely take high rank among the products of American historical scholarship.—*Political Science Quarterly.*

Massachusetts: Its Historians and its History. Crown 8vo, $1.00.

### George E. Ellis.

The Puritan Age and Rule in the Colony of Massachusetts Bay. 1629–1685. 8vo, $3.50.

### John Fiske.

The Discovery of America. With some account of Ancient America, and the Spanish Conquest. With Steel Portrait of Mr. Fiske, Maps, Facsimiles, and Illustrations. 2 vols., crown 8vo, gilt top, $4.00.

The American Revolution. With Plans, and Portrait of Washington. 2 vols., crown 8vo, gilt top, $4.00.

The Critical Period of American History. 1783–1789. With Map, Notes, etc. Crown 8vo, gilt top, $2.00.

The Beginnings of New England. The Puritan Theocracy in its Relations to Civil and Religious Liberty. With Maps. Crown 8vo, gilt top, $2.00.

The War of Independence. Riverside Library for Young People. With Maps. 16mo, 75 cents.

Civil Government in the United States. Considered with some reference to its Origins. 12mo, $1.00 *net.*

Mr. Fiske writes from full knowledge and thorough research, and he has such mastery of his facts, and so distinct a perception of their relations, that his works are marvels of clear statement, while his strong, simple style gives to them a very unusual attraction.

### John A. Goodwin.

The Pilgrim Republic. An Historical Review of the Colony of New Plymouth, with Sketches of the Rise of other New England Settlements, a History of Congregationalism, and the Creeds of the Period. With Maps and Plans. 8vo, 622 pages, $4.00 *net.*

### George Washington Greene.

Life of Nathanael Greene, Major-General in the Army of the Revolution. New Edition. 3 vols., 8vo, $7.50.

A Historical View of the American Revolution. Crown 8vo, $1.50.

### Lord Macaulay.

History of England. From the last Edition of Macaulay's Works, edited by his sister, Lady Trevelyan. With Portrait. *Riverside Edition.* 8 vols. 12mo, $16.00. Also in 4 vols. 12mo, $5.00; half calf, $10.00.

### Edward J. Lowell.

The Eve of the French Revolution. Crown 8vo, gilt top, $2.00.

A penetrating, subtle, and comprehensive review of the ante-Revolutionary situation.—*The Literary World.*

### Harold Murdock.

The Reconstruction of Europe. A Sketch of the Diplomatic and Military History of Continental Europe from the Rise to the Fall of the Second French Empire. With an Introduction by JOHN FISKE, and several Maps. Crown 8vo, gilt top, $2.00.

No romance possesses anything like the interest of the history of the twenty years covered by Mr. Murdock's book. He has told the story with admirable mastery of its main lines, and with decided narrative power.—*The Christian Union* (New York).

### John Gorham Palfrey.

A Compendious History of New England, from the Discovery by Europeans to the first General Congress of the Anglo-American Colonies. 4 vols. 12mo, in box, $6.00; half calf, $12.00.

His historical works hold the first rank for fulness of research, carefulness of statement, candor of judgment, and scholarly finish of style.—*O. B. Frothingham.*

### James Breck Perkins.

France under the Regency. With a Review of the Administration of Louis XIV. Crown 8vo, gilt top, $2.00.

He is to be praised for having produced a work, on a period of French history comparatively obscure to English readers, of the highest degree of readableness, and bearing every mark of thorough investigation and candid temper. — *The Literary World.*

### William R. Thayer.

The Dawn of Italian Independence. Italy from the Congress of Vienna, 1814, to the Fall of Venice, 1849. With Maps. 2 vols. crown 8vo, gilt top, $4.00.

It is a history full of interest, well and faithfully told.—*New York Tribune.*

### Herbert Tuttle.

The History of Prussia to the Accession of Frederic the Great. 1134–1740. With a Map. Crown 8vo, gilt top, $2.25.

The History of Prussia under Frederic the Great. 1740–1756. With Maps. 2 vols. crown 8vo, gilt top, each $2.25.

A thoroughly substantial and useful book.—*Deutsche Rundschau.*

### William B. Weeden.

The Economic and Social History of New England. 1620-1789. With an Appendix of Prices. 2 vols. Crown 8vo, gilt top, $4.50.

A storehouse of historical data of the utmost value. . . . Full of suggestive and vital information about New England.—*New York Times.*

### Henry Wilson.

Rise and Fall of the Slave Power in America. 3 vols. 8vo, each $3.00. The set, $9.00.

One of the most important and valuable books ever published in America.—*Hon. George F. Hoar.*

### Justin Winsor (editor).

Narrative and Critical History of America. With Bibliographical and Descriptive Essays on its Historical Sources and Authorities. Profusely illustrated with Portraits, Maps, Facsimiles, etc. Edited by Mr. WINSOR, with the coöperation of a Committee from the Massachusetts Historical Society, and with the aid of other learned Societies. 8 vols. Royal 8vo, each $5.50 *net;* sheep, $6.50 *net;* half morocco, $7.50 *net.* (*Sold only by subscription for the entire set.*)

## NEW BOOKS.

### Longfellow's Poetical Works.

New *Handy-Volume Edition.* Complete in five volumes, 16mo, printed from beautiful large type, on opaque paper, bound in a simple but very attractive style, and put up in a cloth box, $6.25; half calf, extra, gilt top, $12.00; full morocco, flexible, in fine leather box, $12.00; full calf, flexible, in leather box, $16.00.

Each volume has a different portrait, the five representing the poet at different periods of his life, and the frontispiece is followed by a decorative title containing an etching of the Cambridge home.

### Greek Lines and Other Architectural Essays.

By HENRY VAN BRUNT. With illustrations. Crown 8vo, $1.50.

These essays form a full and interesting illustration of the growth of architecture in its two great divisions, Greek and Gothic, with special reference to the development of architecture in America.

### The Growth and Influence of Classical Greek Poetry.

A book of unusual value and literary charm. By R. C. JEBB, Regius Professor of Greek in the University of Cambridge, author of "Attic Orators," etc. Crown, 8vo, $1.50.

### Poems.

By THOMAS WILLIAM PARSONS. 12mo, gilt top, $1.25.

A book of rare poetic value, which is sure to be more prized the better it is known.

### Translation of Dante.

A wonderfully poetic translation of nearly all of the Divine Comedy, by Dr. PARSONS. With an Introduction by Prof. CHARLES ELIOT NORTON, and a Bibliographical Sketch by LOUISE IMOGEN GUINEY. 12mo, gilt top, $1.50.

### Thoreau's Works.

*Riverside Edition,* with three Portraits.
Early Spring in Massachusetts.
Excursions in Field and Forest.
Miscellanies. With a Biographical Sketch by RALPH WALDO EMERSON, and an Index to the ten volumes.
Each, crown 8vo, gilt top, $1.50; the set, 10 vols., $15.00; half calf, $27.50.

These volumes complete the Riverside Edition of Thoreau's Works, in admirable form for libraries.

### Photography Indoors and Out.

A Book for Amateur Photographers. By ALEXANDER BLACK. With illustrations. 16mo, $1.25.

A most helpful and convenient manual, covering the whole field in brief space, and interesting and aiding the beginner in the most direct way.

### Mr. Fish and the Alabama Claims.

A Chapter in Diplomatic History. By J. C. BANCROFT DAVIS. 8vo, 75 cents.

The settlement of the Alabama Claims is one of the most conspicuous landmarks in the diplomacy of the United States. It was largely due to Hon. Hamilton Fish, at that time Secretary of State, and is one of the surest of his claims to gratitude and to enduring fame as a statesman. Mr. Davis has had long and intimate connection with the State Department, and his discussion of this subject is very full and based on thorough acquaintance with it in all its political and personal relations, and is a valuable contribution to our diplomatic history.

*Sold by all Booksellers. Sent postpaid by*

# HOUGHTON, MIFFLIN & CO., Boston, 11 East 17th Street, New York.

## Socialism: Its Growth and Its Outcome.

By William Morris and E. Belfort Bax. Crown 8vo, $1.00.

"A continuous sketch of the development of history in relation to Socialism. . . . Our plan necessarily deals with the aspirations of Socialists now living towards the Society of the future. . . . The work has been in the true sense of the word a collaboration, each sentence having been carefully considered by both the authors in common."—*From the Preface.*

## A Short History of the Renaissance in Italy.

Taken from the work of John Addington Symonds. By Lieutenant-Colonel Alfred Pearson. With a steel engraving of a recent portrait of Mr. Symonds. Demy 8vo, $3.75.

## Essays: Speculative and Suggestive.

By John Addington Symonds. New edition in one volume. Demy 8vo, $3.00.

## Old Court Life in Spain.

By Francis Minto Elliot, author of "Old Court Life in France," "Diary of an Idle Woman in Italy, Sicily, and Spain," etc., etc. In two vols. Demy 8vo, $7.50.

## The Book of Good Counsels.

From the Sanscrit of the Hitopadesa. By Sir Edwin Arnold, M.A., K.C.I.E., C.S.I., author of "The Light of Asia," "The Light of the World," etc. With illustrations by Gordon Browne. Crown 8vo, antique, gilt top, $2.50.

*NIMROD IN MASHUNALAND.*

## Travel and Adventure in Southeast Africa.

Being the narrative of the last eleven years spent on the Zambesi and its tributaries; with an account of the colonization of Mashunaland and the progress of the gold industry in that country. By Frederick Courtney Selous, C.M.Z.S. With numerous illustrations and map. 500 pp., square 8vo, *net*, $10.00.

*** The most brilliant volume of hunting adventure which has been published since Gordon Cumming. It is filled with thrilling narratives of big game shooting, and pioneering among the natives in the wildest part of Africa. It is especially timely in its account of Mashunaland.

## Madame:

Memoirs of Henrietta, Daughter of Charles I. and Duchess of Orleans. By Julia Cartwright (Mrs. Henry Ady). With 2 Portraits on copper. Demy 8vo, $3.75.

*** This volume will contain Ninety Unpublished Letters of Charles II.

## Landmarks of a Literary Career. 1820-1892.

By Mrs. Newton Crosland (Camilla Toulmin), author of "Mrs. Blake," "Stories of the City of London," etc. With photogravure portrait. Crown 8vo, $2.00.

## Esquemeling's Buccaneers.

The Buccaneers of America; or, A True Account of the Most Remarkable Assaults Committed of Late Years upon the Coasts of the West Indies by the Buccaneers, etc. By John Esquemeling, one of the Buccaneers, who was present at those tragedies. Reprinted from the edition of 1684, to which is added a reprint of the very scarce Fourth Part by Basil Ringrose. With facsimiles of all the original engravings, etc. 8vo, $5.00.

## Ten Years' Captivity in the Mahdi's Camp, 1882-1892.

From the original manuscripts of Father Joseph Ohrwalder, late Priest of the Austrian Mission Station at Delen, in Kordofan. By Major F. R. Wingate, R.A. Fully illustrated, revised, and condensed. Tenth edition. Crown 8vo, $2.00.

## Pastorals of France—Renunciations.

A volume of stories comprising "A Last Love of Pornic," "Yvonne of Croisic," "The Four Bells of Chartres," "A Chemist in the Suburbs," "A Confidence at the Saville," "The North Coast and Eleanor." By Frederick Wedmore. Crown 8vo, $2.00.

## The Paris Law Courts.

Sketches of Men and Manners. Translated from the French by Gerald P. Moriarty, B.A. Profusely illustrated. Royal 8vo, $3.75.

CHARLES SCRIBNER'S SONS, 743 and 745 Broadway, N. Y.

# LITTLE, BROWN & CO.'S NEW BOOKS.

## PAN MICHAEL.

An Historical Novel of Poland, the Ukraine, and Turkey. By Henryk Sienkiewicz. Translated from the Polish by Jeremiah Curtin. Crown 8vo, Cloth, $2.00.

*A Sequel to "With Fire and Sword," and "The Deluge."*

This great historical romance completes the remarkable series of historical novels by Sienkiewicz, of which with "With Fire and Sword" and its sequel "The Deluge," have been so successful. Their publication has been received throughout the United States by readers and critics as an event in literature. Charles Dudley Warner in Harper's Magazine affirms that the great Polish author has in the character of Zagloba *given to literature a new creation.*

*By the Same Author. Just Issued.*

*WITH FIRE AND SWORD. Crown 8vo, Cloth, $2.00.*

*THE DELUGE. 2 vols., Crown 8vo, Cloth, $3.00.*

## Cuthbert Bede's College Stories.

THE ADVENTURES OF MR. VERDANT GREEN, AN OXFORD FRESHMAN. 2 vols.

LITTLE MR. BOUNCER AND HIS FRIEND VERDANT GREEN, ALSO TALES OF COLLEGE LIFE. 1 vol. The series illustrated with six etched titles and frontispieces and over 250 illustrations by the author. *New Library Editions of these favorite Oxford stories, printed in large, clear type,* 3 vols., 12mo, cloth extra, gilt top, $5.00.

*A New Story by Dumas never before Translated.*

## OLYMPE DE CLÈVES.

A ROMANCE OF THE COURT OF LOUIS XV. By Alexandre Dumas. With etched frontispieces, 2 vols., 12mo, cloth extra, gilt top, $3.00.

This remarkable romance, one of the greatest ever written by the greatest of all romantic writers, is termed a *masterpiece* by William Ernest Henley, the eminent critic. It deals with the Jesuit Novitiate at Avignon and the French court during the early days of the reign of Louis XV.; and introduces, besides the young king, such characters as Cardinal Fleury, Marechal de Richelieu, Queen Mary Leckzinska, Comtesse de Mailly, Mademoiselle de Charolais, etc.

*Popular Edition of Francis Parkman's latest work.*

## A HALF-CENTURY OF CONFLICT.

By Francis Parkman. Popular Edition, with 3 Maps. 2 volumes, 12mo, cloth, $3.00.

His place is *alongside of the greatest historians,* whose works are English classics.—*London Athenæum.*

Little, Brown & Co., Publishers,

*254 Washington Street, Boston.*

# LEE & SHEPARD'S NEW BOOKS.

### I Have Called You Friends.

Twenty full-page drawings, accompanied by the text, from entirely new plates. Size, 7¼x11 inches. Cloth, full gilt, gilt edges. Boxed. Price, $2.00. Full leather, gilt titles, gilt edges, $4.00.

### All Around the Year 1894 Calendar.

Designs in color. Printed on heavy cardboard, gilt edge, with chain, tassels, and ring. Size, 4¼x5½ inches. Boxed. Price, 50 cents.

### A Spinster's Leaflets.

By ALYN YATES KEITH. Cloth, illustrated, $1.25.

This is not a series of regrets for a spoiled existence, nor has it any of the acid comment which is wrongfully associated with old maids. It is a segment of a mature and beautiful life. The "Leaflets" record the author's experiences in a quaint home, situated in a charming neighborhood, and among the most *natural* people ever described. The ambition of the spinster was to bring up a boy, and the ostensible purpose of the book is to record her experiences among the boys while looking to find the right one for adoption. Incidentally she describes a village full of people, and contrives to make portraits of all who come into her plan. Also, she touches upon current topics and current literature, and shows not only perception and judgment, but a charming personality of her own.

*New Editions of*

### The Fallow Field.

Poem by JULIA C. C. DORR. Illustrated with reproductions of Charcoal Sketches by ZULMA DELACY STEELE. Containing 25 drawings printed on fine cut paper. Size, 8½x11 inches. Oblong quarto, full gilt, gilt edges, price $3.00. Full leather, gilt titles, gilt edges, $5.00.

To receive the current numbers in a convenient (temporary) form. Substantially made, bound in cloth, with THE NATION stamped on the side in gold. Holds about one volume. Papers easily and neatly adjusted. Sent, postpaid, on receipt of 75 cents.

## The Thoughtful Citizen

Looks back of the present condition of national life in the United States, knowing that a right knowledge of the complex forces that have contributed to the growth of the nation is essential to any but a half-blind exercise of citizenship.

The historian who can best aid him must be keen aad sympathetic and just; he must be logical and thorough; he must show not only effects but causes; he must show the life of the nation, and then his work may be rightfully be called a history. Such a history is

## Von Holst's Constitutional and Political History of the United States.

Few, if any, works in the field of American History are so frequently cited and so highly commended in the Universities of our land as this. A pamphlet descriptive of it will be sent you on request.

*A FEW CRITICAL OPINIONS.*

Its reflections are always astute and incisive.—*Harper's Monthly.*

Written for all time.—*New Orleans Picayune.*

Learned, ingenious, subtle, brilliant, dashing, and sometimes almost rollicking in his lively and glowing style.—*New York Herald.*

The peculiarities of Von Holst's historical clinics are, first, a multitude of side-lights which he throws on them from every quarter, and, second, the remorseless pertinacity with which he follows up every nerve and muscle to its end.—*Alexander Johnston.*

Masterly analysis of events.—*The Nation.*

Omits no significant detail.—*David Swing.*

In the front rank of American histories.—*H. C. Lodge.*

Marked by comprehensiveness of statement, amplitude of detail, and clearness of exposition.—*New York Tribune.*

We seem to feel, from page to page, the onward march of destiny.—*The Independent.*

It is perfectly just and impartial in weighing argument and estimating character. Young America may well read and ponder this graphic narrative.—*Harper's Weekly.*

*Complete in Eight large octavo volumes containing nearly 4,000 pages. Prices, in cloth, $25; sheep, $30; half calf, $38. Sold by leading booksellers everywhere.*

# The Nation.

NEW YORK, THURSDAY, NOVEMBER 30, 1893.

## The Week.

WE were glad to see signs of returning reason in the religious press last week touching the Hawaiian business. The week before, they were nearly all giving tongue in the most disgraceful manner, but now they have the grace to admit that it would be as well to wait until they know the facts, and meanwhile "suspend judgment." We except the *Independent*, which nobly maintains its reputation for knowing things that are not so, and advocating in the name of religion courses of action that are clearly immoral. If ever there was a question on which the religious press could not afford to be wrong, even for one week, the Hawaiian affair is such a question. To have the best foreign opinion united in admiration of an act of international justice and high-mindedness by the Government of the United States, at the same time that the religious press of the United States is denouncing it, is something, as the religious editors say, to make angels weep.

---

Even the Hawaiian *Furiosos* have given up defending Stevens. They admit, with the *Tribune*, that his attitude was "partial," but are tearful over the peril to missions and civilization which would be involved in undoing his work. Stevens himself, in his lecture last week, made no reference to the evidence which shows that he was a conspirator and a falsifier, but was very strong on "what is most sacred in Christian civilization." Now, the first thing to be said to old-time friends and supporters of foreign missions, like the *Sun*, is to remind them that all the wonderful triumphs of the Gospel in the Sandwich Islands were won under a monarchical form of government. How, then, can it be fatal to Christianity in Hawaii to restore the monarchy? In the second place, it is to be said that the most sacred things in Christian civilization are not churches and preaching or singing hymns, but justice and truth and honesty. A long line of prophets and apostles and church fathers could be cited in favor of the opinion that these virtues are the indispensable basis of Christian civilization, and the necessary preliminary to missionary operations in any heathen country. To try to steal Hawaii, and to lie about the way you got the stolen goods in your possession, and to refuse to give them up when cornered, may be done, as Stevens says it was, "in the name of Christian civilization," but it is not fitted to make that name attractive to the victims. We are firm in the belief that the act of simple justice which the American Government now proposes, will do more to advance true religion in Hawaii than the most pathetic missionary address which Mr. Stevens or the editor of the *Sun* ever delivered.

---

Ex-Secretary Tracy has solemnly said to a reporter that Minister Stevens's Hawaiian revolution "came like a thunder-clap to the Administration." But it was only stage thunder, and all the supernumeraries producing it were in plain sight of the audience. Stevens himself, in his *Kennebec Journal*, and the editor of the *Tribune* were both caught in their shirt-sleeves, a full year ago, letting off the first rumblings of the thunder. In Stevens's despatch of November 20, 1892, he gave another Jove-like crash with his plea for "bold and vigorous measures for annexation," as to which, he said, "our statesmen and our Government must decide." What decision they reached was made clear in Secretary Tracy's interview with Admiral Skerrett on the 30th of the following month, when he said: "Commodore, the wishes of the Government have changed. They will be very glad to annex Hawaii." This shows the kind of "continuity" in foreign policy which President Harrison thinks so vital. It is nothing for the wishes of the Government to "change" in the interest of filibusters, but when it is a question of making them disgorge, then all patriots must grieve over the lack of "continuity." But in view of all these elaborate preparations for the "thunder-clap," the startled air of the members of the Administration when it actually came is a high tribute to their histrionic powers.

---

The unhappiness caused to Mr. Thurston and his organs by the failure of the Administration to dismiss him, or "send him his passports," or remonstrate with him, or in any way treat him as a naughty envoy or "persona non grata," because he has talked freely in the newspapers, is very amusing. The fact is, that he has done the right thing in carrying his complaints to the newspapers. That is the place for them. Such stuff as he furnished them for publication would be very odd in a diplomatic paper. Moreover, his character as an envoy extraordinary is not worth the consideration of a serious man in the State Department. The ambassador of a "free people" who muster only 600 strong, is not treated with much respect in any court, and of course ought to receive less from us, who think so much of numbers, than from any other power. He, however, has compensation in freedom of speech. A man in Mr. Thurston's position cannot commit an "indiscretion." He might write an article in the *Tribune*, and nobody would blame him. "Passports" would be wasted on him, and so would "belligerent rights." He might even "declare war" against the Administration, and the wretched Gresham would simply smile that deadly smile of his to which the *Tribune* has already called attention as a *monstrum horrendum*.

---

Secretary Morton's report does not move to tears as those of his predecessor in the Department of Agriculture used to do, but it makes a great rattling among the dry bones. He exposes the happy-go-lucky nature of the organization of the department, showing how he has been able to reduce the number of employees by more than one-fifth without any injury to the service, and also pointing out that the amounts appropriated for the use of State experiment-stations are entirely beyond the power of any officer of the United States to limit or control or audit. He thinks the meat-inspection laws ought to be repealed. They have resulted in no increase in the export of meat products, and, on the other hand, have cost the Government 6½ per cent. of the value of all meat sold to countries demanding the inspection. In the place of "Uncle Jerry's" eloquent appeals for more Government help, Morton declares that the thing which "ought to be engraved upon the memory and reflected in the judgment and the plans of every farmer in the Union," is the fact that "the relation of supply and demand is the sole regulator of value." The Secretary also takes a notably firm and advanced stand for civil-service reform principles.

---

There are signs that Secretary Herbert is preparing for himself the mortification of restoring Commodore Stanton, just as he felt obliged to restore Commander Higginson. It was given out from Washington on Thursday that "a revulsion of feeling" had set in at the Navy Department touching the Commodore's action at Rio, and that "the persons who were quick to condemn him are now disposed to withhold judgment until he has an opportunity to make his defence." On top of this came a *World* despatch on Friday saying that President Peixoto has stated to the Washington authorities that he did not consider Stanton's action in saluting Mello any real disrespect to his own Government. However the affair turns out, it is a melancholy example of the demoralization of the naval service. This peremptory removing of

officers at long range, and calling them home in disgrace, only to find that they have a perfectly good defence for their conduct, is a stone over which one would think the secretary would not break his leg a second time. Why not use the cable for calling for the defence before using it for summary removal? The only astonishing thing is that our naval officers do not blunder, in the sense of going counter to the occult wishes of the Department, oftener than they do. We believe the feeling is general in the service that, since the Barrundia decision, no naval commander knows what he is expected to do anywhere. The common rules of international law are no longer a safe guide to him, and he has to make the best guess he can at what the secretary would like him to do, and thank his stars if he gets off without a reprimand.

---

For the third time the ways and means committee of the House has granted the demands of American artists and placed works of art on the free list of a general tariff bill. The Mills bill so placed them, but they were stricken from the list in Democratic caucus. The McKinley bill also placed works of art on the free list, but the Senate did not concur, and the net result was a reduction of the tax from 30 per cent. to 15 per cent. It is to be hoped that the third time may prove "the charm." The fact that Presidents Arthur, Cleveland, and Harrison all recommended the abolition of this tax, and that Mills and McKinley both included its repeal in their tariff measures, shows how entirely non-partisan the movement is. The domestic producers of art are practically unanimous in declaring the tax a hindrance rather than a help to them. Moreover, art is valuable to a country, not merely as an element of general culture, but as a stimulus to the element of design in manufactures, which, even more than cheapness, conquers the markets of the world. In the manufacture of wall-papers, dress-goods, silks, china, and pottery, carpets, etc., design decides national superiority, and to encourage art is to encourage the artistic education of artisans and to secure the widest market for our manufactures.

---

The Lawrence (Kan.) *Journal* has some very encouraging news about the business situation in the rural districts of that State. It says that the farmers are now paying their taxes promptly, and that "a large amount of the payments is made in gold." It is surmised, says the *Journal*, that this gold has been hoarded for some time back, and is now coming out of its hiding-places because confidence has been restored. The possessors of this hidden treasure no longer have any apprehensions of the silver basis. Very wonderful that this should be true in Kansas, which cast its Presidential vote for Weaver, and which has a Peffer and a Martin in the United States Senate and an Ingalls for ex-Senator. Here is a fresh text for Ingalls to preach a new sermon on—a sermon on the cowardice of gold. We all remember his discourse on that theme, which was quoted three times in one week during the recent session by admiring Congressmen of the school of Bland. Gold, said Ingalls, ran away at the beginning of the war and took refuge with our enemies, but, after the victory was won, it swaggered to the front and claimed all the honors. Here is a fresh illustration of the skulking nature of gold in Mr. Ingalls's own neighborhood, right under his nose, we might say. The cowardly metal has been hiding behind the chimneys in Kansas farm-houses, perhaps ever since Ingalls made his great speech, and now it swaggers to the front and pays taxes with all the airs of a conqueror. If Ingalls cannot do justice to the subject, it will be of no use for Peffer to try.

---

A committee of the Legislature of Georgia has taken up the question of State-bank notes, and has commenced work on a bill in anticipation of the repeal of the 10 per cent. tax. Like most of the State legislatures which have turned their attention to this subject, this one, or this committee, begins by tying up the bank's money in securities of one kind or another—this by way of making money abundant in the neighborhood. The bill proposes that one-half of the capital of each bank shall be kept on hand in coin or legal tenders as a redemption fund, and that the other half shall be invested in bonds of the United States or of the State of Georgia, or of counties or municipalities in the State, which shall be deposited with the State treasurer as security for the circulating notes. Then the State treasurer may issue to the bank three dollars of circulating notes for every dollar of the coin or legal tenders which the bank has on deposit with itself. The security which the State would hold for the circulating notes, supposing all the bonds to be good, would be 33 per cent. of them, instead of being 110 per cent., as it is under the national banking system, since the cash redemption fund is to be under the control of the bank. But if this redemption fund were religiously kept by the bank for its special purpose, and if the deposited bonds were always worth par, the security would be only at the rate of $1,000 for each $1,500 of circulating notes, the bank's capital being wholly impounded and locked up at the start. The national system furnishes security for circulating notes, but it is wanting in elasticity. The proposed Georgia system would furnish neither security nor elasticity. It is very strange that the South, which for the most part had good banks before the war, cannot take a leaf out of its own experience, but must needs copy an inferior system, diluting even that. There is not much danger of harm, however, from these attempts, since they all depend upon a repeal of the 10 per cent. tax. The chances of repeal are lessened by every State-bank act like that of North Carolina and like that which Georgia is now mulling over.

---

The suggestion of the *Tribune* that Mr. Schieren should "conduct a business administration" over in Brooklyn by "giving preference to Republicans without exception" in making his appointments to office, and by "appointing reputable Republicans of recognized business capacity and training," and "*then* keeping the Fire, Police, and Public Works and other departments out of politics altogether," is as good an illustration as one could desire of the reason why no reform movement in New York or Brooklyn is ever steady or continuous. We have "popular risings" every twenty years or so, when the boldness of the Ring becomes intolerable, but we never have a steady and continuous resistance to it from year to year. It has been demonstrated over and over again in both cities that neither party can of itself give good municipal government. Whenever one party determines to oust its thieves, it has to have the assistance of the other party. The Republicans in Brooklyn could not of themselves have overthrown McLaughlin. They had to have the assistance of the Democratic mugwumps. The Democrats of themselves could not keep him out of power. They would have to have the assistance of the Republicans. In other words, party government in American cities is a failure. To be well governed the decent people in both parties must unite. But, as a rule, any tendency towards this desirable combination is nipped in the bud by just such suggestions as the *Tribune's*—that the offices should be all given to the members of one party, and "then" taken out of politics. This always exasperates the other side, making them feel themselves the victims of a fraud of which they will not allow a repetition, and at the next election the old order is restored.

---

Mr. William Walter Phelps, in his speech at the Chamber of Commerce dinner last week, made some very just remarks upon the changes for the worse in the press, which he found upon returning to this country from a four years' absence as minister in Germany. It is quite true that, with rare exceptions, the journalist no longer seeks

to lead and instruct public opinion, but "uses his best gifts to amuse and attract"; and that "our great journals to-day build their circulation on the weakness and vanity of mankind, and vie with each other as to which paper shall make the most personal mentions." The only hopeful feature of the situation is the evidence afforded by such a movement as that of the San Francisco women against sensational journalism that a large proportion of the people are utterly disgusted with the papers now served them. This movement seems to be gaining strength week by week, and has now reached quite remarkable proportions. So general is the interest, and so profound the feeling that the morality of the community is involved, that sermons on the subject have lately been preached in a score of pulpits on Sunday. The most effective work that is being done in this crusade is the exposure of the sensational newspaper publisher in his true light as an enemy of society, who deserves no more respect than the man who should sow seeds of physical, instead of moral, disease.

---

"The butcher's bill" of the last football season in England has been compiled by a gentleman in that country who kept as close a record as possible by reading the newspapers, and it foots up a total of twenty-three, not counting three other cases where death was ascribed to illness incurred on the football field. Among the causes of death are these: "Spine fractured while tackling a rival player"; "struck violently in the abdomen and died two days later, after suffering terrible agony"; "kicked in the stomach"; "injured internally while being tackled"; "killed by a kick in the stomach, received in a scrimmage"; "so severely trodden upon after falling upon the ball that he never recovered consciousness." The *Lancet*, the chief medical journal of England, calls, like the *Medical News* in this country, for a radical reform. Moreover, the officers of the law in England seem disposed to interfere if the atrocities cannot be stopped in any other way. Two pugilists, who had engaged in an unusually severe contest, were recently brought before the recorder of Manchester, and pleaded guilty. The recorder laid down the law in the case, and proceeded to say that it was equally applicable to football. He pointed out that violence on the football field, where an attempt was made to counteract skill by brute force, was just as much a criminal offence as a bare-knuckle fight.

---

The fact is, that every defence of football we have seen would cover prize-fighting. The risks from prize-fighting are very small. The training for it is good for health and strength, the prize-fighters themselves like it, and so do the spectators. What, then, is the objection to it? Both prize-fighting and football as now played permit almost any degree of violence to the person above the waist. Here is the rub. You must not "tackle" a man below the belt either in the football field or in the prize ring, but above the belt you may do anything you please to him but "slug" him at football, and in the prize ring you may do anything to him you please and "slug" him besides. It is this exposure of the person to every kind of violence which puts football, under the present rules, into the same category with the prize-fight, and makes it unlike all other games played by civilized man—cricket, tennis, baseball, golf, polo. Some of these—polo for instance—are dangerous, but in it your person is not kicked, cuffed, pounded by your fellow-man, nor are you trampled under the feet of a rattling, roaring throng. There is talk of amending the rules, but slight amendment will not do. So long as a man can be treated as a simple package, to be removed by pushing, pulling, rolling, kicking, or "slugging," there will always be great danger of his being in some way maimed. The plea set up, that youths *in statu pupillari* have a right to expose themselves, if they please, to soldiers' risks at seats of learning, strikes us as exceedingly droll. Moreover, that somewhat apocryphal saying of Wellington's, that Waterloo was won on the Eton football field, would be of more value if any but a very small percentage of his army ever went near Eton, and if ring-fights were not common at Eton in his day, and if the men who won Jena and Austerlitz and stormed Ratisbon had had the advantages of public-school games.

---

The English Radicals, who have for some time been showing signs of mutiny against Gladstone, are disgusted with the slowness with which the lord chancellor is adding Liberals to the magisterial bench in accordance with the policy traced out last winter, and went to that functionary in a large body a fortnight ago to blow him up. They informed him that he was not going fast enough, and they rated him for not being satisfied with the recommendations of the member of Parliament for the county or borough in which the appointment was to be made. He turned on them, however, in a long speech, and had execution of them, as Cromwell used to say, for nearly an hour. He showed that the reason he went slowly was because he had not time to go fast; that if he depended on the recommendations of the members of Parliament, he would frequently appoint bad characters to the bench, that having happened already, and that nothing could be more unfortunate for the whole English community than any decided lowering in the quality of the unpaid magistracy. It was necessary not only that its members should all be men of good social standing, whatever their social grade, but that they should not be of a kind to drive the present members off the bench. Of course a good many good Radicals might be appointed with whom the present magistrates would not serve, and whom they would not consent to meet anywhere. An injection of "Barney" Martins or "Paddy" Divvers, for instance, would clear any English bench of its other occupants in five minutes. This is of course an extreme illustration, because the appearance in a judicial position in England of anything corresponding to these two worthies is impossible.

---

The Tories, who are, or pretend to be, most shocked by the large additions the Liberals are making to the magistracy, have only themselves to thank for it. There is hardly a doubt that had they not taken home rule so much to heart, the enormous preponderance of Tories or Unionists on the bench would have passed unnoticed, and the bench would never have got into politics. But when the Unionists took to boycotting and "cutting" people for supporting Gladstone, and denouncing them as traitors, it was inevitable that the Gladstonians should be unwilling to have them sit on their quarrels and controversies and delinquencies. The Unionists plead that the magistrates were formerly largely Liberal, but that the Liberals have gone over to the Unionists because of Gladstone's bad behavior; but the concern of people who come before them, or are likely to come before them, is not how they came to be Tories, but the fact that they are Tories.

---

Affairs in Italy have not been in a state so confused and critical since 1859. Never since then have we needed so much to be represented at Rome by a first-class man of ripe experience. Sending a mere man of fashion there is, under the circumstances, something worse than a blunder. The state of Italy attracts public attention, too, once more to the circumstances of Mr. Van Alen's appointment, and sets people asking whether something cannot still be done to keep him at home, and send some one better fitted for the emergency in his place. The English have just filled a similar vacancy at the same post. The history of the official career of their appointee, contrasted with Mr. Van Alen's, is enough to make an American hang his head for shame. On this subject our correspondent at Rome has some pertinent remarks on another page.

### THE TARIFF BILL.

THE Wilson tariff bill has caused a decline of a few points on the stock market in the group known as the industrials, and the groans from that quarter are quite shocking to hear. These are the concerns more familiarly known as Trusts. They blossomed out in great luxuriousness after the passage of the McKinley bill and became the subject of great popular odium. Republican newspapers attacked them with great bitterness, and declared that they were bringing the whole doctrine of protection into disrepute. Some of the high priests of protection in Philadelphia, notably Prof. Robert Ellis Thompson, took strong ground in favor of abolishing the duties on all articles that had been made the subject of artificial monopoly. It is very certain that if the Democratic party had had the power then which it exercises to-day, it would have followed this sound advice. To-day, however, it restricts itself to the reduction, not the abolition, of the duties under which these oppressive concerns have sheltered themselves. Sugar, Lead, Cordage are not visited with the punishment they deserve. The character of these combines is well established in the country at large as monopolies intended to deprive the public of the benefit of competition, and in Wall Street as lures for the unwary and as games played with loaded dice. So far are they from any just claim to mercy that the more crushing the blow dealt them the better for the community.

The Republican party, it should be observed, is ready to deal this blow in any way except by abolishing or reducing the duties under which the Trusts fleece the public. The party, under the lead of Senator Sherman, has passed an anti-Trust law, under which, if it could be enforced, all of them would be passed into the hands of receivers and put in liquidation. But when it is proposed to attack them in a perfectly feasible and practicable way, there is an instant outpouring of crocodile tears, almost in proportion to the amount of water in their stock. The truth is that the committee has been altogether too merciful to this brood of octopuses. It ought to have swept away every vestige of protection to every one of them; and if it had done so, no Republican Congress would ever have dared to renew it.

As to the bill in general, we think that the only fair criticism to be made is that it is too conservative and too lenient to the protected classes. Take pig-iron for example. We select this article because it lies at the foundation of all industries, and also because the treatment of pig-iron is characteristic of the bill as a whole. Any duty at all on pig-iron is now prohibitory. The price of the cheapest grade in England is now $8.01 gold per ton. A better brand of pig-iron is selling in Alabama to-day at $7.25, and the current number of *Dun's Review* tells us that a British purchase of 5,000 tons has been made there at that price. Nevertheless, the bill retains a duty of 22½ per cent. on pig-iron. Take steel billets. These are selling in England at $17.61 and at Pittsburgh at $17.50. These quotations, both foreign and domestic, are taken from the *American Manufacturer* of Pittsburgh of November 17. Obviously any duty, even one per cent., would be prohibitory, when we take into account the freight, insurance, and other charges. Well, the committee's bill gives the producers of steel billets a protection of 25 per cent. Certainly nobody has a right to complain of this except the purchasers and consumers of the article. Yet we presume that the makers of steel billets will declare that a duty of 25 per cent. is ruinous, and will make the bill an excuse for reducing wages.

This conservative spirit runs through the bill and leads our reforming contemporary, the *Sun*, to declare that the measure is "a sound protectionist document from one end to the other." It would certainly have been called such by Henry Clay or by Justin S. Morrill at any time prior to 1870. It certainly is not open to the charge of hostility to manufacturers. Its enlargement of the free list is entirely in their interest, and it has not reduced the duties on goods in the same ratio as the reduction on materials. This is especially true of the wool and woollens schedule. That the duty on wool is to come off this time, there can be no doubt. It does not follow, however, that the price of domestic wool will decline. It may even advance, and this is the belief of many manufacturers, based upon the experience of former years when the duties on wool were merely nominal.

Republican comments on the tariff bill are very far from coming up to Browning's twenty-nine distinct damnations, one sure if the other fails. Gov. McKinley, it is true, considered the bill "a very sweeping one," and one which paid "no heed to the pleas and necessities of domestic industries"; but then, he confessed that he had not read it, and for a damning on general principles his remarks certainly lack vigor. Ex-Speaker Reed started out with the view that "the bill is about as bad as could be reasonably imagined," but roared most gently in the rest of his observations. This was no doubt owing to his having made the slip of confining himself to what could "reasonably" be imagined. He could have been much fiercer if not restrained in that way. Ex-Gov. Ames thought the bill "ridiculous," though he had to admit that it contained two excellent features —excellent because he had long contended for them—free coal and free iron ore. Ex-Gov. Long thought the changes would be "a direct benefit to New England," but deplored the breaking down of the "system," which, it would seem, must be maintained even if it wipes out all New England industries.

This restrained Republican indignation is no doubt due, in part, to the reflection that the Wilson bill is only a carrying out of the professed Republican policy on the tariff, of ten years ago, before McKinley and Reed and Dolan and the Trusts ran away with the party. In fact, the future historian, picking up the new tariff bill and not closely observing its date, might be excused for thinking it a Republican measure proposed in pursuance of the recommendations of the party leaders in 1882 and 1883. In the former year the Republican tariff commission said: "Early in its deliberations the commission became convinced that a substantial reduction of tariff duties is demanded, not by a mere indiscriminate popular clamor, but by the best conservative opinion of the country." President Arthur, in his message of December 4, 1882, recommended "an enlargement of the free list, . . . a simplification of the complex and inconsistent schedule of duties upon certain manufactures, particularly those of cotton, iron, and steel, and a substantial reduction of the duties upon those articles, and upon sugar, molasses, silk, wool, and woollen goods." In Secretary McCulloch's report for 1884, he wrote: "The existing duties upon raw materials which are to be used in manufactures, should be removed. . . . The duties upon the articles used or consumed by those who are least able to bear the burden of taxation should be reduced." No wonder that the Republicans are finding it rather hard to pronounce a good thumping anathema in 1893 upon doctrines which were a part of their own orthodoxy in 1883.

### THE PROPOSED INCOME TAX.

AMONG the various plans on foot for increasing the national revenue, an income tax has been advocated by an influential group of Democratic politicians. Naturally, too, it has aroused strong and even bitter opposition in another influential group in the same party. As for the Republicans, they are privileged, as the minority party, to oppose everything, and they are very sure to make the most of any division in the Democratic ranks on any question of taxation. It seems necessary, therefore, to discuss this question somewhat before the reassembling of Congress.

In the first place, it cannot be said that the people have laid any commands upon Congress in respect of an income tax. The subject is entirely new to the present generation. Such a tax was imposed during the war, and it was continued some years after the war, while the national finances were in an unsettled and strained condition. As soon as it

was found that the tax could be spared without danger to the public credit, it was repealed, but this proves nothing as to the rightfulness or the fiscal expediency of the tax. The repeal may have been due to the fact that the classes who had to pay it were the most influential at Washington, while those who did not have to pay it cared nothing about it one way or the other. Governments generally yield to the strongest pressure, and this may have been the case with regard to the income tax. The idealogues offered little resistance to the repeal at that time. In fact, the amendments that had been engrafted on the tax from time to time had left it in such a tattered condition in 1872 that it yielded little more than the cost of collection. Its history may be briefly recited.

It was first enacted in 1861, and the rate was fixed at 3 per cent. on all incomes over $800. No machinery existed for collecting it, and before any had been provided Congress changed it. Under the act of 1862, all incomes over $600 and under $5,000 were taxed 5 per cent., over $5,000 and under $10,000 7½ per cent., over $10,000 10 per cent. Certain deductions were allowed in estimating income, such as house rent actually paid and other taxes actually paid, whether national, State, or local. In 1864 a special tax of 5 per cent. was levied for one year, this being additional to the regular income tax. In the same year the rate was raised so that all incomes above $5,000 paid 10 per cent. In 1865 the first change was made in the direction of lowering the tax. This was done by raising the exemption from $600 to $1,000, and making the tax uniform at 5 per cent. In 1870 the exemption was raised to $2,000 and the rate reduced to 2½ per cent. In addition to this change it was provided that all business losses sustained during the year, and all interest paid on loans, and all money paid for labor to cultivate land and for rent and repairs of premises actually occupied might be deducted in estimating incomes. Under these sweeping changes the revenue derived from the tax fell to $19,000,000 in 1871 and to $14,000,000 in 1872. The maximum reached in any single year ($73,000,000) was in 1866. This was the year of the "double income tax"—the year in which the bulk of the special tax enacted in 1864 was collected. When the proceeds of the tax had fallen below $20,000,000, it was deemed useless to continue it longer. It expired in 1872, and it was believed then that no occasion short of a war of great magnitude would ever justify its reënactment.

The justice of an income tax if it could be fairly and honestly collected does not admit of doubt, but the objections to it are the same in kind as those which lie against the personal-property tax. It cannot be collected with fairness and equality. The taxpayer must coöperate with the collector in order to ascertain the income. Consequently only the very conscientious people pay their rightful share. The practical attempts to collect a personal-property tax in the several States have been uniformly futile—the amounts realized being ever on a dwindling scale. There is no reason to suppose that the results of an income tax would be in any wise different. The revenue derived during the war is no criterion whatever. At that time the taxpayers generally coöperated with the collector zealously. Public opinion compelled them to do so. The nation's life was at stake. Those who were not in the field felt a double obligation to supply the means to support those who were there.

No such conditions exist now. Hence there is every probability that the taxpayers would adopt the same means to avoid the impost that they employ in avoiding the personal-property tax levied by the States. In other words, the tax would be a vastly unequal one in practice, its burden falling chiefly on those who are too honest to shirk it. It would be well for Congressmen also to ask themselves the question whether the number of votes to be gained among those who are in the exempted class will overbalance the losses among those who are called upon to pay the tax. This question is not to be answered by footing up the opinions of voters in a particular district or any number of districts. The question is, whether votes are to be drawn from the Republican party by the imposition of an income tax in sufficient numbers to overbalance the resentment which will certainly be stirred up by it.

## *MR. CARLISLE'S SPEECH.*

THE speech of Secretary Carlisle at the Chamber of Commerce dinner last week was fully up to the expectations that had been formed beforehand. In some respects it was perhaps in advance of such expectations, for the secretary declared that the single gold standard was *de facto* the standard of the civilized world, and hence it ought to be and must be our standard. He said that the Government was bound to keep every kind of money that bore its stamp at par with gold, and that he, as secretary, would perform this duty as long as he had any gold to do it with. These sentiments and promises were vociferously applauded by the gentlemen to whom they were addressed. It seemed as though the millennium of finance had come when the foremost statesman of the South gave utterance to opinions which were repudiated by two-thirds of Congress when the Bland-Allison act was passed over the veto of President Hayes. The fact that Mr. Carlisle has not always been of this way of thinking has been commented on both in the press and in the Senate. Quite true; but how many of his accusers are qualified to throw stones? Where were Sherman, Allison, McKinley, Charles Foster, and a host of Republican leaders in the bygone times? As for backbiting newspapers, perhaps the less said of them the better. They as well as Senators and secretaries have learned by experience, and it is much to their credit, all around, if they tell the truth when they have learned it.

What the public are concerned with is the statesmanship of to-day, not that of 1878 or that of 1890. Times have changed, and we have changed with them. Mr. Carlisle's positions are not only sound *per se*, but they are stated in a way to carry conviction to others. He has rare gifts as a public speaker, and the most important of these is earnestness. He has no tricks of speech. He does not raise a laugh or waste any words. All that he says is serious, and it carries the conviction to the hearer that the speaker believes what he says. His manner is that of the constitutional lawyer. His training has been in the law almost exclusively, and it is much more to his credit that he has acquired the principles of finance by study and experience than it is to his discredit that he once stumbled in an unknown field where two-thirds of his contemporaries in Congress stumbled likewise.

Perhaps the most impressive single paragraph in the secretary's speech was the following:

> "Gentlemen, the question whether the obligations of the United States will be paid in coin current in all the markets in the world has already been settled, and it has, in my opinion, been settled for all time to come. It has been settled, not by any specific act of Congress prescribing the exact mode of payment, but by the spirit and obvious purpose of the whole body of existing legislation upon the subject, and by the deliberate judgment of the American people and the declared purpose of those who have been intrusted with the execution of the laws. The disposition and ability of the Government to maintain its own credit at the highest possible standard, and to preserve the integrity of all the forms of currency in circulation among the people, cannot be reasonably doubted, and ought not to be subjects of serious controversy hereafter."

It is the conviction of this truth that gives tone and confidence to the business of the country to-day after the crushing disasters of last summer. It is not in the power of Mr. Bland, or of anybody, or of any group, to disturb this confidence. It has its root in the profoundest depths of public opinion. It is fortified by the possession of the Government in all its branches, and most of all by the President and Secretary of the Treasury. Although the national budget is not in the right shape as regards income and outgo, although the reserve in the Treasury is shrinking and the stock of gold is low, nobody is disturbed on that account, because all know that it is only necessary, as Webster said, to smite the rock of the national resources and abundant streams of revenue will gush forth

Even if the last dollar of gold were paid out of the public fisc, no serious disturbance outside of Government circles would result, the means of replenishment being so ample and so easy of access. Of course no one desires to see such an experiment tried, and no one expects it, but confidence is now so firmly grounded on the gold standard that nothing can shake it. This, as Mr. Carlisle says, ought not to be a subject of serious controversy hereafter. Moreover, it will not be.

Mr. Carlisle did not omit a salutation to the "friends of silver," but it was one that they will hardly thank him for. He said that we should continue to use silver as money to the largest extent consistent with the stability of the currency and the preservation of the public faith, *i. e.*, consistent with the maintenance of the gold standard. There is no doubt of this. With $419,000,000 of silver dollars and 140,000,000 ounces of silver bullion plus $76,000,000 of subsidiary silver coin, we are not likely to run short of that metal during the lifetime of the children now in the public schools. But we shall always be ready to exchange greetings with the friends of silver on the basis which Mr. Carlisle indicated, and they will have to be satisfied with that.

Other financial problems are coming on the carpet, and, now that the *basis* of everything financial has been settled, they ought not to be difficult. The banking system must be amended to correspond with the facts of to-day, not those of the civil war thirty years ago. After that is accomplished there will inevitably come up the question as to what shall be done with the Government's circulating notes, its greenbacks and the rest. One thing at a time. Mr. Carlisle's speech makes it a safe prediction that all will turn out well in the end.

### *FOOTBALL AGAIN.*

Capt. Frank Ranken of the Montauk football team had his leg broken in two places on Saturday in "one of the early scrimmages." James McNally of the same team had all his lower teeth knocked out. Mapes of the Cleveland team had a severe shoulder strain. Robert Christy of the Wooster University died from a kick in the stomach. His widowed mother was at his bedside. Capt. Waters of the Harvard team will never play again owing to a wrench in the knee, to say nothing of a bad bruise over one eye, and a blow on the head which laid open the scalp. The conduct of Prentiss at the Crescent-Orange game at Eastern Park is much reprehended, because, when he sees a mass of men on the ground, he "runs and jumps on them feet first." At the game at Springfield on Saturday Mackie punched his head into Stillman's stomach. McCrea was for several minutes under "a mountain of men," and, after extricating himself, was "badly winded," and took some minutes to recover. Beard stepped "unconsciously" on Wrightington's head, and Acton hit Beard a smart blow on the chin. It was thought at first, after Thorn was "thrown down harshly and a dozen men had fallen on him," that his nose was broken, but it appears that it was only badly damaged.

We take the foregoing at haphazard, without any particular search, from Sunday's newspapers, as the football news of *one* day. There are to be more games this week, and it will be well if on Saturday we have not plenty more casualties to record. A professor in a well-known college writes to us:

> "I am glad to see your attack on football. As played at present, it is a murderous game. Our eleven don't like it, but play because it is the fashion. Our captain had his nose broken and another had his neck wrenched and was carried off insensible, last Wednesday. That is an average chapter of accidents. Besides, the men are entirely too good to waste in this way. Our captain happens to be the best man in his class—a rare accident. Generally speaking, the teams are made up of a different quality of men, many of whom are in college solely for football purposes, hired and salaried with the proceeds of gate-money. I hear repeated stories of this kind from Yale, Princeton, and the University of Pennsylvania."

The playing public, too, seems to be beginning to be impressed by the current criticism. Mr. Walter Camp, the great authority on the game, has a letter in Sunday's *Herald*, in which he makes the following admission:

> "The public, the press, and the players are all thoroughly in love with football, provided it is kept as free from dangerous accidents as it has been for the last few years previous to 1893. Those enthusiasts who feel that there is a conspiracy against the sport are blinded by their intense love of the game, so that they cannot and will not see any fault in it. But if every one will carefully study the play that we shall see in both these final matches, he will be very apt to conclude, unless all signs fail, that the overdevelopment of mass plays bids fair to make the sport too hard upon the line men, particularly the tackles and ends.
>
> "When a half-dozen good, solid fellows get in motion and concentrate their force and weight, running at full speed, against one, two, or three men, who are able to get under but partial headway, and who are obliged also to look for the man with the ball coming behind this mass, the shock is pretty severe, and, repeatedly practised, will use up even the stoutest and pluckiest. There are many who can stand it through a game, barring some unusual chance blow, but the tendency to such plays means that they must be practised for weeks, and that the team must meet as well as make them, so that it resolves itself into a question of meeting such an impact day after day for months before the final contest. No wonder, then, that the men get sore and tender; that occasionally a wail of despair goes up from the college that the best men are laid up and there are no good men to take their places. There are two, and very likely more, ways of legislating that might effect a cure."

The most important thing he says is, however, that the Rugby rules, under which our teams are supposed by the general public to be playing, do not admit of "the interference principle" at all; that is, players have no right to run into, interrupt, or obstruct an opponent at all unless between the runner and his goal line—that is, practically behind him. Gradually, during the last twelve years, he says, we have come to disregard this rule completely, until now the team can form in a solid mass in front of the man with the ball, and bear down all opposition by sheer weight and momentum. We have observed that some journals are under the impression that we have borrowed the game from England in its present dangerous shape. The fact is that we have taken it and brutalized it. As an Englishman has well observed: "In the old game you kicked the ball; in the Rugby game you kick a man if you cannot kick the ball, but in the modern American game, you kick the ball if you cannot kick a man."

Mr. Camp proposes that the massing of men to bear down opposition by weight and momentum be given up, and the old rule about "interference" be again put in force. It will be difficult to get the amateurs to do this of their own volition. They are all afraid of seeming "babyish," and our belief is it will never be done without some pressure from parents and the faculties of the colleges, who have not as yet shown much interest in the matter. There is a suspicion abroad that the faculties do not much care as long as their men win the games, because, unfortunately, there can be little doubt that football victories do increase the numbers of a college's undergraduates. A large number of students come from non-collegiate families, whose fathers are unable to compare the advantages offered by the different colleges in the matter of mental culture and social influence, and let their sons make their own choice, which is apt to be determined by a reference to the athletic record of the year. All this is lamentable, and a determined effort should be made to stop it. That excellent Greek motto, "Not too much of anything," should hang over every college door. Football has assumed a ridiculously prominent place in the collegiate mind—which ought to be fatal to it in its present shape, even without the broken necks, legs, and noses.

### *OBITUAL DAYS IN CONGRESS.*

While the responsibilities of congressional life are well understood, it is probable that there are few persons who have an adequate conception of its solemnities. Learned writers on congressional government have, so far as we are acquainted with their works, wholly omitted to treat this aspect of the subject. They tell us of the introduction and discussion of bills, the consultations and reports of committees, and the intricacies of legislative procedure. Further than this they do not go, and it is only by a perusal of the *Congressional Record* that we can learn to appreciate the fact that obitual days constitute an

important, distinctive, and ever recurrent feature in the proceedings of our national Legislature.

As an illustration of this fact we may take the short, and last regular, session of Congress which closed on the 4th of March of the present year. It is true that in respect of its obitual days it was unusually solemn, but for this reason it serves only the more clearly to exemplify the truth of what has been stated. The session had barely begun when, on the 7th of December, an announcement was made to the Senate of the decease some time previously of a member of the House of Representatives. The Senate then adjourned, but on the 11th of the following February the subject was again called up in order that formal eulogies might be pronounced. This particular case is referred to because it illustrates the practice in both houses in all similar cases. First, a resolution is adopted by the house of which the deceased person was a member, and on its adoption an adjournment takes place. The resolution is then presented in the other house with like formalities, and, on some subsequent day set apart in each house, respectively, for the purpose, the resolution is called up with a view to the delivery of eulogies, after which another adjournment takes place. The object in presenting the resolution on one day and setting apart another for eulogies is to afford an opportunity to secure what may be deemed to be appropriate tributes.

It is obvious that such a practice is likely to degenerate into a mere formality, and thus to defeat the end for which it was designed; and so it appears to be in the present instance. No matter who the deceased member may have been, how brief his service, or how limited his acquaintance, the same cumbersome formalities must be gone through with in each house; and if there is no one sufficiently informed on the subject to speak from personal knowledge, eulogists are secured by solicitation and preconcert. The meaning of this practice has by no one been expressed more clearly than by Mr. Peffer. Not long after his entrance into the Senate he was engaged to make some remarks on a deceased member of the House from Pennsylvania. Fully appreciating the situation, he began his eulogy as follows: "Nothing more appropriate, Mr. President, than that when men and women die something should be said about it." In proof of this declaration he quoted from the "Psalm of Life" the words: "Life is real, life is earnest," and said that, therefore, when the Senator from Pennsylvania (Mr. Cameron) asked him to join in the memorial services, he felt it to be his duty to consent, though he had not known the deceased. The rest of the "eulogy" was composed of moral reflections. The only other speaker on this occasion, except Mr. Cameron, whose remarks were very brief, was Mr. Vilas, who said that the deceased was "relatively a stranger to him," and then indulged in a long quotation from "Thanatopsis."

In this relation it may be observed that the employment of verse is generally in inverse ratio to the speaker's knowledge of his subject. The quality of the metrical quotations varies. Sometimes, when the speaker has got hold of a local paper from the decedent's district, elegies having a decidedly original, homespun aspect, but supposed to be specially appropriate, creep in. Usually, however, the quotations are drawn from approved sources, such as the "Psalm of Life," "Thanatopsis," and "O, why should the spirit of mortal be proud?" and there is a strong and general tendency to conclude with the words of *Antony* over *Brutus*:

> "His life was gentle; and the elements
> So mix'd in him that Nature might stand up
> And say to all the world, *This was a man!*"

Not infrequently, when the speaker is lacking in poetic taste, history and political geography are drawn upon. The Congressional Directory always enables the orator to "locate" his subject, both in the immediate and the more remote past, and the enclyclopædias do the rest. The place of birth, if it was foreign, and the place of later residence, are sometimes described, compared, and descanted upon with remarkable comprehension of view and fulness of detail. In one case we find an elaborate eulogy of the departed associate's district, with an enthusiastic description of its wealth and resources, which would have done credit to the skill of a "promoter." In another case an eloquent Senator delivers an oration on the history and achievements of the particular race from which the (to him) unknown member of the other house had sprung.

Sometimes the initiation of the memorial services gives rise to delicate parliamentary questions. Late in February, near the close of the last regular session, attention was called to the fact that the Senate had not discharged its duty to a member of the House who had departed this life during the preceding session. It turned out that this omission was due to a misapprehension as to whose province it was to call up the House resolution for further action. The Senators from the deceased member's State were of different political faiths, and it happened that the one of the same faith as the deceased had entered the Senate since the latter's demise. A delicate question thus arose as to whether length of service or cognate political faith should have precedence. This question, it should be stated, was not raised contentiously, but altogether deferentially, as became the occasion and the "courtesy of the Senate." Finally, faith took the lead, eulogies were pronounced, and the Senate at 5:25 P. M. adjourned.

Reference has already been made to the fact that in the last regular session the number of obitual days was unusually large. There were demands for upwards of twelve in each house, and, as the session was a short one, time became an important element of consideration. In this emergency, an old device, the propriety of which in such cases may be questioned, was adopted—that of "leave to print." Towards the close of the session this was freely resorted to. In these cases, as in those in which the eulogies were actually spoken, the customary memorial volume was of course made up, with a portrait of the subject. Of each of these volumes 8,000 copies are printed, at a cost in each case of $2,720. The total cost for the session was about $30,000. This, however, was an evidence of economy. In some cases as many as 25,000 copies of a memorial volume formerly were printed, at a cost of about $12,000. The number was then cut down to 12,500, and it was subsequently reduced to the present dimension.

It must not be supposed that the practice which has been described does not now and then awaken a protest. Especially is this the case when the death of a member widely known and beloved awakens real feeling. Speaking in February last on the death of Senator Kenna, Mr. Frye said:

> "Mr. President, I have never been in full sympathy, and am not now, with our manner of paying tribute to the memories of associates who have died while in the public service. . . . The fact that Senators are selected to deliver addresses weeks and sometimes months before the occasion is an invitation to a careful preparation, which results in elaborate, philosophical, and beautiful essays, but excludes all impetuosity of speech, all words forced from the lips by the beating heart behind. It seems to me that it would be better, on the day the death of one of our associates is announced, for those Senators who wish, to speak what the heart then and there dictates. This would seem like scattering sweet flowers over the grave of a dead comrade."

Those who have read the record of the obitual days will feel inclined to concur in the sentiments of Mr. Frye, who has not been alone in deprecating what has come to be a distorted and unsightly custom. It would be far better to do away both with the preconcerting of eulogies and the printing of memorial volumes, and to let simple tributes be paid at such time and in such manner as the heart dictates and good taste approves.

## AMERICAN DIPLOMACY.

ITALY, November 10, 1893.

I WONDER if there is any channel by which the American people could be brought to a realizing sense, as the revivalists used to say, of the huge and collective wrong it is doing itself in the continuance of the fantastic system of foreign representation which it supposes to be diplomatic, but which resembles diplomacy (as recognized by the civilized world, Japan, Turkey, China, and even Siam) as much as the general training of a company of New

England militia in 1850 does the drill of a regiment of the German Emperor's Guard. If we did not pride ourselves so much on our great common sense, and our entire freedom from the trammels of old-world precedent, one might hope that a not too long experience would reform our methods; but as we have the immovable conviction that we have discovered the political philosopher's stone and the true method of organizing a state, including civil service and diplomacy, and are no longer bound to pay attention to the precedents of a decrepit civilization, let us be at least consistent enough to drop the old way altogether, and not masquerade our republican simplicity in a grotesque copy of the habits and customs of a state of society entirely different from ours.

We have no diplomatists, while every country with which we have dealings requiring diplomatic action has its body of public servants trained by an education of years, and made effective by a careful selection and the survival of the fittest to perform services which we, if we attempt such an uphill work, are compelled to delegate to men who have all the details of the business still to learn. The consequence can only be, what it is, that all our negotiations are conducted at the seat of our own government, and that our ambassadors and ministers have just as much value, as a rule, as a figurehead or a bowsprit would have on the last Cunarder. Yet even that comparison is one which rather favors us, for the figurehead might be ornamental even if absolutely useless, while our ambassadors are almost never graceful in their places, and are always removed before they have had a chance to become so in case they have it in them to learn the peculiar etiquette of diplomatic circles.

I hear it continually said by the apologists for the American system, that we don't care for the European etiquette; that we are a plain people and have simplified all that, etc., which may be all true, but, if so, only proves that we have no right to intrude into the diplomatic world. When a man insists on forcing himself into a society of whose rules and ways he is utterly ignorant, the host generally requests the servants to show him the door; but when a government like that of the United States sends him into the society, there is a consideration of international courtesy to complicate the action, and the boor remains in the society into which nobody but a gentleman of any other nation is allowed to be sent, and the whole nation becomes responsible for the discourtesy, and is stamped with the initials of its representative. Diplomacy has its peculiar etiquette, its rules of intercourse and of precedence, which have to be learned, and in ignorance of which the best intentioned and most worthy man in America makes himself ridiculous, simply because he puts himself in a position where it is a matter of obligation to know what he should do before he undertakes it. We have had two or three ministers who, by long and intimate contact with European society, had mastered the etiquette of courts and were competent diplomatists—Marsh, Motley, Lowell, at least, will occur to anybody who knows anything of this question; and the most discouraging circumstance connected with it is this, that these men were the targets of the satire and abuse of the great mass of American travellers because they did know and observe the usages of the society in which their official duties placed them. Their travelling fellow-countrymen had the notion that the business of the minister was to introduce them into the courts to which he was accredited; they had their letters addressed to his care, and in a general way expected from him the attentions of a well-bred *valet de place;* and when they got all they were entitled to, and more than the many obligations of the minister made easy to give, they went away abusing him as the "toady of aristocracy," and a man who had sacrificed the simplicity of republican life to the pretensions of an effete aristocracy. It never occurred to one of the revilers that neither of those ministers had made the rules by which he was bound, or was at liberty to modify them to suit the pretensions of republican simplicity.

Mr. Motley was dismissed from a service he condescended to accept from love of and pride in his country, because he wore his hair parted in the middle; Marsh had his days shortened and made bitter in their ending because he had refused to insist on a violation of diplomatic etiquette; and Lowell was persecuted in his life and reviled after his death because he refused to accept the position of *valet de place* for the American emigration, or to urge the intrusion of American worshippers of aristocracy into circles which he had no more control over than he had over the Treasury of the United States. People became his enemies for life for no better cause than that he could see no reason for making it a state question whether Mr. Goldstecker of Nevada or Mr. Shoddy of New York should be presented to the Queen. On the other hand, everybody has heard of the American minister to the court of Italy who sent back his invitation tickets to the court ball, saying that he did not allow his women to go where women danced half-naked, and at the King's table refused the cigar his Majesty had the courtesy to offer him in person, saying that he preferred his own—sentiments he would have had a perfect right to put into effect and words in his own town, but which were a gross breach of courtesy in the minister of the United States at Rome. These may be samples of republican simplicity of manners, but they are none the less proofs that the man guilty of them was unfit to represent the United States in any land as civilized as China or Japan. Ben. Franklin is held up as the model of an ambassador, and so he is, but he was chosen for a special mission, accomplished that mission, for which he was well qualified, and then went home again; and this is the sort of ambassador we should always have. Consuls answer better the needs of the travellers and those of the business world at once, and our legations and embassies are simply useless ornaments in bad taste.

I have in my mind no individual in thus speaking: it is the impression of the entire service, gathered in an experience of a quarter of a century of European life, in England, France, Germany, Italy, Turkey, Austria, and Greece; and where I have seen one thing to raise my patriotic pride, I have seen twenty which brought only mortification. In advance of the arrival of the new minister to Italy, whose person is entirely unknown to me, and whom I shall probably never know, I wish to say here that his appointment in the light of known facts compromises our Government and makes his position a scandal, no matter what kind of a man he may be, or how competent for the post. His hands are dirty, and there is not enough water in the Tiber to wash them clean, nor any personal quality which can make him really respected. He is known to the entire press of Italy to have bought his place, paying a round quarter of a million of *lire Italiane* for it; and in view of this fact it becomes incredible that he should be a competent or fitting person for the place. This popular logic is sound. He will never go to a court reception when those who see him will not have recalled to memory the chief fact of his career, in the common comprehension; and when he is distinguished in public, it will always be as the man who paid a quarter of a million to be appointed ambassador. He will always be received at court, and where he can get admission in society, with polite coldness, as the representative of a country that most people respect—because the Italians are a courteous race, and because diplomacy never fails in the observance of its forms; but no position in society would induce me to face what he will have to face in the inner presentation of the polite world in Rome. X.

## THE MATABELE WAR.

LONDON, November 17, 1893.

AFRICA has within the past few months come with a rush to the front, and it is likely to remain prominent in the public mind until its surface suitable for the occupation of white men is, in fact, "brought within the influence" of the different European nations among whom it is being divided. Trouble has arisen in our "sphere," and the case, like all British troubles, great or small, general or local, has been forced on the consideration of Parliament. Home rule, the *Victoria* disaster, the wicked annexations of the French in Cochin China, for the time pass into the background, and Matabele, Mashona, Lobengula, Buluwayo, Sir Henry Loch, Capt. Lendy, Mr. Rhodes are the subjects of general discussion. Events in relation to Matabeleland and King Lobengula have gone the usual round of all similar dealings with uncivilized races. Reports reach this country of the discovery of a large and fertile district held by a sparse native population. Traders ingratiate themselves by presents of rifles, gunpowder, lead, and brandy. Devoted missionaries, promising blessings in this world and the next, are civilly received. Whites, for one purpose or another, edge into the territory. A friendly monarch, but dimly conscious of what he is doing, cedes certain mining and pastoral monopolies. His authority is soon repudiated by the settlers. Permission is perhaps granted for the erection of a telegraph line. Portions of the wire are cut and obstructed. In the district where the offence has been committed cattle are seized. The King declares the cattle are his, put out to grass with tribesmen. He is, however, prepared to punish the malefactors, which he accordingly proceeds to do in his own summary fashion. Refugees seek asylum in white camps and, naturally, are not delivered up to certain death. The monarch sends an embassy to the Queen, who advises him to endorse her action in giving a charter to the white men and thereby insuring some party being answerable for fair dealing on the part of his new neighbors. He consents. But his fighting men are not altogether satisfied. His envoys upon some occasion are killed—in mistake; or his people steal cattle from the whites, who retaliate by burning down a village and slaughtering a score of its inhabitants. War ensues—"purely defensive" on our part. And what has now happened is a sample of what always happens since modern inventions in gunnery:

"The machine guns worked with extraordinary effect, and the Matabele were easily kept in check from the first. The fight lasted about an hour. The enemy used their rifles, but ineffectually, and finally they fled in complete disorder. They were pursued for some distance

by the mounted men, who, however, were not able to do much execution, and were soon recalled. Of the 7,000 Matabele who went into the fight 1,000 lay on the ground dead or wounded—90 per cent. of them by machine-gun bullets. The entire loss of the Chartered Company's forces was three killed and seven wounded, all by rifle bullets."

And two discoveries have on the present occasion been made, such as are generally made on the termination of such hostilities—one that the defeated potentate is not so bad as, upon the call to arms, he was depicted; the other, that, no matter how the war commenced, there is now to be no going back.

"Lobengula's capital was reached without mishap. The place was deserted save by a few old men and women, and Messrs. Fairbairn and Usher, white traders, whom everybody had supposed dead at the hands of the exasperated Matabele. They had been treated with strange forbearance, they said. . . . The armed settlers are delighted with the new country which is being opened up. They have come to stay."

So far matters have gone in the present instance. We all know what the end will be. If Lobengula and his warriors are not all killed, they will probably, "assured of protection," "come in," to find themselves almost powerless in their own country, at the mercy of a police force recruited, perhaps, from some neighboring people formerly at war with them, and officered by whites. Shocking wars such as the present, with their sequence of annexation of territory, generally arise from the greed of gain or official insolence of individuals or companies, seldom at the desire of the home Government, whose influence is generally involuntary and meant to promote peace. There never was a ministry composed of more humane men than is the present. Mr. Sidney Buxton, undersecretary for the colonies, upon whom, with Lord Ripon, the main responsibility has fallen, is a humanitarian and Liberal of the first water, grandson of one whose name he bears who took a foremost place in the philanthropic movement of his day. Mr. Gladstone, Mr. Bryce, Mr. Morley, Lord Ripon, and he are some of the most responsible members of the Government—but the truth is, the home Government is little if at all responsible in this matter. It has done its best, but, as usual in such cases, it, at a distance, is incapable of counteracting the aggrandizement and selfishness of individuals on the spot. We often hear it said that "governments have no conscience." In the present instance the Government shows more conscientiousness than individuals, but is powerless to act consistently. Once the curse of being discovered falls upon an uncivilized race with land suitable for occupation by whites or containing unworked wealth capable of development, its fate is sealed. The good-will of a home government is as unavailing to save it as is the Government at Washington to save the shrieking black being made a petroleum candle of by a degraded mob in one of the Southern States. Those who first obtain a footing are whites of the lowest class and most selfish instincts. "A church clergyman played the fiddle—most of the company were drunk by ten o'clock," is the account of a charity ball in Mashonaland given in a book lately written by two nursing sisters. Society does not improve as quickly in such lands as in the competition between equals in those previously unoccupied, say, as in California. A veritable hell upon earth reigns until some responsible form of government, under the ægis of an already constituted power, is established. After this the natives, no less surely but perhaps somewhat more gently, are led to their fate. That of the hecatombs swept away by machine guns in a last stand for *their* highest conception of life is not so sad as that of the survivors, broken in spirit by their impact with a new order of things and decimated by drink * and disease, lingering out life perhaps in cages, like the Kaffirs of the diamond mines, the degraded survivors in lands where they once roamed free.

A candid consideration of the Matabele question should lead to individual heart-searching of our natural tendencies to the acquisition of wealth at the expense of others. Rights acquired for practically nothing by charter are now valued at millions on the money market. It also appears to me to argue strongly in favor of teetotalism, for if much of the demoralization of subject races is brought about by the sale of drink, it is impossible for those who maintain the desirability of drinking customs effectually to protest against its export and sale to other peoples. The outcome of the debate should be a warning against factiousness in politics. Had the present war in South Africa arisen under a Conservative régime, not many Liberals would have been ready to consider candidly the difficulties of the Government. In truth, while a Conservative Government finds it easier to carry reform measures because its opponents are pledged to the cause of reform, so a Liberal Government finds it easier to steer through a difficulty such as the present because its opponents are inclined to support all assertions of British power abroad. Those who do not live under a flag carried in an ever recurring succession of such wars cannot conceive the shame and horror they bring. We are, as it were, carried on by inexorable fate into a series of situations from which we naturally revolt. As citizens we must accept complicity in government; as individuals we cannot regard the extension of empire through such means, however unavoidable, as great or glorious. John Woolman's ideal, that of the early Friends—abstention from complicity in all that falls short of the highest standard—is impossible of fulfilment. The attempt to practise it would lead with most men to a quietist indifference, a concentration of the powers and sympathies upon our own narrow circle. We feel impelled, each in his own degree and mode, to step down into the arena of human suffering and action, and, soiled as we may be by the dust and mud of conflict, to bear our part, even if we do not always fully see our way. The invariable fate of nations such as those with whom we are now dealing must render difficult to thousands a heartfelt acceptance of comforting platitudes regarding "His goodness being over all His works."

Concerning the ultimate gain to humanity there can be no question. Matabeleland in its present condition might support some thousands in a state of semi-barbarism. Developed and inhabited by a white race, it would sustain millions in comfort and plenty. And so, in consideration of the benefit to mankind in the long run, we must strive to turn our thoughts from the inevitable horrors involved in the change.

> "Oh yet we trust that somehow good
> Will be the final goal of ill."

But we cannot believe that the present war will result in real good to either of the parties waging it. D. B.

* In this connection there comes to my mind a passage from a letter of a young friend who went out as surgeon on a trading steamer to the African coast: "On Sunday we cast anchor opposite a church and missionary station and landed 2,000 cases of gin."

# Correspondence.

## DUELLING IN VIRGINIA.

To the Editor of The Nation:

Sir: Apropos of the subject of Virginian duels touched upon in the "Notes" of the last *Nation*, I send you an excerpt from the Council Journal of that State which may prove of interest. I made it some years ago, when investigating another subject, and I have never seen it in print. The journal from which it is taken is of great value to students, and it is to be hoped that the revived interest in Virginian history may induce the State authorities to take measures for its speedy and unabridged publication.

The citation is made from the minutes for Friday, February 27th, 1778, the following members being present: His Excellency (Patrick Henry), Dudley Digges, John Blair, David Jameson, James Madison, and Bolling Stark, Esquires.

"The proceedings of a general Court Martial on the trial of Lieutenants [*sic*] Walker Richardson of the Second Regiment of State Troops for fighting a Duel with Lieutenant Triplett of the same Regiment Contrary to the Articles of War section 7th & Article Second, being laid by the Governor before the Board for their Opinion thereupon and it appearing that the said Richardson was sentenced by the said Court to be cashiered for a Breach of the said article, but that inasmuch as he had conducted himself as a Gentleman & Officer it was recommended that he be reinstated to his former Rank: The Council taking the same into Consideration are Unanimously of Opinion that the said Sentence be confirmed, & to shew their abhorrence of the practice of Duelling notwithstanding the Recommendation of the Court advised his Excellency to let him remain cashiered; which the Governor orders accordingly."

W. P. Trent.

Sewanee, Tenn., November 18, 1893.

## SAND-LOTS DISCRIMINATION.

To the Editor of The Nation:

Sir: Please allow me a few lines to call attention to the absurd outburst of misplaced sentiment regarding the landing of a few Russian convicts at San Francisco—for the men who landed were convicts pure and simple; political exiles are rarely, if ever, sent to Sakhalien. One is puzzled to notice the difference between the way San Francisco receives them and the way she receives peaceable Chinese immigrants.—Very respectfully,

Charles R. Crane.

Chicago, November 21, 1893.

## THE LETTERING OF BOOK BACKS.

To the Editor of The Nation:

Sir: Some time since you were so kind as to allow me space to complain of the absurdity of sending finely bound books to their readers with the pages uncut. By the number of letters received from well-known scholars, I know my words were acceptable.

I wish now to complain of a still greater evil: I mean the ineffectual and capricious manner in which the backs of books are often lettered. As a sample of the ineffectual, look at the backs of Miss Alice Bacon's charming books on Japan. The letters are undersized, traced in silver—easily tarnished. They would not readily be found on the shelf by any one who had not seen them. "Capricious" titles are those applied in antique or fancy letters, or Roman letters highly decorated, like those

on the early editions of Hawthorne's 'Note-Books.' This practice is on the increase, and, worse still, the illustrated books intended for the use of children, like Mrs. Ewing's, are often printed in letters wholly different from those the children learn at school.

First-class publishers should hold themselves above such devices. I have long wished to draw attention to this abuse, but an accident makes me at this moment especially indignant. My catalogue marks case and shelf—the books are not numbered. Three days ago I went hastily to the proper shelf for an English book. I did not see it, so sent my housekeeper, an educated woman, to look more carefully. The matter was urgent, and, when she did not succeed, I, going on with my writing, begged the services of two young friends who dropped in. More than two hours were spent in vain, and the search ceased. That evening I took a small lamp and went through the case, imagining the book might have been displaced. When I came to the proper shelf, my lamp glanced over a much ornamented back in which not one letter was legible. I had to take the book down and open it, and behold, it was the one we had been seeking!

Books should be labelled in Roman letters only. These should be large and clear and broadly traced.

CAROLINE HEALEY DALL.

WASHINGTON, D.C., November 24, 1893.

# Notes.

CHARLES SCRIBNER'S SONS have nearly ready an illustrated 'Life of Sir Joshua Reynolds,' by Claude Phillips, and 'The Barbary Coast,' by Dr. Henry M. Field.

J. Selwin Tait & Sons announce 'Sandow on Physical Culture,' by G. Mercer Adam.

A 'Memorial Story of America' is in the press of John C. Winston & Co., Philadelphia—a new topical history of the United States, edited with many colaborers by Hamilton W. Mabie and Marshall H. Bright.

Houghton, Mifflin & Co. send out three more volumes in the comely Riverside edition of Thoreau's Writings, viz., Mr. Blake's excerpts from the journal for Summer, Autumn, and Winter, the first-named containing a map of Concord, with all the famous localities and residences indicated; and 'Natural History of Intellect, and Other Papers,' being the twelfth and final volume in the Riverside edition of Emerson's Writings. This embraces eight papers from the *Dial*, two from the *North American Review*, and three hitherto unprinted lectures on "The Natural History of the Intellect," "Memory," and "Boston." The second is a slight matter, but the discursive eulogium on his native city is as just and discriminating as it is warm, while for style, thought, and "system" nothing could be more characteristic of Emerson than "The Natural History of the Intellect." As one reads consecutively these too compact pithy and brilliant sayings one recalls that distinguished delivery, halting and detached, which supplied Emerson's listeners with the necessary pauses for assimilation and digestion. There was, perhaps, almost as much art in this as in his choice of words. The book has a general index to the thought of Emerson—a difficult task—and one to his quotations, assigning them to their respective sources. One could have wished for a third, of references to his contemporaries.

The volume of eighteen 'Discourses, by Edward H. Hall, pastor of the First Parish, Cambridge, Mass.' (Boston: George H. Ellis), contains a powerful sermon against the abuses of our pension legislation. Many of our readers will remember it as having been separately published two or three years ago. The whole volume is marked by that high style of thought and feeling which has always characterized the best spiritual products of New England, and which has done so much to keep religion from stagnation and to hold public and private conduct amenable to the highest standards.

The appearance of the second volume of the translation of Dr. Moeller's excellent handbook, 'History of the Christian Church in the Middle Ages' (London: Swan Sonnenschein & Co.; New York: Macmillan & Co.), will be welcomed by all who have learned to value the good qualities of the first. It is only to be regretted that the work of translation should have been put into so incapable hands. Mr. Rutherfurd's servile adherence to the original makes it difficult at times to know in what language one is reading, and this defect has already proved serious in the practical use of the book for purposes of instruction. The bibliographies, good as far as they go, might well have been increased with especial reference to the needs of English-speaking students.

'Across France in a Caravan' (Anson D. F. Randolph & Co.) is a brightly written account of the journey of an Englishman, his wife, and his dog, from Bordeaux to Genoa. The average American, who wants to be transported as rapidly as may be, by land or by water, from one place to another, will probably look down upon the Briton's enthusiasm; but even if he cannot enter into the spirit which led the author to prefer a caravan on wheels to a *rapide*, he cannot fail to enjoy the account of the trip, bright and breezy from beginning to end. Troubles and adventures, mishaps and incidents are numerous enough to prevent any sense of monotony, and while at times the author is guilty of efforts at witticism which are apt to fail, he is abundantly and naturally humorous, sees the comical side of things, and hits off the ridiculous and absurd in officials, innkeepers, peasantry, and nobility with a very happy touch. It is not so much the descriptions of places visited, most of them better described by other travellers, as the recital of the moving accidents by field and flood which charm the reader, and the insight he thus obtains into the character of the thorough Briton. The book is richly illustrated with very clever sketches, which greatly add to its already entertaining character.

Dr. Michael Foster's 'Text-Book of Physiology' (Macmillan) is at present undergoing its sixth revision. Parts I., IV., and V., treating respectively of the blood, the tissues of movement, and the vascular mechanism; the senses and reproduction; the chemical basis of the animal body, have already appeared. The other parts, on digestion, respiration, and the central nervous system, will appear shortly. From its first issue as a single octavo volume of moderate size in 1876, it has so grown that each of the five parts is, in this sixth edition, nearly as large as the entire original work. From the beginning it was recognized as a masterpiece, and at once took a prominent place among text-books of physiology, and, to our shame, found also a prominent place among pirated works. All those who labored so long and assiduously for international copyright will be rejoiced to know that this edition is copyrighted under the new law. If one seeks for the reason of the high estimate in which this work is held on both sides of the Atlantic, by the most advanced students as well as by general readers, it may be found in the simplicity and beauty of the style, in the lack of personal prejudice on the part of the author, in his thorough familiarity with the progress of physiological knowledge, and in the rare judgment with which purely hypothetical ideas and those founded on sufficient evidence are discriminated. The work is, therefore, a most admirable guide to physiological progress as well as general physiological knowledge. The rapidity in the growth of physiological knowledge and the thoroughness of the revision of this edition are indicated by nearly 500 additional pages, as compared with the corresponding parts of the fifth edition. The feeling of confidence inspired by the work is also enhanced by the fact that, under the author's inspiring guidance, students have arisen who, in certain fields, have outstripped their master, and he has secured their coöperation in making the work, as just revised, a truly great treatise.

The revived Geological Survey of Iowa, under the direction of Prof. Samuel Calvin, has recently issued its first volume, in which the two chief papers are by C. R. Keyes, Assistant State Geologist; one giving a general account of the formations of the State, the other presenting a full bibliography of its geology and palæontology. The most important part of the first of these papers concerns the unconformability between the lower and upper members of the carboniferous system, or the Mississippian and the Pennsylvanian series, as they are now coming to be called. The Algonkian rocks, represented in the Sioux quartzite, and the cretaceous formation, including valuable deposits of clay, extend the series of formations over a greater time range than is common in the central States.

Since 1891 there has appeared in the *Revue Bleue* a series of articles, the last published in October, 1893, on "L'Histoire des réputations littéraires." These articles, signed by M. Paul Stapfer, have been collected by him and republished by Hachette under the title 'Des réputations littéraires: Essais de morale et d'histoire,' first series. The volume contains all the articles in the *Revue Bleue* and as many more new ones. The order is somewhat changed, and part of the work has been rewritten. The essays are remarkably interesting; they not only throw much light on the main subject of which M. Stapfer treats, but contain many excellent criticisms and sound judgments on authors and their works. The articles on "Manières diverses de survivre," "Le fond et la forme," "Première méditation sur le petit nombre des élus," "L'heure du génie," "La comédie du hasard," and the concluding "L'avenir de la littérature," are especially to be noted among the sixteen which make up the book.

The firm of Hachette & Cie. issues an *Almanach* bearing its name and full of valuable information. An interesting feature is the series of prognostications by eminent men, such as Leo XIII., Bismarck, Reclus, Jules Simon, and others. Of these the remarks of Bourget: "I have come to the conclusion that the greater number of the men and women who obey the precepts of the Church are free from the moral disorders I have described in my novels," and of Vogüé: "The certainty of peace—I do not say peace itself—would, within half a century, engender corruption and decadence more deadly to mankind than the most frightful of wars," are suggestive.

Owing to difficulties attending the proof-reading of the catalogue, Renan's library will not be sold for some weeks to come. The edit-

ing of the catalogue, which will be a work of considerable value, is in charge of Renan's son, the artist. It will contain about 7,000 titles. Renan's whole library numbered about 10,000 or 12,000. The catalogued books are only those of importance; the others are to be given over to an ordinary dealer in second-hand books, who will dispose of them. Mme. Renan has quitted the apartments in the Collège de France, and now resides in the Avenue de l'Observatoire.

In transitional periods of every literature there are certain writers whose works refuse to fit smoothly into any of the regular pigeonholes of critical classification. These works are neither epics, nor lyrics, nor dramas, nor satires, nor novels, nor philosophical systems, nor histories, but partake, in protean and confused fashion, of all or many of the fully developed types. Besides the interest of curiosity attaching to them, to the student of comparative criticism they stand very much as the long-desiderated "missing link" might to the student of comparative biology: they catch the *Zeitgeist* midway, as it were, in the act of changing its clothes. To such students Signor Ireneo Sanesi has rendered a service in his learned little work, 'Il cinquecentista Ortensio Laudo' (Pistoia: Fratelli Bracalli). It must be premised that Signor Sanesi writes for scholars. Knowledge of Laudo's social and literary environment he presupposes; and to the general reader, even were he attracted by so remote a phenomenon as this sixteenth-century "chameleon-satyr," the cautious fulness of the Italian scholar's conjectural hesitations, and the heaviness of his bibliographical asides, would very likely prove altogether daunting.

Under the title 'Studi Letterari,' and apparently as vol. viii. of his collected 'Opere' (Bologna: Zanichelli), Giosuè Carducci reprints three essays from the earlier 'Studi Letterari' (Leghorn, 1874), and adds a fourth which has as yet appeared only in the *Nuova Antologia* (1881). The first are the studies entitled 'Delle Rime di Dante,' 'Della varia fortuna di Dante,' and 'Musica e Poesia nel mondo elegante italiano del secolo xiv.'; the last is called 'Un Poeta d'Amore nel secolo xii.', and is a highly sympathetic, as well as scholarly, treatment of the Provençal poet Bernart de Ventadorn. All the essays have been retouched, and several interesting notes have been added.

'A Primer of Italian Literature,' by F. J. Snell, M. A. (Oxford: Clarendon Press), is a very slight and second-hand affair. The author tells us that his book "does not profess to present a complete account of Italian Litera ture," and clearly this should not be the aim of a primer. All the more, however, should every word in such a sketch be just the right word, reflecting the latest and best opinions upon the subject. Mr. Snell does not seem to have used even the most familiar histories of Italian literature (*e. g.*, Gaspary's and Bartoli's), to say nothing of the now extensive body of special treatises.

*Good Roads* is the title of an illustrated monthly magazine published in this city by the Roads Improvement Bureau of the League of American Wheelmen. It was founded last year, and is now in its fourth volume. Vols. i.-iii. are before us in cloth binding. They constitute a valuable repertory of facts concerning the condition of roads in many States of the Union, as well as detailed instruction in road-making, with diagrams and photographic views from nature. Portraits of contributors (in some cases State Governors) satisfy curiosity in regard to the features of an Altgeld or a Russell. An attempt is also made to lighten the contents occasionally by a story, but the main impression is, as it should be, a serious one, and we must all wish well to the propaganda carried on by *Good Roads* and enforced by so many pictorial "awful examples."

The *Mother's Nursery Guide* (*Babyhood*) completes this month its ninth volume, without exhausting the field which this wisely conducted periodical has made peculiarly its own. As a mother writes to the editor, "It seems as though every subject had been touched upon, and yet I am anxious to ask a few questions about my own particular child"; and so it must be to the end.

In *Macmillan's Magazine* for November Mr. C. H. Firth reveals a fresh but limited source of information concerning the early life of Samuel Pepys when he was "my servant" or factotum to Sir Edward Montagu (afterwards Earl of Sandwich). Some of his letters to this nobleman found their way into Carte's collection, now in the Bodleian Library, and Mr. Firth extracts what is characteristic and historically important in them. They were written between the years 1656 and 1660, and three, dating from December, 1659, describe the popular rising against the rule of the army on the eve of the Restoration. One might expect all these interesting documents to be appended in full to Mr. Wheatley's new edition of the Diary. In the same number of the magazine an anonymous writer offers "Some Thoughts on Rousseau." They are not very valuable, even as a plea in abatement of M. Brunetière's recent harsh verdict, but they show how fascinating the author of 'Emile' continues to be, to friends and enemies alike. He and his works, says this writer, occupy more than eighty pages in the British Museum catalogue. What remains to be done for Rousseau, after all the attempts to estimate his character and to deduce a consistent philosophy from his writings, is to give readers of to-day an adequate conception of the intellectual reward derivable from a perusal of his works for their own sake.

Among the noteworthy contents of the November *Geographical Journal* is Lord Dunmore's account of his extensive journey through the Pamirs last year. It would have been far more interesting could he have been permitted, in addition to the geographical details of his journey, to describe the military and political events which took place in this region at the time of his visit. The destruction of a Chinese fort by the Russians is mentioned, and an incident is related showing the extreme jealousy of the former nation of any attempt to occupy the disputed territory. Among the strange places visited was a "perfectly square frozen lake" on the summit of a pass, 15,700 feet high, which had all the appearance of an artificial reservoir, "its sloping sides being paved by nature with flat stones fitting closely together, giving it all the appearance of a piece of solid mason work." Lord Dunmore experienced very cold weather. Even in September the thermometer went below zero at night, while "on Christmas eve the temperature fell to 38° below zero, and I woke to find three of my horses lying frozen at my tent door." Some notes on Southern Nyasaland are interesting chiefly as showing the progress made in developing the country by plantations and road-making. Mr. H. G. Schlichter describes his method of determining geographical longitudes by photography, and the Rev. J. A. Wylie contributes a description of a very recent journey through central Mantchuria. A singular native account of the fall of Khartum and the death of Gordon is given in a paper upon the Hausa pilgrimages. The author, the Rev. C. H. Robinson, proposes to attempt to reach the Hausa States from the Niger and from thence to cross the desert to Tripoli. One of his principal objects will be the collection of specimens of native Hausa literature and the study of the dialectical differences existing in this language, with a view to the eventual publication of the New Testament.

The chief article in the *Scottish Geographical Magazine* for November has for its title "The Discovery of America by Columbus," but it is in reality a sketch of the gradual development of our knowledge concerning the ocean from the most ancient times to the present. It is accompanied by an exceedingly interesting series of fifteen historical maps. The author, Dr. John Murray, in showing the geographical conceptions of the ancients, dwells especially upon the work of Eratosthenes, who shocked the men of his day by doubting the geographical knowledge of Homer and saying that the real localities described in the 'Odyssey' could never be discovered "until they had found out the cobbler who had sewed up the bag of Æolus." Considering his intimate relations with the *Challenger* expedition, it is not strange that Dr. Murray holds our advances in oceanography to be the most brilliant addition to our knowledge of the earth made during the past generation. In the closing paragraphs of an unusually interesting treatment of a threadbare subject, he shows a decided leaning to Mr. Jules Marcou's theory that the name America is derived from a range of mountains in Nicaragua. There is also an appreciative notice of Emin Pasha, with a portrait from a photograph taken in Zanzibar in 1891. The last entries in Emin's field-book, which with other papers was secured by a Congo Free State official, Capt. Dhanis, of present fame, are given, but they have no especial interest as they refer mainly to the marches of his caravan. On August 9 he writes: "By the negligence of our Manyema chief, all my collections have been lost in the River Tunda, which we had to cross in a canoe. What a pity!" An extract is also given from a letter to his sister in 1871, in which he says: "I have quickly gained a reputation as a doctor. This is due to the fact that I know Turkish and Arabic as few Europeans know them, and that I have so completely adopted the habits and customs of the people that no one believes that an honest German is disguised behind a Turkish name. Don't be afraid; I have only adopted the name, I have not become a Turk."

The present term has seen the opening of a new hall for resident women students in Oxford. St. Hilda's starts under the auspices of Miss Beale, the energetic head of the ladies' college, Cheltenham, and will probably always contain a certain number of her old pupils. A beginning is made with a total of nine. Somerville Hall is building again; the second large house, opened a very few years ago, being already full to overflowing. Another new development of the work of the "Association for the Education of Women" is in the direction of a more definite organization of the so-called "Home Students." This body, which includes several American ladies, now numbers forty-five members, of whom twenty-five are reading for the University honor examinations. Their interests will in future be specially cared for by a lady principal assisted by a small committee. This step places these women students to some extent under the same conditions as the non-collegiate undergraduate body who live under the rule of a censor and a delegacy.

A Faust exhibition is now being held in the

Goethe house at Frankfort under the charge of a German patriotic society, its object being to show the influence of the Faust legend on the intellectual life of Germany. Beginning with the historical Faust, the development of the legend is traced by contemporary accounts, including the various versions, native and foreign, of the *Faustbücher*. The collection includes a vast number of programmes of Marlowe's "Dr. Faustus" as well as of Goethe's drama, and copies of all operas, parodies, satires, etc., based on this subject. Among the translations of Goethe's "Faust" are twenty-one English, eighteen French, four Russian, three each of Swedish, Portuguese, and Italian, concluding with one Hebrew; the poem being represented in sixteen languages in all.

—A correspondent writes:

"Geographical accuracy was from first to last a cardinal aim of the late Francis Parkman. It is doubtful whether any historian covering so large a field has left so few of its localities unvisited and unexamined. He states that 'a strong natural taste led him to the regions of the wild West,' and that he had 'studied his subjects as much in the open air, by camp fires and in canoes, as at the library-table.' East, west, north, and south, the authority for his topographical descriptions is personal observation. But, aware that while ever learning we are never able to come to knowledge of geography, he never hesitated to correct errors concerning any natural feature when he had fallen into them. An instance of this love of the precise truth may be observed in comparing different editions of his Life of La Salle. He was anxious to ascertain the particular point on the Illinois River at which La Salle had passed the winter on his return from discovering the mouth of the Mississippi. This spot, he learned, had been supposed to be Buffalo Rock (p. 293), while his studies had brought him to the conclusion that it must have been Starved Rock, three miles further down the river and on its other bank. For settling the question he made a journey to Utica, the nearest village. He spent more than a day in conference with the inhabitants and in examining localities, and was fully confirmed in his former conclusions (p. 224). In giving reasons for his opinion in his Life of La Salle in the edition of 1870 (p. 288), he said, 'The rock fortified by La Salle [and on which he wintered] stood, we are told, at the edge of the water [as he had described Starved Rock], while Buffalo Rock is at some distance from the bank.' Mr. Parkman's account of the scenery here induced me, though living in another State, to explore the neighborhood. Halting at Ottawa I felt inclined to make the journey down the Illinois in the same way that La Salle had voyaged there. I therefore procured a little boat with two oarsmen. Many things were of interest on this passage, but what most surprised me on arriving at Buffalo Rock was to see that, so far from being 'some distance from the bank,' it formed the bank itself, and rose sheer out of the water no less truly than even Starved Rock. When this discovery was made known to Mr. Parkman, he struck out the above sentence in his first edition, from the edition of 1879 (p. 293) and all subsequent issues. Sending me a corrected copy, he expressed his regret that his own journey to La Salle's winter-quarters had been by rail and not by boat, so that he had never seen Buffalo Rock from the water, and hence had fallen into a mistake which no man was more glad than he to have detected and corrected."

—On November 14 Prof. Edward Caird was elected Master of Balliol, and, on the day before, the appointment of Mr. Ingram Bywater as Regius Professor of Greek at Oxford was gazetted. Thus the positions filled by the late Master of Balliol have been separated, and his official functions will be discharged by two men of great eminence. Prof. Bywater enjoys an American as well as a European reputation as a textual and diplomatic scholar, and in Oxford he is known to be a very able and inspiring lecturer. The new Master of Balliol also needs no introduction to the larger world. The fame of his books has attracted many from far to Glasgow, where he has been for upwards of twenty years, having been elected while holding a fellowship at Merton College, Oxford. He was an undergraduate at Balliol, and now he returns after thirty years to take up the work begun there by Lewis Nettleship and T. H. Green, whose pupil and friend he was, and to give needed strength to a group of very successful and very hard-worked teachers. His power to lead has been long remarked upon.

—At a joint meeting of the Oxford Philological and Ancient History Societies held early this month in Oriel College common-room, Mr. J. L. Myres gave the results of his recent collection of evidence bearing upon the earliest stages of culture in the lands bordering on the Greek archipelago. Hitherto no implements of the palæolithic period have been found in this area. Polished stone axe-heads and hammers have appeared in the lowest strata at Hissarlik, Tiryns, Mykenæ, and Athens, but nothing more primitive. This is partly accounted for by the materials at hand; volcanic and other crystalline rocks having no fracture to invite the most primitive work done upon flints in more northerly regions. Chert enters largely into some Asiatic limestones, and is found in Naxos, but was apparently not used in the early period. The polished implements above mentioned are found sporadically in the whole Mediterranean basin. The Greek specimens, those from Melos and Eubœa, for instance, are made out of rocks found in the neighborhood. Flakes of obsidian from Melos were fashioned at Corinth and at Kephissia in Attica. At Platæa one of the volcanic glazes of Thera was used. Definite settlements belonging to this period of workmanship existed at Hissarlik (the first town) and at Athens, where its traces have been unearthed under the Mykenæan walls behind the Stoa of Eumenes. Less decisive evidence has been gathered at Mykenæ and Tiryns. Traces of similar settlements at Lechaion, Eleusis, Eubœan Castri, on the peninsula of Myndos, and in Cos, have been made out. In Egypt, just before the bronze age, came a hardened-copper period. This is made out also at Hissarlik and in Thera, though in both places the copper is found along with traces of a more advanced civilization. Mr. Myres then discussed the hand-made pottery of the bronze age from Hissarlik, Thera, Syra, and other islands, and pointed out its correspondence with the earliest Cypriote specimens—these last being certainly not earlier than the bronze age. To this age belong the "marble-workers" of Paros, Antiparos, and Amorgos, as well as certain centres of Naxos, Amorgos, and Syra and other islands, as well as at Mykenæ, Tiryns, and in Attica. From handmade the pottery of this period advanced to a rude machine manufacture. Glazes were used and some forms of ornament. The specimens from Thera are remarkable and approach the Mykenæan type. This last may or may not have come later. Then followed a discussion of Mykenæan forms, with which the paper ended. Mr. Myres combated the notion of a Carian origin for the Mykenæan civilization and its products, and closed with a brief mention of new facts lately gathered by him in Crete.

—Dr. Schliemann described in his 'Troja' and 'Ilios' seven successive layers of city ruins found in his excavations at Hissarlik. This number was increased in 1890 to nine by the discovery of two layers intervening between the highest (or Roman) layer, formerly called the seventh, and the sixth, or so-called Lydian layer. These two layers were, from the character of the finds, attributed to the early and the later Greek period. Dr. Schliemann was baffled by the fact that he could discover no acropolis for the sixth, seventh, or eighth layers. Dr. Dörpfeld, who in May resumed the excavations at the expense of Dr. Schliemann's widow, makes in the *Mittheilungen* of the German Archæological Society (xviii, 2), which appeared November 7, a significant report clearly establishing the fact that the Romans, in building the great temple of Ilian Athene, cut down the highest part of the acropolis, and thus destroyed all traces of the acropolis belonging to those layers. The excavations of 1890 had brought to light two magnificent buildings in the sixth layer, besides "Lydian" jars, much pottery, and one entire vase of the Mykenæan or Homeric period. The evidence favored the identification of this layer with the Homeric Troy or the period of Mykenæ and Tiryns. On the other hand, the fact that only two buildings and no city wall had been discovered for this layer seemed to indicate that the Troy of Priam must be referred to a lower level, namely, the second, where a magnificent wall of prehistoric style had been discovered, although its architecture and the character of the finds suggested a more primitive culture than that painted in Homeric song. The sixth layer has now in large part been exposed by Dr. Dörpfeld and reveals the most imposing wall of pre-Roman times. The remains of seven vast buildings have been brought to light which have in part the ground plan of the ancient Greek temples and of the halls of Tiryns and Mykenæ, though surpassing those in proportions and in the carefulness of their architecture. The remains of one admirable building contained a hall 37 feet by 30. The trunk of a stone pillar in its axis showed by its form and position that the building was originally divided by three wooden pillars into two naves. The resemblance of this building to the temple exhumed at Neandria is very marked.

—Further, Dr. Dörpfeld uncovered the fortifications of this city in many places, and found them some sixteen feet in thickness with a still greater height. On the outside the wall has a uniform slope. A strong-tower fifty-eight feet in diameter contains an inner staircase. In strength, proportions, and careful architecture this tower will compare favorably with any tower of Greek antiquity. The neat work of the corners and the nice dressing of the stones might refer it to a period later than Homer, to the historical Greek period, did we not know that in historical times Troy was too insignificant to need the erection of such walls. Moreover, the tower, built over in Greek times, and partly damaged by the addition of an outer stair, was finally in Roman times buried under massive foundations. The correspondences in stone-work of the wall and the houses place the tower and the buildings evidently in the same layer. In the houses were found both local pottery and also pottery of the Mykenæan style. Dr. Dörpfeld's fuller statement, with plans and cuts of finds, may be looked for some time before next spring.

—Mr. Wilmot Harrison, in the preface to his new volume, 'Memorable Paris Houses' (Charles Scribner's Sons), complains that this work, "originally intended, and prepared, for publication in French," is "still awaiting the enterprise of Parisian *éditeurs*." The reason for

this lack of enterprise, if it be a lack, is perhaps not far to seek. The book is interesting; the ground it covers is fertile and has not been fully worked by other writers; the names of dwellers in the "memorable houses" are all, or nearly all, famous. But there are many inaccuracies—enough of them, certainly, to justify the hesitation of Paris publishers, who, after a glance at the manuscript, must have come to the conclusion that a thorough revision would be the indispensable preliminary to publication. On the very first page the date of the decree forbidding Mme. de Staël to reside within forty miles of Paris is given as 1802, when it was actually issued on October 15, 1803. Two lines lower down, her husband's health is stated to have been the cause of her delay in returning to the capital after the Emperor's fall, no hint being given that the husband in question was not Baron de Staël-Holstein, who died in May, 1802, but her second husband, Albert de Rocca. In speaking of Balzac's removal in 1830 to the Rue Cassini, it is stated that "sixteen romances had appeared from his pen." Proudhon is said to have come to Paris in 1838; it was in November, 1839, and he finally settled there at the end of 1847, not in 1848. It was in March, 1849, that he was condemned to prison and to a fine of four hundred pounds sterling, and in December, 1849, that he was married, not between 1852–1858. These are samples of the inaccuracies too frequent in Mr. Harrison's book. His method of abbreviating references to authorities is also reprehensible: "Galerie des Cont. Illus.," "Les Cont.," "Hist. Cont." are necessarily conundrums to the ordinary reader. Through carelessness or ignorance most titles of French works are disfigured: "Salambo," "Le Peau Chagrin," "Souvenirs Contemporaines," "La Chambre Bleu," "The Philosophe sous les Toits," are specimens taken at haphazard. The point of the story of Frederick Lemaître is absurdly destroyed: "I am *flamé*," a new word, certainly not French, which is translated by the author "dished, diddled," which is probably meant for *floué*. With plenty of corrections the book would prove useful; at present it is not reliable.

## PATER'S PLATO AND PLATONISM.

*Plato and Platonism:* A Series of Lectures. By Walter Pater. Macmillan & Co. 1893.

THESE lectures evince the same intimate studies, the same literary gifts and graces, the same penetrating and vital sympathy with the Hellenic spirit, that revealed themselves more than twenty years ago in the essay on Winckelmann, and later again in the history of the pilgrimage, mental and spiritual, of 'Marius the Epicurean.' It is not Mr. Pater's object to criticise dogmatically the general body of Platonic doctrine, but simply to enable the student to understand Plato—to put him in his historic place as a result from antecedent and contemporary movements of Greek speculation and life. It is his object, following a striking suggestion of Hegel's, to help the student, "as in reading 'Hamlet' or the 'Divine Comedy,' so in reading the 'Republic,' to watch for its dramatic interest, the spectacle of a powerful, of a sovereign intellect translating itself, amid a group of complex conditions which can never, in the nature of things, occur again, at once pliant and resistant to them, into a great literary monument."

The scene amid which this interesting drama is enacted is the Grecian states, seething with life and motion—a small vortex of contagious energy amid the quiescence of the antique world. This dreaming Oriental world, in which "the conscious individual, with his rights and capacities, is nothing," the Greek had awakened.

"He had stepped forth," says Mr. Pater, pursuing another thought of Hegel's in a characteristic paragraph which we quote for its importance, "like the young prince in the fable, to set things going. To the philosophic eye, however, about the time when the history of Thucydides leaves off they might seem to need a regulator, ere the very wheels wore themselves out. Mobility! We do not think that a necessarily undesirable condition of life, of mind, of the physical world about us. 'Tis the dead things, we may remind ourselves, that after all are most entirely at rest, and might reasonably hold that motion (vicious, fallacious, infectious motion, as Plato inclined to think) covers all that is best worth being. And as for philosophy—mobility, versatility, the habit of thought that can most adequately follow the subtle movement of things—that surely were the secret of wisdom, of the true knowledge of them. . . . It means susceptibility, sympathetic intelligence, capacity, in short. It was the spirit of God that moved, moves still, in every form of real power everywhere. Yet to Plato motion becomes the token of unreality in things, of falsity in our thoughts about them. It is just this principle of mobility, in itself so welcome to all of us, that, with all his contriving care for the future, he desires to withstand. Everywhere he displays himself as an advocate of the immutable. The 'Republic' is a proposal to establish it indefectibly in a very precisely regulated, a very exclusive community, which shall be a refuge for elect souls from an ill-made world."

How this singular attitude came about, what were the currents of thought, the forces personal, political, and social, which acted and reacted on Plato's mind, Mr. Pater sketches vividly and compactly in the chapters which describe Plato's forerunners, and his relations to Socrates and the Sophists. In tracing his ancestry, the factors of his mental constitution, our author has naturally something to say of Heraclitus, who, in the saying, "All things flow," and the changes he rings on it, anticipated vaguely our modern conception of a universe in constant flux and motion, evolving itself by a secular process; something also of Parmenides, who, in his conception of the absolute and the one, again prefigures the unity of that inscrutable eternal energy which is immanent in the process of the universe; and, once more, of Pythagoras, who to the Heraclitean flux adds the conception of number and of rhythm—that divine harmony which issues, poetically, in the music of the spheres—and who bequeaths, moreover, to Plato that notion of preëxistence and metempsychosis which so dominates his mind, and which he has used to purposes so spiritual and so lofty. The Doctrine of Rest, the Doctrine of Motion, the Doctrine of Number (as Mr. Pater calls them), this triad of conceptions—the oneness of the basis of the universe, its constant flux or motion, the rhythm or harmony which regulates its processes, announced and emphasized by successive thinkers who dwelt too exclusively on this or that partial view of nature—these three doctrines have their counterpart in the region of ethics as well as of politics and social life.

With perhaps some fancifulness, yet certainly also with a basis of historic fact, Mr. Pater finds these ideas embodied in the varied types of Greek character and race—the flux of Heraclitus in the "flamboyant" Ionian, fluid, restless, changeful as the sea by which he dwells and on which he plies his trade, tending to the license of democracy, given over to sophistry, himself the creator rather than the dupe of the Sophists, who are not so much a cause as a symptom of degeneration, and who merely fan the flame that is already consuming the social fabric. Over against these he would set the Dorian or Spartan Commonwealth, with its stability, its historic continuity, its unchanging customs, its contempt of rhetoric, its patient cultivation of the unadorned truth. These contrasts of racial qualities and tendencies explain some anomalies in the 'Republic.' The 'Republic' presents the phenomenon of the largest freedom of thought and speculation embodied in a system whose aim is to regulate life and society by an iron rule of uniformity. While this treatise is itself an extraordinary example of untrammelled speculation, illustrating the social and political freedom from which it grew and under which it was possible, yet the régime and spirit of the 'Republic' (of the 'Laws' still more) are framed to destroy that spontaneity and diversity of life and character which made the soil and basis of such daring speculation. The writer aims to uproot the plant of which he himself and his work were the most perfect flower. The little democracy in which he lived, during the century from which he grew, anticipated, indeed, and presented in miniature very completely that spirit of independence, of individualism, of diversity and freedom of character and thought, even of religious opinion, which is generally conceived to be the most perfect attainment of our own epoch, hardly won by means of reformations and revolutions, by guillotines and acts of parliament. It seems an astonishing thing that Plato, with all his prevision, should deliberately apply himself to arresting the process of the age and extinguishing the social product of the genius of his own Ionian race. The explanation is, of course, that he had under his eyes and among his feet the evils political and social of his own little democracy, the special faults of his own Ionian stock, while at a distance, colored somewhat by the enchantment of distance, he observed the enduring features and stable order of the Spartan commonwealth. This spectacle and this ideal exercised a powerful fascination on his mind and controlled many of his speculations—how far and why, it is a peculiar merit of our author's work to explain and illustrate with especial sympathy for the great philosopher's point of view.

If Plato erred in his dream of imposing a fixed type on society, he certainly made no error in that other ideal which is the culminating point of the working of his State, the notion which, in one form or another, pervades so many of the dialogues, viz., that government, like every other art, should be in the hands of the expert, that "the ills of cities will never cease until political greatness and wisdom meet in one." Small as was the Liliputian republic in which he lived, he saw mirrored in that brilliant bubble which rose and vanished so early on the waves of time a miniature of all the mischiefs which we now experience on a more magnificent scale. He details them as vividly and clearly as if he had himself watched that extravagant experiment of spendthrift nature, the evolution of modern democracy, as if he had seen the blind fumblings of Caliban made master instead of slave—that many-headed creature which knows neither what ails nor what will cure it, but turns to the flattery of the first quack who offers the sugar-coated pill. He prophesies, indeed, our own predicament who assist helplessly at the tragical farce wherein the tribunal of children condemn the physician and listen to the pleading of the pastry-cook—to some Bland, or Boulanger, or whatever be his name. Instead of such blind and wasteful experiment, instead of the political maxim that every man is the equal of every other for every purpose,

he offers the paradox which is met now as then with a deluge of inextinguishable laughter, that Utopia can come to pass only when philosophers become kings, or kings become philosophers. We, too, are familiar with the ripple of laughter which greets the expert in finance or government, and calls the skilled pilot a star-gazer or "doctrinaire."

Another point in Plato's nice and exact prevision comes home to us at the present moment. The philosopher is fittest to rule, not only because he is wisest, but because he is disinterested; he is, in fact, so disinterested that he will be reluctant to rule. Neither ambition nor love of wealth, obtained by fair means or foul, will sway him; hence he will stand aloof, he must be dragged into politics, he must be compelled by some constraint, he must be put under some penalty, "because to proceed with ready will to the office of ruler, and not to await compulsion, is accounted indecent." What, then, is this penalty, this compulsion which is to drag wisdom and disinterestedness out of their asylum of studious contemplation to the rescue of the State, to place them at the helm in the service of an ungrateful and mutinous crew? It is this, as Plato puts it in Mr. Pater's translation: "As for the penalty, the greatest penalty is to be ruled by one worse than one's self, unless one will rule. And it is through fear of that, the good seem to me to rule, when they rule; and then they proceed to the office of ruler, not as coming to some good thing, nor as to profit therein, but as to something unavoidable, and as having none better than themselves to whom to intrust it, nor even as good." Was this said in Athens by one who had watched that tiny cockle-shell of a democracy drift upon the breakers, or was it said yesterday by some observer of the composition and the decomposition of our Senate of the United States? Such flashes, which send their light through the ages, remind us that the thinker is really also the prophet; he is in truth, according to Plato's large saying, "the spectator of all time and of all existence."

The chapter on the genius of Plato is peculiarly sympathetic, and presents a satisfactory unravelling of a complicated and fascinating personality. For the great philosopher offers the curious problem of a nature at once sensuous and puritanical; he is at once the ascetic who tells us in the 'Phaedo' that "life is but a contemplation of death"; and he is also the author of those perfect little love poems to Aster one of which serves for the motto of Shelley's "Adonais." He had in him, says Mr. Pater, the stuff "which might make an 'Odyssey,' which might make a poet after the order of Sappho or Catullus"; he had absorbed the beauties of the natural world with the eyes of an artist; he had noted the traits and foibles of men with the eye of a novelist; his characterization has a touch of the peculiar fineness of Thackeray; he has set down the subtle traits, the tricks and mannerisms of his characters "with a finely pointed pencil, with something of the fineness of malice which the French call *malin*." Though he was the pioneer of Aristotle through the thin ether and the dry light of abstract speculation, though he first, to use Mr. Pater's fine expression, "gave names to the invisible creations of abstract mind as masterly and as efficiently as Adam himself to the visible, living creations of old," yet he more willingly follows the inverse process. While Aristotle dissects, and lays bare the skeleton, and clothes his thoughts in the gray monotone of abstract language, treating even of friendship in the dispassionate terminology of the ledger or of mathematics, Plato's metaphysic puts on flesh and blood; he embodies it in dialogue and drama, he invests its abstractions with the warmth and colors of personality, he shows us the companions of Socrates in hushed apprehension for their fading argument, as if that too, like their master, were about to die and pass into annihilation. He discourses of his ideas with such magic of imagination and expression that he bewitches us into believing for the moment that they exist, and that they are the only real existences. It was like a recrudescence of polytheism in that abstract world. He carries over to it the colors, the witcheries, the personal magnetism of this mundane sphere; he preaches to us deliverance from *Krishna*, from the coil of the senses and their errors, in discourse which, however chastened by a penitential note of self-repression, still glows and warms with reminiscences of the pride of life and the delight of the eye.

The reconciliation of these contrasts of a nature at once sensuous and ascetic, comprehending in itself—always with the saving grace of Greek sanity—an Abelard and a St. Simeon Stylites, Mr. Pater finds truly and strikingly in a single conception. Plato is, like Dante, preëminently and throughout, the lover. "For him, as for Dante, in the impassioned glow of his conceptions, the material and the spiritual are fused together." The loves of his youthful days had not always been Platonic; he knew the violence of that ignoble steed which the charioteer of the soul manages with difficulty on the upward celestial course; and so, beginning with his Beatrice, his earthly loves of the beauties and the forms of this world, he ends by seeing in all these only the patterns of things eternal that are laid up in the heavens. And hence the philosopher—he, whose business it is to meditate of death and to rid himself of the burden of the flesh—is also the supreme lover, who, journeying on from the contemplation of earthly loveliness to the beatific vision of the unseen world, has become at last the lover of truth and of that which *is*, the lover of the eternal beauty. This is his Pilgrim's Progress—the rainbow ladder by which Plato's philosophy climbs between earth and heaven.

Such a way of thinking, which regards beauty (whether of material things or of virtue or of truth) as the crowning manifestation of the spirit of the universe, must inevitably include in its scope æsthetics; and, as a matter of fact, Plato is the earliest critic of the fine arts, the first to speak of "art for art's sake," the first to announce, that is to say, that the end of art is its own perfection. But, for all that, art is made no free citizen of that State which bends all things, even the passions of men and women, to the needs of its imperious ideal. The soul, it is true, must be fed on its proper food, it must not, during its exile from that home whence it came "trailing clouds of glory," live the life of the anchorite, or the fakir, or the Puritan iconoclast; for "right speech and rightness of harmony and form and rhythm minister to goodness of nature." It will pursue, therefore, the beautiful, not in luxurious wantonness, but with temperance; it will be subjected to a Dorian discipline, and will work out a Dorian music—in the larger sense of that word—an austere harmony of nature and faculties in which each individual plays his part in tune with every other member of the organism of the State. To this end, and for the maintenance of this monastic art and discipline, Plato is ready to banish from his commonwealth all artists who minister to vain delights; even the divine Homer does not fall in with his ascetic scheme and purpose, and must therefore go. He will have only the "dry beauty," as Bacon, after Heraclitus, preferred the "dry light."

We should have liked a word, from so competent an authority, on that strange criticism of the imitative arts, proposed in the tenth book of the 'Republic,' which sounds so whimsical, and yet is based on the theory of the Ideas; we should have liked, also, to dwell on our author's view of the Sophists, which, without superfluous praise or blame, simply accounts for them and assigns them their due place with reference to Plato and their age. But our outline of Mr. Pater's plan and treatment is necessarily incomplete, and we do some injustice to the rich and well-wrought fabric of his narrative in borrowing from it some purple patches. No treatise so compact as this gives one a view so rounded, so truly colored, so lifelike of the great personality of Plato. It has the effect of the stereoscope. To Mr. Pater, in an eminent degree, philosophy is a spirit to live with, not a piece of property to lay upon one's shelf; and his learning, which is the growth of leisurely acquisition pursued *con amore*, he uses as an instrument—as a spell to evoke the figures of the past and make them live to our duller eyesight and imagination.

## LELAND'S MEMOIRS.

*Memoirs.* By Charles Godfrey Leland (Hans Breitmann). D. Appleton & Co. 1893.

In the preface to the first instalment of his biography, Mr. Leland resents the imputation of having "expatriated" himself:

"During more than ten years' residence in Europe," he says, "I had one thing steadily in view all the time, at which I worked hard, which was to qualify myself to return to America and there introduce to the public schools of Philadelphia the industrial or minor arts as a branch of education, in which I eventually succeeded, devoting to the work there four years, applying myself so assiduously as to neglect both society and amusements, and not obtaining, nor seeking for, pay or profit thereby in any way, directly or indirectly."

If Americanism were to be acknowledged according to St. Paul's rule of following the man's professions, Leland would have vindicated his in saying: "I hope at some future day that I shall still further prove that, as regards my native country, I have only changed my sky, but not my heart, and labored for American interests as earnestly as ever."

Mr. Leland is known chiefly as a mystic, corrected by science. He is himself a "Sunday-child," having been born on the ninth Sunday after Trinity, 1824. His parents were Episcopalians; but he was brought up in Philadelphia, and his own youthful diction seems to have had a Quaker twang. He was fond of Scriptural words and phrases from his tenderest infancy. The following is an example:

"Now, I was a great reader of Scripture; in fact, I learned a great deal too much of it, believing now that for babes and sucklings about one-third of it had better be expurgated. The Apocrypha was a favorite work, but above all I loved the Revelations, a work which, I may say by the way, is still a treasure to be investigated as regards the marvellous mixture of neo-Platonic, later Egyptian (or Gnostic), and even Indian Buddhistic ideas therein. Well, I had learned from it a word which St. John applies (to my mind very vulgarly and much too frequently) to the Scarlet Lady of Babylon or Rome. What this word meant I did not know, but this I understood, that it was 'sass' of some kind, as negroes term it, and so one day I applied it experimentally to my nurse. Though the word was not correctly pronounced, for I had never heard it from anybody, its success was

immediate, but not agreeable. The passionate Irish woman flew into a great rage and declared that she would 'lave the house.' My mother, called in, investigated the circumstances, and found that I really had no idea whatever of the meaning of what I had said. Peace was restored, but Annie declared that only the divil or the fairies could have inspired such an infant to use such language" (p. 29).

Here is another example: "My mother said that I, having had a difficulty of some kind with certain street-boys, came into the house with my eyes filled with tears, and said : 'I told them that they were evil-minded, but they laughed me to scorn'" (p. 52).

Although always very dull in mathematics, in other departments the boy seems to have been rather bright, and studious quite to excess. For some years the family sat under Dr. Furness's pulpit; and when they returned to the Episcopal Church Charles obtained permission to continue at the Unitarian chapel; but later, while in college at Princeton, he was confirmed in the parental church of his own volition, and seems still to hold to that faith, somewhat abraded, one may suppose, by historical studies. His father, he tells us, looked very much like Thomas Carlyle, and had the same sort of disposition, only much more so. He himself went to school to two celebrated men, Bronson Alcott and Sears C. Walker. It would have done one's heart good to hear the kindly but Gargantuan laugh of the wit-loving astronomer over Charley's speeches.

At the age of fourteen the boy was a tremendous reader in English and French. At fifteen he fell in love with François Villon long before that charming Bohemian had been made fashionable. It must have been in 1838 that his father presented him with 'The Doctor,' which can only mean the first five volumes of the original edition. "This," he says, "I read and reread assiduously for many years, and was guided by it to a vast amount of odd reading." He had already dipped into Henry Cornelius Agrippa and Giambattista Porta—in translation of course—and before he entered Princeton in 1841 he was deeply versed in (Taylor's translations unquestionably of) Porphyry, Proclus, Jamblichus, Hermes Trismegistus, and other writers who we now know, and as the boy then believed, drew from Egyptian lore. Not only that, but the still less easily intelligible 'Sartor Resartus' was read by him in its original numbers, and gone "through forty times ere I left college, of which I 'kept count.'" He had also read "a translation of Kant's 'Critique of Pure Reason,' the first half of it many times." This was Hayward's translation; and it will be observed that he studied the constructive part of it with great determination, but was evidently less impressed with its destructions. Emerson's Essays appeared in the May before he entered college, and he had read them before he went to Princeton. He furthermore says that he had read Strauss's 'Life of Jesus.' If so, it must have been in some French translation; for George Eliot's English version did not appear till June, 1846. He had also dipped into Schelling (in French) and Spinoza's 'Tractatus Theologico-Politicus' (in English). He mentions many other books he had read at this time. All this is marvellous. He need not say that he did not fully comprehend these books, for the deepest historian of philosophy cannot boast of doing that; yet he certainly studied them sufficiently to avoid making any absurd slip about any of them now. We have lain in wait to catch him doing so; but though he shows a little heedlessness, he does not betray false pretensions. More extraordinary still, he enjoyed, and as he now assures us, he understood, Rabelais! If that be so, he must have been an uncanny boy. Many a lad who would be annoyed by the suggestion that he does not fully comprehend 'Don Quixote,' after he grows up is by no means confident that none of its wisdom escapes him. To like Rabelais implies a strong stomach for a boy. Reading always, everything, and with the speed of lightning, Leland passed the college years, and thoroughly unfitted himself for the business of life.

The summer he was graduated he went to Niagara. He says:

"It is usual, especially for those who have no gift of description, to say that Niagara is 'utterly indescribable,' and the Visitors' Book has this opinion repeated by the American Philistine on every page. But that is because those who say so have no proper comprehension of facts stated, no poetic faculty, and no imagination. Of course no mere description, however perfect, would give the same conception of even a pen or a button as would the *sight* thereof; but it is absurd and illogical to speak as if this were *peculiar* to a great thing alone. For my part, I believe that the mere description to a *poet*, or to one who has dwelt by wood and wold and steeped his soul in Nature, of a tremendous cataract a mile in breadth and two hundred feet high, cleft by a wooded island, and rushing onward below in awful rocky rapids with a mighty roar, would, could, or should convey a very good idea of the great sight."

In the same autumn Mr. Leland sailed in a packet for Marseilles, in company with his cousin Samuel Godfrey. From Marseilles he journeyed through Italy and passed the Carnival in Rome. Our eye catches this remark, which is sadly un-American:

"And here I may say, once for all, that one can hardly fail to have a mean opinion of human common-sense in government when we see this system of examining luggage still maintained. For all that any country could *possibly* lose by smuggling in trunks, etc., would be a hundredfold recompensed by the increased amount of travel and money imported, should it be done away with, as has been perfectly and fully proved in France; the announcement a year ago that examination would be null or formal having had at once the effect of greatly increasing travel" (p. 124).

Un-American, too, for the time, was what follows:

"I returned [from Europe] fully impressed with the belief that slavery was, as Charles Sumner said, 'the sum of all crimes' [an unlucky double slip this for John Wesley and 'the sum of all villanies']. In which summation he showed himself indeed a 'Sumner,' as it was called of yore. Which cost me many a bitter hour and much sorrow, for there was hardly a soul whom I knew, except my mother, to whom an abolitionist was not simply the same thing as a disgraceful, discreditable malefactor. . . . It was so peculiar for any man, not a Unitarian or Quaker, to be an *Abolitionist* in Philadelphia from 1848 to 1861, that such exceptions were pointed out as if they had been Chinese—'and d—d bad Chinese at that,' as a friend added to whom I made the remark" (p. 136).

Leland entered himself as a law-student in Heidelberg. Later, he studied philosophy in Munich, though already imbued with the spirit of physical science. In November, 1847, he arrived in Paris, where he entered the secret society which made the revolution of the following February. In January, he wrote home to his brother that there was to be a revolution on February 24, the very day on which it actually occurred. From Paris he went to London, and in the autumn came home, making the passage from Portsmouth to New York in thirty-five days. He now entered a law office; but, his father's resources becoming more limited, he began writing for publication in 1849.

"So time rolled on for three years. I passed my examination and took an office in Third Street, with a sign proclaiming that I was attorney-at-law and *Avokat*. During six months I had two clients and made exactly three pounds. [But he probably dealt with dollars in those days.] Then, the house being wanted, I left and gave up law. This was a very disheartening time for me. I had a great many friends who could easily have put collecting and other business in my hands, but none of them did it I felt this very keenly."

He next became editor of the *Illustrated American News*, owned by P. T. Barnum, whom he found remarkably free from guile. The circulation sometimes reached 150,000, yet Leland wrote the whole thing. The salary was so infinitesimal that he ultimately gave up, and became writing editor of the Philadelphia *Evening Bulletin*.

"All my long-suppressed ardent Abolition spirit now found vent, and for a time I was allowed to write as I pleased. A Richmond editor paid me the compliment of saying that the articles in the *Bulletin* were the bitterest published in the North."

But he was soon checked by the proprietor and left the newspaper. He now became editor of *Graham's Magazine*, raised the circulation from 0 to 17,000, and received a salary of $50 a month. It was at this time that the Hans Breitmann ballads began to appear. Mr. Leland does not state precisely at what date he became editor of *Vanity Fair*, which had been running for some time; on the breaking out of the war this comic journal expired. Leland presently became editor of the *Knickerbocker Magazine*, and later of the *Continental Magazine*—an organ, he says, of the Cabinet. This was published in Boston, so that he went to live there in December, 1861. He was private in a volunteer company raised at the time of Lee's invasion of Pennsylvania; but they were not quite in the battle of Gettysburg. In 1866 he became managing editor of Forney's *Press*, and fought Andrew Johnson with all his might. After Grant was elected, Forney, who conceived that the result had been in great measure due to him, no doubt expected a place in the Cabinet; but he was not the only person who was at that time disagreeably surprised. Leland, most likely, expected a place abroad, though he does not quite confess it. At any rate, there is no doubt that he was now suffering from nervous exhaustion. His father's affairs had been prospering, and he found himself in a position to take a rest. As soon as he stopped work his system gave way, and for some years he was a downright invalid. At that point the volume before us breaks off.

## NEWTON'S DICTIONARY OF BIRDS.

*A Dictionary of Birds.* By Alfred Newton, assisted by Hans Gadow, with contributions from Richard Lydekker, B.A., F.G.S., Charles S. Roy, M.A., F.R.S., and Robert W. Shufeldt, M.D. London: Adam & Charles Black; New York: Macmillan. 8vo, Parts I. (A-Ga) and II. (Ga-Moa). 1893.

It is safe to say that this work, which, when completed, will form an octavo volume of about 1,000 pages, profusely illustrated, will prove the most useful single volume ever published on ornithology. It is made up largely of articles contributed by Prof. Newton to the ninth edition of the 'Encyclopædia Britannica,' but many of them have been recast, and all brought down to date. With these have been incorporated a large number written

expressly for the present work, including apparently all of the anatomical matter. This has been mainly prepared by Dr. Gadow, for which part of the work Prof. Newton could hardly have selected a more competent and trustworthy collaborator. The principal author, in defining the scope of the work, warns the reader that he "will not find [in the 'Dictionary'] a complete treatise on ornithology, any more than an attempt to include in it all the names under which birds, even the commonest, are known." Taking, as already stated, the ornithological articles contributed to the last edition of the 'Encyclopædia Britannica' as a foundation, the author has "tried, first, to modify them into something like continuity, so far as an alphabetical arrangement will admit, and, next, to supplement them by the intercalation of a greater number, be they short or long, to serve the same end." In the difficult task of choosing subjects for additional articles, one of the main purposes has been to supply information known to the author (from inquiries often made of him) to be greatly needed. In order to keep the size of the volume within reasonable bounds, a large number of bird-names compounded, mostly of late years, by writers on ornithology, have been omitted, "since their meaning, if they have one that is definite, is at once made evident." For the same reason many local names, even those of British birds, have been excluded.

The volume is not, however, as its name might seem to imply, merely a dictionary of bird names; it covers the whole field of ornithology, including, in addition to the bird names, the anatomy of birds, their classification, their geographical distribution, their geological history, and much matter that is purely biographical. As regards method of treatment, birds are introduced, with few exceptions, only under their English names, either as species or as groups; the names are treated historically as to how and when first used, and their etymology and the cognate words in other languages are given. The birds themselves are defined as regards their relationships, structure, and distinctive traits; the space devoted to the different species or groups varying in extent, according to the requirements of the case, from a few lines to many pages. The technical names of the higher groups employed by different systematists, from Linnæus down, are also defined and explained. Such general subjects as extermination, migration, geographical distribution, mimicry, eggs, feathers, color, embryology, etc., are treated at some length, a careful summary being given of our present knowledge of each.

The topics thus far enumerated are, with few exceptions, treated by Prof. Newton. Mr. Lydekker, however, contributes the article on fossil birds, and Prof. Joy that on flight, while, as already said, nearly all of the anatomical matter is by Dr. Gadow, inclusive of the articles on color, feathers, and embryology. The principal parts of the skeleton and of the external anatomy, as well as the various organs of the body, are made the subjects of separate articles, and a large number of the anatomical terms employed in ornithology are separately defined. The task could not have fallen into better hands. Prof. Newton is not only everywhere recognized as one of the leading ornithologists of the world, but is especially fitted for the philological part of the work by his classical training and his antiquarian predilections, while his natural conservatism renders him a more than usually safe guide as regards the taxonomic and theoretical phases of the subject. Respecting a few principles of nomenclature and many questions of classification there is so much room for differences of opinion, and so much actual disagreement of doctors, that we can readily grant some liberty in such matters. Where mere questions of fact are at issue, the conclusions of our author can generally be taken as final. But doubtless many ornithologists will differ with him in respect to his exclusion from, or doubtful admission to, the British fauna of many species recorded as having occurred in the United Kingdom a greater or less number of times as waifs and strays from distant lands, which Prof. Newton regards as having reached the British Islands only as "assisted" wanderers. He also gives it as his opinion that the last specimen of the Labrador duck seen alive was the one "killed by Col. Wedderburn in Halifax Harbor in the autumn of 1852," and that alleged later records of capture are open to question. That this is an error, however, can easily be shown by the testimony of a number of eminent American authorities who, on repeated occasions, received the bird in the flesh many years subsequent to this date.

References are given *passim*, in the text or in footnotes, to most of the leading authorities on the various subjects treated, so that the reader is constantly referred to sources of original and fuller information. It is noticeable, however, that some of the latest authorities are omitted, which may perhaps be accounted for in part, at least, by the announcement made on the back of the title-page of part i., which states that the sheets of that part "were passed for the press at various times from 1889 onwards."

Many of the principal articles are well worthy of special notice, but we have space to call attention only to that on Geographical Distribution (pp. 311–363, with a map showing the principal zoögeographical regions). Of particular interest is the fact that Prof. Newton has here abandoned as primary divisions the "Palæarctic" and "Nearctic" regions of Sclater and Wallace, which he combines to form his "Holarctic" region, thus conceding the similarity of the life of the temperate and arctic regions of the whole northern hemisphere, so long maintained by various American writers. He also recognizes New Zealand and neighboring islands as one of his six primary regions, and thus brings the ancient or more primitive character of the life of this portion of the globe more prominently into notice than any preceding writer appears to have done. The article on migration (pp. 547–572) is generally excellent, but the author fails to take note of certain recent generally well-received views on the cause and origin of migration, and explanations of the way migrating birds find their route during their long journeys.

The abundance and excellent character of the illustrations form a prominent and important feature of the work. Full-length figures are given of one or more species of all the leading groups, and a large number of others illustrative of the internal and external structure. The latter are mainly accredited copies of Swainson's admirable figures, almost unequalled for accuracy and artistic finish, from his well-known 'Classification of Birds,' published in 1836-37.

We are, of course, judging the 'Dictionary' by its first two parts (pp. 1-576), but there is no reason to suppose that the second half will prove inferior to the first. Hence, we can commend the work as containing the greatest amount of thoroughly trustworthy ornithological information hitherto embraced between the covers of a single volume. It is thus truly a *vade-mecum* for the general reader or the bird-lover, whether simply an amateur or a professional ornithologist; for the former it will prove entertaining and instructive, while it will serve the latter as a handy reference volume on a thousand and one abstruse points, whether philological or ornithological. Prof. Newton's style, if at times a little involved, is singularly attractive and pleasing, while Dr. Gadow's is concise, direct, and clear. An index, at least to the technical names, will prove so essential to the convenient use of the volume that we can hardly suppose that such an important feature will be omitted.

## HENRY JAMES.

*Essays in London and Elsewhere.—The Wheel of Time, and Other Stories.—The Private Life, and Other Stories.* Harper & Bros.

IN the essay on Gustave Flaubert included in Mr. James's volume, 'Essays in London and Elsewhere,' when referring to the few people who understand what Flaubert tried for, the author says, "it is only when a reader is also a writer and a tolerably tormented one that he particularly cares." This is an example of the personal note occasionally struck in the volume, and echoes like a response to the sound of many voices clamoring criticism of Mr. James. No writer of fiction has suffered more from the people who won't or can't understand what he is trying for, while none has more consistently directed his energy towards one issue—the perfection of form and expression. Public obtuseness is probably more real than affected, for there is nothing of which the average Anglo-Saxon has less intuitive appreciation than of literary form apart from subject, except, it may be, of the resources of his own language. One may deplore such defective perception, but can hardly regard it as a valid excuse for angry rejection of every effort at education.

When he publishes a volume of essays, Mr. James gets the better of his more vociferous censors. The subjects are labelled, and, at least, the general drift is obvious. His knowledge and his sympathetic comprehension of his chosen subjects' meaning may be realized by every one, but there still remains enough sensitive penetration to puzzle a resentful multitude. The only essay which can hope for unqualified approval both from the public and from the literary class is that on James Russell Lowell. Mr. Lowell's mind, says Mr. James, had "little affinity with superfine estimates and shades and tints of opinion," and in writing of him Mr. James shakes off his own preoccupation with shades and tints, and takes on much of his subject's freedom, fulness, and warmth. He makes no attempt to classify Mr. Lowell either as author or diplomatist, but he draws a beautiful living portrait of the man at the moment when he stepped from the library into the great world, and he follows with loving yet clear-sighted enthusiasm the development of a career which he characterizes as, in the last analysis, a tribute to the dominion of style. This combination of affectionate sympathy with clearness of vision makes Mr. James's best qualification for criticism. Those with whom he cannot, for one reason or another, sympathize he kindly neglects, and on the other hand his judgment is never impaired by the glow of personal congeniality. He recognizes that his function is to enlighten, and he chooses to do that by emphasizing merits rather than defects.

Cordial approval is his prevailing mood, except when judging 'The Journal of the Brothers de Goncourt,' a performance which invites much harsher terms than Mr. James employs. Though his greatest admiration is reserved for the writers' writers, in his estimate of Mrs. Humphry Ward he is wholly with the public—a rather surprising testimony to catholicity of taste. It is useless to dispute the charm of a book so phenomenally successful as 'Robert Elsmere,' but that charm, for the English public, probably owes more than Mr. James perceives to the purely didactic element. In his remarks on Henrik Ibsen he gives full value to the power of a moral question to agitate the British breast. The few pages devoted to Ibsen are more acute and comprehensive than all the screeds of his English adorers and antagonists put together. One gets away from the endless irrelevant chatter about his morality or immorality, and is permitted calmly to consider him as a dramatist, a man with an almost infallible sense of dramatic effect, quite unscrupulous in the choice of subjects through which the effect is to be wrought. He is not set forth as a Shakspere or a Dante dealing with eternal verities applicable to every era and phase of human life. He is a dramatist of extraordinary intellect and more extraordinary imagination, but with national, local, and even parochial limitations. His magic lies in the wonderful vivification of an assemblage mostly commonplace and vulgar, or abnormally vicious. Mr. James emphasizes Ibsen's lack of humor, and there is a moment when we fear that by temporary infection his own admirable sense of the humorous has been impaired. It is when he supposes Ibsen, in 'Hedda Gabler,' to be "playing with an idea from the simple instinct of sport," and qualifies the play as an "ironical pleasantry." This may be an ingenious explanation of the dreadful Hedda, but it seems to represent the author as too monstrous in his play.

It is perhaps not fair to pass directly from Mr. James's critical work to his fiction. The judgment of practice by principle is too immediate, and the operation may have the air of a cold-blooded attempt to hang a man with a rope of his own spinning. Yet, when two volumes of fiction lie beside the essays, the temptation to consider them in order is irresistible. In the essays the vexed question of subject and form in literature receives much incidental attention. Mr. James naturally leans to the opinion that good form may save a poor subject and that bad form must lose a good subject. He is not quite convinced that the idea is good enough if the expression is, but he thinks the idea is the author's affair and not the critic's. Strict adherence to this principle would almost reduce criticism to comment on technicalities, and would compel it to desist from any estimate of the author's value in literature, literature being considered as a commodity or luxury, with the æsthetic gratification and spiritual elevation of mankind for *raison d'être*. The perfection of the word cannot kill, but, enshrining no perceptible idea, it is an empty and vain thing.

With a clear notion of what Mr. James is trying for, and with thankful recognition of the effort, we get from his two latest volumes of fiction the impression of form without substance, of fine-spun elusive phantoms with no claim on emotional regard, and rather irritating to the intelligence. One has no objection to the fine quality of the garment clothing figures mostly artificial or trivial, but a resentful sense of waste. There are times, too, when the garment fails to please or satisfy, when the phrase is so subtle or so elliptical that lucidity is missed. Such failure is especially noticeable in the conversations, where the reader has often to rely on the descriptive sentence, "he said with a laugh," or "she answered gravely," for a cue to the mental attitude of the characters and an adjustment of his own. Close attachment to refinement of expression is also detracting from Mr. James's creative force. Finish of phrase is not, for instance, characteristic of the British matron, no matter how exalted her station. This somewhat heavy, worldly, and inane personage makes a frequent appearance in these stories, but we cannot think that she ever appeared elsewhere with such polished and vivacious sentences at her tongue's end. It may please Mr. James to toy with this ponderous figure, but the reality recedes from view in proportion to the elaboration of his presentment.

Failure to give the sense of life is of course the irretrievable fault in fiction. We do not mean to burden Mr. James with the imputation of a positive failure in the essential of his art, but only to indicate a possible result from an obvious cause. By the perfection of his rendering of an episode, a situation, a state of the mind or soul, he has achieved unique distinction in English letters; but, to take a place in what he calls the great tradition, his exquisite method must be applied to subjects that are well in the range of common experience, and that appeal with some passion to intelligence and emotion.

---

*Italian Lyrists of To-day:* Translations from Contemporary Italian Poetry, with Biographical Notices. By G. A. Greene. London: Elkin Mathews & John Lane; New York: Macmillan. 1893.

THIS is a pleasing book and contains some graceful verses. The purpose of the maker is indicated in these words of the introduction: "The translations included in this volume have been accumulating for some years, and are from writers all of them living at the time, the intention of the translator being that of giving some slight idea of the present condition and the present aspects and methods of Italian lyrical verse. In almost every case the attempt has been made exactly to reproduce the metre of the original poem." In pursuance of this plan Mr. Greene has given specimens of the work of thirty-four poets, prefacing the selections from each by a slight account of the poet himself. He has also composed a very readable introduction, in which he makes some more general observations upon the methods and purposes of the latest school of Italian verse-writers. His translations are all tolerable, a few of them even interesting. Perhaps as good an example of his powers as any is the following version of Carducci's *Io non lo dissi a voi, vigili stelle* ('Rime Nuove,' xxxv.):

PANTHEISM.

I told it not, O vigilant stars, to you;
To thee, all-seeing sun, I made no moan;
Her name, the flower of all things fair and true,
Was echoed in my silent heart alone.

Yet now my secret star tells unto star,
Through the brown night, to some vague sphery tune;
The great sun smiles at it, when, sinking far,
He whispers love to the white and rising moon.

On shadowy hills, on shores where life is gay,
Each bush repeats it to each flower that blows;
The flitting birds sing "Poet grim and gray,
At last Love's honeyed dreams thy spirit knows."

I told it not, yet heaven and earth repeat
The name beloved in sounds divine that swell,
And mid the acacia blossom's perfume sweet,
Murmurs the Spirit of All—"She loves thee well!"

There is poetizing here, that first and last pitfall of the translator; but there is also a certain pleasant fall of the phrase, and a certain harmony in the imaginative coloring not too remote from that of the original. If all the versions were as good as this, the reader would find his task an attractive one. As it is, however, he will probably feel that his chief gain comes from learning the names and styles of the verse-makers of modern Italy.

Still, after all, it will be only a meagre and superficial orientation that the reader will get, for Mr. Greene (perhaps properly, seeing the nature of his public) has felt it necessary to exclude from his selection almost all the pieces of these poets that have independent poetical value. It is generally true of these writers of genuine, but inferior, inspiration that their best achievement is to be found in the portion of their work that is most shocking to the world at large. This arises from the fact that their imaginative reaction proceeds not from life as a whole, or from universal experience and knowledge, but from the observation of the inconsistencies and incongruities—the unreality, in short—of conventional society as they see it immediately about them. They are their best selves, therefore, when they are in revolt. Then their matter is real, or, what is the same thing from the artist's point of view, seems to them real. They handle it with conviction, and are able to give it that ultimate quality which alone makes poetry worth while. To be sure, they are often very ignorant as to what they are actually accomplishing. Nothing is on the whole more dreary than reading the abundant prologues and prefaces they are fond of sending into the world with their poems—nothing, unless it be reading the attacks upon them by indignant conservatives and moralists, and the replies to these attacks by their enthusiastic friends.

They tell us in these prologues that they are occupied with art for art's sake, with the world as it is rather than as it ought to be, with liberty in its struggle against outworn beliefs, with nature in contrast to convention, and so on. All this, however, is mere jargon. What they have really done is to come upon that elementary truth long since enunciated by Tertullian when, in a particularly obscurantist moment, he exclaimed: "Tot sunt artium venæ quot hominum concupiscentiæ." Surprised and delighted with this discovery, and sure that they have thereby attained reality, they proceed to apply the principle as though their own crude and undisciplined *concupiscentiæ* represented the complete round of human passions and desires. Of course, they do nothing of the sort, being of a very limited and inferior kind. Still, all reality has its value; and if one can stand somewhat arrogant crudity, one may learn much from the best of the Veristi, the Décadents and Symbolistes, the writers of La Jeune Belge, and the similar groups to be found in most of the countries of Europe at the present time.

---

*Observations on Some Points Connected with Hospital Construction.* By Sir Douglas Galton. Oxford: Clarendon Press; New York: Macmillan. 8vo, pp. xi–287. 1893.

MORE than thirty years ago, Douglas Galton, then a captain in the Royal Engineers, was appointed a member of the Barrack and Hospital Improvement Committee, organized on the recommendation of the Royal Commission of 1857, and in 1865 he published a description of the Herbert Hospital at Woolwich, which had been constructed as a sort of model, in accordance with the views of this committee. Since that time he has published several works

relating to the sanitation and proper construction of habitations and hospitals, and now brings out the work noted above as the result of long experience and careful deliberation upon the subject. He says in his preface that his object is "to place on record those principles which ought invariably to be followed in every good hospital"—which is delightfully dogmatic, and inspires the reader with a cheerful confidence that all vexed questions on this subject are now finally settled. He concludes by saying that

"the principles enumerated in this book are not new: they are well known, but they lie somewhat scattered through various publications, and . . . it is hoped that by bringing together this information the erection of large, palatial hospitals in towns or other localities which are not suited to them will be discountenanced, and that the hospital architect . . . will be content to provide simple structures abundantly supplied with light and air, in which the interests of the patients and their recovery will be not alone the first, but the only consideration."

It is not probable that this idea will be realized, and it is well that this is the case, for in a large and properly constructed and managed hospital there are several things which should be considered besides the immediate interests of the patients in it. Such a hospital should increase and diffuse knowledge; it should be agreeable to the eye, and, if it is the gift of single donor or of a private corporation, it should do honor to the giver.

Quite a number of the maxims given will not apply to this country, owing to climatic differences. The direction that water-closets should always be placed against the outer wall is wrong; they should almost always be placed against an inner wall, directly opposite a window. Sir Douglas Galton says that the velocity of the air may be measured by puffs of the vapor of turpentine—which is quite new. The "Lower General Hospital of Philadelphia," with 50 huts, affording accommodation for 500 patients, is probably the "Mower General Hospital," which contained 3,000 patients. The bibliography of the subject furnished at the beginning does not give date, place of publication, or full title, and is almost absolutely useless for reference. Upon the whole, the book is a good and useful compilation, but it will not be accepted by hospital experts as the final authority upon the subject. The fact is, that each new hospital is in some respects a new problem, that recent advances in bacteriology and in therapeutical methods require new arrangements, and that the more experience one has had in the practical working of modern hospitals, the less likely he is to plan a new one which will be merely a copy of any now in existence.

# JUST PUBLISHED.

*A CHARMING VOLUME.*

# LOVE IN LETTERS.

BY

HENRI PÈNE DU BOIS,

The author of "Witty, Wise, and Wicked Maxims."

Mr. Henry Pène du Bois, who loves the byways of literature, and has explored their nooks and charming windings, has gathered from many climes and many ages the love-letters of great men and of the women who made life more attractive to them than did fame and the acclamations of the multitude.

Beginning with Heloïse, and quoting the letter that will remain famous as long as women will continue to sacrifice themselves and men to be selfish, Mr. du Bois gives letters written by Napoleon, Franklin, Lord Byron, Nelson, Lincoln, Mirabeau, and many others of the great ones of this earth, and beside them the answers of the women to whom they were addressed—Josephine, Sophie Monnier, the Countess Guiccioli, Lady Hamilton—of all the remarkable women that held in subjection the great minds and hearts of history, arts, and letters.

The dainty volume is illustrated with portraits of Abélard and Heloïse, the Countess Guiccioli, Lady Hamilton, the Empress Joséphine, Abigail Adams, and Sophie Monnier, etched from rare originals by Mr. Frank M. Gregory.

1 vol., square 16mo, cloth, gilt tops, illustrated, $1.50.

# *Two Books for Girls.*

BY MRS. FAIRSTAR.

## The Memoirs of a London Doll:

Related by Herself.

## The Doll and Her Friends:

An Autobiography.

*Illustrated with ten etchings by Frank M. Gregory.*

Two charming volumes by Mrs. Fairstar that appeared in London over fifty years ago, and for two generations thereafter reigned supreme in England and America as standard "Juve niles." They were the delight of those who had charge of the literature permitted to come to the eyes of our fathers and grandfathers, for the tales appeal to and afford amusement for both preceptor and pupil.

Each 1 vol., 16mo, bound in French sateen, white cloth and gold stamping, $1.25.

The volumes can be had together in a pretty box. The set, $2.50.

*The above will be sent, postage paid, on receipt of the price by the publishers,*

Subscribe through dealers or remit to The Century Co., 33 East 17th Street, New York.

**The Christmas Number is for Sale Everywhere. 35 Cents.**

*Back Numbers of "The Nation."*

In response to frequent inquiries from subscribers:

*An incomplete set* of The Nation has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

*Complete sets*, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

*Single numbers* not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street, New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in The Nation.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LVII. comprising the last half-year of 1893.]

MEISTERSCHAFT SUPERSEDED

*BY ITS OWN AUTHOR,*

**DR. RICHARD S. ROSENTHAL.**

Dr. Rosenthal's name has become a household word wherever foreign languages are studied. A new work,

**The Rosenthal Method of Practical Linguistry**

has just been issued by him, which does not only supersede his former system, published 20 years ago, but will be found superior to any method. It is the mature outcome of 25 years' experience of "the greatest linguist and foremost teacher of the age," enabling any one to learn to

*Speak Fluently and Correctly*

with scarcely an effort and without a teacher.

GERMAN, FRENCH, or SPANISH,

within a marvellously short time.

"Next to living in a foreign country, this is undoubtedly the best of all methods for learning modern languages."—*The Dial.*

Exact pronunciation given. All subscribers become actual pupils of Dr. Rosenthal, who answers all questions and corrects all exercises free of charge. Terms of membership $5.00 for each language. Part I., each language, 50 cents.

*JUST FROM THE PRESS.*

BIOGRAPHY OF THE ENGLISH LANGUAGE. By ARTHUR MACARTHUR, LL.D., author of Education in its Relation to Manual Industry, Essays, Addresses, etc. 12mo, cloth, 417 pp., $1.50.

The subject of this work is the English Language, and the object is to furnish an account of its rise and progress from the earliest periods of its history. This naturally reaches back to the primeval races from whom the English people sprang, and relates to the manner in which their varied dialects finally merged into our present form of speech.

Comparative Philology is the science of scholars, but a knowledge of our own language can easily be acquired by those who speak it.

The intention is, therefore, to give a plain and popular history of our mother tongue alone, and to set it off with critical remarks and slight biographical sketches of ancient and modern authors who have used it in composing their works. The ordinary reader may thus learn the English history of the English Language without being called upon to understand either Greek or Latin, or even any of the modern tongues. The book is made more complete by an examination into the present position of English among the languages of the world.

A table of contents is printed and a general index is added. W. H. LOWDERMILK & CO., Publishers, 1424-1426 F Street, Washington D. C.

## People Who Weigh and Compare

Know and get the best. Cottolene, the new vegetable shortening, has won a wide and wonderful popularity. At its introduction it was submitted to expert chemists, prominent physicians and famous cooks. All of these pronounced

# Cottolene

a natural, healthful and acceptable food-product, better than lard for every cooking purpose.

The success of Cottolene is now a matter of history. Will you share in the better food and better health for which it stands, by using it in your home?

Avoid imitations—countless—worthless. Stick to **COTTOLENE.**

## In the Track of the Sun.

Readings from the Diary of a Globe Trotter. By FREDERICK DIODATI THOMPSON. Profusely illustrated with Engravings from Photographs and from Drawings by Harry Fenn. Large 8vo. Cloth, gilt top, $6.00.

"In very gorgeous holiday attire comes this large octavo volume, with its sumptuous full-page illustrations and its profusion of head and tail pieces. . . . The author's style is pleasant and easy, occasionally almost conversational, and it is impossible to follow him through the intricacies of his tour without acquiring a deal of information by the way."—*Philadelphia Bulletin.*

"One of the handsomest of this year's Christmas books. . . . . The author has practically abandoned the grand tour in favor of regions less known. There is not much of Europe in the volume, but a great deal about China, Japan, and the East. In this good judgment is shown. . . . A truly elegant piece of bookmaking."—*Philadelphia Telegraph*

## Poems of Nature.

By WILLIAM CULLEN BRYANT. Profusely illustrated by Paul de Longpré. 8vo. Cloth, gilt, $4.00.

"A very rich volume embellished with exquisite designs. . . . The publishers have been at great pains to make this volume what it is—one of the handsomest of the year."—*Philadelphia Press.*

"The poems included in the collection are some of the choicest of Bryant's inspirations, the illustrations are lovely and sympathetic, and the entire make-up of the volume is eminently artistic."—*Philadelphia Telegraph.*

"There has probably been no more beautiful, and certainly no more fitting, presentation of Bryant's selected work than is offered in this volume. . . . Each poem is accompanied by special designs arranged with picturesque irregularity, and the volume is admirably printed. An excellent effect is secured by the use of a little lighter ink for the text."—*The Outlook.*

## The Country School in New England.

By CLIFTON JOHNSON. With 60 Illustrations from Photographs and Drawings made by the Author. Square 8vo. Cloth, gilt edges, $2.50.

"Mr Johnson's descriptions are vivid and lifelike, and are full of humor, and the illustrations, mostly after photographs, give a solid effect of realism to the whole work, and are superbly reproduced. . . . The definitions at the close of this volume are very, very funny, and yet they are not stupid; they are usually the result of deficient logic."—*Boston Beacon.*

"A superbly prepared volume, which, by its reading-matter and its beautiful illustrations, so natural and finished, pleasantly and profitably recalls memories and associations connected with the very foundations of our national greatness."—*N. Y. Observer.*

## The Story of Washington.

By ELIZABETH EGGLESTON SEELYE. Edited by Dr. Edward Eggleston. With over 100 Illustrations by Allegra Eggleston. A new volume in the "Delights of History" Series. 12mo. Cloth, $1.75.

"One of the best accounts of the incidents of Washington's life for young people, and the illustrations are original and good."—*N. Y. Observer.*

"The Washington described is not that of the demi-god or hero of the first half of this century, but the man Washington, with his defects as well as his virtues, his unattractive traits as well as his pleasing ones. . . . There is greater freedom from errors than in more pretentious lives"—*Chicago Tribune.*

## Picciola.

By X. B. SAINTINE. With 130 Illustrations by J. F. Gueldry. 8vo. Cloth, gilt, $1.50.

"'Picciola' is an exquisite thing and deserves such a setting as is here given it."—*Hartford Courant.*

"Saintine's 'Picciola,' the pathetic tale of the prisoner who raised a flower between the cracks of the flagging of his dungeon, has passed definitely into the list of classic books . . . . It has never been more beautifully housed than in this edition with its fine typography, binding, and sympathetic illustrations."—*Philadelphia Telegraph.*

## The Romance of an Empress.

*Catharine II. of Russia.* By K. WALISZEWSKI. With Portrait. 12mo. Cloth, $2.00.

There has been no more extraordinary figure in Russian history than this gifted, tempestuous, and dissolute empress, "The Semiramis of the North." M. Waliszewski's book is based upon unpublished documents in the state archives and upon the memoirs and correspondence of his subject. His story makes a most extraordinary historical romance.

## The Brontës in Ireland.

By Dr. WILLIAM WRIGHT. With Portraits and numerous Illustrations. 12mo. Cloth, $2.50

"A new and thrilling chapter in the history of the Brontë sisters."—*Boston Advertiser.*

"One of the most curious pages which have lately been added to literary history."—*Boston Traveller.*

## A Friend of the Queen.

By PAUL GAULOT. With 2 Portraits. 12mo. Cloth, $2.00.

This is the true and intimate life history of the Swedish soldier, Count Axel Fersen, whose romantic friendship with the ill-fated Marie Antoinette led him gladly to peril his life again and again in vain attempts at rescue. The hero's career is one to which history offers few counterparts.

## The Gilded Man

**(El Dorado),**

And other Pictures of the Spanish Occupancy of America. By A. F. BANDELIER. 12mo. Cloth, $1.50.

"As Mr. Bandelier is an acknowledged authority on the subjects discussed in this volume, historical students will see that it is well worth a careful perusal. Nor does it appeal to them alone; every lover of tales of adventure will find entertainment in its pages."—*Chicago Journal.*

"A volume which cannot fail to possess unusual attractions for those interested in the romantic story of the Spanish conquest and occupation of North and South America."—*San Francisco Chronicle.*

## Memoirs.

By CHARLES GODFREY LELAND (Hans Breitmann). With Portrait. 12mo. Cloth, $2.00.

"From first to last a very entertaining book, full of good stories, strange adventures, curious experiences, and not inconsiderable achievements, instinct with the strong personality of the writer."—*London Times.*

"A book that no one who wants to be entertained as he has not been entertained in many a long day can afford to let go unread."—*New York Herald.*

## Great Commanders Series.

Brief biographies of the highest order of excellence, of distinguished American military and naval men, from Washington to Sheridan. Edited by Gen. JAMES GRANT WILSON.

The volumes of this series thus far issued, all of which have received the highest commendation from authoritative journals, are:

GENERAL TAYLOR. By General O. O. HOWARD, U. S. A.

GENERAL JACKSON. By JAMES PARTON.

GENERAL GREENE. By Captain FRANCIS V. GREENE, U. S. A.

GENERAL J. E. JOHNSTON. By ROBERT M. HUGHES, of Virginia.

GENERAL THOMAS. By HENRY COPPÉE, LL D.

Each 12mo, cloth, gilt top, $1.50.

*A Valuable Gift for a Medical Student or Practitioner.*

## Foster's Illustrated Medical Dictionary.

Being a Dictionary of the Technical Terms used by writers on Medicine and the Collateral Sciences in the Latin, English, French, and German Languages. By FRANK P. FOSTER, M.D., Editor of the New York Medical Journal; Librarian of the New York Hospital. With the collaboration of several specialists. Profusely Illustrated. Imperial octavo, four volumes. Cloth, $36.00; sheep, $40.00; half morocco, $44.00. (Sold by subscription.)

"In fullness and accuracy it is admirable. It is impossible to overestimate the value of this Dictionary to any one desiring the most accurate and full information on the branches of science coming within the wide range of this truly great work."—WILLIAM PEPPER, M.D., LL.D., Professor of the Theory and Practice of Medicine, University of Pennsylvania.

"It is not too much to say that Foster's Medical Dictionary will be more useful to the profession than all the dictionaries combined."—AUSTIN FLINT, M D., Professor of Physiology, Bellevue Hospital Medical College.

## New Juvenile Books.

ON THE OLD FRONTIER. By WILLIAM O. STODDARD, author of "Little Smoke," "The Battle of New York," etc. With 10 full-page Illustrations. 12mo. Cloth, $1.50.

In the series of American Statesmen. By JOHN T. MORSE, jr. With a portrait and map. 2 vols. 16mo, $2.50. Also in Library style, $2.50; half morocco, $5.00.

The Harvard Graduates' Magazine says: "As a Life of Lincoln, it has no competitors; as a political history of the Union side during the Civil War, it is the most comprehensive, and, in proportion to its range, the most compact."

### *The Life and Writings of Jared Sparks.*

Comprising selections from his Journals and Correspondence. By HERBERT B. ADAMS, professor in Johns Hopkins University. With six Heliotype Portraits. 2 vols. 8vo, $5.00. (Edition limited to 500 copies, printed from type.)

### *College Tom.*

By CAROLINE HAZARD, author of "Memoirs of the Rev. J. Lewis Diman," etc. 8vo, $2.00.

"College Tom" was Thomas Hazard, the great-great grandfather of the writer; and from his account-book and the records of the South Kingstown Monthly Meetings Miss Hazard has prepared a book of much interest and historic value.

### *Sam Houston and the War of Independence in Texas.*

A work of great interest as biography and history. By ALFRED M. WILLIAMS, author of "The Poets and Poetry of Ireland." With a Portrait and Map. 8vo, $2.00.

### *The Dawn of Italian Independence.*

Italy from the Congress of Vienna, 1814, to the Fall of Venice, 1849. By WILLIAM R. THAYER. With Maps. 2 vols. Crown 8vo, gilt top, $4.00.

"It is a history full of interest, well and faithfully told."—*New York Tribune.*

### *Mr. Fish and the Alabama Claims.*

A Chapter in Diplomatic History. By J. C. BANCROFT DAVIS. 8vo, 75 cents.

Mr. Davis has had long and intimate connection with the State Department, and his discussion of this subject is very full and based on thorough acquaintance with it in all its political and personal relations.

### *Massachusetts: Its Historians and its History.*

By CHARLES FRANCIS ADAMS, author of "Life of Richard Henry Dana," "Three Episodes of Massachusetts History," etc. Crown 8vo, $1.00.

"No student of Massachusetts history can afford to be without Mr. Adams's most valuable monograph."—*Boston Advertiser.*

## Fiction.

### *Two Bites at a Cherry, with Other Tales.*

A book of exquisite short stories, written in the most delightful style. By THOMAS BAILEY ALDRICH. 16mo, $1.25.

### *Polly Oliver's Problem.*

A story of special interest to girls, but delightful to everybody, by Mrs. WIGGIN, author of "The Birds' Christmas Carol," "A Cathedral Courtship," etc. Illustrated, $1.00.

### *A Native of Winby, and Other Tales.*

By SARAH ORNE JEWETT. 16mo, $1.25.

Seven delightful stories of New England, in which Miss Jewett is unsurpassed, and two Irish-American stories equally good.

### *The Petrie Estate.*

By HELEN DAWES BROWN, author of "Two College Girls," etc. $1.25.

"We have read every line of this story, and so pure is its tone, so sweet, yet withal so very natural are its characters, that one cannot but wish there were more like it."—*Baltimore American.*

### *Rachel Stanwood.*

By LUCY GIBBONS MORSE, author of "The Chezzles." $1.25.

"A pretty romance runs side by side with anti-slavery fairs, the Hutchinson concerts, Wendell Phillips's eloquent speeches, and the strong, quiet influence of Lydia Maria Child."—*New York Christian Advocate.*

### *The Son of a Prophet.*

By GEORGE ANSON JACKSON. 16mo. $1.25.

"We do not hesitate to rank this story in respect to both interest and power with 'Ben-Hur' and 'The Prince of India.'"—*Boston Congregationalist.*

### *No Heroes.*

A Capital Story for Boys. By BLANCHE WILLIS HOWARD, author of "One Summer," "Guenn," etc. With illustrations, attractively bound, 75 cents.

### *Twenty Years at Sea.*

By FREDERICK STANHOPE HILL. 16mo, $1.00.

"One of the most fascinating volumes of the season. The first part relates to the merchant service, and the second to the author's experiences in the navy, where he served under Commodore Farragut, thus giving his reminiscences a peculiarly delightful interest."—*Boston Advertiser.*

### *Donald Marcy.*

A story of college life of much power and interest. By ELIZABETH STUART PHELPS. 16mo, $1.25.

### *A Cathedral Courtship*

and Penelope's English Experiences. Two very bright and entertaining stories, by Mrs. WIGGIN, author of "The Birds' Christmas Carol," "Timothy's Quest," etc. With illustrations. 16mo, $1.00.

A New Edition of Mrs. Harris's latest novel. $1.25.

*Sold by all Booksellers. Sent postpaid by*

HOUGHTON, MIFFLIN & CO., Boston, 11 East 17th Street, New York.

## The Thoughtful Citizen

Looks back of the present condition of national life in the United States, knowing that a right knowledge of the complex forces that have contributed to the growth of the nation is essential to any but a half-blind exercise of citizenship.

The historian who can best aid him must be keen and sympathetic and just; he must be logical and thorough; he must show not only effects but causes; he must show the life of the nation, and then his work may be rightfully be called a history. Such a history is

## Von Holst's Constitutional and Political History of the United States.

Few, if any, works in the field of American History are so frequently cited and so highly commended in the Universities of our land as this. A pamphlet descriptive of it will be sent you on request.

*A FEW CRITICAL OPINIONS.*

Its reflections are always astute and incisive.—*Harper's Monthly.*

Written for all time.—*New Orleans Picayune.*

Learned ingenious, subtle, brilliant, dashing, and sometimes almost rollicking in his lively and glowing style.—*New York Herald.*

The peculiarities of Von Holst's historical clinics are, first, a multitude of side-lights which he throws on them from every quarter, and, second, the remorseless pertinacity with which he follows up every nerve and muscle to its end.—*Alexander Johnston.*

Masterly analysis of events.—*The Nation.*

Omits no significant detail.—*David Swing.*

In the front rank of American histories.—*H. C. Lodge.*

Marked by comprehensiveness of statement, amplitude of detail, and clearness of exposition.—*New York Tribune.*

We seem to feel, from page to page, the onward march of destiny.—*The Independent.*

It is perfectly just and impartial in weighing argument and estimating character. Young America may well read and ponder this graphic narrative.—*Harper's Weekly.*

*Complete in Eight large octavo volumes containing nearly 4,000 pages. Prices, in cloth, $25; sheep, $30; half calf, $38. Sold by leading booksellers everywhere.*

**CALLAGHAN & CO., 114 Monroe St., Chicago.**

## Henryk Sienkiewicz,

THE GREAT POLISH NOVELIST.

## Historical Romances.

AND OTHER

"One of the direct anointed line of the kings of story-telling."—*Literary World.*

# Pan Michael.

A sequel to "With Fire and Sword" and "The Deluge." (Just Ready.) Translated by Jeremiah Curtin. Crown 8vo, cloth, $2.00.

This great historical romance completes the remarkable series of historical novels by Sienkiewicz, of which "With Fire and Sword" and its sequel, "The Deluge," have been so successful. Their publication has been received throughout the United States by readers and critics as an event in literature. Charles Dudley Warner in *Harper's Magazine* affirms that the great Polish author has in the character of Zagloba *given to literature a new creation.*

*WITH FIRE AND SWORD.* Crown 8vo, Cloth, $2.00.

*THE DELUGE.* 2 vols., Crown 8vo, Cloth, $3.00.

*WITHOUT DOGMA.* A Novel of Modern Poland. Crown 8vo, Cloth, $1.50.

### YANKO THE MUSICIAN

**And Other Stories, by Henryk Sienkiewicz.** Translated by Jeremiah Curtin. Illustrated by Edmund H. Garrett. 16mo, white and gold, $1.25.

The stories are deeply intellectual.—*Philadelphia Public Ledger.* The tale of Yanko has wonderful pathos.—*Chicago Herald.* Exquisite in technical expression.—*Boston Beacon.* They are full of powerful interest.—*Boston Courier.* The simple story of the light-house man is a little masterpiece.—*New York Times.*

## Little, Brown & Co., Publishers,

*254 Washington Street, Boston.*

# East and West.

*The Discovery of America and Other Poems.*

By Ernest Francisco Fenollosa.

This first volume of poems by Mr. Fenollosa, a native of Salem, Mass., who has spent twelve years in the service of the Japanese government as Professor of Philosophy, and later as Commissioner of Fine Arts, presents the first fruits of his studies and contemplations upon the two great types of the world's civilization.

In "East and West," which attracted considerable attention as the Phi Beta Kappa Poem of 1892 at Harvard, he has formerly stated the problems of their ultimate union, begun to-day, after two thousand years of separation since the epoch of Alexander.

In "The Discovery of America" he has pursued the same thought, in showing that the lofty idealism of Columbus, which contemplated a Christian conquest of the Oriental world, so far from being a delusive dream is only now, in this Columbian year, reaching a grander realization in the peaceful fusion of Asiatic and European ideas.

As the preface states "To-day his caravels have met the ambassadors of Xipangu on the shores of Lake Michigan."

These two long poems, with some thirty shorter lyrics make up the volume.

**8vo, white and gold, gilt top, $2.00.**

For sale by all booksellers, or sent, postpaid, by the publishers upon receipt of price.

## Thomas Y. Crowell & Co.,

*New York, 46 East 14th St.*

*Boston, 100 Purchase St.*

NEW YORK, THURSDAY, DECEMBER 7, 1893.

## The Week.

THERE have been three great and most encouraging victories of public opinion this year—the passage of the silver-repeal bill, the defeat of Maynard, and Mr. Van Alen's resignation. All three show how impossible it is for any abuse to stand up under concentrated and well-directed public censure. Of the first two it is needless now to say anything, but the last calls for a word or two in view of Mr. Cleveland's letter. In the first place he says he did not select Mr. Van Alen for nomination to the Italian mission "without satisfying himself of his entire fitness for the place." We believe it has been generally conceded that, everything considered, Mr. Van Alen was as fit for the place as many of his predecessors; but that is not the question in this case. The question is, how did Mr. Cleveland come to investigate Mr. Van Alen's fitness for the place? What led him to leave the world of politics, and law, and literature, and diplomacy, and penetrate into the world of pure fashion in search of a candidate for the Italian mission? The public have assumed that he did so in consequence of a large contribution by Mr. Van Alen to the fund used in electing the appointing officer, and its view has been confirmed, or at all events excused, by the account of the transaction by both Mr. Whitney and Mr. Van Alen himself. Moreover, Mr. Cleveland was fully warned, before he made the appointment, that, although he might make it on the ground of fitness solely, people would say and believe that he made it for cash, and that, therefore, in making it he would lose the high moral position he had so far held. He chose to disregard this consideration, and we see the result: Mr. Van Alen has resigned, and the President is discredited with that portion of the public whose good opinion has been to him during the last ten eventful years his proudest boast and strongest defence.

---

We are very sorry that he has thought fit to talk of "malignant criticism," and inform us that "the decent people who have doubted its [the nomination's] propriety have been misled, or have missed the actual considerations on which it rests." He knows surely that it is not "malignant criticism" which has damaged Mr. Van Alen. That would never have driven him to resign. It is the criticism of "the decent people," or, in other words, of the great body of Mr. Cleveland's supporters. We are quite sure we are within the mark when we say that nine-tenths of those who voted for him, of whatever position in life, deplored this appointment. We have ourselves never met one who did not. The best, and indeed only, defence of it we have seen was that Mr. Whitney could not in such a case be resisted—which, of course, availed nothing in the teeth of Mr. Cleveland's numerous discourses on morality in politics. And Mr. Cleveland's friends all over the country will read with positive affliction the news that the "decent people" are all wrong, and have "missed the actual considerations" upon which the appointment was made. This view of the "decent people" ought to have been left to McKinley, who, we believe, started it in defence of his bill. The notion that the people do not understand the acts of their own servants, was one of the humors of the canvass of last year which furnished much merriment at the time.

---

One of the best things in the President's message is his remarks on the definitive abandonment of the claim that we have a right to convert our legations in South America into asylums for local criminals. It is of course an extremely insulting claim to any Government against whom it is asserted; and we chose to assert it, through the instrumentality of Pat Egan, against Chili in a moment of great trial and distress, and he actually plumed himself greatly on his success in keeping a lot of notorious rascals out of the hands of the police, after their chief had blown his brains out. Not only this, but the natural irritation of the Chilians over his goings on was used here to stimulate the hostility to them and justify an armed attack on them. The President now justly observes:

> "The doctrine of asylum, as applied to this case, is not sanctioned by the best precedents, and, when allowed, tends to encourage sedition and strife. Under no circumstances can the representatives of this Government be permitted, under the ill-defined fiction of extra-territoriality, to interrupt the administration of criminal justice in the countries to which they are accredited. A temperate demand having been made by the Chilian Government for the correction of this conduct in the instance mentioned, the minister was instructed no longer to harbor the offenders."

This is a bad blow to Pat Egan, who is, we believe, in these parts, but happily no longer wearing the robes of a "Blaine Irishman," that office having been abolished.

---

Secretary Herbert's annual report and recommendations are couched in so moderate a tone that it seems ungracious to object to anything in either. To be let off with one battle-ship and six torpedo-boats, requiring an immediate appropriation of little more than $500,000, is a novel experience, and we will not too curiously inquire whether it is solely due to the Treasury deficiency. But we must point out that, if the secretary's argument for this slight increase in our naval strength is sound, he is really derelict in not urging the immediate building of at least fifty battleships. He insists that our unarmored cruisers are not fighting-vessels, and that our four first-class and two second-class battle-ships, even if concentrated, would "scarcely be able to create a diversion of an enemy's fleet," and correctly infers that "if our Government in the future is to have naval strength enough to command the peace and to enforce the terms dictated by its sense of right and justice, it must have more battle-ships." Many more, indeed, and if Mr. Herbert thinks that war is as imminent as he appears to, it is little short of treasonable in him to recommend only a single new ship. One more would be simply a target for the enemy's guns. We must have ships enough to outnumber any possible combination that might be made against us. In no other way can we get that "assured strength" which the secretary believes to be our aim in naval matters. One beggarly new ship would contribute so little to this that we should not be surprised if Congress thought it not worth while to build it at all.

---

The Post-office Department does not make a good showing in revenues for the fiscal year ending with last June. Mr. Wanamaker estimated that the annual deficiency would be only a trifle over a million and a half dollars, whereas it exceeds five millions. He also figured on a surplus of nearly a million for the current fiscal year, whereas Mr. Bissell thinks the deficiency will be nearly $3,000,000 greater than for the year which closed last summer. Undoubtedly Mr. Wanamaker made his showing much more favorable than the facts really justified, yet it is true that nobody could have anticipated so great a deficiency. Mr. Bissell thinks that the influence of the hard times upon the postal revenues began to be felt even before the end of June, and the effect must have been far greater since then.

---

The Government receipts for the fiscal year ending June 30, 1893, were about $2,000,000 in excess of the expenditures. For the present fiscal year it is expected that they will be $28,000,000 less than the expenditures. This estimate is on the basis of the present revenue laws. It is a noteworthy fact that the amount disbursed by the Government for first payments in pensions during the last fiscal year was a little more than the estimated deficit of the present year. It

was about $33,000,000. The first payments embrace the arrears. They consist principally of "back pay," and they have to be paid only once. Whenever these arrears are eliminated from the pension appropriation bills, the disbursements will fall off at least $33,000,000, but probably more, since the list itself is constantly diminishing by the death of pensioners and by the arrival of their children at mature years. It is very clear, therefore, that the additional revenue required to carry on the Government will not be a permanent public burden if there are no further outbreaks of pension profligacy on the part of Congress. We are not likely to have any such while the present Administration remains in power. There is a strong probability that the pension appropriation for the next fiscal year—the year ending June 30, 1895—will be $7,000,000 to $10,000,000 less than for the present year, and that they will shrink steadily after that time. In other words, the condition which Garfield supposed had come nearly twenty years ago will actually arrive two years hence, unless another pension debauch should take place.

---

Another fact is now pretty plain. The additional revenue cannot be secured during the present fiscal year to meet the deficit of $28,000,000, or whatever it may be. The new taxes cannot be gathered in with sufficient promptness. Time is required to put the taxing machinery in operation, whatever it may be. Therefore some temporary expedient is called for. A business man, under such circumstances, if his credit were good, would borrow. This is what the Government will be obliged to do. There are, however, different methods of borrowing. This being only a temporary deficit, the borrowing should be only temporary—something in the nature of the exchequer bills which the English Treasury puts out in like emergencies. These are interest-bearing Treasury notes. They do not go into circulation, they are not legal tender. They should be payable at the pleasure of the Government on three months' notice and should bear just sufficient interest to make them salable at par. They should be offered to the Government's creditors, including the pensioners, at par, but of course no creditor would be obliged to take them. Such as are not so taken would be offered to the public and would be taken probably at as low a rate as 2½, perhaps at 2 per cent. interest. If Congress would authorize the issue of $50,000,000 of such Treasury notes, to be used as required, the financial difficulties of the Government would disappear at once. This measure would not obviate the necessity of additional taxation, but it would bridge over the present embarrassment in the least burdensome manner, and would give new confidence to the business community. There is hardly anything so bad for an individual or for a Government as postponing one's daily bills. Our Government took up this practice during the last year of the Harrison Administration, and has never had the means to stop it since.

---

Fresh fish are put on the free list by the Wilson bill, exclaims the *Tribune* in agonized tones. This is proof, not only of the destruction of American industry, but of the subserviency of President Cleveland to British interests. But what shall we say of the Republican tariffs from 1861 down to the McKinley bill, all of which put fresh fish on the free list? An investigation of our tariff history will disclose these facts, namely: (1) that the tariff of 1857, enacted by a Democratic Congress, put a duty of 15 per cent. on fresh fish; (2) that the Morrill tariff of 1861 put fresh fish on the free list; (3) that all the Republican tariff revisions down to 1883 left it on the free list; (4) that the tariff of 1883 expressly put fresh fish on the free list, with the words "for immediate consumption" added. This phrase was of very little practical importance—how little, will appear from the Treasury rulings on the subject. These rulings declared that fish frozen artificially were dutiable, but that those frozen naturally were not dutiable, and that those packed in ice were not dutiable if the collector judged that they were intended for immediate consumption; also, that live fish in barrels were not dutiable. Eliminating all the fish importations thus declared not dutiable, we have a small residue upon which a duty might be collected. It is this residue which assumes such magnitude in the *Tribune's* eye that "statues in honor of President Cleveland might well be raised in the public squares of Toronto, Montreal, Quebec, and Halifax." *Vive la bagatelle!*

---

The address which the most eminent and respected members of the Democratic party in this city have put forth, calling for a party reorganization, is the most encouraging public document that has been issued in this State since the Bar Association's arraignment of Maynard. The two deliverances have a common origin. Each is a protest from the outraged moral sentiment of the body from which it comes. The Bar Association was forced, in order to preserve its own character and self-respect, to say that Maynard was unfit for the bench. To have remained silent about him would have been to acquiesce in his preferment. In the same way the honest members of the Democratic party have been compelled, after protesting formally and effectively in 1892 against the corrupting and disgracing control of their party organization by the Hill-Murphy-McLaughlin-Croker machine, to come out now and call for a complete reorganization in order that the good name of the party may be restored to it. Instead of acting hastily in this matter, the respectable element of the party has been not merely deliberate but inexplicably dilatory. There has been no doubt for fully seven years of the bad and dishonest character of the leadership which reached its culminating achievement in Maynard's nomination. That character was revealed immediately after Mr. Hill came into the governorship in 1885, when he arranged the "deal" with Squire for control of the work of constructing the new aqueduct. From that time till the nomination of Maynard the downward course of the party has been undeviating and unbroken.

---

Mayor-elect Schieren of Brooklyn has justified the confidence of Independents in his backbone by his first selection for his cabinet, that term being applied in Brooklyn to the heads of the important departments. Ever since election the leaders and spokesmen of the Republican machine have been insisting that he should appoint Republicans to office, and "Republicans without exception," to quote from the *Tribune* when it attempted to lay down the law for him a fortnight ago. Mr. Schieren's response is the appointment to the most important of all the departments—the commissionership of city works, with its control of the streets, of the sewers, of the water supply, and, above all, of a vast amount of "patronage"—of Mr. Alfred T. White, a typical Independent, who is the foe of all machines. Mr. White used to be a Republican, but, like Mr. Schieren, bolted the nomination of Mr. Blaine in 1884; he has continued to support the Democratic candidate for President in both of the national campaigns since then. In city affairs he has supported the best man without regard to party lines, and he was a warm supporter of Mr. Low in both of his campaigns for the mayoralty. He is the furthest possible remove from the professional politician of the "Al" Daggett and "Mike" Dady type, who have so long cursed the Republican party in Brooklyn, being a business man of high standing, a citizen of great public spirit, a philanthropist who has been practical enough to erect successful "model tenement houses," and a thorough believer in civil-service reform.

---

The lynching mania is spreading, or, we should rather say, lawlessness is spreading. No wonder the train-robbers are active when the following appears in the *Iowa State Register*, the most widely circulated paper in Iowa, edited by Mr. Clarkson, assistant postmaster-general under President Harrison, and the Northern paper which has for years

been most sedulous in lecturing the South for lawlessness. The citizens of Ottumwa in that State recently lynched a man named Gustafson, in the regular Southern fashion, for an assault on a little girl. Now hear the editor of the *Register:*

"The laws, courts, and juries have become harbors for criminals, and demagogue and anarchist Governors are rapidly defeating the few instances in which justice has been and is being meted out in the courts. The people are daily becoming more greatly disgusted over the increase in crime, the laxity of courts and juries, and the base actions of Governors who seek to perpetuate themselves in office by pardoning criminals. Lynchings will become more numerous until the law, courts, juries, and Governors realize that justice must and shall be promptly meted out to all criminals. The editor of the *Register* endorses the action of the citizens of Ottumwa in lynching Brute Gustafson, and will personally aid in executing similar punishment for a similar most horrible crime whenever the occasion and duty present themselves. Innocent and defenceless children and women must be protected at all hazards."

"The people," it appears, in Iowa have become "disgusted with the law, courts, and juries," and their only remedy seems to be to form mobs, headed by editors, to kill people without trial. We presume the history of all free countries might be searched in vain for a similarly impudent confession of the failure of popular government. The implication that laws, courts and juries and Governors exist independently of the people, and without responsibility on the part of the people, is very droll.

---

Another case of a similar kind has occurred in Whitehall, Ill. A man, hitherto considered respectable, a piano-tuner, was there also accused of assaulting a girl. Here is what then happened, according to a despatch to the New York *Herald:*

"He was arrested, but, before his preliminary hearing could be had, a mob numbering probably 100 men took him from the constable and hurried him to a field near the town. Here he was released and the mob set upon him with stones and clubs. His pleadings for mercy were not heeded, and he was literally pounded to a pulp by the stones that were showered upon him. His body presented a sickening sight when the mob had completed its brutal work. The face and head were a bleeding mass, none of the features being recognizable, while many of the bones of the body were broken. When they were satisfied that Morrison was dead, the members of the mob retired, leaving the body lying in the field."

The mob was probably largely composed of the worthless wretches who, in every place, enjoy the sight of suffering and perhaps vary the diversion of lynching by the diversion of train-robbing. The risks to which individuals are exposed in such communities is frightful, for a false charge will set a mob in motion just as readily as a true one. It is said that the Illinois lynchers will be "vigorously prosecuted," but how can they be vigorously prosecuted when, in the adjoining State, the editor of a leading newspaper offers to go to a lynching himself in person, and apparently treats courts and juries as irresponsible bodies?

---

No changes as yet proposed in the rules of football will satisfy those parents and guardians who are alarmed and disgusted by the prominence given to the game in the leading colleges, by the enormous amount of attention paid to it and to athletics generally by the undergraduates, by the fame it brings to the successful practitioners, and by the connivance of the faculties at the undergraduate view that the winning of games is the best service a young man can render to his university, or, as the phrase goes, the best mode of "testifying his devotion to his Alma Mater." This is the evil which no modification in the mode of playing the game can cure, and it is, for our time and country, an enormous evil. Who that read the account of the rejoicings at Princeton over the victory of last week, and the speeches of the professors to the mob of students, from the president down, would imagine that the place in which this occurred was not a gymnasium or a circus, but a seat of learning? The college bell was rung for four hours; the students paraded the little town in a triumphal procession, blowing foghorns and beating drums and tin pans through the greater part of the night. Dr. Patton, the president, told them "it was a glorious day for Princeton," Dr. Green that "Yale was nowhere and Princeton everywhere," and Dean Murray "announced that if they would wait until next week, they would be given an opportunity and every assistance to have as glorious a celebration as possible." This celebration came off on Monday night, and was infinitely grotesque.

---

There is very great, and apparently not unreasonable, alarm in England over the size of the combined Russian and French fleets. It has long been the policy of the British Admiralty to keep up a fleet superior in force to any two foreign fleets. It has been discovered, since the recent tremendous fraternization between the French people and the Russian navy, that the combined Russian and French navies in the Mediterranean will surpass the British force at that point in both ships and guns. There is the usual dispute between experts as to the correctness of the various calculations, but enough remains unquestioned to cause serious alarm in England. The Tories are, of course, making the most of the situation, and Lord Salisbury, in a recent speech, spoke strongly of the terrible effect on English commerce of even the temporary possession of the Channel by a foreign enemy. But it is difficult to see how the Channel is to be kept safe for commerce, no matter what the size of the navy is. No great naval war in Europe has broken out since the introduction of steam, and it is impossible for any one to predict with accuracy what the fate of English commerce, in any such contingency, would be. But there seems to be little doubt that no possible additions to the British navy would enable commerce to go on unchecked. The French ports would be filled with small steamers, which, no longer dependent on the wind as in the old wars, would rush in and out with impunity and do enough damage to the British carrying-trade certainly to make it unprofitable. This would be true of the Mediterranean as well as of the Channel. According to present appearances, too, most of the great ironclads would go to the bottom in a great naval battle. In fact, the tremendous commercial and manufacturing prosperity of England since 1815 has had the unfortunate effect of rendering her exceedingly vulnerable, no matter what her naval defences may be.

---

Prof. Tyndall was one of the three or four men who have made English science in the nineteenth century famous for its union of German throughness of research with French lucidity of exposition. A great part of the influence of his writings, as of those of Huxley and Prof. Foster and, in a less degree, Darwin, has been due to the wonderful clearness and charm of their style. Clear thinking was no doubt responsible for a good share of the clear writing, but over and above this he must have had a special gift for popular presentation of scientific results. It is doubtless true that the world must assign the supremacy to the ponderous scientific learning of the Germans, but we may yet hope that the typical scientist of the future may be nearer like those Englishmen we have mentioned, who smelted their ore instead of flinging it out in amorphous masses. Tyndall came into great disrepute with the religious world in 1872 by his bold suggestion that the efficacy of prayer be made a subject of scientific experiment. In this he was substantially anticipated in Hawaii, where the natives, years before, had challenged the missionaries to a competitive test of the value of prayer and of heathen sacrifices as a means of stopping the dangerous flow of lava from Mauna Loa. The doctrine of prayer now held by intelligent Christians has made Tyndall's "prayer-gauge" obsolete, as far as they are concerned. He allowed the last years of his life to be embittered by political controversies in which he had a perfect right to take a part, but in which it was little short of ridiculous to assume that he could speak with the same authority as about radiant heat or spontaneous generation.

### *STEVENS'S DEFENCE.*

In Lanman's 'Biographical Annals' we find the following entry: "Stevens, John Leavitt, . . . studied theology, and at the age of twenty-four was ordained a minister of the Universalist church; . . . then became associated with James G. Blaine in the ownership and management of the *Kennebec Journal*." These biographical items go far towards explaining the extraordinary document with which the ex-minister to Hawaii broke in upon the Thanksgiving repose of the American people. Its vigor of pious blackguardism, and its intimate acquaintance with the nameless and abhorrent sins of inconvenient witnesses who expose the author's crookedness, are better understood with that early record before the eye, while its furious parading of irrelevant matter, and its abnormal acuteness in detecting the corrupt schemes of England, are the legitimate fruit of association with James G. Blaine.

Mr. Stevens's defence, in fact, is best described as an afterglow of the Blaine school of politics. Confronted with a legal case made up by a trained lawyer, he kicks up a tremendous dust over points not at issue, lets loose an avalanche of scurrilous epithets with Christian adjectives attached, shouts loudly that England, or at any rate Japan, is back of the attacks upon his veracity, and sedulously avoids mention of the evidence, much of it documentary and signed by his own name, which convicts him of being a conspirator and a falsifier. Blaine himself could not have done it better.

The real strength of the case against Stevens was never so clear as when read in the light of his defence. The evidence of witnesses whose character he does not undertake to impeach, and of documents whose existence he ignores, are alone sufficient to sustain the charges against him. Granting the truth of every word he says, the facts and evidence to which he does not make the faintest allusion are enough to convict him. The testimony of Mr. Wunderberg, a member of the committee of safety, is not referred to by Mr. Stevens. Uncontradicted, it proves that he (Stevens) was in league with the revolutionists beforehand, had promised them to land the troops in their aid, and to recognize them as the Hawaiian Government the moment they read a proclamation at the Government building " or any other building at Honolulu." The testimony of Mr. Damon, president of the advisory council of the provisional government, Mr. Stevens nowhere touches upon. Uncontradicted, it proves that Stevens recognized "about eighteen men in all," sneaking through the streets so as to avoid arrest by the police, as the *de facto* government of the country, though they were not in possession of a single Government building, We should have been glad of less information about the gambling and licentious habits of witnesses whose testimony is not material, and more about the witnesses just named. But Mr. Stevens seems to think that, by his refusing to "recognize" them, they will be blotted out of existence.

Then there is the documentary evidence which the ex-minister forgets to mention. There is the written appeal to him of the committee of safety, asking him to land troops on the distinct ground that "we are unable to protect ourselves without aid." There is the formal protest of the Queen's Government the same day against landing the troops, with the assurance that the police and military forces were ample to preserve order and to protect American property. There is also the protest of the Governor of the island, A. S. Cleghorn. It is true, Stevens does dispose of him by showing that he was only an "honorary" Governor at best, and, what is pretty damaging, "a brother-in-law to the fallen Liliuokalani," and, what is absolutely fatal, "the reputed father of the so-called Princess now residing in England, *whose half-sister is married to the English minister's son.*" After such an annihilating stroke, it seems hard to go back to the law of the case, and ask, as both the local and the general governments did, what right Stevens had to land troops. It really is not a complete answer to say that somebody's half-sister is married to the English minister's son, but we suspect it is the only answer we shall ever get from Stevens.

One other of the vital points Stevens fumbles over, which shows that he is aware of the pickle the documents leave him in. In his despatch to Secretary Foster he said that he did not recognize the provisional government until after it was in "possession of the Government buildings, archives, and treasury." This was given the lie by Mr. Damon, and is also in direct contradiction with an extant letter from President Dole, thanking him for his "recognition," and requesting "the immediate support of the United States forces" so as to enable the new Government to get possession of what Stevens deceitfully told Foster it was already in possession of. Stevens now says that the Queen's forces "must have surrendered in a few hours," anyhow, as they were "surrounded"—we presume by those "eighteen men in all." This is a clear admission that he lied to Secretary Foster, as he did again, by implication, when he said that the other foreign ministers "promptly recognized" the provisional government, the fact being that none of them did so till the next day.

The merits of the controversy are now clearly before the public. On the one hand is the carefully prepared legal case of Mr. Blount, with its array of authenticated testimony, and documentary evidence. On the other is the *Kennebec Journal* harangue of Mr. Stevens, filled with personal assaults and irrelevancies, but carefully avoiding the crucial and cumulative evidence against him. If that is his best defence, he has no defence.

### *THE ATHLETIC CRAZE.*

We are glad that the Harvard Overseers have appointed a committee to investigate the game of football in its various aspects. We are also glad to learn that there is to be this winter a convention of the deities of the football world, to revise the rules, and probably abolish the "flying wedge" and other dangerous features of the present game. So far so good. But we would respectfully ask the college faculties whether they propose this winter to take any action looking to the reform of the game, and indeed all college games, on the moral side. We refer them to some paragraphs in *Harper's Weekly* on Phillips Exeter Academy, which show the effect that the inordinate attention given to athletics in colleges is having on the young boys in the preparatory schools. How many of them who have the size and weight qualifying to row or play football now think of the college to which they are going as a seat of learning? The practice, on the part of the athletic element in the colleges, of seeking them out, and bribing them by offers of a free education to come to one college rather than another, has become unhappily common, and has ceased to seem discreditable; that is, very young boys are invited to become professionals, and to take what is in reality a salary for acting as football players in the guise of students. That the faculties play into the hands of these debauchers of youth by being easy with these young professionals in the examinations and recitations is at least generally believed. Can nothing be done to suppress or make disgraceful this abuse of allowing professional athletes to haunt the college buildings as sham students? Is not the presence of such men at all in colleges highly demoralizing, and likely to confuse the minds of freshmen as to the ends for which colleges exist?

Is it possible, again, that the faculties, say of Yale and Princeton, look with equanimity on the enormous sums of money now received as gate-money every year in athletics by these young men *in statu pupillari*, and on the very large sums which change hands by betting in what may be called the collegiate world, beginning with the children who are preparing for college in the schools? We are informed on good authority that Yale spent last year about $47,000 on athletics, and the team went to Springfield the other day with three drawing-room cars and fifty men as substitutes, doctors, trainers, rubbers, and cooks.

The receipts on Thursday from the gate-money in New York cannot have fallen far short of $50,000. It was earned by exhibiting feats of strength and agility by scholars and gentlemen before an enormous city crowd, in which the gambling fraternity and the prostitutes were very prominent. Here is the *Tribune's* account of the appearance of the defeated team when the game was over:

"About the entrance to the hotel were perhaps five hundred people waiting to see what a defeated Yale team looked like. And they saw. But they never saw a more woe-begone, used-up, pale-faced, bruised, and bloodied lot of respectable, healthy, sane young men before. One by one the players crawled down off the coach and passed into the hotel through the alley made by the police through the crowd. Two of the players had to be helped, half carried by substitutes. The men had come directly from the field and were in their battle clothes. Their faces were muddy and marked with bloody streaks; their sweaters were stained and reddened, their heads a mass of tangled hair. In their dilapidated condition, marked with defeat, they did not look the strong, powerful young giants that had driven away from the hotel so full of confidence and sure of victory earlier in the day."

Is this an exhibition before a waiting hotel crowd in which any man who has sense enough and money enough to send his son to college would care to have him figure?

We are not inveighing against athletic games. If the colleges were to-morrow to make football compulsory for every man in them, we should not say a word in objection. We are simply asking for moderation and decency. It seems to be the weakness of the American people to take nearly everything in "crazes." There was the greenback craze, and the silver craze, and the granger craze, and the cholera craze, and now there is the athletic craze, and the leading colleges are becoming huge training-grounds for young gladiators, around whom nearly as many spectators roar as roared in the Flavian amphitheatre.

As far as can be ascertained, the thing which produces most of the evils of football and other games is the effort to improve them as a spectacle for the multitude. All the good which the amateurs of the game say results from training for it and playing it could be obtained just as well by playing on the college grounds without any spectators at all. By carrying it to the neighborhood of populous towns and cities, it takes on promptly the character of the horse-race. It furnishes to the gambling fraternity something of which they are constantly in search—an interesting event of uncertain result—and sets free from the restraints of home and friends a large body of youths in a state of great excitement. One of its worst results is, however, that it frightens "the plain people" away from the colleges. The modest father who is willing to pinch himself and wife and daughters in order to give a son a college education, is appalled by what he hears and sees of the results of a football match. Debt, drink, debauchery rise up before his mind's eye as a probable concomitant of "college training," and he decides to keep his pet lamb at home. The colleges are not drawing as they ought on this class. The wealthy men are going to them in greater and greater numbers, but it is not they who keep alive the traditions of American scholarship, or show the world what a college education can do by way of preparation for life. Of the effect on the members of the various teams of the conspicuousness in which they pass some months of every year, of the interviews, the newspaper gossip, and portraits, we will not speak, as nothing definite can be known about it. But if much remains of "the modest stillness and humility" which is, the poet says, so becoming in time of peace, after training for two or three matches, they must be almost more than human.

## *LIQUOR LEGISLATION.*

It is not without significance that while the United States Bureau of Labor Statistics has been occupied in studying the methods of regulating the traffic in alcoholic drink employed in Scandinavia, the methods in use in this country have been undergoing investigation by some foreign inquirers. At the request of Mr. W. Rathbone, M.P., Mr. E. L. Fanshawe, a London barrister, has just devoted eight months of careful study to the liquor laws of our States and of the provinces of Canada. He has also endeavored to ascertain the effects of these laws by the comparison of statistics and through the testimony of witnesses. By the terms of his commission, Mr. Fanshawe was to investigate without bias, and without reference to the support of any particular line of legislation. The result of his labors is now published by Cassell & Co. in a compact and well-indexed volume, and it is difficult to conceive an investigation carried on with greater impartiality. If Mr. Fanshawe had any prepossessions, he has not disclosed them; and if he has formed any conclusions, he keeps them religiously to himself.

What struck Mr. Fanshawe first and most forcibly in comparing the situation here with that in Great Britain was the fact that not only our legislatures, but also our courts, hold that liquor-dealers have no rights that other people are bound to respect. They are not shielded by the constitutional prohibition of the deprivation of property without due process of law. The Legislature of Kansas enacted that the manufacture of beer was a crime, and that a brewery was a nuisance to be summarily abated; and a brewer whose business was stopped and whose apparatus was destroyed by the officers of the law, at an admitted loss to him of thousands of dollars, was declared by the Supreme Court of the United States to have suffered no wrong. As to compensation to liquor-sellers suddenly deprived of their licenses, the very idea would seem so strange to most Americans as to require explanation. It is true that we sometimes hear it urged that local option or prohibition is an unjustifiable interference with individual liberty, but those who bring forward this argument receive little attention. It seems to be tacitly agreed that it is wise and just to make it as inconvenient as possible to procure alcoholic drink, although if a man can get it he is at perfect liberty to use it, and nothing is more common than to see people who would as soon be without food and clothing in the house as without whiskey voting to make criminals of those who furnish them with this indispensable article.

Such conduct is explained as due to hostility to the "saloon." As Mr. Fanshawe points out, the American liquor-saloon and the British public-house are quite different institutions. They differ principally because Americans do not as a rule partake of alcoholic drinks when eating, while the English do. But Americans do partake of both wine and spirits—though not of beer—to a greater extent than the English, and as they do not get them with their meals they get them at bars. This, of course, leads to treating and to spending much time in saloons. A great many men frequent bar-rooms, but refuse to have liquors upon their tables at home, thinking it a "bad example," and fearing that their children may develop uncontrollable appetites. A great many, it may be added, although Mr. Fanshawe does not refer to the cause specifically, abstain from drinking at home out of regard for or fear of the prejudices of the women of their families. All these influences tend to magnify the importance of the saloon, and to make its temptations to young men more potent. So long as people will drink, and are prevented by public opinion from drinking at their meals, either at home or elsewhere, it seems to follow necessarily that they should patronize the clubs and saloons.

Upon the operation of prohibitory laws Mr. Fanshawe has collected a great deal of testimony. It is, as might be expected, largely inconsistent and contradictory. The figures regarding crime and pauperism in the United States are notoriously untrustworthy, and no valid inferences can be drawn from them as to the influence of the liquor laws. Nor can much dependence be placed upon comparative returns of the number of arrests for drunkenness in different communities, or even in the same community at different times. That prohibition reduces the number of saloons in the rural districts is generally admitted; but, on the other hand, it is maintained that in large towns it has the opposite effect. One of its curious results

is that it greatly lessens the consumption of fermented as compared with distilled liquors; the traffic being illicit, the article having the greatest potency in the smallest bulk is necessarily selected. Upon the whole, Mr. Fanshawe's collection of opinions upon this subject leaves us nearly as it finds us—quite unable to come to any conclusion. The fact that large numbers of persons take out United States internal-revenue licenses in the prohibition States is perhaps the most convincing piece of evidence that is adduced.

As to the effect of laws requiring the payment of high fees for licenses to sell liquors, the evidence is stronger and comparatively free from contradiction. In some communities these laws are not rigidly enforced, but in others it appears to be universally agreed that there is little evasion. In such communities the law is in effect prohibitory in sparsely settled regions, as the demand is not sufficient to make the sale profitable; and in the cities the number of drinking-places, especially of the more disorderly kinds, is generally diminished. Whether the aggregate consumption of liquors is lessened, it is impossible to say. It appears to be the general impression that it is, but on the other hand the revenue from excise keeps even pace with the growth of population.

The policy of holding liquor-sellers responsible in damages for selling to minors and known drunkards appears to be quite successful, and is likely to be extensively adopted. Few persons, indeed, are found to take exception to it. The faltering and timid steps that have been taken in the direction of treating drunkenness as an offence and increasing the length of sentences for persistent offenders are carefully noted by Mr. Fanshawe. If it can once be established that responsibility attaches to the drinking of liquor as well as to the sale of it, we shall have begun the solution of the liquor problem. Meanwhile it may certainly be said that our country owes thanks to Mr. Rathbone and Mr. Fanshawe for their admirable and disinterested contribution to its knowledge of itself. Their essay is full of interesting particulars as to the success of special laws in a number of communities, to which we cannot refer. Whoever wishes to form an intelligent opinion about the regulation of the liquor traffic by law cannot do better than consult this exhaustive and impartial work. He will find no conclusions thrust upon him, but he will be put in position to reach conclusions of his own.

---

### *COURT AND LEGISLATURE.*

NEITHER the *Harvard Law Review*, nor any of our legal periodicals, has given us for a long time a more interesting study of a vital subject than Prof. Thayer's on the "Origin and Scope of the American Doctrine of Constitutional Law." The paper was first read before the Congress on Jurisprudence and Law Reform in Chicago, and was then published in the October number of the *Harvard Law Review;* it is now republished in pamphlet form by Little, Brown & Co., Boston. The title is somewhat too broad for the subject carefully investigated and philosophically discussed, namely, the assumed power, as it may be termed, of the American judiciary to do what the judiciary of no other nation has ever done—to annul an act of the Legislature by declaring it to be absolutely void.

The assumption of this power seems to run through gradations somewhat like these: (1) As was pithily said by De Lolme, "English lawyers hold that Parliament can do anything except make a man a woman or a woman a man"; (2) certain loose assertions in "the books" that what is contrary to natural equity and reason is void—which, however, is much reduced by the great commentator whom Gibbon sarcastically calls "the orthodox Judge Blackstone," for he dutifully says that "if the Parliament will positively enact a thing to be done which is unreasonable, I know of no power in the ordinary forms of the Constitution that is vested with authority to control it"; (3) the immediate and inevitable but reluctant genesis of the American idea as early as 1787, when a State court (in North Carolina), "after every reasonable endeavor had been used in vain for avoiding a disagreeable difference between the Legislature and the judicial power of the State, at length, with much apparent reluctance, but with great deliberation and firmness, gave their opinion separately but unanimously," etc., etc. (Bayard vs. Singleton). In this cautious, reluctant decision, moreover, it should be noticed that the constitutional right upheld was one precious in the sight of any Anglo-Saxon community, the right of trial by jury. In these early cases, too, the judiciary justified their action by illustrations of possible extreme abuses, such as if the Legislature should declare their own office to be for life where the Constitution limited the term; or should vest executive power in one of their own committees where the Constitution vested it in the Governor. Here parenthetically it should be said that, in Virginia, the doctrine had been enunciated earlier, and with exceptional courage and distinctness (see the *Nation* No. 1476, pp. 269, 270). (4.) The generally received doctrine of the present day, which has been as well stated by a judge of this State, the late Ira Harris, as by any. He is thus quoted by Professor Thayer: "A legislative act is not to be declared void upon a mere conflict of interpretation between the legislative and judicial powers. Before proceeding to annul by judicial sentence what has been enacted by the law-making power, it should clearly appear that the act cannot be supported by any reasonable intendment or allowable presumption."

A lay reader cannot apprehend, or at least will not be apt to suspect, the latitude which lies within the practical applications of this rule. Paradoxical as it may seem, a judge can hold a statute to be constitutional which, as an individual, he would condemn as unconstitutional. As judges refuse to set aside a verdict on the ground that it is against the weight of evidence, though as jurors they never would have agreed to it, so courts will refuse to annul an act of the Legislature, though as legislators they would have contended that it was in excess of legislative authority. A striking and almost paradoxical, but philosophically correct, illustration, which Prof. Thayer quotes from Judge Cooley, will best present this: That one who is a member of a legislature may vote against a measure as being in his judgment *unconstitutional;* and, being subsequently placed on the bench when this measure, having been passed by the legislature in spite of his opposition, comes before him judicially, may there find it his duty, *although he has in no degree changed his opinion*, to declare it *constitutional.*

Beyond this point, in his investigation, Prof. Thayer does not go. We hope that he will yet treat the subject negatively as well as positively—that he will analyze and bring before us the bad decisions as well as the good, the cases where political prejudice or the personal arrogance of small men on the bench, or the inevitable narrowness of a "little learning" in judicial places, has brought about decisions which are no better than tardy vetoes of legislative bills. But, so far in the discussion of the subject, the cases covered by the above rule are cases within one or the other of our dual systems of government—cases where a State statute conflicts with a State constitution and the question of constitutionality is adjudged by a State court; or cases where the statute is an act of Congress, and the tribunal is the Supreme Court of the United States. Will this easy-going rule do when State authority collides with the supreme law of the land, when the question before the court does not relate to mere individual suitors, when the powers of two governments must be delicately and accurately defined? Prof. Thayer treats this question too briefly; and there is another which he does not allude to—where an act of Congress trenches upon the constitutional rights of States.

As to the origin of the American doctrine, we are not now prepared to controvert the views of Prof. Thayer, and yet are not altogether willing to assent to them. The cases where colonial

statutes were held to be in excess of colonial authority or in violation of restrictions in a charter, are few and far between. They seem to have made, so far as we now recollect, no appreciable lodgment in the public mind of that day. Moreover, if they had been frequent, they would have operated unfavorably; for when a colonial statute was declared a nullity, was it not a decision by a crown court against the right of the colonies to make their own laws? The public sentiment of the time was jealous of everything that savored of irreversible official power, afraid of monarchy and titles of nobility; and would not the public inclination have been to keep power in the hands of the people and to deny to the judiciary, or to any body of men, the right to annul that which the people, through their representatives, desired to attain by means of legislative enactments? Certain it is that, sooner or later, the doctrine would have come though there had never been a colonial charter in America. Written constitutions were inevitable when it was determined that there should be limitations set upon the powers of government. In what other way could the limitations be declared? And when constitutions were made the supreme law, it was equally inevitable that sooner or later they must be brought to the only tribunals whose office it was to interpret and authoritatively declare the meaning of the law. But it is not unlikely that the forthcoming work of the late Brinton Coxe will throw new light upon the subject and modify present conclusions.

That the American doctrine of which Americans at this day are justly proud has its disadvantages, and that it is to be kept rigorously within judicial limits, Prof. Thayer shows in a few brief but forcible paragraphs. The growing incapacity of our legislative systems to confront the increasing needs of modern civilization, the settled distrust in the public mind of the integrity and wisdom and common sense of all legislative bodies, State and national, inclines the public to lean more and more upon the judiciary, beseeching them, as it were, for the annulment of laws which should never have been made. Conversely, our professional legislators, as they may be termed, are growing rapidly in the faith that nothing is iniquitous which is constitutional. Bryce was struck with the "singular result" in America that our legislatures are "very largely occupied in purely legal discussions." "Legal issues," he says, "are apt to dwarf and obscure the more substantially important issues of principle and policy." To many good citizens the views of Prof. Thayer upon this point will be unpalatable food for thought, but that they should be thought over no one can doubt.

## RECENT CONSTITUTION-MAKING IN SWITZERLAND.

PARIS, November 9, 1893.

ON the 13th of last October the Federal Council, the executive power of the Swiss Confederation, sent a message to the Federal Assembly announcing the official count of the vote of August 20 on the following amendment to the Swiss Constitution, which now becomes Article 25 *bis:* "Il est expressément interdit de saigner les animaux de boucherie sans les avoir étourdis préalablement; cette disposition s'applique à tout mode d'abatage et à toute espèce de bétail." This message of the Federal Council did more than officially declare the amendment accepted by a majority of the votes cast and by a majority of the cantons—the two conditions necessary to amend the Swiss Constitution: it declared the vote of eleven and a half cantons in the affirmative as against ten and a half cantons in the negative to be a majority in the Constitutional acceptation of the term, and thus destroyed the last hope of the French-speaking cantons, which were unanimously opposed to the amendment from the beginning.

If, in the generally accepted sense of the word, a constitution be regarded as a fundamental statute determining the seat of sovereignty among a people, and prescribing rules and maxims for the exercise of sovereign powers, the spirit of such an instrument has certainly been violated by the introduction of a clause prescribing the manner of slaughtering animals. However laudable such a provision may be as a police regulation, certainly the makers of any of our great written constitutions would have regarded a proposition to incorporate such a clause into the law of laws as little less than sacrilege. The iconoclastic spirit recently manifested by our Swiss contemporaries is nevertheless only part and parcel of a movement or tendency that has made itself felt also in America in dealing with our State constitutions. It is, further, a good barometric indication of corrupt politics, and of that distrust with which free peoples are now everywhere viewing their legislative bodies.

The Swiss Constitution is modelled on those of the cantons, and, like the latter, has always been capable of comparatively easy amendment, made more easy by an amendment passed in 1891, giving the initiative right to propose amendments to 50,000 voters; the "beef slaughtering" amendment of 1893 is the first exercise of this power. The right of initiative thus given is more than any mere right of petition, because it requires the properly constituted authority to act on the matter presented. It is also necessary to distinguish between the initiative in this case as applied to the total revision of the Constitution and as applied to a simple amendment or revision in part. The present Constitution of Switzerland was adopted in 1874, but the provision for amendment remained the same as in the Constitution of 1848, with the addition of the statement that the vote of a half-canton is counted as half a vote in making up the majority of the States, and the result of the popular vote in each canton is considered to be the vote of the State. Both of these constitutions charged the Federal Assembly with the duty of proposing amendments, but provided that whenever one house passed a resolution for amendment to which the other house did not agree, or when fifty thousand Swiss voters demanded amendment, the question whether the Federal Constitution ought to be amended should, in either case, be submitted to a vote of the Swiss people, voting yes or no; and in case of an affirmative majority, a new election of both houses should take place for the purpose of preparing amendments. This practically applied only to total revision, and although 50,000 voters could compel total revision provided they received a majority at the polls, yet their wish had to be put into shape through the indirect medium of a legislature. No provision was made for definite partial revision, which always partakes more of the nature of lawmaking.

It is true that the report accompanying the Constitution of 1848 said that partial revision might be undertaken in the same way as total revision, but neither this Constitution nor its successor in 1874 gave the matter of partial revision any further notice, and no test case came up until many years later. In the year 1879 a widespread movement in favor of making the issue of bank-notes a monopoly of the Confederation not meeting with favor at the hands of the National Assembly, a petition was presented to the Federal Council, signed by more than fifty thousand voters, asking to have the Constitution amended to this effect, and accompanied by the text of an amendment such as was desired. The Federal Council laid the matter before the Assembly, and evidently desired to have the question whether or no the Constitution should be revised on this particular point put directly to popular vote. The Assembly, however, decided that only the question of the total revision of the Constitution could thus be provoked by the people and presented to them at the polls, and consequently ordered a vote to be taken upon the general question, Shall the Constitution be revised? The people at the polls returned a majority in the negative, fearing a reopening of the disputed questions settled in 1874, though it is probable that a majority was actually in favor of the bank-note amendment, which was put into the Constitution by regular process eleven years later, in 1891. The question of partial revision thus raised in 1880 did not lie dormant; it was brought up in 1884 in the National Council, or lower house of the Assembly, in the form of a demand, on democratic grounds, for the sanction of the popular initiative in cases of partial revision, in order logically to complete the sense of the Constitution.

For four years more the proposition rested in the committee stage, having been sent to the Federal Council for report, when the matter was taken up by the Grütliverein, a powerful workingmen's organization. This Verein presented various petitions to the Federal Council and kept the matter before the public, advancing, however, no other arguments than that it was an evident defect in the Constitution to deny to the people the lesser power of demanding the revision of a single article, while granting them the greater power of demanding the revision of the whole; and, further, that this was one of the people's rights that must be claimed in the interest of pure democracy. The Federal Council then presented to the Federal Assembly a proposition which, if it had been accepted, would have submitted to vote a new amendment providing for a simple extension to cases of partial revision of the power already granted in cases of total revision. A demand made by 50,000 Swiss voters for the amendment of the Constitution on a single point would then have caused either the acceptance of the desired amendment at the hands of the Assembly and its presentation to the plebiscites, or, if the Assembly disagreed with it, the presentation of the question, Shall the Constitution be revised in this particular? which being answered in the af-

firmative, the election of a new Assembly to draft the new amendment and submit it afresh to the people would have followed. Thus there would have been still considerable restraint imposed; the amendments would have been framed by competent persons, and practically submitted twice to popular vote. The National Council accepted the proposition thus made by the Federal Council, but, curiously enough, the Council of States, or upper house of the Assembly, amended it in such a way as completely to change its significance. In the form in which it finally passed the Council of States and was agreed to by the National Council, it gave to 50,000 petitioning voters the right to present a definite amendment which must be submitted directly to popular vote, the Assembly having the right to offer a counter proposition, whereupon the amendment receiving a majority of the votes cast and the vote of a majority of States would become part of the Constitution. In the form of an amendment to the Constitution this proposition was then submitted to the plébiscites on July 5, 1891, and accepted by a vote of 183,029 to 120,599, eighteen cantons voting in the affirmative,

To explain why the National Council made so radical a change in the original form of this proposition, and thus took away all the safeguards to the grant of a doubtful power, would require more space than we can give it here, though it may be remarked that the members of the Council of States representing the cantons were doubtless largely influenced by the methods in vogue for revising the cantonal constitutions, which are in most cases very loose, and in some cases give a small number of citizens the right to propose amendments to be voted on at an annual public gathering with little ceremony. At the hands of these representatives the proposition for revising the Constitution of the Confederation did not assume the importance it did to those better trained in more healthy theories of constitutional law. The Swiss people, however, were amply warned before election day of the probable consequences of their action by eminent constitutional authorities and their leading journals. Little interest was taken in what seemed to be a mere theoretical controversy, and less in the fears and warnings of academical theorists. A few speeches embellished with democratic platitudes served to bring out the rank and file of voters of the less intelligent class in favor of the amendment, and the total vote was light, owing to general indifference. The majority, nevertheless, was sufficiently pronounced, the amendment adopted, and the Swiss Constitution dethroned from the rank of a fundamental law. Henceforth all that malcontents and faddists had to do to further their pet theories on any minute detail of government, in case they were refused satisfaction at the hands of the lawmaking powers, was to put their ideas in the form of an amendment to the Constitution. With an association, or even a newspaper, at the head of almost any movement, it is not difficult to get fifty thousand signers for a petition even in little Switzerland.

In reading over the amendment accepted last August, prohibiting any animal to be slaughtered without being stunned by a sharp blow to deprive it of consciousness, probably only those well versed in the undercurrents of European politics of the hour will suspect the true nature of the movement that led up to its proposal and acceptance. Anti-Semitism is every day taking on new forms, but nowhere has it found a neater chance to give vent to its absurd fanaticism than here. The movement originated in the cantons of Bern and Aargau, where Jewish colonies formerly were permitted to slaughter animals according to the mode prescribed by their religion, by cutting the arteries at the throat and bleeding the animal to death. It seems that this mode of slaughter attracted the attention of the Society for the Protection of Animals—a rather powerful organization throughout Switzerland—which proclaimed it more cruel than methods in vogue among the Christians. The anti-Jewish feeling, already strong, was not slow to accept this idea, and sufficient pressure was brought to bear upon the cantonal governments of Bern and Aargau to secure the prohibition of the Jewish practice. The Society for the Protection of Animals then endeavored to have similar laws passed in other cantons. The Jews organized themselves and petitioned the Federal Council, claiming that such legislation was unconstitutional, since their mode of slaughter was part of their religious belief, and Art. 50 of the Constitution guaranteed all persons religious liberty. The Federal Council thereupon undertook the examination of the two fundamental questions at issue: (1) Is the Jewish mode of slaughter an integral part of their religion? and (2) if so, does it harmonize with the general standard of public good and morals under which the guarantee of religious liberty must be construed? Ample testimony was taken on both points from the ablest specialists. The first point was decided in the affirmative, and the second, which covered the question of cruelty, was likewise decided in favor of the Jews, with an almost unanimous recommendation for the adoption of the Jewish mode on grounds of public health and expediency. Such authorities as Profs. Virchow of Berlin, Herzen, Vogt, Guillebeau, and Hess of Bern, the Director of the Veterinary Institute of Leipzig, the Secretary of the New York Society for the Prevention of Cruelty to Animals, and the majority of a Russian commission of seven specialists, all testified that the Jewish mode was less objectionable than any of the others, though the reflex movements of the muscles, after consciousness has left the animal, are painful to witness, and have thus given rise to the belief that this method is cruel. The Federal Council was, therefore, compelled to report the Jewish petition favorably to the Assembly, and that body sustained it in both houses by a law declaring the cantonal restrictions and prohibitions to be null and void.

The next step for the Anti-Semites was an easy one, viz., to amend the Constitution. They aroused the anti-Jewish feeling, and circulated a petition for a constitutional amendment, which soon received 83,000 signatures, of which number the three German cantons, Zurich, Bern, and Aargau, furnished over 64,000 and the French-speaking cantons only 2,500. A strong agitation pro and con ensued. In the affirmative were arrayed the anti-Semitic organizations and the friends of the Society for the Protection of Animals; in the negative the leading journals and the most enlightened public sentiment in all those cantons where Jewish colonies were not yet influential enough to arouse jealousy and hatred. Except in these latter cantons, the vote polled on election day was light. As now officially announced, it stands 191,527 for the amendment and 127,101 against. Less than half of the voting strength was brought out, yet not one French-speaking canton voted in the affirmative. In view of the fact that the vote of the States or cantons gave only one majority, we may say that the vote in the smallest of the cantons, Zug, which cast only 1,300 votes and gave an affirmative majority of less than 400 votes, decided this important change in the Swiss Constitution. The whole question, however, has not sufficiently touched the pockets of the people to arouse much indignation at this the first use to be made of the "people's initiative." The time will doubtless come when a sufficiently flagrant abuse of this power will arouse the Swiss nation to a consciousness of its mistake, and lead to a reconstruction period in its constitutional history. SAMUEL M. LINDSAY.

## THE FRENCH ARTISTIC INVASION OF ENGLAND.

LONDON, November 20, 1893.

THERE was promise in the announcement that an exhibition of French decorative art was to be held in London. The term is confusing, since all art is decorative, else it is not art. But the Arts and Crafts' show being still open to prove that, according to this Society's definition, decorative art in England begins and ends with the work of its own members, the French collection, it was hoped, by explaining the French use of the term, would offer a fine opportunity for comparative study. If it has turned out to be not at all what was expected, it is a hundred times more interesting than if it were; for the organizers of the exhibition have given the word decorative an interpretation liberal and sensible beyond the belief of the English Arts-and-Craftsmen. The arts which custom classes as decorative either are not represented at all, or else so vilely that it would have been better not to make the attempt. Household furniture, stained glass, wall-papers, pottery, china do but succeed in showing that French amateurs and manufacturers can, when they choose, be as inartistic and vulgar as anybody else. It is only Charpentier, with his exquisite metal-work—his little bas-reliefs for locks or panels, the tankards and candlesticks in which he charms by his accomplished use of the human figure introduced into ornament—only Charpentier, and Chéret with his vases, and Wiener with his book-bindings, who, by bringing to London their contributions from last spring's Champ-de-Mars Salon, have lent to this department distinction and elegance.

But then, on the other hand, arts not usually classified as decorative have been, not merely included in the collection, but represented most marvellously well and adequately. These are the arts of lithography, wood-engraving, and etching, and upon them the interest of the exhibition rests. Nothing could be more timely than their present appearance in London. In the first place, they give the lie direct to the theory of the Arts-and-Craftsmen that prints and drawings cannot be decorative if the draughtsman swerve a hair's breadth from certain arbitrary lines and combinations of lines, a certain affectation of primitiveness and indifference to natural beauty of form. In the French work, the artist has allowed himself the freedom of the painter, or, perhaps, borrowed motives—to be worked out in his own fashion—from the Oriental, or has boldly forsaken the beaten track for strange and original experiment. And he will be a blind man who will find truer feeling for ornament in the stilted mannerisms of Crane than in the free, unconstrained designs of Carrière—in the archaic wood-blocks after Burne-Jones than in the lovely color-prints of Lepère. Not an artist is there who does not work according to conventions, for art itself is in its very nature a convention. But this is no reason why each

artist should not be at liberty to choose his own, instead of being bound by those of others, or by tradition. Just as a canvas filled with a landscape by Corot is as wholly decorated as a wall-space filled with geometrical figures, so the characteristic and personal lines of Lepère, or the well-composed portraits of Carrière, form as truly decorative a design as the cross between Botticelli and Burne-Jones — and mighty little of the former — which is the only convention accepted by the English would-be authorities.

More important still is the proof afforded by the collection of the reaction against the excesses of "process." For, flat contradiction as at first it may sound, to process we really owe the present new Renaissance in the arts of lithography and wood-engraving, and, in a lesser degree, etching. I do not wish to be misunderstood. For the reproduction of line drawings process is not easily to be outdone; for the rendering of wash drawings, ninety-nine artists in a hundred will prefer it—and prefer it with emphasis—to wood-engraving; and, the chances are, it will be carried to greater perfection in the future. But the very excellence of these mechanical facsimiles has directed the energies of the wood-engraver and lithographer into new channels. Professional pessimists there be who declare that these arts are doomed to utter extinction; that henceforth the intelligence of engraver or lithographer will be superseded wholly by the unintelligent action of chemicals. And, indeed, in England there is danger of this prophecy being fulfilled. Here, process has been sadly abused, since its cheapness, and not its excellence, has to most editors and publishers been its recommendation; and, where cheapness is sought, original wood-engravers and lithographers can have small chance. But in France, and to a lesser extent in the United States, such among them as are artists, their services being no longer monopolized in the facsimile reproduction of other men's designs, have been able to give their individuality full play, to make experiment after experiment, to use the stone or the wood for the recording of their own impressions. The result is the possibility of so fine and striking and suggestive a series of prints as that now hanging on the walls of the Grafton Galleries—a series which could not well have been brought together some ten or twelve years ago, before the popularizing of process.

This activity is most marked in the revival of lithography. The stone has attracted painters like Besnard and Carrière and Puvis de Chavannes, who are represented in the present collection, as some years ago it appealed to Whistler, who may be said to have inaugurated the movement. But even more notable are the many new departures that have been made in the art, the wonderful manner in which the resources of the stone have been tested. Of the technical methods employed I say nothing, since just now I am concerned with results. Judging from these, it seems as if there were nothing the original lithographer cannot do. He can give not merely line, as in a pencil drawing on the stone by Willette, but tone no less well, as in the rich, brilliant studies of light and shade by Dillon and Lunois, two masters of the art. His very brushmarks can be rendered, or so subtle a quality as the mist that hangs over a portrait by Carrière. And next to an example of this kind you will come at once upon a strong design in thick, straightforward black lines and bold blots by Anquetin of the *Courrier Français*. The prints in color are no less interesting. Unfortunately there are few of the posters that give gayety and life to French streets—only about half-a-dozen by Grasset have been sent, among them the familiar, angular, delightful arrangement of Sarah Bernhardt as *Jeanne d'Arc*. But there are curious impressions of vivid color by Lunois, delicate suggestions by Lepère, Japanese-like, fantastic use of figures by Dennis. And in none are we dependent upon another man's interpretation; we have in each the work of the artist himself. There could be no question of process competing with lithographs like this.

In America, Cole's engravings after the old masters, and Kruell's portraits, certainly have qualities which process or photography, in the eyes of an intelligent critic or even educated observer, could never rival. In France, Florian has experimented in this same field with still greater originality and more varied effects. His use of the graver is freer; he sketches at times on the block, giving in beautiful lines his impressions of pictures or those parts of a picture which have charmed him. Wood-engraving will not soon surpass the loveliness of his blocks after Botticelli, especially one, showing a single figure from the "Birth of Venus," the flower-sprigged gown, the swirl of the draperies, the little landscape beyond, all expressed with incomparable refinement and delicacy, while the silvery quality given to the print is in admirable harmony with the subject. So long as there are such masters as Florian, Cole, and Kruell, what nonsense it is to lament the decline of wood-engraving. Others, Lepère, for instance, like Mr. Elbridge Kingsley, engrave directly from nature on the block, and, Lepère being an artist of distinction, the results with him are always interesting, sometimes of supreme value. His most noteworthy achievement is in the blocks printed in color. These have less in common with the ordinary color work of the Western engraver—like those now exhibited by Pissarro, for example—than with the work of the Japanese. He has not thought it necessary to overload his print with color, even though he may use the same number of blocks as Pissarro; rather he has suggested tints the beauty of which would be sacrificed by elaboration or attempt at too close realizing, and by his suggestion he has obtained an effect of distant landscape, of flowing water, or even of the modelling of the sky, much as the Japanese artist succeeds in producing very similar effects in his print. What has already been accomplished by the modern original wood-engraver is of importance, not solely in itself, but in the still wider scope and greater freedom it bids fair to give to the art in the future.

The experiments in etching are as amusing, but hardly as promising. The printing of plates in color, as practised by Delatre, is ingenious, but his success is scarce sufficient to induce many etchers to neglect the old black and brown and gray inks. More to the purpose are the effective combinations of line and aquatint, or some method of preparing the plate known only to the etcher himself, to render any and every effect. The three Pissarros have made wonderful prints in this way. And there is a small portrait of Lautrec by Maurin which commands the respect of the artist, while it stimulates the layman's curiosity, so impossible is it to understand how the beautiful rich surface and the fine tones have been obtained.

In London the influence of the exhibition should be for good. It is refreshing in its frank, unaffected contrast to the fads of the English draughtsmen of the primitive school, who call themselves decorators in contradistinction to all other illustrators and engravers. It should prove of incalculable use to the English student, who, for the first time, has the chance to learn something of the possibilities of wood-engraving and lithography which he has hitherto known by their limitations. To every one it is delightful as a reminder of the present vitality of arts whose very existence is supposed to be imperilled by the invention of process. N. N.

## PASQUIER'S NAPOLEONIC MEMOIRS.—V.

PARIS, November 11, 1893.

TALLEYRAND understood well the need of striking while the iron is hot, and lost no time as soon as he had the Emperor Alexander with him. He had declared himself for the Bourbons, and when Alexander asked him how he would accomplish the revolution, he did not hesitate to say that he would accomplish it with the help of the Senate. Pasquier too knew how to take a prompt resolution. "I had," he says, "reflected on the grave situation in which I was to be placed. I did not conceal from myself the dangers or the sadness of an irrevocable resolution. From that moment [his first interview with Nesselrode] I resolved to employ all the means in my power to procure the triumph of the House of Bourbon." The Senate behaved as Talleyrand had promised that it should behave: if it had not done so, "our situation," says Pasquier, "would have become critical. . . . This occasion was, in all Talleyrand's life, the one when he best manœuvred, for it is past comprehension how, and how rapidly, he obtained all that was necessary, how everything was fixed and executed." The Senate met, named a provisional government, and promulgated a series of articles which were the foundation of the *Charte*, all in one day, under the presidency of Talleyrand. The next day it pronounced the deposition of Napoleon. The decree of deposition was brought to Alexander, who, in order to show that he wished to become an ally of France, ordered that all the French prisoners held in Russia should be set free. Pasquier had kept his office of prefect of police, and had to answer for the safety of Alexander, who liked to go through Paris on horseback and to visit all its public establishments. "Honored," said the prefect, in a circular to all his agents, "with the confidence of the provisional government, which has maintained me in my functions, I have accepted this mode of serving my country."

Meanwhile, Napoleon was still at Fontainebleau, ready to take the offensive. He had called near him the two corps of Marshals Marmont and Mortier, and was expecting troops from Champagne. He was desirous to fight a battle before Paris and to rouse the workingmen of the capital. "The idea of a battle fought under the walls of Paris threw the firmest into consternation, for, if it was lost by the Allies, the consequences were incalculable. Who could know what might happen in a precipitate retreat! . . . As for the men who had dared to come out against Napoleon as we had just done, it is easy to perceive what would have been their fate. Flight would have been their only resource." So great was the fear that some people already thought of trying to assassinate Bonaparte. Pasquier heard of these projects, and, having received a letter from the Duc de Bassano, brought to him by a peasant, he took the opportunity to send back word, first, advising the Emperor to have his person well guarded, and, secondly, urging him not to apply to him any more for anything concerning his service.

The Duc de Bassano had asked him, on behalf of the Emperor, in his letter to give him details of the state of Paris. Pasquier gives the full text of the dry note which he sent to the Duc de Bassano; it ends thus: "No need to ask me any more for anything. You must know the side I have taken."

Alexander was much concerned about the sentiments of the army, as if in 1814 he foresaw the return from Elba in 1815. He said in his little circle: "The army is always the army: as long as you have it not with you, gentlemen, you have nothing. It represents the French nation, and if you do not gain it over, you can do nothing solid. It will always in the end upset what has been established without its consent and against its sentiment." The answer to these fears was given by Marshal Marmont; his defection was the deathblow to Napoleon. Pasquier relates in great detail the story of Talleyrand and Nesselrode's negotiations with Marmont.

"I know all that has been said," writes Pasquier, "all that one has a right to think about Marshal Marmont; alas! it is certain that I would not have the act with which he is reproached weighing on my memory. Still, he rendered a great service, and he rendered it unconditionally. Whatever may have been his secret thoughts, he asked nothing, he stipulated nothing for himself. We shall soon see his example followed by his most renowned rivals and equals. All, in the course of three weeks, yielded to the new order of things, to the House of Bourbon."

The abdication of Napoleon, which was forced on him by his own marshals, was signed on the 4th of April, 1814, at Fontainebleau. Pasquier was present when the plenipotentiaries of the French Emperor were received by Alexander. A conference took place, in which the fate of Napoleon was decided; it lasted till two o'clock in the morning. "We had witnessed one of the most extraordinary scenes of which history has preserved the memory. A sovereign, arriving from the confines of Asia, had coolly allowed to be discussed the existence of a dynasty founded by the greatest man of modern times, and the return of the most ancient European dynasty, torn from the throne twenty-two years before by the most terrible revolution. He ended the discussion by saying: 'I will come to a decision to-morrow before nine o'clock.'" And so he did. Alexander was convinced that the abdication would be an illusion if Napoleon was recognized; the King of Rome was sacrificed, and Austria did not appear to care for his interests.

The island of Elba was chosen for Napoleon's prison. Is it true that, on hearing his fate, Napoleon tried to poison himself? Pasquier admits it. "During the night of the 12th and 13th of April, he tried to destroy himself. The poison which he used, shut up in his *nécessaire* since the Russian campaign, was probably too old; it had no effect except to cause very intense pain. The Servian surgeon who was with him lost his head, went down into the court of the Cheval Blanc, and, finding a horse saddled, jumped on it and went off on a gallop. He did not reappear at Fontainebleau." Napoleon was a fatalist; he accepted his fate, ratified the arrangements made for him, and rather encouraged than discouraged all the adhesions to the new government which poured in from all sides in a few days. Monsieur, Comte d'Artois, made his entrance into Paris on horseback, in the uniform of the national guard. The King was detained some time longer in England by a fit of the gout. Napoleon was still at Fontainebleau.

"It cannot be disputed that, having once made up his mind to abdicate, his attitude was noble and resigned. He even spoke with indulgence of Talleyrand. 'After all,' he said, 'he served me well while he did serve me; I quarrelled with him perhaps with a little levity. I then ill-treated him. He must have been tempted to avenge himself. So fine a mind as his must have understood that the Bourbons were approaching, that they alone could assure his vengeance. He took the first steps towards them. It was very simple. I committed a great blunder. I had brought him to such a pitch of discontent that I ought to have shut him up or have kept him always at my side.'"

Napoleon left for the island of Elba; the next day the Duc de Berry arrived from Normandy. "I was beside him," says Pasquier, "when he gave his first audience. All the generals then in Paris came to be presented to him. He knew none of them; all were obliged to give their names to an aide-de-camp placed near him. I was obliged to help in this delicate duty." This incident shows how utterly ignorant the Bourbons were of the society which was to become theirs. The Comte d'Artois, who had assumed the functions of government before the arrival of the King, asked Pasquier how the King could recompense the services which he had rendered. Pasquier said that he was tired of his place, and wished to leave it. The Comte d'Artois insisted on his remaining in it one or two years more.

Louis XVIII. travelled slowly from England and stopped at Compiègne.

"When the Emperor Alexander appeared at Compiègne, it was impossible for him not to perceive that he entered into an atmosphere very different from that in which he had hitherto lived. He was no longer the indispensable, unique man, upon whom everything depended; a new influence balanced his, and it was the most disagreeable of all to him, as it came from the quarter which revealed the only rivalry he had to fear. [The King had found an asylum in England when he was excluded from every country in Europe, even Russia.] Alexander had come with an idea which he had cherished for some little time with complacency—the idea of an intimate union between Russia and France, a union which would be cemented by the marriage of the Duc de Berry with one of his sisters. . . . He found neither in the King nor in his family the abandon, the cordiality which might have made an overture simple and easy. He returned from Compiègne to Paris in a very different state of mind from that in which he had come."

The consequences of this coldness were grave, for, as Pasquier remarks, the conflict between the English influence and the Russian influence was soon felt in the political parties of France.

"On the side of England were the Court and the whole of the party of the *émigrés;* on the side of Russia were all the men who had played an active and important part in recent events, all those whose patriotism had, during the wars of the Empire, revolted against England. A deep hatred of England had become a national sentiment; all the military men were imbued with it, the inhabitants of the coast had drunk it in with their mothers' milk."

Talleyrand's astonishment at Compiègne was as great as Alexander's surprise; he saw himself relegated to the crowd of courtiers; he had to wait two or three hours before being introduced by M. de Blacas. The King said to Talleyrand when he saw him: "Well, M. de Talleyrand, so I am right in the end? If you had had the advantage, you would have said to me, 'Sit down, and let us have a talk'; it is for me to pay you this compliment and to say, 'Sit down and let us talk together.'" There was much irony and some impertinence in this apparently friendly familiarity. The King still saw the Bishop of Autun in M. de Talleyrand; he had forgotten nothing. Louis XVIII. received at Saint-Ouen the Senate, the marshals of France, all the high dignitaries of the State; he made the declaration which bears the name of Declaration of Saint-Ouen, in which he accepted the principle of a Constitution, and confirmed the principal articles which had been prepared by the Senate. Among the framers of the Constitution was M. Beugnot. It was agreed between the King and his brother that Beugnot should become director-general of the police in place of Pasquier. M. de Blacas, in the name of the King, informed Pasquier of this change, and asked him what compensation he would prefer. The place of director-general of the Ponts-et-Chaussées was vacant, and was not a political post. Pasquier, in this new office, became a witness and ceased to be an actor.

There was no intimacy between the King and his family and the allied sovereigns; Louis XVIII. was anxious only to see them depart. In the meantime, Alexander often called at Malmaison on the Empress Josephine and on her daughter, Queen Hortense. He spent with them the greater part of his evenings. In the small circle of Josephine, he spoke rather too freely of the Bourbons. "*Ces gens-là*," said he in a moment of spleen, "*ne se soutiendront jamais.*" Louis XVIII. could not view with much pleasure these visits to Malmaison; on his part he always let Alexander see that he was the King of France *par la grâce de Dieu:* he walked before him in going through a door; he kept up all the forms of the ancient etiquette of sovereigns. Josephine fell ill during Alexander's sojourn in Paris, and expired after three days' illness. The Emperor of Russia was very attentive to her, and spent the night of her death at Malmaison. The Russian Imperial Guard attended her funeral at Rueil, and rendered her the honors which in other times would have been rendered by Napoleon's imperial guard.

At last, the treaty of peace was signed and ratified:

"I shall never forget," says Pasquier, "the impression I received on the morning of the 3d of June, when I crossed the Place Louis XV. to go to my house. I found the square and the adjacent quays covered with Russian and Prussian troops marching away with their knapsacks on their backs. The morning was misty, and whether on account of the weather or of the fatigue of having seen so many things, the great event of the evacuation was accomplished without noise, without spectators. Nobody, or almost nobody, had taken the trouble to turn out. . . . I remained half an hour on the bridge, motionless, looking on the flow of these soldiers, of this mass of arms, of guns, of horses. . . . How far from my thought was the possibility of seeing again and in a very short interval of time these terrible phalanxes which had weighed so heavily on us!"

# Correspondence.

## AN INDEX GRIEVANCE.

To the Editor of The Nation:

Sir: In a small Southern college, which has a meagre library and very limited funds for adding to it, there is a certain professor of Greek whose none-too-aldermanic salary barely enables him to support his family, and to buy from year to year a few new books that he deems necessary aids to his work if he is to do his duty by his classes. This teacher, who has from twelve to fifteen hours per week of classwork, has a certain feeling (which creeps into his mind timidly enough in the presence of tomes of German learning), that a book of re-

ference should be a book of ready reference. He thinks that an index adds something to a good many books, and he has tried in a feeble way to use his Schmidt's 'Kunstformen der Griechischen Poesie' and Rossbach and Westphal's 'Musische Künste der Hellenen' without one.

But the *Nation* has preached and preached upon this text, and he hopes will continue to preach. He begs to sing a different tale of woe. He has found Lipsius's edition of Meier and Schoemann's 'Der Attische Process' useful in his reading of Lysias and other Attic orators. The book has an index (though no index of passages cited), but what is he to do with the 123 "Berichtigungen und Nachträge"? He must either look in two places on every consultation, or incorporate all the corrections in the body of the book, by symbol or in full. The first is inconvenient, the second takes time ill to be spared. He gets interested in the etymology of some word and consults his Brugmann's 'Grundriss der Vergleichenden Grammatik.' He happens to have met Prof. Brugmann, and found him a courteous gentleman, full of the milk of human kindness. Yet his 'Grundriss' contains, in the first volume, 46 "Nachträge und Berichtigungen"; in the second, 141 solidly printed "Berichtigungen und Nachträge" to the first volume, 152 to the second volume, followed by 55 "Verbesserungen und Nachträge"! And then, to cap the climax, he finds that after the index come 45 more "Nachträge und Berichtigungen zu Band II." And so on and on through a long list of books that the Fatherland sends us. One becomes profoundly thankful that the 131 "Berichtigungen und Nachträge" in the first volume of Kühner-Blass, and the 153 in the second volume to the first, and the 75 to the second, are included in the purview of the index, though of course one cannot trust the body of the book without reference to the index.

Is it always the notoriously bad German eyesight that is responsible for the often execrable proof-reading, or is it sometimes simply haste? It is true that these multitudinous corrections come in part from a desire to refer the reader to the latest word on every question. But it often seems as if more deliberation would have increased the elements of dignity and finality. And surely, when an important correction has been made, the index should show it.

W. H. B.

## DILÎP SINH.

To the Editor of The Nation:

Sir: It occurs to me that a few words supplementary to "F. H.'s" communication respecting the late Dhuleep Singh in your paper of last week might be welcome to some readers. Having had some direct or personal knowledge of an important incident in the Maharajah's life to which "F. H." refers, I am able to mention some circumstances or considerations which deepen the curiosity (queerness?) of the affair, and which, though probably well known to "F. H.," he does not explicitly denote or indicate.

Dhuleep Singh was not, as some Americans have supposed, merely the heir apparent, but the actual Maharajah or great king of the dominions of Runjeet Singh, having been placed upon the throne of Lahore by the British in 1846; and in his character of great king it was he who, after the crushing defeat of the Sikhs in 1849, tendered to the Governor-General, at the gates of Lahore, the submission of himself and his chiefs. And when, in 1849, Lord Dalhousie annexed the Punjab to the British territories, it was as the deposed Maharajah that he was thought worthy of the liberal pension of £40,000 a year. It was also upon his title, as having been their actual or *de facto* king, that the Sikhs relied in their hope of his future restoration to the throne from which he had been deposed.

Whatever knowledge some of the Sikhs possessed respecting the baseness of his birth, and whatever suspicions were entertained by others of them, Dhuleep Singh was undoubtedly a centre or nucleus around which the Sikhs might some day rally. Though still a boy in his early teens, and not a boy who gave promise of great future ability, he was already a source of troublous thoughts and of brooding intrigue among the Sirdars and other chiefs in the Punjab. And though no movement against the recently imposed rule of the "white foreigners" might take place, or even threaten to take place, at an early day, it was clear enough that the state of unrest would probably grow worse as the captive Maharajah advanced in years and stature.

Now, most readers very likely know that the Sikhs of the Punjab were by far the most formidable antagonists, of Indian origin, the British have ever encountered in maintaining their dominion in the East. In the war with the Sikhs there was a day on which, during many hours, English rule in India seemed to have reached its end or to hang by a hair. Indeed, even another battle with the Sikhs, though the English were known beforehand as predestined victors, seemed of all calamities the most to be avoided, if possible; and happily there was one way in which whatever dangers might inhere in the person of the little "Great Rajah" might be easily eliminated or neutralized. Purposely or consciously to injure, and thus, in any manner or degree, to disqualify the Prince was out of the question and not to be thought of; a remedy forbidden with equal emphasis by British magnanimity and by British humanity. No, certainly such a thought, I am sure, never entered the mind of one of the English gentlemen upon whom the high responsibilities of British administration in India then rested. Instead of injuring the boy in any way, they determined to confer upon him the greatest of all benefits by making, or rather by causing him to be made, a Christian in the mode and after the pattern prescribed by the Church of England. Accordingly, at the request of the Prince's English guardian, Sir John Logan, an American missionary at Farrakhabad, the Rev. Mr. Seeley, undertook his preliminary instruction in the elements of Christian doctrine; and when this course of teaching had continued a few months or weeks, the Maharajah, then in his fifteenth year, was baptized by an East India Company's chaplain, the Rev. Mr. Jay, and was thus made a Christian. Naturally, the report of this transformation was rapidly spread abroad over the northwest provinces and from there over the Punjab, with results easily foreseen. The bibliolaters who worship the Granth and hate the Moslems; the Moslems who love the Koran aud hate all idolaters; and the orthodox Hindus who regard neither the Granth nor the Koran—in a word, all the peoples of the Punjab—forthwith found themselves in a state of happy unity of sentiment respecting the very objectionable metamorphosis of their late Maharajah; while the rebellious Sirdars at once perceived that he had ceased to be available for their purposes.

R. E. W.

176 Federal Street, Allegheny, Pa., November 28, 1893.

# Notes.

The "Heart of Oak Books," of English prose and poetry for young folks, already announced as in process of compilation by Prof. C. E. Norton and Miss Kate Stephens, are soon to be published in five volumes by D. C. Heath & Co., Boston.

The procession of reprints recommences with (let us say at random) the 'Lorna Doone' in two volumes issued by Porter & Coates, Philadelphia. We find this edition preferable to a much more ambitious one of recent date in respect both of typography and of handiness. The photogravure illustrations are numerous, and all but wholly views of the scene of this Devonshire story; the few figure compositions are weak and ineffective, but do not seriously mar the uniformly pleasing impression of the well-chosen transcripts from nature. The binding is in white and gold with an arabesque design. We like best the pretty page of print with its deep *unbroken* margin in the Harpers' edition of Charles Reade's 'Cloister and the Hearth,' in two volumes richly bound in buff and gold. Still, Mr. William Martin Johnson's drawings, which irregularly break in upon the margin, seldom lack a decorative quality and they show not a little versatility. The draughtsmanship of the figures is in general clever in an amateurish way. The shiny page must be set down to the account of "process." For every-day use one can but commend the simpler style in which A. C. McClurg & Co., Chicago, have revived Elizabeth Spofford's 'Rumour,' again in two volumes, light to the hand and most tastefully bound in blue cloth, stamped in gold on the back and in white on the side. Mrs. Spofford's "introductory note" is a pretty full disquisition upon the author. The two frontispieces are of Beethoven and Louis Napoleon.

We recur once more to the parallel editions of Scott, the International (Estes & Lauriat) and the Dryburgh (Macmillan), which now respectively add 'The Abbot' in two volumes and 'The Fortunes of Nigel' in one—neither calling for any remark by way of distinction from their predecessors. We may say the same of Fielding's 'Jonathan Wild' in the Dent-Macmillan issue; of 'In Far Lochaber,' in Harper's uniform edition of William Black; and of Ruskin's 'Elements of Drawing' in the Brantwood edition supervised by Prof. Norton (Maynard, Merrill & Co.). McClurg's "Laurel-Crowned" series is well known as a standard of good inexpensive bookmaking, and we need therefore only refer to it as the model after which the same firm have fashioned Carlyle's 'Sartor Resartus' and Thackeray's 'English Humorists,' the shorter work having a more open appearance.

Little, Brown & Co., Boston, celebrate the fortieth anniversary of 'The Adventures of Mr. Verdant Green, an Oxford Freshman,' by bringing this classic out anew in very handsome style, within and without, while coupling with it for the first time a uniform (third) volume embracing the same author's 'Little Mr. Bouncer and His Friend Verdant Green' and 'Tales of College Life.' Mr. Cuthbert Bede's own Thackerayesque illustrations have been reproduced in this set, which has an historic as well as an imaginative value. The covers are in green, of course, richly and artistically stamped, and the price for such good workmanship very moderate.

The Scribners have thought it well to make up a brochure, in large type, of the articles by

artists on the World's Fair and its frequenters that have appeared in their *Magazine*—Mr. F. D. Millet on "The Decoration of the Exposition," Mr. J. A. Mitchell on "Types and People at the Fair," Mr. Will H. Low on "The Art of the White City," etc., etc. There is some overlapping in these categories, and some, but less, in the accompanying designs, from all which emerges a pretty souvenir called 'Some Artists at the Fair.'

We pause in this long list with 'A History of My Time,' an English version of the Memoirs of Chancellor Pasquier, of which the first volume, 1789–1810, is before us (Charles Scribner's Sons), while our Paris correspondent is commenting on the second in the original French. We shall say nothing as to contents, therefore. The 559 pages are compactly printed, without being trying to the eyes. An early and a later portrait of Pasquier are the sole illustrations. The translation, by Charles E. Roche, shows itself, on the least examination, to be literal to a degree that makes it more trustworthy than scholarly or idiomatic.

Some of the illustrated holiday books are not new, and some that are new are not good. Lee & Shepard revive J. Noel Paton's time-honored designs for Coleridge's 'Ancient Mariner' (for what, we wonder, do they claim copyright?), and the Appletons bring out illustrated editions of 'Picciola' and of Bryant's 'Poems of Nature,' of which it is difficult to say whether J. F. Gueldry's figures or Paul de Longpré's landscapes and flowers are the worse. In the absence of other tests, perhaps the cover of the second of the volumes may be considered to gain for it the palm of badness.

Good training and an adequate knowledge of the figure mark Mr. F. V. Du Mond's drawings for Mr. William Trumbull's not very inspiring poem, 'The Legend of the White Canoe' (G. P. Putnam's Sons), and Mr. Bernard Partridge, as is well known, sketches with a brisk and clever pen, even if not with quite the dainty elegance of fancy that should accompany Mr. Austin Dobson's 'Proverbs in Porcelain' (London: Kegan Paul, Trench, Trübner & Co.). Mr. Dobson himself, it is fair to say, seems satisfied and pleased with Mr. Partridge's work, and if we feel that Abbey could have done it better, it is hard to say who else could.

The great album of 'The City of St. Louis and its Resources' (St. Louis: *Star-Sayings*) is an excellent specimen of a class of works familiar to the West. Its letterpress is exceptionally well written, and its numerous portraits of leading men in the various industries, trades, and professions afford material for an interesting study of American types. A few of these persons have a national reputation outside of trade circles, but in the main the biographical sketches deal with men of only local fame and importance, and their genealogical value is considerable. The typography and presswork are very creditable.

Readers of the *Bookman* must have been struck with a series of reminiscential papers running from its first number, of October, 1891, down to the present, and signed Φ. Mr. Francis Espinasse now fathers and collects them under the title, 'Literary Recollections and Sketches' (Dodd, Mead & Co.). The Carlyles and their circle cut the largest figure in the volume. Mr. Espinasse is himself a Scotchman, notwithstanding his name, and, being one who neither grovels before Carlyle nor bellows at him, he contributes not a little to the better understanding of the Sage of Chelsea which has been reached since other hands than Mr. Froude's have been taking a turn at his portraiture.

A Life of Wagner, in about 15,000 words, by Edward Francis, has been added to Brentano's "Petite Library." It is prettily bound and small enough to be slipped into the vest pocket and read on a single trip on the elevated railway. It gives the principal facts of the composer's life in a sufficiently accurate manner (although we note a few small mistakes, especially on p. 98), and it contains at the end a useful list of Wagner's compositions, besides a full table of contents of his ten volumes of literary works.

Schopenhauer's principal work has been translated into English, but his 'Parerga' and other books still await a complete translation. That it will come in time is a matter of course. Schopenhauer is, as a French writer has said, not "a philosopher like others, but one who has seen the world." Pending the appearance of a complete translation, we must welcome the 'Essays of Schopenhauer,' by T. B. Saunders (A. L. Burt), a selection of the best chapters from the philosopher's various volumes. They are grouped by the translator under five heads—"The Wisdom of Life," "Counsels and Maxims," "Religion and Other Essays," "The Art of Literature," "Studies in Pessimism." The American edition is a cheaper reprint in one volume of the English edition in five small volumes, one of which is already in its third edition. To authors there is hardly anything in all literature more valuable and suggestive than the essays here reproduced "On Authorship," "On Style," "On Thinking for One's Self." In the translator's preface is pointed out, among other things, the affinity between Schopenhauer's pessimism and a fundamental tenet of Christian theology.

From the Scribners we have a new edition, abridged in one volume, of the Life of Jenny Lind by Holland and Rockstro. It is an interesting story in itself, and Jenny Lind was such a pure and lovable character that her career is one with which all young women interested in music and the stage should be familiar. In the chapter on Jenny Lind's method they will also find some useful practical hints.

E. Schuberth & Co. are the American agents for Donajowski's Miniature Scores of famous symphonies. They are the full orchestral scores, elegantly printed, in the convenient size of an ordinary book, and the price is extremely moderate.

After a long interval devoted to men of comparatively little importance, the series of "Les Artistes Célèbres" (Macmillan) again gives us a book dealing with a justly celebrated painter. Constant Troyon, if not an artist of the very first rank, yet holds a very high place in the second. Greater than Dupré and Diaz, if not so great as Millet, Corot, or Rousseau, he comes, with Daubigny, immediately after this trio, in the list of those who formed the splendid school of landscape and the open-air which is the glory of France, and which gives modern painting the right to be counted among the great developments of art in the world's history. If not very subtle or exquisite, his style is full, strong, and rich. His drawing of animal forms is not impeccable, but he got the essence of animal nature, and his beasts are much more living than those, for instance, of his cleverer pupil, Van Marcke. He had a strong sense of light and air, and great breadth and vigor of vision combined with a feeling for color, and his best work will always be admired and enjoyed. M. Hustin's account of his simple life is brief but adequate, and the lists of exhibitions and sales will prove valuable for reference. They are carried down to 1892. The illustrations are, as usual in this series, profuse, and some of them are much above the average of merit.

Max Simon's 'Swift: Étude Psychologique et Littéraire' (Paris: Baillière) is a contribution not so much to knowledge as to understanding. After a brief account of Swift's eccentricities, illustrated by the usual anecdotes, M. Simon analyzes the art of Swift as satirist and humorist, and his character as "le malade et l'homme." The temper of the author is perfect—catholic, humane, and sympathetic—and he knows his subject. The result is a charming essay, which can easily be read at a sitting, but which gives, we feel sure, a juster picture of the great dean than any that his biographers have succeeded in drawing. The criticism is clear-sighted and suggestive. Particularly noteworthy is the defence of the Yahoo episode in Gulliver—a defence which, whatever one may think of its validity, is not to be laughed or scolded out of court.

Hachette & Cie. have just published a new edition of M. Gustave Larroumet's 'Marivaux, sa vie et ses œuvres' which, in its original form of a thesis, formed a thick octavo volume. The book has been abridged, not rewritten, but the changes unquestionably make it more generally useful. M. Larroumet, in his original study of Marivaux as dramatist, novelist, moralist, and critic, had heaped up proof upon proof and quotation on quotation, giving extended analyses and summaries with the view, mainly, of replacing Marivaux in a higher position than he occupied at the time. He succeeded in doing so, and, in reissuing his admirable study of the eighteenth-century writer, he felt that much of this special pleading might now be safely and judiciously omitted. The book remains the best authority on Marivaux, from the critical point of view of the nineteenth century.

Mme. Hector Malot has written for "poets, lovers, and young people" a novel entitled 'Le Prince' (Paris: Flammarion), which is not immoral, it is true; which is intended to be a careful analytical study of two characters, husband and wife; which is undoubtedly meant to be fragrant with poesy and the charm of youth, and yet which is merely dull. The characters fail to interest, the dénouement is realistic in its way, but not very intelligible, and the style lacks vigor.

The "Chinese-Lantern Calendar," "A Calendar of Pets," with water-color designs by Maud Humphrey, "'The Playmates' Calendar," and "'Little Friends' Calendar," with like drawings by Elizabeth S. Tucker, come to us from Frederick A. Stokes Co. They share with the smaller 'All Around the Year' of Lee & Shepard the defect of subordinating the calendar proper to the decorations almost to the extent of illegibility.

Besides the section on drift deposits contributed by Prof. R. D. Salisbury to the annual report for 1892 of the State geologist of New Jersey—a valuable paper of general application, which we have already noticed—the report deals with Cretaceous and Tertiary formations, water-supply and water-power, artesian wells in the southern part of the State, and (with reference to the same region) the sea-dikes of the Netherlands and the reclamation of lowlands. A sample sheet of the colored map of surface geology in preparation by the Survey accompanies Mr. Wm. Bullock Clark's discussion of the clays, marls, and greensand of Monmouth and Middlesex counties in particular, from New Brunswick to Long Branch. Another map, of the entire State, illustrates the watersheds actually drawn upon for the supply of the northeastern cities, and also

those available for such supply. Mr. C. C. Vermeule's discussion of this important topic fits in with Prof. Smock's reiteration of the urgent need of parks and reservations for the recreation of a territory whose urban population exceeds 800,000 souls and is increasing with ominous rapidity. The Massachusetts example of a Metropolitan Park Commission is held up for emulation. Clearly, no time should be lost in appealing for enlightened legislation on this subject.

One of the latest numbers of the *Forschungen zur Deutschen Landes- und Volkskunde* is a study of the Island of Rügen, on the Baltic coast of Prussia, by Prof. Rudolf Credner of Greifswald. The island has for a long time attracted attention from the peculiar dislocations of its cretaceous strata with their cover of glacial drift. Credner concludes, after a minute examination of the district, that the dislocations were produced after an early pleistocene glacial advance, which left a sheet of drift over a series of horizontal strata; and that a later glacial invasion had a moderate effect in subduing the constructional forms that it encountered. Credner regards his results as strongly confirmatory of the complexity of the glacial period, inasmuch as, between the deposition of the older and newer drifts, there was time enough for a considerable dislocation and denudation of the surface. These *Forschungen* have now reached seven volumes, of from five to seven numbers each; it is announced that new subscribers for the whole series may secure the first five volumes at half price. The editor is Prof. Kirchhoff of Halle; the publisher, Engelhorn of Stuttgart.

A timely paper is M. Henri Duveyrier's account of a journey from Telemsan to Melilla, in the *Bulletin* of the Société de Géographie. On account of the disturbed condition of the country at the time, 1886, he was obliged to travel in the suite of the Shereef of Wazan, disguised as his physician. His route through Morocco followed so closely the Mediterranean shore that he was unable to add much of importance to our geographical knowledge of a region which has never been explored, and rarely, if ever, visited, by a European. The chief interest of the journey began with the country of the Guela'aya, the tribes who are now fighting the Spaniards. They are five in number, Guela'aya being a collective noun signifying fort people, "gens des forteresses," and could muster at that time about 6,200 men armed with needle-guns. They are skilful mechanics and gunsmiths, being able both to make and repair their weapons, as well as to manufacture powder and mould bullets. Though nominally Mahometans, their religion sits easily upon them. They are wine-drinkers and hemp-smokers, and slay a man with as little compunction as they would a rabbit. Melila, as M. Duveyrier insists the name should be spelt, not in the Spanish fashion, Melilla, was very like Malaga, only more "triste" and far less animated. During his stay in this place he was treated by the authorities almost as a prisoner of war, being regarded as a French spy, and was accordingly unable to make any excursions outside the city. Even had the Spaniards permitted this, it would have been impossible from the hostility of the natives to every foreigner. The Spaniards were at that time repairing the old fortifications, and were building a new wall, on which were mounted four enormous Krupp guns. Of these fortifications he writes somewhat contemptuously as impregnable so long as the assailants are only the Guela'aya.

Can a still, small voice be heard, in the midst of our athletic craze, suggesting that boys as well as girls ought to be thinking of "news of national interest," of the "work of Congress," of current "achievements in all lines of science," of literature, arts, and music, of "new lights on history," of "civil government object-lessons from the nation's capital," of "the march of human activity"? Such seems to be the optimistic view of the projectors of "a real newspaper for the young people of America," the *Pathfinder*, of which the first number will be issued January 6, 1894, at Washington. The scheme calls for a high degree of tact, judgment, and catholicity.

With the November-December number, completing its tenth year, the *Andover Review* suspends publication. The reasons assigned by the editors are the pressure of work, and, more conclusive, the settlement of the issues in which the magazine had its origin. With the "Andover Case" decided in the courts, and the "Noyes Case" in the American Board, and both in the way advocated by the *Review*, it may honorably retire from the field.

"F. E. M." sends us the following correction:

"In your review of 'Memoirs,' by Charles Godfrey Leland, in No. 1483, vol. 57, you say, in speaking of the comic journal *Vanity Fair*, that 'on the breaking out of the war this comic journal expired.' I think you will find that the last number of *Vanity Fair* (volume 7) was issued in July, 1863. The volume was not completed, but only a few numbers issued. Vol. i, No. 1, of this entertaining and witty journal was issued December 31, 1859, and during its comparatively short career it was edited by Frank Wood, Charles Godfrey Leland (some time in 1861), 'Artemus Ward,' and Charles Dawson Shanley, successively."

—The contents of the December *Atlantic* are marked by the conventionality into which all our monthly magazines of amusement and information are in danger of falling. All of the stories are in dialect, and the articles include two on birds and one (a long dissertation) on Japanese æsthetics. Fresher in interest are the letters of Thoreau to his typically English friend, Thomas Cholmondeley, Prof. Kittredge's defence of Chaucer's sense of dramatic propriety in the Pardoner's Tale, and Prof. Woodrow Wilson's attack on the contemptuous attitude of modern education towards "mere literature." In our colleges, Prof. Wilson maintains, "the delicate and subtle purposes of the study [of the essence or spirit of literature] are quite put out of countenance, and literature is commanded to assume the phrases and the methods of science"; science, too, sharply discriminates between the study of "mere literature," *i. e.*, literature proper, and linguistics, or, as Americans say loosely, philology. This charge is not unlike that of Prof. Stoddard, in a recent number of the *Educational Review*, to the effect that college students no longer care for literature. Both charges stand in need of positive proof; in each case the evil is very likely a local one. We doubt if at Harvard or at Columbia—to take as illustrations two somewhat dissimilar institutions about which accurate information is easily collected—there have at any time been a larger proportion of students or a more effective corps of teachers devoting themselves to the study of precisely what we are told is lacking in our colleges. There are signs, too, that the extraordinary prominence given to the degree of Doctor of Philosophy in connection with the study of literature is everywhere subsiding, and that linguistics and literature, as ends in themselves, are yearly growing more distinct. It is to be hoped also that the Master's degree, with the opportunities it offers for broad literary culture, may steadily increase in favor.

—Directly in line with the reform which Prof. Wilson advocates, and which we think has already, to a great extent, taken place, is a dictum in another fragment from Lowell's papers published in the current number of the *Century* under the title of "The Five Indispensable Authors," *i. e.*, Homer, Dante, Cervantes, Goethe, and Shakspere. The fragment is in itself remarkable, and the very first sentence states with admirable compactness what both the writers referred to above probably had in mind. "The study of literature," it reads, "that it may be fruitful, that it may not result in a mere gathering of names and dates and phrases, must be a study of ideas and not of words, of periods rather than of men, or only of such men as are great enough or individual enough to reflect as much light upon their age as they in turn receive from it." To this ideal, we repeat, our better colleges have almost without exception held true. In the same number Mr. Cole begins a new series of engravings of the works of the Dutch masters, his first choice from which consists of five paintings of Rembrandt and one of Jan Steen. We have also the opening chapters of "Pudd'nhead Wilson," a new story of Missouri life by Mark Twain. Humorous, also, is an "open" letter from a gentleman who seriously proposes that football should be recognized as a part of the college curriculum.

—The chief articles in the Christmas *Harper's* are a description of the "Old Dominion" and one of the House of Commons. In the "Editor's Study" Mr. Warner propounds a curious dogma when he declares that in America the public is as directly responsible for poor literature as it is "for low and degrading theatrical performances or for sensational newspapers," or for a false monetary standard. If literature means the magazines, as Mr. Howells would have us believe, this statement might in a vague way be true. For periodical literature the public may be responsible, in the sense that, if we all stopped buying the magazines, they would probably no longer be published, and the money invested in them would be put into other enterprises. But even in such cases the fault of bad or mediocre literature lies, not at the door of the people at large, but at that of the managers, who, by an adroit balancing of the gains of advertising and the expenses of publication, can, if they choose, tempt a susceptible public with the wares which they cleverly guess will be popular.

—*Scribner's* prints the first half of a long article on Constantinople by Mr. Crawford, Mr. Marquand's account of his search for Della Robbia monuments in Italy, and an unpublished work by Sir Walter Scott. The last, as Mr. Lang's introduction explains, is a collection of letters supposed to have been written in the reign of James I., which Scott amused himself by concocting in 1821. Part of the material, acting on very sensible advice, he worked over into the 'Fortunes of Nigel.' In the "Point of View" a writer criticises, with some show of reason, the part of Mr. Howells's article on the man of letters as a man of business in which he asserts that the prosperity of the man of letters would be much greater if the "great literary periodicals" were entirely literary—that is, if they printed nothing but "pure literature," instead of diverging into divers other kinds of interesting and amusing matter. As the critic observes, scarcely enough literature

of the kind Mr. Howells desires could be got together to fill the fifty volumes, reckoning by ordinary standards, which the magazines in question publish every year.

—"L'Europe féodale: Les Croisades," being the second volume of Lavisse and Rambaud's 'Histoire générale du IVe siècle à nos jours' (Paris: Armand Colin & Cie.), follows hard upon the first, reminding us that serials no longer linger luxuriously through a century, appearing just often enough to keep their memories fresh in the families of subscribers, but are turned out as if by the rapidity and remorseless regularity of a steam lathe. The present volume, which deals with a most interesting period in European development, new and strange, but not lying (from dearth of contemporary documents) in the semi-darkness where true learning languishes and false grows wanton, impresses the reader, like its predecessor, by the neatness of its workmanship and the thorough control of the editors. These men know how to make a good book, and that is a gift rarer even than good scholarship. It is significant that English names and titles, commonly the greatest stumbling-block to French —compositors, let us say, are given in the bibliographical lists with accuracy. Moreover, the lists are well up to date: Green's 'Short History,' for instance, is quoted in the illustrated edition now appearing. The influence of the editors does not stop at form: the book is not only written to scale, but its authors have worked from one point of view, with one aim. It is human character, modified by and modifying historical progression, that attracts all these writers. One-fourth of the book, and that the most attractive portion, is devoted to subjects which directly touch the condition of the people—the feudal system (M. Seignobos), the origin and characteristics of cities, the growth of commerce and industry (MM. Giry and Réville), the state of religion, morality, arts, and sciences (M. Langlois); while the chapters dealing with political and ecclesiastical history take frequent note of social changes. The history of all European countries and of Asia is brought down to the close of the thirteenth century. M. Ch. Seignobos, who writes the chapter on the Crusades, thinks that the fashion of attributing to their influence, direct or indirect, most of the changes taking place in Europe from the eleventh to the thirteenth century is ill-founded.

—An appeal has been issued in England and America on behalf of the Asia Minor Exploration Fund. It is addressed to all interested in the history, antiquities, and geography of Asia Minor. The results obtained during the last twelve years are familiar as embodied in Prof. W. Ramsay's 'Church in the Roman Empire' and in his 'Historical Geography of Asia Minor,' as well as in the acknowledgments made by Prof. Kiepert in publishing his new map of Asia Minor. The recent report by Messrs. Hogarth and Munro on 'Modern and Ancient Roads in Eastern Asia Minor,' articles well known to scholars in the *Journal of Hellenic Studies*, the *Bulletin de Correspondance Hellénique*, the *Ephemeris Epigraphica*, and various supplements to the Latin *Corpus Inscriptionum* published at Berlin, are all of them indications of the kind of work hitherto done and still remaining undone. If a sufficient sum is raised, it is proposed that Prof. Ramsay and Mr. Hogarth should resume the work of exploration in 1894. First there is the unexplored field of the Euphrates valley, where there are doubtless early monuments, as well as plentiful remains of the Roman frontier defences. Towards investigations in Eastern Cappadocia, the Royal Geographical Society has already made a liberal grant. A reëxamination of certain Phrygian districts is also proposed with a view to complete the data for Prof. Ramsay's 'Inland Provinces of Asia Minor.' Furthermore, the Asia Minor Exploration Fund, if the proper support is forthcoming, proposes excavations which, it must be remembered, have rarely been made in Asia Minor. There have been none excepting on the western coast, and not many sites there have been touched. Lystra would be the first site undertaken. Here was the temple of Jupiter, "before the walls," where worship was offered to Paul and Barnabas. Both Lystra and Derbe, an adjacent site, have been satisfactorily identified; they are uninhabited, and thus more promising and less expensive than Antioch or Iconium. In northwestern Cappadocia, at a place called Eyuk, sculptured slabs can be seen protruding from a mound of débris; here would be a second site, and one interesting for the study of the pre-Hellenic period. Tyana is a third place, with its "Semiramis" mound known to Strabo, and with a large surrounding tract which certainly would yield remains of all periods since. Tyana was one of the most interesting centres of religion and government in Asia Minor. To carry out all these explorations $10,000 would be necessary, but $3,700 would cover the Euphrates plan of work, the investigations in Phrygia and excavations at Lystra. Donations may be sent to the Hon. Sec., G. A. Macmillan, Esq., in care of Macmillan & Co., 66 Fifth Avenue, N. Y.

—In view of the proposal several times made to transplant the entire population of Iceland to one of our Western States, a recent Danish account of the extent of the dread disease of leprosy in that country has a special significance for American readers. While leprosy was introduced into both Denmark and Norway, and from the latter into Iceland, in the beginning of the thirteenth century, it died out (in the first) four hundred years later. Norway has three leprosy hospitals, all in Bergen, where the disease is carefully studied by specialists, to relieve the sufferers, and to prevent its further spread. In Iceland no scientific treatment is pursued, and the returns made by the pastors of the different parishes, as a result of personal inquiries only, must be regarded as extremely doubtful and incomplete. These show 128 cases in 1837, 66 in 1847, and 43 in 1872. An attempt is soon to be made, however, to obtain reliable statistics on the subject, a Danish physician, Dr. Ed. Ehlers, having already begun to make preparations to spend next summer in Iceland in order to ascertain the exact condition of the disease there as regards its extent and character. If his anticipations as to its actual extent are realized, the Icelandic transportation scheme will receive a considerable damper.

## THE GREEK HORSE.

*The Art of Horsemanship, by Xenophon.* Translated, with chapters on the Greek riding-horse and with notes, by Morris H. Morgan, Ph.D. Boston: Little, Brown & Co. 1893.

PROF. MORGAN has ingeniously made his book acceptable to widely different classes of readers. He has adorned the treatise of Xenophon with some choice and well-executed illustrations from the antique, adding notes and observations of his own on the Greek horse and the ancient ideal of the horse. Many readers are connoisseurs in the horse who are not connoisseurs in the Greek of Xenophon; and, in fact, this treatise is so sensible, and based on so thorough and sympathetic an acquaintance with the animal it treats of, that it still commands the respect of experts in its main features. No one who looks into the history of horsemanship can afford to neglect it.

Prof. Morgan's commentary and notes will, on the whole, bear the critical eye of horsemen, as his rendering will in general commend itself to the scholar. He notices, among other interesting facts, that the type of horse described by Xenophon corresponds very closely with that which is represented on the Elgin marbles. This is a cobby but spirited and corky creature, with a light and somewhat peculiar carriage of the head and neck. "It is thought by some," says Prof. Morgan, "that Xenophon based his description on these very reliefs, and it is of course possible that they may have served as a sort of guide to his words." Even among these, there are many differences in point of execution; some have faults when judged by Xenophon's canon, and only a few approach perfection. It must be remembered, however, that we have here the handiwork of craftsmen and not of Phidias himself. Prof. Morgan concludes that the horse has been more perfectly represented in modern art than in antiquity; but he warns us that, in this line, no complete work is left of Phidias, and not a trace of the legendary perfections of the painters Micon and Apelles.

The Greek horse was generally smaller than ours and not so tall, yet not so small, proportionately to the rider, as we should infer from the representations of the Parthenon frieze. Here the men are as tall as the horses, or even taller; but this appearance is due to the convention, called *isokephalismos* (misprinted on page 96), which required that in the frieze the heads of the figures should be nearly on a level. The legs of the riders also dangle some distance below the bellies of the horses; but this effect, again, is partly owing to the fact that they could be seen only from some distance below, and that the effect of perspective would alter their apparent length. Making all allowances, however, the evidence of the various works of art proves that the Greek horse was an undersized animal compared with ours, and this evidence is strikingly reinforced by Xenophon's direction, in mounting, "to lay hold of the mane *about the ears*." The size and height, of course, varied, and there is some evidence on Thessalian and Macedonian coins that the breed of these countries was larger than elsewhere. To the Thessalian breed belonged Bucephalas, noted for his size, whose biography is here fully detailed, and whose type, a favorite one in antiquity, is represented in the frontispiece.

As to the ever burning question of clipping manes and tails, Prof. Morgan has a learned dissertation which shows that the practice probably varied, and was more or less a matter of fashion at different periods. Xenophon does not approve of the practice, giving the same pious reasons for his opinion which are generally advanced now by old-fashioned horsemen. The fact that horses' manes were shorn on occasions of mourning (as on the deaths of Pelopidas and Hephæstion) proves, so far, that it was the fashion to retain them in their natural condition. The testimony of works of art might be thought to prove the opposite, for many of these repre-

sentations show us the mane "hogged." But here again the testimony is conflicting, for many vases and friezes show the mane in its natural condition, and, on the Parthenon frieze, only thirty horses out of a hundred have the mane hogged. This may therefore have been, as Mr. Morgan suggests, an old fashion which was just going out in the time of Xenophon.

The notorious temper of Bucephalas was not altogether exceptional. In this matter it is evident that the Greek horse was seldom what our jockeys call "kind." A great many passages prove this incidentally. Xenophon recommends the use of the muzzle regularly when the horse is led out for exercise or for a roll in the sand, and he gives many directions to the groom as to how he may avoid being kicked and bitten in the stable. In battle, too, the horseman is sometimes whimsically spoken of as an object of pity, "being in danger from his horse as well as from the enemy." This shows clearly enough that there was not that comradeship which now exists between the cavalryman and his steed. Generally speaking, the Greek rider did not regard his beast as a friend. This was partly owing to the less humane spirit of the period, partly, perhaps, to the change that has been since wrought by the continued domestication of the horse. No professional, however, could take exception to Xenophon's precepts for managing the horse, which are remarkably enlightened and modern, and may be summed up as follows: Always keep your temper, try to understand your animal, and reward his obedience with kindness. As to winning his affection for its own sake, this is a counsel of perfection more suited to a treatise on ethics than on horsemanship, and to this height Xenophon does not attain. Indeed, it would not always be easy to attain, as stallions were often used in the cavalry. Moreover, the Greeks did not ride for pleasure, as we do; the horse was associated in their minds with the notion of battle and the contests of the hippodrome, and Mr. Morgan suggests that this may be the reason why there was no love lost between horse and rider. Yet, even in battle and in racing, a mutual good understanding is so desirable that it must have existed to some extent. Pindar mentions with pride the victorious "Pherenicus" who ran without whip or goad; and Cimon's famous team of four mares which won the prize for three successive Olympiads, and were the means of restoring their owner from banishment, must have been well and skilfully tended for many years before they received honorable burial not far from their master's tomb.

We find the translation, generally speaking, as transparent as the original, following it with that closeness which the careful scholar is apt to prefer. When it is not transparent, the original is usually to blame. For example, Xenophon's cautions to the buyer of a horse run as follows (p. 24): "The exercise called the volte shows up a hard mouth, and even more the practice of changing the direction. Many horses do not try to run away unless the mouth is hard on the same side with the road for a bolt towards home." This last sentence is rather a hard saying. The excuse for it is the obscurity of the original. We should suggest "unless the homeward way lies on the hard side of the mouth." In the preceding sentence, Xenophon is evidently talking not only of a hard mouth but of an *uneven* mouth, which is the meaning of ἑτερόγναθος. Mr. Morgan explains in his note: "He seems to mean that if, for example, the stable lies to the right, the horse will throw his head to the left, and, advancing his right shoulder, will make a bolt for it. The left rein being loose and the right side of the mouth hard, the rider will have no control over the animal." This explanation is confirmed by the experience of horsemen, and is undoubtedly correct. The following passage is awkward for a different cause: "But you must beware of horses that are naturally shy. The over-timid let no harm come to the ene my from off their backs, and they often throw the rider and bring him into the greatest danger." But here the perplexity arises from the translator's following too closely the Greek idiom, and neglecting those humble particles μέν and δέ. The sense is, "The over-timid horse not only hinders his rider from harming the enemy with his weapons, but often throws him," etc. In a few cases, Mr. Morgan forgets that the strait-laced English requires a statement or a contrast to be definitely expressed, which the Greek simply suggests to the listener or reader. But these rare slips proceed from a failing that leans to virtue's side—the overscrupulousness of the conscientious translator.

The illustrations are selected with great care, rather for the sake of explaining points in Xenophon's treatise than simply for their beauty. They are drawn from the best sources and are exceedingly well executed and faithful to the originals, surpassing, as we can testify, the photographs ordinarily procurable of the same subjects. In this matter, Mr. Morgan is at his strongest, and his special studies in Greek art and antiquities make his remarks on the illustrations particularly valuable and interesting. On the whole, while gracefully disclaiming any originality for his work, he can hardly disguise the fact that he has stored away in it the results of much careful research, without making erudition a burden to his reader. Some points in his interpretation are new and will commend themselves to the judgment of experts. He has produced a compact little volume of about 200 pages, which, while wearing a certain daintiness of holiday attire, deserves to be treasured on the shelves of the connoisseur in horsemanship, or of the amateur in Greek art and literature.

## CABOTIANA.

*John and Sebastian Cabot:* Biographical Notice, with Documents. By Francesco Tarducci. Translated from the Italian by Henry F. Brownson. Detroit: H. F. Brownson. 1893. 8vo, pp. 412.

We are bound to experience a reactionary fervor, following upon the inordinate warmth sometimes used of late in sounding the glories which humanity has reaped from the exploits of Columbus and the Spaniards. We are doubtless to have a flood of discussion next year (1894) on the date of Cabot's discovery, as starting English and Protestant influences on the current of events in American history. Those who believe with Davezac and Tarducci in the year 1494 as being that fateful epoch, and those who are in the majority and find more evidence to make it 1497, will have their tilts. But there are questions more vital. There are those who, like Mr. Clements R. Markham, deem it essential, in defending the fame of Columbus, to make him the discoverer not only of San Salvador, but also of the mainland, and who contend that Cabot, on his first voyage, saw only an island, and not the continent of North America. Warmer still will be the discussion, started already with trenchant vigor by Mr. Charles Francis Adams—to name no others—whether the planting of Spanish Catholics in middle America was at all comparable in gain to humanity to the beginning of English and Protestant influence, which followed upon the doughty indifference of Henry VII. to the papal bull of demarcation. Even such writers as the present translator of Tarducci feel bound to say that "the world is better, nobler, happier for the discovery made by Cabot," and to ask, "Has any real benefit to mankind resulted from the lands south of us?" It is curious, however, to find Mr. Brownson discriminating between the influences that surrounded Columbus and the reflected character of that personage, when he speaks of the horrors of the early rule of the Spaniards at the South, as resulting "against Columbus's will and in spite of all he could do to prevent it." We might expect such a sentence from a blinded enthusiast, Roselly de Lorgues; but it is hardly creditable to one who would translate and edit a book like Tarducci's. Indeed, Mr. Brownson, in his failure to comment upon palpable slips of his Italian original, does not show that he is master of the details of this kind of study.

The orators who are bound to talk about the Cabotian discovery and make the most of their opportunity in contrasting influences at work in the fifteenth century and their outcome, will find that they can study, if they will, a plenty of critical material for their theme. They must remember that the best elucidations are quite recent ones, and not imitate the Oxfordian Payne, who, the other day, in his 'New World Called America,' showed himself so content with Hakluyt that he had never learned that there were two Cabot voyages. If these orators use the book now before us, they will find much at their service; but they will need to discover that neither Tarducci nor his editor knows all the results of late inquiries. Even Biddle must be corrected by the investigations of Charles Deane and of Harrisse, and, moreover, the correctors themselves must be placed in parallel columns. Mr. Markham, in his last work on the subject, in a recent volume published by the Hakluyt Society, found it essential to remember Mr. Deane's services, which neither Tarducci nor his editors seem to have heard of; nor does the Italian writer know, apparently, what the late Dr. J. G. Kohl accomplished except as a few excerpts from his work are quoted by Harrisse.

Students in this field not infrequently have occasion to notice a certain lack of knowledge in Italian writers of what has been done beyond the Alps, and it is perhaps owing in some measure to the deficiency of Italian libraries, particularly in English and American books. Nor are Italian writers quite possessed of the intuition which comes from close acquaintance to enable them to weigh justly these writers of other tongues. One sees this in Tarducci at times, as for instance when Gravier becomes a gospel to him in matters which you could hardly trust a Norman to be sane upon.

Upon two points respecting the great Cabot map Tarducci has opinions about which there is an abundance of controversial writing. One of these is accepting the date of 1494 for the discovery of Cabot, as against 1497, in which he puts himself down in favor of the earlier date and among the minority of critical scholars. The other point is his acceptance of the legend on the map as placing the landfall at Cape Breton Island, in which he is supported by Deane (not so decidedly, however, as by Markham), while Harrisse argues that the legend is fraudulent, and intended to bar the claims of Cartier for the first discovery of the regions about the St. Lawrence Gulf. The dubious character of the map is recognized both

by Deane and by Harrisse; but Tarducci does not seem to comprehend the points of doubt raised by those critics.

Another important question in which there is a contrariety of opinion is as to the personal character of Sebastian Cabot, and the fact of his participation in the discoveries of his father, John Cabot. Biddle made a hero of Sebastian and minimized the part played by the elder Cabot. Henry Stevens, in his quaint way, subtracted the father from the son and left nothing. Harrisse, strange to say, starting in the Stevens grooves—which he is not often inclined to follow—has made Sebastian a scamp, and Markham now tells us that Sebastian was not on the first voyage at all. Tarducci is a pretty good champion for the maligned son. With some of the various mooted questions involved in the career of Sebastian Cabot, Tarducci has done well, and he is somewhat frisky at times when he crosses lances with Harrisse. We may certainly thank him for full references and for printing many of the contemporary documents, or the essential parts of them, and the translator enables us to read them all in English.

The book will reach a revised edition, we have little doubt, and the editor will then have an opportunity to correct the various palpable errors of Tarducci. Why, for instance, should anybody repeat the often-expressed statement that no one at Columbus's death supposed the explorer had reached other than the coast of Asia, in the face of Peter Martyr's asseveration of doubt and the unbelief which appears in some of the contemporary maps? When shall we hear the last of that other statement, that La Cosa drew an uninterrupted coast line from Labrador to South America, when he studiously dodged the question of that continuity by interposing a vignette? It is this blind repetition of stock but unfounded statements that is so annoying to a student, and hardly less disagreeable is the commingling of forms of names, as when the editor of Tarducci eschews Amerigo and italianizes the Latin Americus in "Americo Vespucci."

## CHILDREN'S BOOKS.—III.

Since the tales of Weems, many attempts have been made to make the life of Washington interesting to young readers, but without success. The most recent experiment is embodied in 'The Story of Washington,' by Elizabeth Eggleston Seelye, edited by Edward Eggleston, and illustrated by Allegra Eggleston (Appletons). The compiler has followed closely the writings of Washington, and lightened them by a liberal use of tradition and camp gossip, without lending interest to them, while introducing an element that cannot be gauged by, and in fact is often opposed to, historical evidence. The "story" is a bald narrative of the Revolution, and not a study of Washington, and is pitched in that doubtful key—neither major nor minor—which appeals to neither young nor old. Still, it may serve a purpose.

In Hezekiah Butterworth's 'The Boys of Greenway Court' (Appletons) a story is told of one Harry Mendell, who remained through life under suspicion of telling a lie, but was finally exonerated. Washington was one of the boys at the Court, and his youthful adventures are related in his own and Weems's words. There was material here for a story of historical character—Lord Fairfax, Virginia life in the last century, Washington's surveys and mission to the French fort, negro superstition, Morgan's ride, and a number of other incidents, and Mr. Butterworth has fashioned a tale of some interest. It will, however, not excite curiosity in the reader: it is not history, it is not Virginia, it is not Washington. Any names could be substituted for those of Washington, Lord Fairfax, and Rouzé, and would do as well.

The scene of 'Doing and Daring' (T. Nelson & Sons), by Eleanor Stredder, is laid in the geyser country of New Zealand. An English settler arrives with his four children just on the eve of the terrible volcanic eruption of 1886. Their adventures and hair-breadth escapes form the theme of an entertaining story, which is, however, somewhat overloaded with incidents and at times is hard to follow. There are striking descriptions of the rain of mud and the widespread ruin caused by it, as well as of the efforts of the rescuers of the entombed. The account of the Maoris and their peculiar customs is the least satisfactory part of the book. The principal characters are two boys, the English Edwin and the Maori Whero, who are represented as manly, self-sacrificing, capable lads.

The adventures of Kate Douglas Wiggin's newest heroine ('Polly Oliver's Problem: A Story for Girls,' Houghton, Mifflin & Co.) can hardly fail of the sympathy, not only of younger, but even of older readers, who will be apt to fancy, rightly or wrongly, they detect in them an autobiographical ring. Polly Oliver, portrait or fancy sketch as the case may be, after trials and sorrows of an intimately personal nature, makes a successful venture into a hitherto unexplored tract of activity suited to young ladies endowed with fine imagination, a little skill in music, and a pleasing personality. She is sent, in the first place, by a benevolent lady to tell tales two hours each day in the orphan asylums and Children's Hospital in San Francisco, at a salary of twenty-five dollars a month. The success of this venture is so pronounced that she presently invents the plan of telling stories, illustrated kindergarten fashion, by song and drawing, in a private house to groups of children of wealthy parents, at a charge to each child of five dollars for twenty hours. The details of the plan are all so carefully drawn out that any young girl who chooses to consult the volume may find even the toilets appropriate to the private-house story hours sketched with a *modiste's* skill. As a further development of this pretty scheme, a class for child's-nurses is also hinted at, and visions are thereby evoked of the happy future awaiting infant minds when they have been freed from the terrifying or drivelling inventions of the unaided nursery-maid. There are also some hints for ways of becoming what the charity organization societies put down as "benevolent individuals," such, for instance, as "buying up splendid old trees in the outskirts of certain New England country towns—trees that were in danger of being cut down for wood," or putting stamps on the unstamped letters displayed in post-offices and "sending them spinning on their way." There is undoubted suggestiveness in all this, and to remark that judgment is a necessary ballast to suggestion, is merely to fall into a truism never fresher in the mind than in these days of profuse grafting of the old stock; and since it is so much easier to sit in judgment on all ideas than to suggest a new one of even the smallest value, thanks must always be due to the one who can see her way to the ounce of practicability in the hundredweight of objection.

*The Century Gallery:* Selected Proofs from the *Century Magazine* and *St. Nicholas.* The Century Co. 1893.

This publication is in the form of a portfolio. It contains sixty-four prints on paper of a warm tint, with broad margins, favorable to a display of the artistic quality of the work beyond the possibilities of the original publications, with their limited space and necessity for rapid production. Two of the pictures are from "half-tone" plates, and two from zinc etchings after pen-and-ink drawings; the remainder are from wood-engravings, which range in merit from high to the highest. A merely casual view of this remainder awakens a feeling of gratitude that the art of wood-engraving is still practised somewhere. That it has been given sufficient encouragement to maintain the high standard here shown is a most creditable exhibition of liberality on the part of the publishers, when one considers the patient endurance of the public, and the number of cheap makeshifts which might have been used to effect a saving in cost.

Mr. Timothy Cole, although not first on the list, assumes the place of prime importance on account of the number and standing of his subjects. There are nine of these, mostly after works of great masters. As specimens of engraving they display Mr. Cole's conscientious application of his best ability on all occasions. His utter mastery of his means is particularly brought out in the rendering of the "Madonna and Child" after Botticelli; but he reaches his highest attainment in "The Madonna of the Goldfinch," after Raphael. Here is pure line engraving; no help is derived from the white cross-hatch of the wood-engraver, but delicate graduations in sky tones, drawing of draperies, luminosity of flesh, to the expression of the Madonna's sweet, pensive face, are all reached through the medium of a black line as firm and simple as though engraved on copper, yet with a result much more grateful. Mr. Elbridge Kingsley has four subjects: "Twilight," after Rousseau; "The Setting Sun," after Daubigny; "The Wood-Gatherers," after Corot; and "Under the Greenwood," after Inness. His engraving is in very close sympathy with the views of nature here presented, and it is entirely his own, never suggesting the influence of any other person or school. Mr. J. H. E. Whitney also is represented by four subjects, of characteristic excellence. A female head after Maynard, entitled "Daphne," is very strong in its color relations and the variety of textures suggested; in the "Augustus St. Gaudens," after a painting by Kenyon Cox, the skilful drawing and the color of the original are well kept; and the nicely sustained tremor in the line of the silvery gray tints conveys a pleasure aside from that received from the subject. The same may also be said of the St. Gaudens bas-relief portrait of children, after a drawing by Kenyon Cox; the print is a veritable bas-relief with a beautiful line added, to wonder at and delight in.

Of Thomas Johnson's four subjects the "Head of a Man," after Rembrandt, is very striking, partly by virtue of the subject; but this engraver's feeling for drawing, and differentiation of textures, and manner in which he uses Bewick's white-line in picking out drawing and vivid chiaroscuro, are very painterish. Mr. Henry Wolf, one of the most painstaking and faithful of our engravers, is here represented by five subjects, all of considerable importance. Mr. Frank French has three subjects. In the first of these, "In the Beech Woods," the thoughtful English technique of

Mr. Alfred Parsons is well preserved. Apprehension of the artist's view is the crowning characteristic of Mr. French's work. To see this fully, we have but to pass to the "Izaak Walton," after G. H. Boughton. Sympathetically the treatment has changed its expression to suit the flowery mead wherein good Izaak stands and displays his speckled trophies to two milkmaids. The fluent line so well suited to the rendering of the Parsons is now exchanged for a crisp, free white-line, alive with every suggestion of the lush growth of damp meadows. The entire picture is seriously and studiously treated, but this field of spatterdocks and daisies is delicious. There are five subjects of Mr. William B. Closson's, the best of which are "Sheep Shearers," after Millet, and "The Turkey Pasture," after George Fuller.

Frederick Juengling has a print from "Able to Take Care of Himself," an independent boot-black, after a drawing by William M. Chase. One might almost take it for an engraving by Linton, because of its free use of "pure line." That the subject is not in Juengling's most characteristic manner, may be admitted. Mr. Gustav Kruell has gracefully accepted the mantle of Linton's free line, and with him that Nestor of xylography has no quarrel, for when, in his 'Masters of Wood Engraving,' he takes occasion to belabor the "American development," he puts Kruell out of harm's way by mentioning the fact that he is a German. Now Juengling, a most important figure in that development, was also a German; yet he was severely criticised by Mr. Linton, and in truth the development referred to is mostly American in the sense of its having taken place under American conditions, which seemed to favor it. But above all, an examination of the work of Juengling, Johnson, and Kruell will abundantly show to what an extent the teaching of Mr. Linton's own graver is responsible for a progress in art which he censures. The print by which Kruell is here represented is after a subject by E. H. Blashfield, entitled "His Lordship's Bedtime," in which the influence of his protagonist is very discernible.

Mr. F. S. King has given a very sympathetic rendering of Mrs. Mary Hallock Foote's drawing, called "Looking for Camp," a scene in the Far West, with its hills of solitude and far-away sky. No engraver could have transferred more of the spirit of the original into print than Mr. King has done. In his one other subject, "The Eugénie Verdier Rose," after a photograph from nature, he shows fruitful invention and great skill in manipulation. Mr. Robert Collins has the "Ponte Vecchio, Florence," an exquisite translation into wood-engraving of an etching by Pennell. It is a good lesson in the scope of the art of wood-engraving itself, which speaks in the language of every graphic art. To all but the technical etcher this print conveys the free quality of etching with the added charm of reduction. Mr. Wm. Morse's masterly facility is shown in "St. Paul's from Fleet Street," after Pennell.

We cannot particularize further. There are twenty names in this list, which includes a large proportion of the engravers through whose efforts American wood-engraving has reached its proud eminence, and of whom three, Messrs. Juengling, Morse, and Whitney, are no longer with us. In regard to the printing, comparison may be very favorably made with that of the hand-press artist's-proof. Several of the prints are produced in colored ink, and yet others with a tint, doubtless with a view to avoiding monotony; but it can hardly be maintained that they have benefited by this treatment.

---

*Noah Porter:* A Memorial by Friends. Edited by George S. Merriam. Charles Scribner's Sons. 1893.

It would be a misfortune if this collection of friendly sketches and appreciations should stand in the way of such a biography of Dr. Porter as could easily be written by one skilful in this kind of work. The Rev. Edward A. Smith gives a very pleasant impression of Dr. Porter's manner as a lecturer on theology, its modesty and reserve, so far removed from the dogmatism of the past to which by his affections he was ever closely bound. This was much better calculated to make his pupils think than to impose on them any body of opinion. It is evident that he put forth much more of his strength in the easy conversational talk of his library, where he met his pupils, than in his more formal discourse as a speaker and lecturer or in his books. Mr. Merriam adds at this point some interesting reminiscences. Dr. Porter's doctrine of endless punishment was, like his college discipline, "a rigid code with very mild enforcement." "In short, he maintained that there was everlasting punishment, while he allowed exemption so wide that practically almost every one would escape!" When a pupil asked him, "Suppose a man born so and so, circumstanced so and so, acting thus and thus, how can it be just that he should be subjected to everlasting punishment?" As to each case the answer was promptly given: "Such a man would doubtless not incur the penalty." And when another pupil asked him, "How are we to regard the spiritual prospects of a man like Ralph Waldo Emerson?" Dr. Porter answered, "The Scripture tells us that in every nation he that feareth God and worketh righteousness is accepted with him. I suppose that holds good even in Concord, Mass." He was always more liberal in his practical and personal constructions than in his formal theology. He could be very friendly with the heretics whom he joyed to meet in battle—with Theodore Parker, for example, whose last letter to him is full of tenderness. The date given is July 15, 1859. Evidently from the connection this should be January 15, a few days before Parker left Boston for the West Indies, whence he went to Europe never to return.

Miss Sarah Porter writes all too briefly of her brother's ancestry and youth. Born December 14, 1811, in Farmington, Conn., a place whose habits answered to its name, he had a fair share of industrial education, and his face never outgrew the New England farmer look. Entering Yale in his sixteenth year, he was the smallest and brightest scholar in his class. In the Divinity School he fell in love not only with Dr. Taylor's modified Calvinism—we were damned as much as ever, but not for Adam's sin—but also with his daughter, who came in time to be a grievous invalid, but was always the intellectual and moral companion of his deepest life. The story of his first pastorate at New Milford, Conn., is told in his own words, and they have no special interest except for his adroit avoidance of slavery as a question about which good men might differ and which might therefore be let alone. Like the Boston Unitarian clergyman who waited for God to "turn abolitionist," and was then duly rewarded by a place on the Republican electoral ticket, he was late in coming to the field. He was neither an abolitionist nor a Freesoiler, but joined the Republican party on the eve of victory, and it is written to his credit that the Independents never took him in their snare.

From New Milford he went for a few years to Springfield, Mass.—an important change if for no other reason than that it initiated his connection with the Merriams and opened the way to his editorial work on Webster's 'Dictionary,' through which he probably exerted his most important influence on the culture of his countrymen. His work began with the edition of 1847, and he supervised the great final revision of the 'Dictionary,' and was its salaried editor until his death. In 1846 he went back to New Haven as Clark Professor of Moral Philosophy and Metaphysics. Mr. Merriam's account of this phase of Dr. Porter's life is interesting not only for its bearing on the Doctor's own work, but also for its suggestions of what Yale College was about fifty years ago, when the senior year was spent in happy leisure for the most part, with a single eye to the commencement exercises at the year's end. Dr. Porter was every student's friend. "His manner was like an elder brother's." He found the college professors given over to hearing recitations, and to his conservative temper the need of change did not occur, but it was a method for which he was particularly unfit. He waited so patiently for the answer, he tried so hard to help the stupid and delinquent out, that he had little time for his own exposition. His students were not often strong in study or in recitation. When Dr. McCosh visited his classroom, he said to him afterwards, "Why, Dr. Porter, half the men had their books open behind the seats!" "Oh, well," was the answer, "I am glad to get them to open their books on any terms!" As theological professor he first let the students hear him and then solicited questions, without first fortifying himself from his tobacco-box, as Dr. Taylor had invariably done at this juncture. He was already sixty when, in 1871, he entered on the presidency of the college. His management was eminently conservative, made so less by his distrust of new things than by his optimistic and affectionate attachment to the old. The proposition to change the name of Yale College to Yale University aroused his eager indignation.

Prof. Duncan's outline of Dr. Porter's philosophical system is careful and instructive. The latter was as much opposed to metaphysics as a means of psychological inquiry as Locke or Mill, but equally averse to physiology, save as a kind of foil, a reminder of the absolute incommensurableness of psychological and physiological data. The review of Dr. Porter's ethical system has a special attraction as the work of his pupil, Dr. Rikizo Nakashima, now professor in the University of Tokyo. The substance of his ethical doctrine was that man's cognitive and emotional and voluntary powers are concerned in every moral action, and that there is no special moral faculty to legislate or execute the edicts of morality. But, better than any of these things, and more expressive of Dr. Porter's influence on those who knew him as a teacher or a friend, are the pages which reflect the more personal aspects of his life. The abstractness of his studies took nothing from his humanity, which was ever warm and bright. His personal relations were full of homely pleasantness. Mr. Dean Sage and Rev. J. H. Twichell describe his Adirondack days, and they were not vitiated by Emerson's surprising and uncanny eagerness to kill a deer. He made friends among all sorts and conditions of men, all schools of thought and forms of creed. Dr. Holmes

could write to him of Calvin as "the Genevan turnspit" and be certain of his smile. If he was slow to give up old methods and beliefs, he was eager for new light. He made his own the saying of Clerk Maxwell, "I assert the Right of Trespass on any plot of Holy Ground which any man has set apart to the power of darkness." Fundamentally he was as much a rationalist as Jonathan Edwards or Theodore Parker—a strange but not unwarrantable conjunction of great names.

*A Wild-Sheep Chase:* Notes of a Little Philosophic Journey in Corsica. Translated from the French of Émile Bergerat. Macmillan & Co.

Not a few books, in the translator's hands, get out of their own language but never get into any other; they remain there in a mysterious sort of neutral region, suspended, like Mahomet's coffin, between heaven and earth. M. Bergerat's journey, instead of being "little philosophic," was superabundantly philosophic, in his fashion, so that he may not even care very much about the naïve over-literalisms, as above, that reverse the meaning of his title and aim to blunt his witticisms—aim but do not always succeed, for his points are generally good tangible ones, the humor is often in situations rather than witticisms proper, and, with one language or the other, we understand him. Émile Bergerat belongs with Aurélien Scholl and the rest in that set of out-and-out *boulevardiers* who conceive it their mission to keep alive the old sceptical, devil may-care Gallic gayety; they must continue in popular form the irony of Rabelais and Voltaire, and what Maupassant calls "the prodigious laughter of Molière." Their occupation would seem to be to go everywhere in Paris and have an exceedingly good time, to bring out occasionally a little theatrical piece—Bergerat has produced his at all the theatres, from the Comédie-Française to the Théâtre Libre—to fight an occasional duel, to chat for hours at the more luxurious boulevard cafés, and then to go off and write up a sprightly chronique about it all for some newspaper. They succeed best apparently when they have least to say. This type of man being borne in mind, the character of the new book may be understood without going largely into details. It is the *chroniqueur* gone to Corsica, and he laughs and makes skits about the things there that are unlike his boulevard.

He is evidently a good fellow, and good fellows are in demand. Prince Roland Bonaparte asked him to join him in a little trip to Corsica, and he did so. They had, besides, the Prince's librarian, his secretary, and a photographer It will be remembered that Prince Roland is one of the later scions of his great name, who married a daughter of the proprietor of the Casino of Monte Carlo. The Prince of Monaco devotes himself quite seriously to deep-sea dredging; this other magnate of the roulette dynasty does not go quite so far as that, but it is pleasant to see that he abates the enormity of his ill-gotten millions a trifle at least by taking an interest in 'Colomba.' We are assured that Merimée's charming story was the motive-power of his journey. He went to Corsica, not to revisit the homes of his ancestors—though of course, incidentally, he did that too—but to see how the island had progressed since the time of 'Colomba.' The author, truthfully enough in the main, sums up the result of the inquiry in this way (it is a good example of his lively style of putting things): "Corsica, since the time of 'Colomba,' has progressed as far as—'Colomba.'"

It must not be forgotten that they put their guns on their shoulders, too, and went more or less in search of the moufflon. But this chase for the all but apocryphal animal, about which it is a controversy whether he be not quite as much of a wild goat as a wild sheep, was only a facetious one. They never saw him, but what matters your moufflon, they say, so long as you have the chasing of him? M. Bergerat thought the Government did not really want to abolish the vendetta, "because this romantic nonsense attracts travellers to the island, and consequently brings capital." His own tone towards the gentry outlawed on account of these unpleasant affairs is even more liberal. He would speak of a certain district not as infested by bandits, but as infested rather by gendarmes; and he made interest to go and call on the famous Bellacoscia in his stronghold. A great chance for a writer of the realistic sort was here thrown away; this one giving only the sort of statement that might have been made up—by a vague imagination too—without ever leaving Paris. This was all in 1887, and important things have happened in the island since, which leave the account already somewhat antiquated. Paoli's ruinous house has been restored and made his mausoleum, the old Bellocoscia has been semi-amnestied and deported to the mainland, and escaped again and returned, probably to die in his *maquis* in peace. The railroad has been built across the island, and will probably be a potent factor in putting an end to disorders.

---

*Camp-fires of a Naturalist:* The story of fourteen expeditions after North American mammals, from the field notes of Lewis Lindsay Dyche, A.M., M.S., Professor of Zoology and Curator of Birds and Mammals in the Kansas State University. By Clarence E. Edwords. Illustrated. D. Appleton & Co.

Professor Dyche has passed an interesting life, and his adventures, though not exciting, are full of the romance always associated with out-door activity and the pursuit of wild animals. The son of Western pioneers, nursed by a squaw, pursuing a frontier life without education to the age of sixteen, our naturalist educated himself, and finally attained his present university position. This interesting human document is comprised in a chapter of four pages; the rest of the book is devoted to stories of hunting adventures, told without great art and containing little incident, and much less matter at all instructive to the student of natural history than the book's title would lead one to expect. Prof. Dyche has followed his pioneer instincts and pushed into the deepest woods and most rugged mountains to find his game, led on, if we may judge from what he says, quite as much by a sportsman's instincts as by love for his chosen study. He is evidently a good shot and a good woodsman, and his skill in mounting animals is probably greater than would appear from the accompanying illustrations, presumably taken from specimens of his work. The narrative is written in a rather exaggerated style, which magnifies a thunder-storm into a cloud-burst, and the usual misadventures of camp-life into hardships. A little frontier wit is inserted with scant success, and an attempt made at vernacular which is a distinct failure. Some statements are at least inexact. In speaking of bears the editor makes Dyche say that they do not hibernate in the ordinary sense of the word: "They do not become torpid." Bears certainly do become torpid to a great extent, so much so that it is regarded as no feat by Western hunters and trappers to go into a bear den in winter and kill the occupant. There is a very interesting account of a hunting trip in company with Chippewa Indians, containing a good many suggestions of Indian customs and character.

To sum up, Mr. Edwords may have made the most of his material, but in any case a hunter's field-notes offer a severe test of literary skill as a foundation for a story like this.

---

*L'Ennemi des Lois.* Par Maurice Barrès. Paris. 1893.

Another book by the new light, Maurice Barrès. From behind the stalking-horse of a story, slender, nebulous, unreal, unnatural, unpleasant, and Parisian, intended to be Wilhelm Meister-y in flavor, the author aims to make converts to his social theories, by vague reflections upon laws, upon young ladies of the new intellectual type, upon Russian princesses highly emancipated, upon the French reformers St. Simon and Fourier, upon the German reformers Lassalle and Karl Marx, upon Louis II. of Bavaria, upon dogs as companions and as educators of children, upon vivisection, and upon feeling versus thinking. The book produces an artistic impression, but could not well be feebler. One wonders by what courses the author, after he had once resolved to put forward his ideas, could have managed so to reduce his powers of persuasion below the average of thinking men, or, if there be any people whom he influences, what excessively peculiar persons they must be. The doctrine may be classed as sentimental individualism. The proposition is that the time has come to throw off laws—not merely those which are enforced by the tribunals, but every means by which the ideas of the public are made in any respect to dominate the conduct or ideas of the private individual. Especially, all that is traditional should be broken up. The use of language is not disapproved; still, it is traditional, and those only should teach who cannot speak—that is, the "hairy," and particularly dogs. As all thinking rests more or less upon common notions, individual feeling is much to be preferred to thinking. The conduct of people is to be made social through their sensibilities, but is not to be governed by the public will. The last words of the book are:

"For these persons other egos exist just as much as their own, so that the conditions of others' happiness are at one with the conditions of their own; they crush not the flowers they love to breathe. That they should suffer would lessen their own joy. Their refined sensibility suppresses every immorality."

All this is set forth in exaggerated and shocking language. Yet as the author never says he would carry out the principle to its furthest possible limit, nor ever says how far he proposes to carry it, except that he means to carry it further than we now do, there is really nothing new in the substance of the book, nor anything (except an extravagant tone) but what multitudes of sober-minded people would be quite disposed to admit. The truth is, that the essence of what he wishes to inculcate is nothing but a tone, and that tone he contrives to render as disagreeable and as repugnant to good sense and to good taste as the Enemy of Laws' worst enemy could desire. Excessively one-sided works, vigorously executed, have many times done much good by stimulating reflection. They can never do much harm, be-

cause they convince nobody; they can at most cause those who already entertain the same opinions to speak out. But the present volume can hardly have any effect at all, beyond that of amusing a few people who may like to listen to the praises of Louis II., to analyses of modern libertinism, and to twenty-page dissertations upon St. Simon. The admirers of M. Barrès think him startlingly brilliant and original; his detractors treat him as little better than a vulgar *poseur*. The truth is, he has nothing definitely new to say, but often succeeds in imparting to old ideas a pretty well-emphasized tenor of expression. Here is a specimen or two.

"I say things abruptly, as I feel them. Besides, I agree with everybody who feels anything. No matter for the formulas by which we express our emotion, the important thing is to be warmed by life. If that lady interests herself in what does not interest me, what right or propriety would there be in substituting my feeling for hers?"

"Many of the ideas of St. Simon have filtered into modern Europe: but they have not been improved in their renewal. The industrial system of which he dreamed is just our moneyed society against which the reformers of to-day revolt."

"Clara Pichon-Picard, wonderfully intelligent, saw less accurately into life than the frivolous Marina, who decided all questions under the guidance of a sensuality which is precisely the sense of life."

"They slept, and met in dreams. There was an orchard surrounded by a high hedge, and they walked in procession towards the rising sun, amid children and animals, under the direction of Hairy the Second [a dog], their monitor. All busied themselves with burning their material humors in the open air. To expel the useless, to keep the essential, there lies the whole secret."

"Kennel, stable, hen-house, fish-pond clustered about a peaceful house, a copy of the Museum laboratory [a laboratory of vivisection], but a reversed copy. Here the problem is, not to destroy humble beings for the joy or material benefit of augmenting the sum of knowledge! Here, in an atmosphere purified of all dead ideas, are formed young persons who breathe nothing but what is living, and who develop that new sensibility which the new aspect of the world requires. Yes, here in the open air is a laboratory of sensibility."

---

*The American Girl at College.* By Lida Rose McCabe. Dodd, Mead & Co.

THE writer of these observations and reflections upon girls at college is an optimist. "Eventually a system [of college gymnastics] compatible with the best development of American physique will be evolved, leading to a race like the Greek prototypes," she remarks. Even this is not all. "As these opportunities broaden, fewer bookworms will infest our colleges, and careless or indifferently dressed able women will be numbered among the traditions of the past." The opportunities that promise this delightful consummation are for nothing less than more "social contact with the flower of Boston courtesy," and still more "vital touch with Philadelphia's most exclusive social life." A certain measure of the last-named felicity is said to be already provided for a fortunate few by women of social culture to be found on the "Board of Bryn Mawr." According to the published circulars of Bryn Mawr College, there are as yet no women on its board of trustees, but this is a mere matter of detail. More important to note are the lapses pointed out in the educational system in general. Thus, "when nature has not given a woman taste in dress it is the duty of education to supply it. The college that overlooks it does not discharge its whole duty." Again, "more attention to the speaking of the Continental languages is an imperative need in American education. There is certainly something radically defective in present methods, otherwise greater results would be secured." Moreover, there are "able educators and many laymen" who would eliminate the scientific course entirely from women's colleges. In the meantime, however, the sciences remain, so that the author is able elsewhere to observe tersely that of the classical, scientific, and literary courses at Barnard and other colleges, "the first leads to the degree of Bachelor of Arts, the second to Master of Arts, the trio to Doctor of Philosophy."

It would appear, too, that those captious persons who have been insisting on Harvard's injustice in thus far granting Annex students no more than an insubstantial certificate, or charging Johns Hopkins with interested inconsistency in bidding women to its dissecting-tables while still forbidding them a seat in literary or historical class-rooms, have, after all, been tilting at windmills. Harvard and Johns Hopkins, no less than Yale and the University of Pennsylvania, are here roundly declared to "have opened their degrees to women on equal footing with men, as quickly as the girls developed the disposition and proved the capacity to meet the requirements of the university curriculum." To attribute wrong intentions to the propounder of these airy fabrications would, however, be entirely erroneous. The head and front of her offending is nothing more than a sublime incapacity to understand the alphabet of what she writes about. Ignorance of educational methods and aims is compatible with many virtues, even with some degree of literary skill, though none is discoverable here; the only condition under which it becomes an unpardonable sin is when it exposes itself to the length of a volume.

---

*A Japanese Interior.* By Alice Mabel Bacon, author of 'Japanese Girls and Women.' Boston: Houghton, Mifflin & Co. 1893.

MANKIND, for purposes of travel, may be divided into two classes. There are the selfish, unthinking, fault-finding people, who know no point of view but their own, enjoy being miserable wherever they live, and will pick flaws in the management of heaven if ever they enter its portals. There are also the intelligent, sympathetic, self-contained people, who know something of the variety of human life and can recognize real virtue and real vice in whatever garb it is concealed, who can measure humanity in different lands by universal standards, and not by the Pharisaic tests of their own nation, creed, or clique. To the former belongs one who has this year finished a month's tour in Japan, to whose astounding lucubrations we shall not give an unmerited publicity by mentioning his name in these columns. To the latter belongs Miss Bacon, whose little book is the most real picture we have yet seen in print of Japanese ways as observable by a foreigner. It contains, as her preface intimates, no profound conclusions, no eloquent descriptions, no careful research. But it furnishes what is in this field even rarer than profundity, rhetoric, or research—an unbiassed and lifelike chronicle of all that one may see and hear in a year's sojourn in that most enjoyable of cities, Tokyo. Space would fail if one were to quote the passages in which one meets just the comment or conclusion which the occasion merits. It is enough to say that the returned sojourner from Japan (provided he is somewhere within the circle of the second sort of people above mentioned) will nowhere find pages in which he can live over again with such relish the experiences, pleasant and unpleasant, of his Japanese holiday. If the spirit of the writer could be communicated to all Americans (we do not add "and English," for that would be hopeless) who intend to travel, the sum of the world's happiness would be much increased.

## HENRY HOLT & CO., N. Y.

*JUST FROM THE PRESS.*

## Biography of the English Language.

By ARTHUR MACARTHUR, LL.D., author of Education in its Relation to Manual Industry, Essays, Addresses, etc. 12mo, cloth, 417 pp., $1.50.

The subject of this work is the English Language, and the object is to furnish an account of its rise and progress from the earliest periods of its history. This naturally reaches back to the primeval races from whom the English people sprang, and relates to the manner in which their varied dialects finally merged into our present form of speech.

Comparative Philology is the science of scholars, but a knowledge of our own language can easily be acquired by those who speak it.

The intention is, therefore, to give a plain and popular history of our mother tongue alone, and to set it off with critical remarks and slight biographical sketches of ancient and modern authors who have used it in composing their works.

A table of contents is printed and a general index is added. W. H. LOWDERMILK & CO., Publishers, 1424-1426 F Street, Washington, D. C.

## Heath's Modern Language Texts

## NOTABLE BOOKS FOR HOLIDAY TIME

### Roman and Medieval Art.

(JUST PUBLISHED.)

By Prof. WM. H. GOODYEAR. With 150 illustrations. Library Edition. 12mo, gilt top, $2.00.

Rarely has a more beautifully illustrated volume come from the press. Prof. Goodyear's reputation as an authority and writer upon art is a guarantee of faithful, accurate, and appreciative treatment. The text is richly illustrated with pictures of famous art treasures, several of which are reproductions of early Christian paintings only recently discovered. This Library Edition is printed upon a heavy coated paper, which enhances to a remarkable degree the artistic value of the pictures.

### The Four Georges.

By WM. MAKEPEACE THACKERAY. Price, $3.00.

The text is embellished with decorations, portraits, and vignettes of beautiful design by Mr. George Wharton Edwards. Printed in two colors. Large 8 vo, richly bound in buff and white vellum, stamped in gold, with wide margins, flat back, rough edges, and gilt top.

### Log of a Japanese Journey.

By TSURAYUKI. 12mo, 50 cents.

Translated from the Japanese by Mrs. Flora Best Harris. Twelve original photogravure illustrations by the Japanese artist, Toshio Aoki. Printed and bound in close imitation of the books issued in Yokohama.

### Callias: An Historical Romance.

By ALFRED J. CHURCH, M.A. 12mo, cloth, illustrated, $1.50.

*Callias*, undoubtedly the most important of Mr. Church's writings, is printed originally in the United States, direct from the author's manuscript. The novel is intensely interesting; the plot is not subordinated to the historical and biographical matter.

### All He Knew. A Story.

By JOHN HABBERTON. 12mo, cloth, $1.00.

"Its purpose and spirit, and its practical adaptation to the great spiritual needs of mankind, are so admirable that it deserves to be read and re-read and circulated widely."—*The Congregationalist.*

### The Golden Calf.

By H. H. BOYESEN. 12mo, cloth, $1.00.

Prof. Boyesen has left his favorite Scandinavian scenes to tell a story of modern American life.

"A strong novel containing a story interestingly told with an unmistakable purpose."—*Saturday Spectator.*

### The United States and Foreign Powers.

By W. E. CURTIS. 12mo, $1.00.

Mr. Curtis, a prominent official of the State Department, has prepared a book which treats in a popular way the relations which have existed and are now maintained between the United States and the principal nations of the world. This is a distinct addition to American historical literature, by reason of its compactness and its combination of widely scattered material.

### The Story of Gottlieb.

By Dr. WM. F. WARREN, president of Boston University. 16mo, white vellum, 60 cents.

It describes the struggle of a refined young German for the true ideal of life.

"It is a strong book—strong in its simplicity, its truthfulness, in the impression it makes."—*Presbyterian Observer.*

### The Busy Man's Bible.

By GEORGE W. CABLE. 16mo, cloth, 75 cents.

"It is hoped that this bright and helpful book will have a large circulation."—*National Baptist.*

"An admirable exposition of the way to study and teach the Bible."—*Boston Budget.*

*** *For sale by all booksellers, or sent postpaid on receipt of price by the publishers,*

**FLOOD & VINCENT,**

**The Chautauqua-Century Press, MEADVILLE, PA.**

## Maynard, Merrill & Co.'s Authorized

## Brantwood Edition of Ruskin's Works.

### With Special Introductions by Prof. CHARLES ELIOT NORTON.

This is the only edition published in this country with Mr. Ruskin's consent and from the sale of which he derives a profit. The illustrations have been prepared under the author's personal supervision, and the type, paper, and style of binding are in accordance with his suggestions. Each of the prose works contains a special introduction by Prof. Charles Eliot Norton of Harvard College, explaining the purposes for and the conditions under which it was written. The two volumes of poetry written between the ages of seven and twenty-six, with an appendix of later poems, now first collected from original manuscript and printed sources, are edited in chronological order, with notes, biographical and critical, by Mr. Ruskin's secretary, William G. Collingwood, M.A. The chronological arrangement of the poems—the author's age at the time of writing being printed at the top of each page—illustrates in the most interesting manner the development of his mind and style. The two volumes of poems have been copyrighted in this country under the new law, and the attention of the public is called to the fact that, by virtue of this copyright, we shall hereafter be *the only publishers in this country able to supply Ruskin's works in a uniform style of binding.*

*All English editions of Ruskin now in print are kept in stock or will be imported at short notice.*

*The Literary World, Boston*, says: "In simple elegance this new edition deserves, indeed, to be 'approved by him,' and, with the aid of Professor Norton's introductions, it will undoubtedly commend itself to the taste, as well as to the conscience, of American disciples of the great art critic who has taught our generation so sound a gospel."

*The Publishers would be pleased to send on application a full descriptive circular.*

# CHARLES SCRIBNER'S SONS' NEW BOOKS

## THE ONE I KNEW THE BEST OF ALL

A Memory of the Mind of a Child.

By Mrs. Frances Hodgson Burnett. Richly Illustrated by R. B. Birch. 12mo. $2 00.

"This 'Memory of the Mind of a Child' has the engaging candor and transparency of all sincere autobiography, yet it is revealed with such exquisite delicacy and absence of self-consciousness we forget that the child heroine is Mrs. Burnett *in petto*—Mrs. Kate Douglas Wiggin.

## With Thackeray in America

By Eyre Crowe. With 121 Illustrations. Small 4to, $2.00.

"'Perfectly delightful' is the only descriptive epithet for this volume. Mr. Crowe was Thackeray's secretary and artist in that famous lecture tour of 1852-53, and here we have the daily jottings and off-hand sketches of that time."—*Churchman.*

## SOME ARTISTS AT THE FAIR.

Fully Illustrated by the authors and others. 8vo, $1.25.

The contributors to this volume are F. Hopkinson Smith, Will H. Low, W. Hamilton Gibson, F. D. Millet and J. A. Mitchell, each of whom presents and illustrates his impressions in a characteristic manner.

## MEH LADY

By Thomas Nelson Page.

Illustrated by C. S. Reinhart. Small folio. $1.50.

"No more charming story of the war has been written than 'Meh Lady,' which is quite worthy of the superb holiday edition in which it is now issued. Mr. Reinhart has furnished a series of beautiful and expressive drawings. They have been faultlessly reproduced."—*Boston Beacon.*

## REMBRANDT

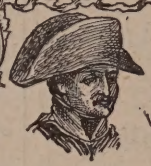
His Life, His Work, and His Time. By Emile Michel. Edited by Frederick Wedmore. Elaborately Illustrated. 2 vols., Royal 8vo, $15.00.

M. Michel's celebrated work is not only a life-like portrait of the man and the artist, but a gallery of reproductions in color, in photogravure, and in black and white, of Rembrandt's finest paintings and etchings. These, to the number of 320, have been selected from public galleries and famous private collections.

## Stories from Scribner

The set, now complete, 6 vols., in a box, 16mo. Illustrated. Paper, $3.00; cloth, $4.50; half calf, $9.00.

"An exquisitely dainty series of little booklets. The tales, selected for republication in this series, are chosen with the greatest care; indeed, they are the second sifting of the grain which has already yielded such rich and abundant returns in the pages of *Scribner's Magazine.* The mounting is unexceptionable."—*Boston Advertiser.*



## JUNOT'S NAPOLEON

With Portraits. 4 vols., crown 8vo, $10.00.

"This new edition of a most vivid and romantic work is worthy of the attention both of the scholar and of the general reader. We have in these volumes an inside view of the home and court life of Napoleon, with pictures of the most distinguished persons of the time. In this new edition no expense nor pains has been spared to make the mechanical execution perfect."—*N. Y. Observer.*

## THE LAND OF POCO TIEMPO.

By C. F. Lummis Illust 8vo, $2 50.

"These sketches are picturesque, poetic, glowing in local color and have a genuine ethnological value showing familiarity with the country, the people, and their traditions."—*Chicago Inter-Ocean.*

## THE BARBARY COAST.

By Dr. Henry M. Field. Illustrated. 8vo, $2.00.

A highly entertaining volume, written in the author's agreeable style, and presenting the results of a journey to many interesting points in Algiers, Tunis, and Tripoli.

## MEN OF ACHIEVEMENT.

Statesmen, by Noah Brooks; Men of Business, by W. O. Stoddard; Explorers and Travellers, by Gen. A. W. Greely; Inventors, by Philip G. Hubert, Jr. 4 vols., each Illust. 8vo, $2.00 *net.*

The volumes are replete with things of interest in type and picture, about the men noticed."—*Brooklyn Eagle.*

## IVAR THE VIKING.

By Paul B. Du Chaillu. 12mo, $1.50.

"The story of a typical Norseman in the third and fourth centuries. The volume is a thrilling and an interesting one."—*Boston Advertiser.*

## CUSTOMS AND FASHIONS IN OLD NEW ENGLAND.

By Mrs. Alice Morse Earle, author of "Sabbath in Puritan New England." 12mo, cloth, $1.25.

"Thanks to her investigation, we may follow the Puritan child from his cradle through his life. There is not one of the chapters which is not full of interest."—*N. Y. Sun.*

## NEW SAINT-AMAND VOLUMES.

**Women of the Valois Court. The Court of Louis XV. The Court of Louis XIV. Last Years of Louis XV.**

Each with numerous portraits. 12mo, $1.25. The set, 4 vols., half calf, $10.00; cloth, $5.00.

"It seems as one reads the successive volumes of Saint Amand, that each is worthier and more interesting than its predecessor."—*Chicago Times.*

## CYCLOPEDIA OF MUSIC AND MUSICIANS.

Edited by J. D. Champlin and W. F. Apthorp. With more than 1000 Illustrations. 3 vols., large 8vo, buckram binding, $15.00 *net.*

"A grand book of reference."—*London Academy.*

## THE WATCHMAKER'S WIFE.

And Other Stories. By Frank R. Stockton. $1.25.

"A delight to the many friends of his previous stories."—*Boston Times.*

## THE CAMEO EDITION.

**Virginibus Puerisque and Other Papers.** By R. L. Stevenson. With etched portrait.
**Letters to Dead Authors.** By Andrew Lang. With etched portrait and four additional letters.

Each 10mo, cl. $1.25; half calf, $2 75; half levant, $3.50. Limited large paper ed., per set, $7.00 *net.*

OTHER BOOKS ARE—"**David Balfour,**" by R. L. Stevenson (12mo, $1.50); "**Windfalls of Observation,**" by E. S. Martin (12mo, $1.25); "**History of French Painting,**" by C. H. Stranahan (8vo, $3.50); "**Sunny Days of Youth,**" by the author of "How to be Happy Though Married" (12mo, $1.25); "**Stelligeri, and Other Essays,**" by Barrett Wendell (16mo, $1.25); "**Sir Joshua Reynolds,**" by Claude Phillips (8vo, $2.50).

# NEW JUVENILES

## MY DARK COMPANIONS

And their Strange Stories. By Henry M. Stanley. With 64 Illustrations. 8vo. $2.00.

From Preface: "The following legends are the choicest and most curious of those that were related to me during seventeen years."

## WESTWARD WITH COLUMBUS.

By Gordon Stables. Illustrated. 12mo. $1.50.

"It tells the story in a vivid, picturesque fashion."—*Christian Register.*

## THE WRECK OF THE GOLDEN FLEECE.

By Robert Leighton. Illustrated. Crown 8vo. $1 50.

"A boy's book of adventure, in which life on the North Sea is vividly described." Hartford *Courant.*

## ROBERT GRANT'S BOOKS FOR BOYS.

**Jack Hall,** and **Jack in the Bush.** Each illustrated. 12mo. $1.25.

"In the above volumes Mr. Grant has shown that he has not forgotten what it is to be and feel like a boy, and that he understands the audience he is addressing. The moral tone of the books is wholesome and the literary quality excellent."—Boston *Courier.*

## NEW STORIES BY G. A. HENTY.

"Probably the most popular writer of boys' books in England today is G. A. Henty."—*Boston Transcript.*

**The Sikh War,** A Tale of the Conquest of the Punjaub.

**St. Bartholomew's Eve,** A Tale of the Huguenot Wars.

**A Jacobite Exile,** Being the Adventures of a Young Englishman in the service of Charles XII of Sweden.

Each crown 8vo. Illustrated. $1.50.

## THE WHITE CONQUERORS.

A Tale of Toltec and Aztec. By Kirk Munroe. Illustrated. Cr. 8vo, $1.25.

"A fascinating volume."—*Boston Beacon.*

## EVENING TALES.

Done into English from the French of Frederic Ortoli by Joel Chandler Harris. 12mo, $1.00.

Charming, new, original fairy tales, having in this free translation the added raciness of Mr. Harris' style.

## THE MAKING OF VIRGINIA

And the Middle Colonies, 1578-1701. By Samuel Adams Drake. Illustrated, 12mo, $1 50.

"A valuable historical study. Well adapted to the wants of the general reader."—*Chicago Herald.*

*** SCRIBNER'S DESCRIPTIVE BULLETIN OF HOLIDAY BOOKS, also ILLUSTRATED LIST OF BOOKS FOR THE YOUNG, containing works by Frances Hodgson Burnett, H. H. Boyesen, Frank R. Stockton, Robert Louis Stevenson, Thomas Nelson Page, Edward Eggleston, Jules Verne, G. A. Henty, and other popular writers, will be sent to any address.

## Charles Scribner's Sons' New Books.

### *A SUMPTUOUS ART WORK.*

### REMBRANDT.

His Life, His Work, and His Time. By EMILE MICHEL. Edited and Prefaced by FREDERICK WEDMORE. With 80 Plates and 300 Reproductions of Rembrandt's Works. 2 vols., royal 8vo, $15.00.

One of the handsomest and most comprehensive works of its kind ever issued. The author is of all living authorities on Rembrandt the one who has the largest experience, the best opportunity of knowing all that can be known of the master's personal history and his career as an artist. Besides giving a vivid portrait of the man as he appeared to his contemporaries, this work reproduces the finest paintings by Rembrandt in the private as well as the public galleries of Europe and England.

"A monumental work. In its present form the book is one for all time It is the most complete survey of the work of a single artist which the world has yet seen."—*Examiner.*

### *NEW JUVENILES.*

ESTES & LAURIAT, Boston, Mass.

# Francis Parkman,

*America's Greatest Historian*

"The characteristics that prove Mr. Parkman to be the first of living American historians, and possibly of all American historians, living or dead, are in this work strikingly manifest."—*The Critic, in a notice of his last work, "A Half Century of Conflict."*

"*His name will live long in human memory.*"—Pres. Eliot, Harvard College.

"*Of all American historians he is the most peculiarly American, and yet he is the broadest and most cosmopolitan.*"—Prof. John Fiske

The Conspiracy of Pontiac was described by Prof. John Fiske as "*one of the most brilliant and fascinating books that has ever been written since the days of Herodotus.*"

"*The completion of this history is an event that should awaken interest wherever historical genius can be appreciated.*"—New York Times.

"*It is to the pages of Mr. Parkman that we must go for the American Indian.*"—GEORGE WILLIAM CURTIS.

The last piece of writing by James Russell Lowell was a tribute to Parkman, afterwards published in *The Century Magazine.*

# PARKMAN'S WORKS.

*An Old Town by the Sea.*

By THOMAS BAILEY ALDRICH. 16mo, $1.00.

A delightful book about Portsmouth, which Mr. Aldrich has immortalized under the name of "Rivermouth."

*The Witness to Immortality in Literature, Philosophy, and Life.*

"A most interesting study of one of the deepest problems of existence," by Rev. Dr. GEORGE A. GORDON of the Old South Church, Boston. 12mo. $1.50.

*Sub-Cœlum: A Sky-Built Human World.*

By A. P. RUSSELL, author of "A Club of One," etc. $1.25.

"A nineteenth century Eutopia, the well-drawn picture of a perfect human society."—*Boston Watchman.*

*A Japanese Interior.*

By ALICE M. BACON, author of "Japanese Girls and Women." 16mo, $1.25.

"The best picture we have seen of the habits, manners, and whole life of this interesting people."—*New York Observer.*

*Prose Idyls.*

By JOHN ALBEE. $1.25.

"Silver-points in prose, one might call them; dainty impressions, delicate allegories, 'poems in prose.'"—Mr. Le Gallienne in *London Star.*

*Tools and the Man.*

By Rev. Dr. WASHINGTON GLADDEN, author of "Applied Christianity," "The Lord's Prayer," and "Who Wrote the Bible." Third edition, $1.25.

"The spirit of Christianity seems to him to possess in its fusion of individualism and altruism, the key to a sane, true solution of the vexing problems in our present industrial structure. The *Review of Reviews* believes heartily not only in Dr. Gladden's purposes, but also in the great value of his work itself."—*Review of Reviews.*

*The Interpretation of Nature.*

By N. S. SHALER, Professor of Geology in Harvard University. Second edition, $1.25.

"The purpose of his volume is noble, and his treatment of the most difficult of subjects a perfectly honest one."—*New York Times.*

*The Story of Malta.*

A graphic account of this famous island by MATURIN M. BALLOU, author of "Equatorial America," "Due West," etc., who made a long visit to the island, studied carefully on the spot the many interesting features of its history, and now tells the engaging story. $1.50.

*Twenty Years at Sea.*

By F. STANHOPE HILL. 16mo, $1.00.

"One of the most fascinating volumes of the season."—*Boston Advertiser.*

## Poetry.

*Mercedes.*

By THOMAS BAILEY ALDRICH, author of "The Sisters' Tragedy," etc. 16mo, $1.00.

Mr. Aldrich's two-act tragedy, produced with signal success last spring in New York.

*Poems.*

By THOMAS WILLIAM PARSONS. 12mo, gilt top, $1.25.

A book of rare poetic value, which is sure to be more prized the better it is known.

*Translation of Dante.*

A wonderfully poetic translation of nearly all of the Divine Comedy, by T. W. PARSONS. With an Introduction by Prof. CHARLES ELIOT NORTON, and a Bibliographical Sketch by LOUISE IMOGEN GUINEY. 12mo, gilt top, $1.50.

*A Roadside Harp.*

A new volume of strong, suggestive, remarkable Poems, by LOUISE IMOGEN GUINEY, author of "The White Sail," etc. Attractively bound. 16mo, gilt top, $1.00.

*Fair Shadow Land.*

A new volume of Poems by EDITH M. THOMAS, one of the most thoughtful and lyrical of living American poets. 16mo, gilt top, $1.25.

*Greek Poets in English Verse.*

Edited by WM. H. APPLETON, Professor in Swarthmore College. 12mo, $1.50.

"To those who do not know the Greek tongue, yet wish to learn something of Greek poetic thought, its depth, richness, and transparent lucidity, we cannot do better than recommend this admirable compilation."—*The Churchman, New York.*

*Horatian Echoes.*

By JOHN O. SARGENT. With a biographical sketch of Mr. Sargent, and an introduction by Dr. HOLMES. 12mo, $1.50.

"Mr. Sargent has raised a monument to his own memory as well as that of his beloved poet."—*R. H. Stoddard.*

*Longfellow's Poetical Works.*

Complete in an entirely new *Cambridge Edition.* With a Biographical Sketch, Notes, Index to first Lines, a Portrait, and an Engraving of Longfellow's Cambridge home. Printed from new plates, large type, on opaque paper, attractively bound. Crown 8vo, gilt top, $2.00.

*Longfellow's Poetical Works.*

*NEW PUBLICATIONS.*

### The Cruise of the "Cormorant";

Or, Treasure-Seekers of the Orient. By ARTHUR LEE KNIGHT, author of "The Rajah of Monkey Island," "Dicky Beaumont," etc. With illustrations by Walter S. Stacey. Crown 8vo, cloth gilt, $1.00.

A healthy, hearty, "up to date" story of perils and dangers encountered by the good yacht *Cormorant*, a yawl of ninety tons, with a plucky commander and crew. Hand-to-hand fighting there is plenty, and breathless scrimmages, captures and escapes; and, withal, plenty of information concerning the Somalis, Kroomen, and Arabs of various denominations. Walter Stacey's illustrations are admirable, and the tone of the book is vigorous and manly.

*Uniform with and a companion volume to "The Romance of Engineering."*

### The Romance of Navigation.

A Brief Record of Maritime Discovery from the Earliest Times to the 19th Century. By HENRY FRITH, author of "The Romance of Engineering," etc. With about 120 illustrations. Crown 8vo, cloth extra, full gilt, $1.50.

### The Steam-Engine User:

A Practical Handbook of the Stationary Steam-Engine in Its Various Forms, with Details of the Boiler and Furnace, Their Appliances and Fittings; of the Engine, with Details of Modern Valve Gear, the Multiple-Cylindered or Compound System of Working, etc. Together with Descriptions and Illustrations of Heat Prime Movers other than the Steam-Engine, such as the Gas-Engine, the Hot-Air and the Petroleum and Spirit-Engines. Edited by ROBERT SCOTT BURN, author of "The Steam-Engine: Its History and Mechanism," etc. With about 130 illustrations. Large crown 8vo, cloth, $2.00.

### Women Writers:

Their Works and Ways. (Second Series.) By CATHERINE J. HAMILTON. With 12 full-page portraits. Crown 8vo, cloth gilt, $1.00.

Modest and unassuming as was the first series of Miss Hamilton's "Women Writers," it achieved an immediate success, which was as complete as it was unusual, and it may be said with confidence that the second series will more than sustain the reputation of the first. Mrs. Hemans, Mrs. Jameson, Fredrika Bremer, Harriet Martineau, "L. E. L.," Mrs. Browning, Mrs. Gaskell, Charlotte Brontë, George Eliot, Adelaide Anne Procter, Miss Alcott, and other women of genius are sketched with rare sympathy and insight in Miss Hamilton's delightful and fascinating pages. The interest of the volume is increased by the numerous excellent portraits.

### A Book of Strange Sins.

By COULSON KERNAHAN, author of "A Dead Man's Diary." Crown 8vo, cloth, $1.00; paper, 50 cents.

From the *Athenæum*, September 2: "'A Book of Strange Sins' is the title of the long-expected work with which Mr. Coulson Kernahan is to follow up the success he achieved three years ago with his 'Dead Man's Diary.' It is to be issued by Messrs. Ward, Lock & Bowden on both sides of the Atlantic in November, and will consist of story studies dealing with different forms of crime or sin. The author anticipates in his preface the charge of morbidness or sensationalism, but denies that he has dwelt unduly upon details."

*Mr. T. P. O'Connor's Series of Brilliant Parliamentary Sketches of the Session of 1893.*

### Sketches in the House.

By T. P. O'CONNOR, M.P. Crown 8vo, paper, 50 cents.

"Mr. T. P. O'Connor's lively and vigorous accounts of the proceedings in Parliament have been reproduced from the London *Weekly Sun*, and are now published in a little volume bearing the title 'Sketches in the House: the Story of the Memorable Session of 1893.' 'Gladstone Olympian wrath,' 'Gladstone a splendid gambler,' 'Balfour limp,' 'Chamberlain abashed,' these quotations from the index smack of the book itself. Their promise is fulfilled in the narrative, in which Mr. T. P. O'Connor's thorough-going sympathy with the great political movement of the day is effervescent."—*New York Herald.*

### Joel Marsh:

An American. By AVERY MACALPINE, author of "A Man's Conscience," etc. 12mo, cloth, gilt, gilt top, $1.00; paper, 50 cents.

"Joel Marsh, as a whimsical American who is a benefactor to his species, and especially to that forlorn member of it, William Eaton, has no superior—perhaps has not even an equal—in the whole range of the humorously pathetic literature of the States."—*The Academy*, (London).

*15 East 12th Street, New York.*

THOMAS NELSON & SONS'

# NEW CHRISTMAS BOOKS.

## The Oxford "Miniature" Shakespeare.

*Superbly Printed on the Famous "Oxford India Paper."*

One of the daintiest and most exquisite specimens of book-making ever produced. In six volumes. Size, 4¾x4⅜, and only 3⅜ inches in thickness.

By the use of the "Oxford India paper" the dimensions have been reduced very much below those of any book containing the same amount of letter-press matter.

At prices from $8.00 to $16.00. Also in one volume, 8vo, at $3.75 and $5.00.

*A New History.*

## Portugal and Its People.

A New History of Portugal and its People. By W. A. SALISBURY. 8vo, cloth extra, illustrated, $1.50.

*A Model Compilation.*

## Torch-Bearers of History.

A Connected Series of Historical Sketches. By AMELIA HUTCHINSON STERLING, M.A. 12mo, cloth, 80 cents.

## Periods of English History.

A New Series of Histories, with Notes on Contemporary History in Scotland and Abroad. Summaries of the Constitution, Glossaries of Historical Terms and Sketch Maps. Edited by W. SCOTT DALGLEISH, M.A., LL.D.

PERIOD I. Mediæval England from the English Settlement to the Reformation (449–1509). 12mo, cloth extra, 80 cents.

PERIOD II. The Reformation and the Revolution (1509–1688). 12mo, cloth extra, 80 cents.

PERIOD III. Great Britain and Ireland (1689–1887). 12mo. cloth extra, 80 cents

*R. M. Ballantyne's New Book for Boys.*

## The Walrus Hunter.

Illustrated. 12mo, cloth extra, cover in colors and gold, $1.50.

## The Forlorn Hope.

By A. L. O. E., author of "The Iron Chain and the Golden," "Beyond the Black Waters," "The Blacksmith of Boniface Lane," etc. 12mo, cloth extra, $1.00.

A tale, written in A. L. O. E.'s charming style, of the anti-slavery movement in America.

## Sketches of Natural History;

Or, Songs of Animal Life. By MARY HOWITT. Illustrated with upwards of one hundred drawings by H. Giacomelli. 12mo, cloth extra, $1.00.

*For sale by all Booksellers, or sent, postpaid, on receipt of price.*

*Send for Catalogue.*

THOMAS NELSON & SONS,

*33 East 17th St., - - - New York.*

# LONGMANS, GREEN, & CO.'S New Publications.

*MR. LANG'S CHRISTMAS BOOK FOR 1893.*

## THE TRUE STORY BOOK.

Edited by ANDREW LANG. With 9 plates and 58 illustrations in the text by H. J. Ford and others. Crown 8vo, cloth, extra, gilt edges. $2.00.

This volume, uniform in style with "The Blue Fairy Book," contains among others the following stories: A Boy Among the Red Indians—Casanova's Escape—The Story of Grace Darling—The "Shannon" and the "Chesapeake"—Captain Snelgrave and the Pirates—The Spartan Three Hundred—The Escape of Cervantes—Baron Trenck—The Kidnapping of the Princes—The Conquest of Montezuma's Empire, etc , etc.

*UNIFORM WITH THE ABOVE.*

**THE BLUE FAIRY BOOK.** Edited by ANDREW LANG. With 8 Plates and 130 Illustrations in the Text by H. J. Ford and G. P. Jacomb Hood. Crown 8vo, cloth, gilt edges, ornamental blue and gold cover, 390 pages, $2.00.

**THE GREEN FAIRY BOOK.** Edited by ANDREW LANG. With 13 Plates and 88 Illustrations in the Text by H. J. Ford. Crown 8vo, cloth, gilt edges, ornamental green and gold cover, 380 pages, $2.00.

**THE RED FAIRY BOOK.** Edited by ANDREW LANG. With 4 Plates and 96 Illustrations in the Text by H. J. Ford and Lancelot Speed. Crown 8vo, cloth, gilt edges, 390 pages, ornamental red and gold cover, $2.00.

**THE BLUE POETRY BOOK.** Edited by ANDREW LANG. With 12 Plates and 88 Illustrations in the Text by H. J. Ford and Lancelot Speed. Crown 8vo, cloth, gilt edges, ornamental blue and gold cover, 371 pages, $2.00.

*** THE BLUE POETRY BOOK may also be had without Illustrations but with Notes, printed on India paper and bound in blue and gold cover designed for an Italian binding of the fifteenth century.

*A NEW FAIRY STORY BY MR. LANG.*

## PRINCE RICARDO OF PANTOUFLIA. Being the Adventures of Prince Prigio's Son.

By ANDREW LANG. Illustrated by Gordon Browne. Crown 8vo, cloth, $1.25.

## THE OUTDOOR WORLD; or, The Young Collector's Handbook.

By W. FURNEAUX, F.R.G.S. With 546 Illustrations, including 16 colored Plates. Crown 8vo, 438 pages, ornamental cover, gilt edges, $2.50.

Part I. ANIMAL LIFE.—Ponds and Streams. Insects and Insect Hunting. The Sea-shore, &c. Reptiles and Reptile Hunting. British Birds, &c. Part II. THE VEGETABLE WORLD.—Seaweeds. Ferns. Wild Flowers, &c. Part III. THE MINERAL WORLD.—Minerals and Fossils.

## THE SACRED CITY OF THE ETHIOPIANS:

### Being a Record of Travel and Research in Abyssinia in 1893.

By J. THEODORE BENT, F.S.A., etc , author of "The Ruined Cities of Mashonaland," etc. With a chapter by Prof. H. D. Müller on the Inscriptions from Yeha and Axsum, and an Appendix on the Morphological Character of the Abyssinians, by T. G. Garson, M.D. With 8 Plates and 65 Illustrations in the Text. 8vo, $5.00.

This volume gives an account of the journey taken by Mr. and Mrs. Theodore Bent into Abyssinia last spring. The chief object of the journey was to examine the archæological remains at Axsum, which has been the sacred city of the Ethiopians since before the Christian era, and a study of the great monoliths there and other features formed the chief object in their work.

## ESKIMO LIFE.

By FRIDTJOF NANSEN, Author of "The First Crossing of Greenland" Translated by William Archer 8vo, with 16 Plates and 15 Illustrations in the Text. $4.00.

An Account of Greenland and the Eskimo, Their Appearance and Dress, The Kaiak and its Appurtenances, Winter-houses, Tents, etc., Cookery and Dainties, Character and Social Conditions, Love and Marriage, Morals, Mental Gifts, Art, Music, etc., Religious Ideas, etc., etc.

"Dr. Nansen, in his account of his memorable journey across Greenland informed his readers that he had made an extended visit among the Eskimo people before his return. This sojourn enabled him to write this charming account of Eskimo life. Dr. Nansen had exceptional opportunities to observe and weigh what he saw. For a whole winter he dwelt with these people, living in their huts, taking part in their hunting, and aiming, so far as he could, to live their life and learn their language."—*N. Y. Times.*

*READY DECEMBER 19.*

## LEONIDAS POLK, Bishop and General.

By WILLIAM M. POLK, M.D., LL.D.

With 9 Maps, 2 full-page Illustrations, and 4 Steel Plates.

In 2 volumes. Crown 8vo, cloth, gilt top, $4.00.

Bishop Polk's father took part in the famous Mecklenburg Declaration of Independence. He himself graduated from West Point, then went into the Church, became Bishop of Louisiana, founded the University of the South, was appointed General in Confederate Army, and was killed in battle at Kenesaw. In telling his life his son has made use of the original letter-books of the Atlanta campaign, on which he throws new light, reproducing the maps made on the field at the time.

## EPOCHS OF AMERICAN HISTORY.

**THE COLONIES, 1492-1750.** By REUBEN G. THWAITES.
**FORMATION OF THE UNION, 1750-1829.** By Professor A. B. HART.
**DIVISION AND REUNION, 1829-1889.** By Professor WOODROW WILSON.

LIBRARY EDITION, printed on large paper and bound in plain cloth, gilt tops. 3 vols., in a box, $4 00.

## A HISTORY OF ST. ANDREWS.

By ANDREW LANG, M.A., Hon. LL.D. St. Andrews, Honorary Fellow of Merton College, Oxford. With 8 Plates and 24 Illustrations in the text by T. Hodge. 8vo, $5.00.

## THE INSPIRED WORD.

Eight Lectures on the Early History and Origin of the Doctrine of Biblical Inspiration. Being the Bampton Lectures for 1893. By the Rev. W. SANDAY, M A , D.D., Dean Ireland's Professor of Exegesis, Fellow of Exeter College, Oxford. 8vo, $5.00.

*Sold by all booksellers. Sent on receipt of price by*

## MACMILLAN & CO., 66 Fifth Avenue, New York.

# The Nation.

NEW YORK, THURSDAY, DECEMBER 14, 1893.

## The Week.

THE discussion in the Senate on Thursday over the failure of the President to keep Congress informed of his acts and instructions in the Hawaiian matter, would have had more weight if the attacks on his reticence had not come mainly from those who avow their desire to see the present provisional government recognized and supported, or at least, let alone, by the United States, and who hold that any interference with this government now by the President will be an "act of war" which should, under the Constitution, be authorized by Congress. But not one word was said in the debate as to what a President should do when an unauthorized act of war has been committed in a foreign country by a representative of the United States, and a legitimate representative government thereby overthrown. This is exactly what has happened in Hawaii. This is clearly a wrong done by the United States. Has the President under the Constitution no power to undo wrongs committed in foreign countries without authority by his officers or agents? Somebody ought to answer this question.

---

It is said, also, that the wrong done in Hawaii ought to have been righted at once, and that it is monstrous now, after ten months, to disturb the established order of things. But the wrong, if a wrong, consisted in the overthrow, with our help, of the government preferred by the majority of the Hawaiian voters. It cannot become a right as long as the majority of the voters have not acquiesced in it. Have they been consulted? Is it the American doctrine that ten months or a year legitimizes a successful usurpation, and that a minority has only to maintain itself in power by force during that period in order to deprive the majority of its rights? Who is the American public man who will become responsible for this doctrine? Any one who has read the history of the Republican party during the last thirty years would expect to see all the leading Republicans in both houses denouncing the President for not settling the Hawaiian trouble by taking a plébiscite in the Islands; but, strange to say, the only voices raised for justice to the men of color are Democratic voices. A plébiscite is the very last thing the Republicans desire.

---

Great amazement is expressed in certain quarters over Ambassador Bayard's remarks about Hawaiian affairs. What he said was, that the President was simply following a policy of magnanimity and justice, and had never thought of interfering by force to set up or put down a government in Honolulu; his main wish being to give the Hawaiian people a chance to determine their own form of government without American dictation. This is spoken of as betraying the "secrets" of the Administration. But what reason has any sane mind had at any time to think that the President intended anything else? All the furious talk about his trampling on the Constitution and shooting down Hawaiian patriots has been purely gratuitous, without a shadow of support in anything he has said or done. In fact, it has been confessedly based upon what he was going to do, the critics being sure that they knew what that was. They showed some signs on Monday of being aware that their unconstitutional action may turn out to be all in their eye, and are already preparing to find a victim in another quarter.

---

Ex-Minister Stevens has all along represented his action in recognizing the provisional government of Hawaii as in perfect harmony with the views of Capt. Wiltse of the *Boston*, "now in his honored grave." But there is an officer of the *Boston* yet in the land of the living, who gave a very different account of the affair to Mr. Blount. Lieut. William Swinburne, recounting the events of January 17, 1893, says that he was present at an interview between Capt. Wiltse and several gentlemen claiming to be the provisional government. They asked for recognition from the captain, but he inquired whether they had possession of the police station or the barracks. They confessed that they had not, as, in fact, their main object in seeking recognition was precisely to enable them to overawe the Queen's troops. "Very well, gentlemen," said Capt. Wiltse, "I cannot recognize you as a *de-facto* government until you have possession of the police station and are prepared to guarantee protection to life and property." This was undoubtedly the correct view, but Stevens regarded it as thoroughly un-American, and himself recognized the conspirators while they were still shivering with dread lest the Queen's 600 well-armed troops should fall upon their 60 raw recruits. Then President Dole thanked Stevens, and asked him to be kind enough to loan him the United States troops for the purpose of storming the police station.

---

Mr. Charles Nordhoff of the *Herald* had a most destructive letter in that journal on Tuesday calling ex-President Harrison's attention to various fatal concealments and perversions in Mr. Stevens's report and that of the Hawaiian commissioners, as brought out by the evidence collected by Mr. Blount. Some of these concealments, as, for instance, the protest of the Queen's minister of foreign affairs against the landing of the troops, are most important. The evidence collected by Mr. Blount ought in fact to have closed the mouths of Stevens and his defenders long ago, but it will not. The manner in which they have conducted this controversy is in truth little short of a national disgrace. From Stevens down it has been impossible from the beginning to get them to discuss the evidence in detail. When he, after a long delay, appeared with a statement, it consisted almost wholly of rather vulgar abuse of Mr. Blount and the Administration.

---

Another matter is not less important. Should Hawaii be annexed, we may be sure it will be a precedent under which other islands—probably West Indian—and other States, inhabited wholly or in large part by a colored population, will be brought into or under the dominion of the Union. It is most needful, therefore, that the political status of these people should be settled now. Are they to be voters who may any day decide a Presidential election, or are they to be subjects to be ruled by proconsuls sent from Washington once in four years in return for campaign work or money? How are they to be made to fit into the time-honored policy of the Republican party with regard to the Southern negroes? What will be the bearing on them of the fifteenth amendment? No more important questions than these have ever been submitted to the American people, and yet not one word in answer to them have we been able to extract from the *Tribune* or any other Republican organ. Nothing comes from them day after day but a dreary and monotonous bow-ow-ow at the President and Mr. Blount.

---

The exportation of $500,000 of gold on Saturday, followed by further shipments on Tuesday, are regarded with indifference in the money market. The fact is that such a movement, under existing conditions, is a sign of health and not of disease. With call money as low as 1½ per cent. here, while it commands 2½ in London and 3 or 4 in Berlin, an exportation of gold is desirable. If the gold is owned by us, we shall get more for its use abroad than could be obtained here. If it is owned by foreigners, we shall no longer be paying interest for something that we cannot employ profitably. These are very ele-

mentary truths. They are properly appreciated now because we are not under apprehensions of a change in the standard of value arising from the purchases of silver by the Government. On the contrary, we are now witnessing large shipments of silver abroad, for which gold would have been required under the régime of the Sherman act; 450,000 ounces of the white metal having gone out on Saturday. Another fact of importance is the increased productiveness of our own gold mines, those of Cripple Creek, Colorado, having risen to $261,000 in October, as compared with $204,000 in September, a gain of 30 per cent.

---

There is an Italian proverb which says that there can be no omelet without the breaking of eggs. The committee on ways and means are learning the truth of this every day. Whenever it is proposed to levy a tax on anything, a lot of people rise up and say that it must not be done, and they make such a "poor mouth" that most people take pity on them and agree that it would be a very bad thing to do. But obviously the Government must have more revenue, and somebody must pay it. The Republicans have been very cunning. They have used up the Treasury surplus, they have abolished from time to time the largest sources of revenue, and have finally swelled the pension list, nearly thirty years after the close of the war, to a figure that equals the cost of the large standing armies of Europe. That is the situation to be faced. It may be unjust, but it will not yield to scolding. It cannot be railed away any more than the seal could be railed from off *Shylock's* bond. The Democratic party must take the risk of imposing some new taxes. Let us see what the Government raised in the way of internal revenue in 1866 *aside* from the tax on manufactures and the tax on incomes. Here is the list:

| | |
|---|---|
| Stamps | $15,044,373 |
| Tax on gross receipts | 11,262,430 |
| Licenses other than liquor and tobacco | 14,011,132 |
| Sales | 4,002,283 |
| Legacies and successions | 1,170,979 |
| Banks, railroads, etc | 12,109,410 |
| Miscellaneous | 4,440,290 |
| | $62,040,907 |

It is safe to say that each one of these sources of revenue would now yield double the amount that it yielded in 1866, with the same rate of taxation. A stamp duty, for example, of the same kind that was imposed then, would now yield $30,000,000. At one-half the *rates* imposed in 1866 it would yield the same amount as then. Or the same amount might be raised by stamps on a smaller number of instruments, as, for example, conveyances of land, mortgages, and shares of stock transferred or created after a certain date. Probably a stamp duty would produce less trouble and encounter less opposition than any other thing that could be devised.

The drift of sentiment among Republicans in Congress regarding the position of their party towards the tariff bill seems to be rather with Senator Hawley in pronouncing for prompt action than with Senator Aldrich in suggesting the consumption of several months in discussion, simply for the wasting of time. Senator Sherman is quoted by the *Herald's* correspondent as saying that he thought a month or six weeks would be time enough for the Senate discussion, although it might run for two months, depending largely upon the course the debate might take, and that there would be no talk for the mere sake of talk. The policy advocated by Senators Sherman and Hawley is so obviously the only rational one, from a party point of view, that it will be quite impossible to secure much support for obstructive proceedings. The bill is surely going through, sooner or later, and nothing in the world is to be gained by making it later. Manufacturers and business men generally are everywhere anxious for promptness in the matter, and if the Republican party should try to prevent this, it would suffer.

---

The Government of Chili has put in a claim for damages for the seizure of the *Itata* by our Government during the Harrison administration. It will be remembered that this vessel was lying at San Diego waiting for a cargo of arms for the Congressionalists; that a deputy marshal, or a person who supposed himself to be such, went on board and seized her, or supposed he had done so, in behalf of the United States, for violation of the neutrality laws; that the commanding officer of the *Itata* put him ashore, took on her cargo of arms and sailed for Chili; that the United States war-vessel *Charleston* was despatched after her, and pursued her to Chilian waters, where she was surrendered by the Chilian authorities; and finally that the United States District Court, in which a libel was filed against her, decided that the *Itata* had not violated our neutrality law or any other law. If the trespass committed by our Government had been committed by a private person, a judgment for damages would have been given against him at once. Whatever loss was incurred by the *Itata* ought to be made good without further delay. Chili paid us $75,000 for a very dubious claim growing out of a street riot in Valparaiso. We ought to show no less readiness in paying a bill which our own courts have declared to be valid in every moral point of view.

---

Kansas and Colorado continue to pay the penalty for their folly in electing Populists as Governors. The Colorado executive persists in his determination to call a special session of the Legislature, which is not needed and can do no good, and which there is no money to pay for; and the people are petitioning the members to adjourn as soon as they meet, as the cheapest way out of the difficulty. The Governor of Kansas last week issued an executive letter to the boards of police commissioners throughout the State, ordering them not to enforce the law for the punishment of vagrants, and paying a warm tribute to the tramp as very likely a Diogenes or a Columbus in disguise. The result is already seen in a rush of tramps into Kansas from all parts of the West. "The army of vagrants," says a Topeka despatch, "are flocking into the State in great numbers. They throng the railroad yards, and boldly demand food and clothing at private residences. Reports of petty thefts and robberies are being received from all parts of the State, but as the officers have been forbidden to make arrests for vagrancy, they are powerless to rid the communities of objectionable characters."

---

This sort of thing is hard on Colorado and Kansas, but it is good for the rest of the country. We have been told for many years that neither of the old parties had any capacity for government, and that what the people needed was a "people's party," which should rule in their interest. As long as the Populists were never tried, their claims were very effective with the unthinking. The farmers of Kansas at last became convinced that the condition of the State would be vastly improved if they tried the promising experiment, but they have already had more than enough of it, and are lamenting that Gov. Lewelling is fastened upon the commonwealth for another year. In Colorado even the mine-owners and workers are so far recovered from their craze as to see that Gov. Waite's policy only means an addition to their burdens. But nothing short of such an experience as that of Kansas and Colorado would ever have convinced the general public that Populism was really so great a humbug. As it is, the whole country now realizes the truth about it, and the organization has no future.

---

The decision of the general term of the Supreme Court at Albany last week upon the conduct of the State Canvassing Board in consummating the theft of the Senate which Hill, Maynard, and Rice had planned, is a most appropriate sequel to the November verdict of the people upon Maynard's conduct. The general term not merely summons the members of the board to appear in court and show cause why they should not be punished for contempt, but it goes over once more the disputed question of the legal status of the Mylod return from Dutchess County, and declares that, whatever else the State

Board of Canvassers had a right to do, it had no right whatever to canvass that as either a legal or a valid return. Yet it was for the purpose of having this return canvassed by the State Board that Messrs. Hill, Maynard, and Rice removed the legal return from the official records of the State. The finding of the general term upon this point is directly in line with the decisions of Judge Cullen in the Emans case, and with the report of the Bar Association upon Maynard's conduct.

---

The excitement over the question of giving Catholic schools a share of the school-fund in this State and in Maryland and New Jersey, where definite proposals have been made looking that way, seems to us unnecessary. With influential Catholics opposed to such a policy, and with a pronounced and almost overwhelming sentiment against it among the non-Catholic population, there is no likelihood whatever of any such measure being successful or even seriously pushed. Its revival just now may be due in part to the hard times, which have undoubtedly made the burden of supporting the parish schools unusually hard to be borne by their patrons. It may also have been taken up, in this State at least, on the theory that the control of the Legislature would rest in quite other hands than those in which the late election placed it. We believe that the American people are ready to consider any fair plan of compromise on the school question such as that proposed by Archbishop Ireland, but that they will never consent to appropriations of public money for Catholic schools—this, not because the schools are Catholic, but because they are sectarian. If the Catholics are entitled to such appropriations, so are the Jews, so is each of the Christian sects, so are the agnostics, and the Christian Scientists, and the Theosophists.

---

The only practical effect of the gathering of the striking Danbury hatters in town meeting to vote themselves $50,000 will probably be the speedy bringing of the absurdity into the courts to have the sawdust let out of it. Meanwhile the incident should afford food for thought to those ardent socialists who look to see the state, when conducting all industry collectively, display heroic virtues and supernatural wisdom. As a writer in a current magazine justly remarks: "The new socialism freely constructs imaginary societies in which every fact of history is deliberately violated. The whole relation of man to things is cast aside, and a new man—a social creature with new instincts—is thrust into being, to enjoy a new relationship to things." What havoc the Danbury hatters make of the theories of such a man as the Oxford don who recently wrote, in a book on the 'Labor Movement':

> "If society were able to control industry and wealth for the good of its own members as a whole, I imagine that the only differences in this respect would be two. First, it would be *only* the incompetent and not also the idle who would be allowed thus to live on the surplus products of other men's industry. Idleness would be regarded as a social pest, to be stamped out like a crime. Secondly, the miscellaneous selection of the incompetent for suitable provision, at present effected by birth, fortune, favoritism, intrigue, quackery, and other means, would be superseded by a more scientific adjustment. All who could work would have to work."

Working simply because one can work! The mad hatters know a trick worth two of that, and vote themselves money out of other people's pockets without a suspicion of the New Era halo anywhere in sight about them.

---

President Patton is reported to have said, in the course of an address at Philadelphia on Tuesday week:

> "All athletics are beneficial to the progress of students with their studies. . . . They sharpen his intellect and give him a stronger mind. The recreation and exercise thus derived enable him to more easily master the difficult problems his studies develop. While athletics are at their height in college, the student never neglects his studies."

We have found it difficult to believe that the president of Princeton used this language, and our doubts were strengthened by the following item in Thursday's budget of football news from Princeton:

> "The team received a communication from the faculty forbidding them to play any more games this year. The faculty are of the opinion that study should take the place of sport after Thanksgiving Day. This necessitates the cancelling of the exhibition game scheduled with the Columbia Athletic Club at Washington next Saturday."

How small the reporter must feel who put all that talk into President Patton's mouth. If his silly inventions had any foundation in fact, the Princeton faculty would urge the football team to play as many games as possible, and to keep it up all winter under cover in the Madison Square Garden, where, in fact, games have been played in cold weather, and in this way develop a set of intellects which would astonish the world by the way they mastered difficult problems.

---

One cannot help feeling sorry for the new cabinet in Italy—Crispi's, it promises to be at this writing. It cannot do much better than the old one, unless it gets rid of the Triple Alliance. It is that which is gradually working the ruin of the Italian kingdom. The drift towards bankruptcy grows stronger every day, because the armaments ashore and afloat which Italy is compelled to maintain under the treaty are wildly out of proportion to her means. She is literally surrendering, for the sake of protection against a remote danger, most of the things which constitute national success and happiness. If her present situation lasts much longer, it will become a question whether she would not have done better to knock under to France years ago, live under her patronage, and take up a position of mere sufferance in the Mediterranean. The national finances are going to ruin; the destruction of public and private credit is destroying the character of public men and bringing parliamentary institutions into utter disrepute with the masses. That there is not more talk of a republic is undoubtedly due to the fact that nobody feels that a republican assembly would be any better than the present parliament.

---

It looks more and more as if France would soon have another war on her hands. This will be unwelcome to her at a time when Siam and Morocco demand such close attention, not to speak of African boundary disputes with Great Britain, Germany, and the Congo Free State, unfinished conquests in Dahomey and the Sudan, an unsettled feeling in Europe, and various complications in her home politics. For years, letters from Madagascar have dwelt on the increasing friction between the government at Antananarivo and the French Resident. By the treaty of 1885 France has charge of the foreign relations of Madagascar, while she has nothing to do with the internal administration of the island. This seemed a new and convenient form of protectorate, a way of keeping off all rivals while quietly waiting for her convenience to pluck the pear, or until it was ripe enough to fall of itself into her lap. From the beginning, however, the arrangement has worked badly, as has a similar one between Italy and Abyssinia. It is hard to say what relates to external affairs and what does not. Such questions as the rights of granting exequaturs to consuls, and of giving large land or mining concessions to foreigners, have led to endless bickerings. The French have tried to make their protectorate as broad as possible; the Hovas, promptly regretting that they ever agreed to such a thing, have wished to minimize it; the English Protestant missionaries, who are a power in the land, and are naturally jealous of French and Catholic influence, have helped to envenom a quarrel that has now reached the point where hostilities may break out any day. The Hovas can perhaps bring into the field 50,000 men, more or less well armed and disciplined. They will be no match for European soldiers, but the country, with its dense vegetation and total lack of roads or navigable rivers, is admirably suited to prolonged guerilla warfare, entailing on the invader serious loss besides great weariness and expense. England will look on jealously and disapprovingly, though, as she recognized the French protectorate in 1890, it is difficult to see on what grounds she can interfere.

*THE EXPLOSION IN PARIS.*

THE explosion in the Chamber of Deputies in Paris is another of the acts of the war on society in which the lowest grade of the socialists are engaged. For it must be remembered that there is no distinction worth mention between the anarchists and the Continental socialists. It is true that the anarchists, properly so called, profess not to believe in the necessity of any government whatever. But the number who hold this opinion sincerely is probably very small indeed. The great majority of anarchists are simply socialists who think they can hasten the socialist millennium by violent means—that is, by frightening the bougeoisie with bombs; and the socialist millennium consists in the possession by "the state" of all the instruments of production, and the constant supply of employment and comfortable subsistence to everybody. The Paris *Temps* recently pointed out, in proof of this, that none of the socialist writers or orators in France ever pass out-and-out condemnation on bomb-throwing. They call it, at most, a mistake, not because it is inhuman or unjust, but because it prejudices the public against the socialist cause. The anarchists have good reason to slaughter their enemies, but they are unwise in doing it.

We fear we must be prepared for many more outrages of the same sort as long as the socialist craze lasts, and it will probably not die out without the trial of experiments which will do serious injury to our civilization. It is gaining ground in nearly every civilized country, and it cannot gain ground without calling into existence a large fringe of desperate and broken men who used to be considered, and to consider themselves, criminals or pariahs, but who now assume the rank and functions of the apostles of the new gospel. The examination of several anarchists in France shows how easy it is nowadays for a half-crazy fellow out of work to look on himself as a martyr in a great cause, and every man with a good coat on his back as one of his persecutors.

The causes of the spread of socialism are many and various. The chief, doubtless, are the extension of universal suffrage and of the art of reading among vast bodies of poor and really ignorant people, the increased facilities of communication between the workingmen of different countries, and the growing force of the principle of equality, which lies at the bottom of all democracy, and which, as Tocqueville pointed out in 1851, after levelling all other distinctions, is beginning to rage against distinctions based on property. Socialist opinions, like religious opinions, of course, take their tone and temper very much from the medium through which they pass. Among the philanthropists and ethical philosophers they make a mild form of human brotherhood, a sort of sublimated Christianity; but, down among the lower class of untaught workers, they become as fierce a fanaticism as ever offered an infidel the choice between the Koran and the sword.

But no analysis of the causes of the movement would be either complete or accurate which did not give a high place among them to the talk of the clergy, of the new political economists, and of the philanthropic public generally, on social topics. The behavior of these more or less instructed bodies at this juncture recalls irresistibly the way the French aristocracy before the Revolution played with the new ideas which were before long to cut their throats and confiscate their property. The clergy are almost everywhere seeking to retain their hold on the masses by taking up sympathy with the poor and intercourse with them as a sort of religious duty, and in doing so flatter them with preposterous accounts of what the community can and ought to do to make amends for "pangs of nature, sins of will, defects of doubt, and taints of blood."

Still more helpful to the socialists are the labors of the new school of political economists. The outgivings of these gentlemen are all treated in the socialist camp as confessions of guilt and proposals to surrender on the part of the "capitalistic" class and the well-to-do world generally. What name to give to their political economy it would be hard to say. The older political economy, founded by Adam Smith and extended by Ricardo and others, confined itself strictly to describing the manner in which the human mind plays on the various phenomena of trade and commerce. One can easily see here the possibilities of a genuine science. All that these economists had to say to the legislature was, "If you do so and so, such and such things will happen; the explanation of this and that phenomenon which puzzles you is this and this." To the new school this modest rôle is mere foolishness. Each professor is an economist, legislator, and preacher of righteousness all in one. He cannot write about value without getting hold of a "germ of ethical implication," or about cost without "taking up a concept into his ethical consciousness." One of their most distinguished text-writers, Prof. Marshall, lays it down that "the inquiry whether poverty is necessary" is "what gives its highest interest to economic science," and of course "economic science" decides with Dr. McGlynn that poverty is not necessary; that different social arrangements would banish it, no matter what demand the human race made on the produce of the earth, and no matter what kind of character men brought to the process of earning a living. The same authority says that political economy "is, on its more important side, the study of man," which makes it include almost everything which can in the slightest degree affect the condition of the race, and makes its professors the equals at least of Comte's corps of philosophers. Hence, as might be expected, "school" succeeds "school," each trying to outdo the other in inventing new distinctions about value, and cost of production, and rent, and the pains of labor, but all promising the workingmen, and the poor generally, a glorious future—when "the state" really takes their case in hand.

With real men of science this new political economy is falling into the contempt which long ago overtook theology and metaphysics; that is, they set it down as merely a collection of the opinions of all sorts of people, who cannot be called to account, and whose predictions there is no means of verifying. But with the socialistic poor it meets with a very different reception. It satisfies them that they are right in believing that society has for long ages been cheating and oppressing them, that the existing social organization is vicious and tyrannical, and that it is the duty of "the state" to take care of them. When professors in colleges, sprung from the capitalistic class and armed with all the learning of the Egyptians, talk in this way, all further discussion seems unnecessary. It only remains to get possession of the government in order to banish poverty; and any means which seems likely to frighten the well-to-do into capitulation seems lawful.

The mischief these various bodies do among the laboring class is worked mainly by spreading false ideas of the state and false ideas of human nature. For their talk about "the state" there is no excuse. They know well that the state cannot be in our time any abler, wiser, or more honest than the majority of the people who compose it, and would certainly be less so, and that any state in our day which was armed with control of the property of the community would simply be a sink of corruption, of which decent people would soon rid themselves by force of arms. Fancy Gilroy and Croker in possession of the "instruments of production" in New York city, and Flower, Hill, and "Billy" Sheehan in the State at large; how long would the working classes escape "precariousness of employment, of livelihood, of support for old age, and of freedom from employers' dictation," which one of the economical philosophers sets down among the crying evils of our time? Even if we escaped such worthies as these, where would the State get the talent and honesty necessary for any such a vast scheme of administration? Everybody knows that the working class does not contain it, any more than the middle class, in any country in the world. Venal and lazy leaders abound among the working classes, and there

is hardly a corporation in the world today which is not suffering or has not suffered from the folly or dishonesty of its managers. The régime of individualism and competition undoubtedly has its evils, but they are trifles compared to the probable evils of state socialism, and they diminish in proportion to the improvement of individuals in character and intelligence, and in no other way can or will diminish.

The false ideas of human nature which the economists diffuse consist in their ignoring the gravest fact in the history of the race, the desire of man to live on his fellow-man, in a greater or less degree—that is, to impose on some one else the cares, the labor, and burdens of life which properly belong to him only. It is this trait of human nature which has made government, laws, military discipline, philosophy, and religion necessary all the world over. Our whole civilization is based on a recognition of it. If the lazy, the selfish, the shirks, and the incompetent were allowed to have their way, it would not last two years. It is only the élite of the race who are exempt from the trait in question. Even people who would not steal for worlds are quite capable of letting other people do their work and bear their burdens. What keeps humanity at all up to the mark is the embodiment in the jurisprudence and philosophy of every civilized people of the apostolic precept that the man who will not work shall not eat. In other words, the fear of poverty is one of the greatest supports of our morality.

### *WHAT IS THE REMEDY?*

It is not now denied on any side that the *de-facto* government of Hawaii is a government set up by violence, with the aid of the American minister and of American troops, for the sole purpose of transferring the country to a foreign power, that power being the United States. President Harrison accepted this transfer in hot haste. President Cleveland has rejected it pending investigation, partly because the acceptance of it would be a reversal of the policy of the Government touching the annexation of foreign islands, and partly because he thinks the dethronement of the Queen a "wrong" done to a friendly government. In the meantime he has done what any rational man, one would say, ought to do under the circumstances, in sending the best man he could find to inquire and report. This man has reported, and the report confirms the opinion that the revolution was in the main the work of the United States minister. This is as far as the President has gone. The abuse he is receiving for his instructions to Willis assumes that he has ordered Willis to restore the Queen by force, but this is very unlikely. Anyhow, nobody knows as yet what Willis's mission is.

The affair may now be said to have passed out of the President's hands into those of Congress. Congress has now to act in the matter. It can do one of three things—recognize the provisional government as the permanent and lawful government of the country, and leave it to take care of itself; give President Dole notice to quit and restore the Queen; or, take the vote of the registered electors as to the kind of government they will have and recognize and protect *that*. Now the country is waiting to hear which of these policies Congress will adopt. As yet we have no indication of what the choice will be.

As regards the first, it will be observed that it would, if adopted, be an avowal that we had no remedy for the wrongdoing of one of our agents in a foreign country; that no matter how much his conduct might be condemned by his superiors, we had no choice but to accept the consequences of it. There is no doubt that the situation is one of great difficulty. We can recall no case like Stevens's except the dethronement of King Kamehameha by Lord George Paulet. But Paulet did not set up a government of his own, and he was promptly disavowed by his admiral. There have been cases, too, where a foreign minister has connived at and encouraged revolution in the country to which he is accredited, but no case that we know of where he has himself made the revolution—that is, no case in which the revolution could not have succeeded without his aid. In this absence of precedent Congress will have to make one for itself, and it will be not only a contribution to international law, but a rule of our diplomatic service. It can hardly be that the Congress of a Christian nation will confess that it has no remedy for the wrongdoing of its own agents. The law of nature ought to be drawn on here by some of our jurists as it was in the case of the seals.

As regards the second, the objection is made that it would be "declaring war" on President Dole, who is, according to one theory, a lawful government in good and regular standing. But it is to be observed that Dole does not claim this character for himself. He is, according to his own showing, only a provisional president pending the annexation of his country to the United States. Now, should Congress refuse to annex, would not the refusal operate as the service on Dole of a notice to quit? It seems to us that when his annexation scheme fails, he is *functus officio*, and ought to retire, and it would then be our duty to keep order until the Queen returned to possession. Anyhow, the "war" on him would never be anything more serious than writing him a note, and it is confusing counsel to talk or think of him as a national belligerent. About the restoration of the Queen we express no opinion. It is, however, to be observed that she has never been heard in her own defence, that extraordinary pains were taken to prevent her being heard, and that her character is now being blackened all over the country on mere rumor. The very same people who are maintaining that Dole is entitled to all the rights, privileges, and immunities of a lawful government in the forum of international law, are loudly proclaiming the right of the United States to dethrone queens for immorality. But both positions cannot be sound. If we have a right to depose the Queen for unchastity, we surely have the right to kick Dole out for illegality. Let us add that stories about immorality coming from missionaries and from enemies about either man or woman should be received with great caution. It is a matter on which missionaries and clergymen and women generally are exceedingly credulous. Moreover, we find from the evidence in Blount's report that no white ladies in Honolulu refused the Queen's invitations to the palace, and all were glad to get them.

The third policy, the taking of a popular vote, we should have said a year ago, was the truly American policy, and the one which Congress, in circumstances like these, would be pretty sure to adopt. We supposed, a year ago, that the policy of allowing a handful of white traders to set up a government without consulting the main body of the people, anywhere within the radius of United States influence, would be strongly condemned by both parties, and especially by the Republican party. And, above all, we never expected to see the Republican party arrayed against a popular vote on account of the color of the bulk of the voters, seeing that it was it which embodied in our own Constitution that famous clause which says that the right to vote "shall not be denied or abridged by the United States, *or any State*, on account of race, color, or previous condition of servitude."

### *AN ABANDONED POSITION.*

By an act of Congress, approved July 27, 1868, it was declared that "the right of expatriation is a natural and inherent right of all people, indispensable to the enjoyment of the rights of life, liberty, and the pursuit of happiness," and that "any declaration, instruction, opinion, order, or decision of any officer of this government which denies, restricts, impairs, or questions the right of expatriation, is . . . inconsistent with the fundamental principles of the republic." These declarations, which were foreshadowed in the fifteenth section of the Free Soil platform of 1852, were worked into the revised statutes. They mark the first formal and complete adoption by the Government of the United States of the principle of voluntary expatriation,

Prior to their promulgation, differences of opinion had been disclosed in the expressions of our secretaries of state as to how far it was permissible to intervene in behalf of a naturalized citizen abroad, especially within the jurisdiction of his original country, if he voluntarily returned to it; and in several well-known cases our courts, following the doctrine of the English common law, had held that natural allegiance could not be shaken off without the consent of the sovereign. With one vociferous breath the act of 1868 swept all these doubts and differences away. Since expatriation was a natural and inherent right of all people, the naturalized citizen should (the act proceeded to declare) be entitled to receive the same protection as the native citizen, everywhere and under all circumstances. The country of his origin, if he saw fit to return to it, could no longer claim his allegiance, but must accord to him the same rights and immunities as belonged to the native citizen of the United States. Such was the position expressly assumed by the United States in the act in question, though no attempt has been made to impress it by other means than argument on governments like Italy and Russia, which do not recognize the right of their subjects to expatriate themselves without their consent.

The circumstances in which the act of 1868 originated were somewhat ridiculous, but it is not necessary now to narrate them. Nevertheless, that year was a notable one in the history of expatriation. Prior to the passage of the act, naturalization treaties were concluded by George Bancroft with various German states, including the North German confederation, and negotiations for similar treaties with other powers were begun. But of all the treaties of the year, the most remarkable in its declarations respecting expatriation was that with China, commonly known as the Burlingame treaty. According to the terms of her penal code, China had apparently treated the renunciation of her allegiance as a capital offence. By article 5 of the Burlingame treaty it was declared, in the very substance of the act of Congress: "The United States of America and the Emperor of China cordially recognize the inherent and inalienable right of man to change his home and allegiance." This declaration was absolutely unqualified, going in this respect beyond the stipulations of any other treaty.

The right of expatriation is the "right of man to change his home and allegiance." It comprehends both emigration and naturalization. It necessarily involves the right to leave one country and enter another, and the right to transfer allegiance from the former to the latter. It belongs equally to all races, and to men of all occupations not criminal or injurious to society. It is, as the Burlingame treaty declares, a "right of man," or, as the act of Congress expresses it, a "right of all people." Hence any law or rule of governmental action that abridges this "right of man," or "right of all people," to make a voluntary choice of home and allegiance, necessarily denies, restricts, and impairs the right of expatriation. If it be true that the right of expatriation is a natural and inherent right, it is not possible to deny to one government the power to forbid emigration and renunciation of allegiance, and to concede to another government the power to forbid immigration and the acquisition of allegiance. The two things are strictly correlative. The right of expatriation, as a natural and inherent right of the man as distinguished from the citizen, is as clearly denied and discredited by the government that refuses admission and naturalization to the foreigner, as by the government that refuses emigration and renunciation of allegiance to the subject.

While the truth of these propositions should seem to be self-evident, it does not appear to have been appreciated in the United States. In the correspondence of the Department of State even during the last ten years constant references may be found to the act of 1868 as a valid and subsisting law, binding in the full extent of its declarations on all officers of the Government. In reality it may easily be shown that, as the result of positive legislation which has been sustained by the decisions of our courts, the position we assumed in 1868 has been abandoned, and that the act of that year can no longer be considered as in force.

In 1875 Congress passed an act forbidding the immigration of persons under contract to labor. The right to enter into contracts to labor is inseparable from the right to labor, and is fundamental. It lies at the foundation of all organized society. The act of 1875 was designed to exclude not only immigrants who were not in themselves desirable, but also those who, in the exercise of the "natural and inherent right" to labor, might become competitors of laborers already here. It was an abridgment, for certain local purposes, of the paramount right of the individual to expatriate himself.

But it was three years later that our repudiation of the declarations of 1868, and perhaps their insincerity also, began to be demonstrated directly and comprehensively. In 1878 a Chinaman named Ah Yup presented a petition to Judge Sawyer, in the Circuit Court of the United States for the district of California, praying to be admitted to citizenship. His petition was denied, because an examination of our statutes disclosed the fact that they authorized the naturalization only of "white persons" and of persons of the African race—the extremes of color—and thus excluded all races of an intermediate hue, whether American red, Malayan brown, or Mongolian yellow. It further appeared that this state of the law was not the result of accident, but of design, and that the sweeping denial of change of allegiance, so far as we were able to deny it, to a large part of the people of the globe, was deliberately inserted only two years after the blast of 1868. Nor did we stop here. As some of our courts, either from ignorance of the law or from color blindness, did not observe the limitations of the statute, which still exist, Congress in 1882 enacted that no Chinese person should be naturalized, and thus specifically excluded that race from the enjoyment in the United States of the right of expatriation—that "natural and inherent right of all people."

Having denied the right of expatriation in respect to change of allegiance, by refusing citizenship to races neither white nor black, and to Chinese in particular, we have as completely denied it in its other aspect—that of change of home. Omitting from further consideration the contract-labor law, it is obvious that the whole course of our legislation in respect to the Chinese since 1880, including statutes passed in accordance with treaties as well as those enacted in violation of them, has involved an absolute denial of the right of expatriation as promulgated in the act of 1868. Adopting the disposition and ability to work with the hands as the rule of our proscription, we have not only forbidden Chinese laborers to come to us, but we have asked their Government to coöperate with us in keeping them at home.

As it appears that the act of 1868 was long ago implicitly repealed by inconsistent legislation, and as its principles are daily repudiated by us in practice, ought not our Government, in a spirit of fairness and of decent self-respect, to cease to hold it up as a reproof and a threat to other powers?

---

*THE ACTUAL COLLEGE YEAR.*

ONE of the first lessons forced home upon the student of government and social institutions is the need of going behind written constitutions and declarations to arrive at actual practice. The Constitution of the United States would be a blind guide to any foreigner who should undertake to derive from it the real place and functions of Presidential electors. Churches have their formal charters and laws, their provisions for worship and administration; yet how much of the vital life of a modern church is not written down in any of these formularies! Nowhere can one find described in ecclesiastical canons the sewing societies and receptions and

sociables and amateur theatricals and young people's meetings and excursions and picnics and Christmas festivals which make up so large a part of the actual life of a church at the present. It is necessary to go back of anything you can find put down in books and get at the real mental attitude of real church people, before you can understand how much of the attraction of the church for them lies in such things as have been mentioned.

The same principle holds of the life of a college. You will not find it, or, at least, cannot be at all sure you have found it, in the college catalogues and reports of trustees or examining boards. There you may indeed get the theory, but the practice you must look for in the ideas and ideals of the young men actually in the college or looking forward to being in it. The undergraduate college paper is a far better witness to summon than the college catalogue. The staple talk of college students in their rooms and in public places and at their homes, the pictures they hang on their walls, the ambitions with which boys in preparatory schools anticipate entrance upon their college course, the real heroes of college life, the predominant interests which student correspondents of newspapers show they think the public most associate with colleges—all these sorts of evidence are of far greater weight in settling the real order of importance of the various phenomena of college life than any catalogue or report that was ever printed.

Now what, we ask, would any unprejudiced inquirer, making use of those classes of evidence, conclude to be the greater, and what the lesser, events in the modern college year? We think it to be beyond question that he would find athletic days to be the great and high days of the year, and that the average college student of the present day would graduate the attractions of his scholastic year something as follows: (1) Football, (2) baseball, (3) track athletics, (4) rowing, (5) tennis, (6) secret societies, (7) junior exhibition, (8) class-day, (9) library and reading-room, (10) "getting through" and taking his degree, (11) possibility of coming back as graduate "coach" to one of the teams.

The public has now a pretty fair inkling of the predominance of athletics in colleges, but a full perception of the truth can be had only by one actually on the inside. What the public sees is the few great spectacular games, but it knows little or nothing of the long preparation for them going on through months, or of the absorption of undergraduate attention in them both before and after the event. Football has been well in evidence for two months past, and everybody has seen how impossible it was for the members of the principal teams to give thought to anything but the game. We have perfectly authentic evidence that one Yale player, from the opening of the term late in September up to Thanksgiving, could give no more than an hour a day to his studies, after attending to his main duty of training and practising. And it should be understood that this thing is no longer confined to the fall months. Capt. Waters had the brilliant idea of starting the Harvard team training last June; and he had the men at Bar Harbor and Sorrento and elsewhere. Of course, Capt. Hinkey and Capt. Trenchard could not see themselves handicapped in that way, and they, too, called their men to various retired places and put them at work at intervals through the summer. Logically, there is no room for stopping at any time, and, if the thing keeps on, the team will not go "out of training" at all, but will begin immediately after the Thanksgiving game to make a new start for glory.

Even without this the college in winter is a vast camp of men "in training" for something. The crew are hard at work at the weights and on the "tank." The candidates for the nine are to be seen at all hours in the "cage." The aspirants for the Mott Haven games are getting up their wind and their muscle night and day. It is actually a fact that a student who is not "in training" for some athletic contest, unless plainly disabled physically, feels called upon to make an apology for proposing to do nothing for the honor of his class or college.

Before any objector charges this account with exaggeration, let him note that we predicate it only of the average student. We know that there are many exceptions, and that the professors and writers and successful professional men of the future are in college for study just as their fathers were before them. But we also know that the scholastic ideal now gives the first place to the athletic ideal, that the true college hero of the present, in college and out, is the college athlete. We do not know, but we fear, that college faculties are not acting up to their convictions in the matter of regulating athletics—that they make the rivalry of colleges an excuse for not doing what they really believe ought to be done. What is certain is, that, against their convictions or with them, the historic and rational idea of an educational institution has been turned upside down.

## SARDOU'S "MADAME SANS-GÊNE."

PARIS, November 27, 1893.

M. VICTORIEN SARDOU may be called the most fortunate of our modern dramatists. He abandons all pretensions to the dignity of a moralist; he does not profess to give us lessons or to analyze human passions; he does not even say, "Castigo ridendo mores." He does not, above all, belong to the gloomy psychological school, which delights in exposing the worst parts of human nature. I speak not of his earliest and lightest works, some of which were not devoid of a slight moralizing tendency. In his later years, Sardou has adopted a theatrical form which consists in making of a very simple and sometimes almost commonplace drama the pretext for the reconstitution of a period, of a society, of what Taine would have called a *milieu*. In "Patrie" this tendency began to appear, but the drama still has some importance; we are taken to the Low Countries and participate in the struggle of oppressors and oppressed. Since "Patrie," Sardou has given less importance to the dramatic part of his works and more and more importance to what I must call the operatic or picturesque part. To this end he has become a passionate collector of engravings, of *bibelots*, of old costumes, old furniture, tapestries, arms, etc. The collector has conquered the dramatist; the *milieu* has become the chief preoccupation of the writer. His *dramatis personæ* are hardly ever left to themselves: they move, and move rapidly, surrounded by a multitude of men. In "Theodora" we are taken to the circus; in "Cleopatra" we see numberless Romans, Greeks, and Egyptians; the "Tosca" belongs to the same order of operatic dramas; "Thermidor," which was played only a few times in Paris, gave us all the tumult of the great Revolution.

Sardou is very quick at following the popular taste or even fancy; he gave us "Rabagas," one of his best pieces, at the moment of the reaction against Gambetta and his friends, immediately after the war of 1870. The present current of literature is directed towards the Napoleonic period. I have dwelt several times on this curious tendency, which has been clearly marked since the publication of the memoirs of Marbot. The furniture of the Empire, which has been so long despised, is now coming out of its hiding-places, and you can see it in the shop-windows of the dealers in "antiquities." The dressmakers are returning more or less boldly to the fashions of the Empire. Sardou, who is very barometrical, rightly judged that the time had come for a thorough reconstitution on the stage of the imperial period. He had collected all his documents, and in his case the documents are chiefly costumes, ornaments, uniforms, pieces of furniture; the principal part of the work was done, for the drama proper was only an easy and secondary part.

Having made up his mind to sacrifice the pleasures of the mind to the pleasure of the eyes, Sardou always looks for a very attractive centrepiece for his dramas, which are, so to speak, operas without music. He must have what is called in the theatrical world a star; a renowned actress, be she renowned for her beauty, her grace, or her originality, is a necessity to him, especially as his dramas have become an article of export, and, after having been played in France, are to make a journey round the world. In "Patrie" Sardou, in order to introduce a very handsome actress, created a part which was entirely out of harmony with the spirit of his drama; many of his later dramas have been written in order to give full scope to Sarah Bernhardt. This famous actress has been able to show the most astounding costumes, to vary *ad infinitum* her graceful and serpentine attitudes; she likes to die on the stage, and she has invented I don't know how many different ways of dying. Her silvery voice is, to be sure, sometimes lost in the tumult of Sardou's dramas; we lose the delicate pleasure which Sarah once gave us when she was contented to recite the poetic and pure

verses of Racine on the severe stage of the French Theatre; but the public of the Porte-Saint-Martin and of the theatres of the boulevard does not care so much for delicate and refined poetry as for melodramatic effects. The elastic genius of Sarah Bernhardt can accommodate itself to all necessities. She can be *Andromaque*, she can be *Cleopatra* or *Theodora*.

"Thermidor" and "Madame Sans-Gêne" bring us so near our own time that people have asked themselves how far it was permissible to put on the stage historical personages such as Napoleon, Maria Louisa, the marshals of the Empire. Napoleon, to be sure, has been a hundred times put on the stage, but it has generally been in great military spectacles; he has appeared as the Napoleon of the bridge of Arcole, of Austerlitz, sometimes of St. Helena, as the Napoleon of the legend. Sardou shows (or attempts to show) us in "Madame Sans-Gêne" a real Napoleon, a "Napoléon intime," on seeing whom we cannot help thinking of all the private memoirs which have been published about him, not excepting the late volume of M. Frédéric Masson, which bears the title of "Napoléon et les Femmes," and which tells us with the most minute details all the love affairs of the great man. We have had the 'Napoléon Intime' of M. Lévy, we have the "Napoléon Amoureux" of M. Masson. But what we can very well bear in a book we cannot bear so well on the stage. There will always be something incongruous in a theatrical Napoleon behaving like the vulgar hero of a vaudeville; a "Napoleon Flirting" is a little too much for our patience, even if he flirts with such an admirable actress as Réjane, who plays with so much wit the amusing part of the *Maréchale Lefebvre*.

"Madame Sans-Gêne" might be called "Napoleon Jealous." The flirtation with the Maréchale Lefebvre takes but a moment, but Napoleon's jealousy with regard to Maria Louisa fills the whole drama. He is represented to be jealous of Neipperg, an Austrian, half diplomat and half soldier. We see this Neipperg in the prologue (which is, in fact, a first act) escaping from the Tuileries, which have been invaded by the mob. Neipperg is wounded and takes refuge in the shop of a washerwoman (Réjane) who is washing her linen while the patriots are making a revolution in the neighborhood. Cannon are heard all the time; she cares only for her lover, a sergeant, who is a great patriot. The sergeant arrives with his friends; he is Lefebvre, the future marshal of Napoleon. She has hidden the wounded Austrian in her own bedroom, and then ensues one of those pretty scenes in which Sardou delights and in which he can exhibit all his adroitness. Lefebvre becomes suspicious; he sees his mistress is uneasy, and thinks at first that he has a rival. He insists on entering the bedroom; he threatens to take the key from her by force. She tells him that if he does she will never see him again. He will listen to nothing; he takes the key, enters the room, and comes out, saying, "He is dead." She knows the contrary; she understands that Lefebvre has become her accomplice and means to help in saving the wounded Austrian. Her anger and indignation melt at once into love; she throws herself into his arms, she will become Mme. Lefebvre.

All this consumes very little time, but the emotion is intense, and the way Réjane plays this scene is simply admirable. In the second act the sergeant has become a marshal of France; the washerwoman, who has made herself a vivandière in order to follow him, and who has passed through a few campaigns, has become the Duchess of Dantzig. She washed in old times the linen of a young officer called Napoleon, and he still owes her sixty francs, which he was unable to pay. This impecunious officer, who lived in the sixth story, has become Emperor of France. We see him in his well-known uniform, in his cabinet in the Tuileries; and we see in turn Fouché, Savary, the Duc de Rovigo; we see his chamberlains, Duroc, Lauriston; we see his valet, Constant; his Mameluke, brought from Egypt; we see his sisters, Queen Caroline, Princess Eliza, with their ladies in waiting, and the ladies of the Empress, Mme. Vintimille, Mme. de Canisy, Mme. de Talhouët, Mme. de Bassano, Mme. de Mortemart, Mme. de Brignolles, Mme. de Bellune, etc.; Maria Louisa does not appear in person, she is only heard for a moment in an adjoining room. It is difficult to imagine a finer show of uniforms and of gowns in the style of the First Empire—a style evidently derived from the school of David and from imitation of the antique. The long gowns with their trains are an exaggeration of the tunics worn by the Romans and the Greeks; the arms are bare, and so are the shoulders; the hair is in disorderly curls, *à la grecque*. The uniforms of the *grande armée* are very gorgeous. Sardou has obtained what he delights in, an absolute reproduction not only of the dresses of the Empire, but of the furniture, the silks, the curtains, the bronzes; the illusion is complete. You might really think yourself at the Tuileries in 1809.

The Maréchale Lefebvre has modified her dress, is as gaudily dressed as the princesses, but she has remained exactly what she was before the Revolution; she has taken dancing lessons, but she does not know how to spell, and writes with difficulty; her vocabulary is unaltered; she has still "le cœur sur la main." She adores her Lefebvre, and he adores her, for she is a brave, courageous, faithful woman. The ladies of the court, and the princesses, think she is not fit to associate with them, and they try to persuade the Emperor that Lefebvre ought to divorce her. The Maréchale goes to the Emperor, and their conversation is one of the best scenes in the play. The Emperor recognizes in her his washerwoman of old times; she makes him laugh by telling him about the unpaid bill. "How much do I owe you?" he asks. "Three napoleons." And now again he finds that he must remain her debtor. When his sisters come to him, he takes the part of the Maréchale against them; they have a fine quarrel, and they become so excited in the end that they all three talk Corsican.

The great defect of the play is the Neipperg incident. It is very melodramatic and absurd. Neipperg is supposed to be in love with Maria Louisa, and is found in the Tuileries in the middle of the night. The real truth is, that Neipperg never saw Maria Louisa before 1814, when he took her, by Metternich's order, from Aix-les-Bains to her principality of Parma. He became her morganatic husband at Parma, after the death of Napoleon. He was handsome, though he had lost an eye in the wars, but he had nothing in him of the hero of a novel or a drama.

# Correspondence.

## GATE-MONEY AND EXTRAVAGANCE.

To the Editor of The Nation:

Sir: You have probably dwelt upon the rough and brutal aspects of football as much as you care to in the columns of the *Nation*. The "gate-receipts" phase of the large games you have also condemned several times. In connection with the latter, however, I wish to voice the protests of a number of Harvard and Yale men with whom I have talked about the matter to-day—protests which are specially relevant since the report of the treasurer in charge of the Yale-Princeton game was published only day before yesterday, on which day also a report of extravagance among the Harvard coaches was printed.

It is unfortunately true that financial demoralization is the concomitant these years of the large football games. The large amounts of money which are the share of the three larger colleges as the result of a big game encourages wild extravagance in the management of the team. As an example may be cited the bill for $1,575 for the new leather suits of the Harvard eleven, suits which irresponsible coaches whimsically ordered, and which the manager himself refused to pay for. It is, further, an outrage that $2.50 or $2—to say nothing of speculator's prices—should be charged for tickets to a game. Tickets to the big games were formerly 50 cents and $1. The price was raised upon the suggestion of grounds managers, who plausibly urged, "You can get more; why not charge it?" I have it on excellent authority that next year the management of the Yale-Princeton game purposes charging $3 for the best seats, simply "because they can get it."

A halt should be called. Not more than one dollar should be charged for the best seats, "a tariff for revenue only." Games should be played on home grounds, or at the most in small cities. If football were to be thus purified financially, and as a game be pruned of its savagery, conservative men and women, as well as self-respecting young men and girls, could enjoy the sport heartily and without fault-finding.—Very respectfully,

Collegian.

New York, December 9, 1893.

[The root of these evils lies in the toleration of intercollegiate contests. Rowdyism, brutality, betting, extravagance, will all be reduced to a minimum the moment athletic sports are confined to the college grounds, where they can be effectively supervised and controlled by the faculty, and to the students of the college itself. More slowly will disappear the bitter animosities engendered by the present rivalry, so detrimental to the cause of learning and of letters. Any other remedy is a mere makeshift.—Ed. Nation.]

## THE DUTY ON PIG-IRON.

To the Editor of The Nation:

Sir: In your issue of November 30 occurs the following:

"Any duty at all upon pig-iron is now prohibitory. The price of the cheapest grade in England is now $8.01 per ton. A better brand of pig-iron is selling in Alabama to-day at $7.25 per ton, etc. Nevertheless, the bill retains a duty of 22½ per cent. on pig-iron."

Starting with your price of $8.01 for English iron, adding the duty (22½ per cent.) of $1.80, and freight of 25 cents per ton from Liverpool or Glasgow to New York, the cost in New York becomes $10.06 per ton. Landing the Alabama iron by rail and water at a cost of $4.01 at New York, your price of $7.25 becomes $11.26, or

$1.20 in favor of the English iron. If you thus bring the Alabama furnaces into direct competition with the English furnaces, what does it profit Alabama? Or what does it profit Pennsylvania, New Jersey, or New York, whose iron costs them to make 50 per cent. more than your Alabama quotation?

Of course I am aware that were any business of consequence done, the ocean freight rate would advance, as would the foreign price and the duty. I am stating only the conditions of to-day, using your initial figures of price.

Yours truly, C. L. P.

BOSTON, December 4, 1893.

[It may be true that some Middlesbrough pig (the kind quoted at $8.01) would be imported along the coast if the duty were entirely removed, but it could not go far into the interior. We learn by inquiry among shipping men in New York that the usual freight charge from Middlesbrough shipping points is 7s. 6d. to 10s., although Liverpool and Glasgow freights are cheaper—Glasgow being quoted at 2s. to 4s. and Liverpool at 3s. to 6s. To the freight charge must be added insurance and commissions, the latter being at least 50 cents per ton. Adding the lowest Middlesbrough freight charge and the commission charge to the $8.01, we have $10.31 as the cost of the iron landed here without duty. If a duty of 22½ per cent. is added, the cost comes up to $12.11, which is more than the cost of Alabama iron laid down in New York, as computed by "C. L. P."—ED. NATION.]

## A FRENCH VIEW OF FRANKLIN AS A DIPLOMATIST.

TO THE EDITOR OF THE NATION:

SIR: The allusion to Benjamin Franklin, made in your last number by your Italian correspondent, brought to my mind a very racy French estimate of our philosopher's work at Paris by Maxime de la Rocheterie in his 'Histoire de Marie-Antoinette.' It differs just enough from our current impressions to be very interesting. It would take a more skilful hand than mine to translate it without spoiling it, so I send a literal transcription of it.

Yours very respectfully,

S. N.

WASHINGTON, D. C., December 6, 1893.

"Faux bonhomme, cachant, sous une apparence de simplicité alors à la mode, un esprit plein de finesse; affectant des airs de rondeur et d'indépendance qui séduisaient par leur contraste même avec les formules solennelles de l'étiquette; ayant la patience et le flegme des races anglo-saxonnes; sachant attendre sans se presser, mais aussi sans jamais se décourager ni perdre de vue le but qu'il se proposait, Franklin, par ses qualités comme par ses défauts, devait plaire à une nation qui se paye de mots, se leurre d'apparences, s'engoue volontiers pour les étrangers et s'enthousiasme facilement pour des innovations.

"Il comprit vite que le vrai souverain de la France, à ce moment, n'était ni le Roi, ni la Reine, ni le ministère, mais l'opinion, et c'est sur l'opinion qu'il résolut d'agir. Tout chez lui fut donné à l'apparence. Sans préjugés qui le gênassent, allant à la messe quoique protestant, faisant l'éloge des rois quoique républicain, courtisant à la fois son curé et Voltaire, offrant le pain bénit au premier; sollicitant la bénédiction du second pour son petit-fils . . .; flattant les evêques et les francs-maçons, les salons et les loges, les hommes de lettres et les hommes d'affaires, les philosophes et les jolies femmes, qui l'embrassaient malgré ses lunettes; frondant les usages reçus pour mieux se faire remarquer, paraissant au théâtre avec un habit de drap brun uni et des cheveux plats au milieu des perruques poudrées et des habits brodés; tranquille et inactif en apparence, mais 'employant beaucoup de gens en sous-ordre'; mettant tout en œuvre, les arts, les sciences, les lettres, pour se faire connaître et célébrer, le bonhomme Franklin, comme l'appelaient les uns, le bon et vénérable docteur, comme l'appelaient les autres, ne tarda pas à devenir l'idole, ou, comme il le disait lui-même, 'la poupée,' des Parisiens, en même temps qu'il rendait son pays et sa cause populaires. On ne parlait plus que de l'Amérique, on ne rêvait que des Etats-Unis, on se coiffait aux 'insurgents,' on jouait au 'boston,' on se passionnait pour les idées républicaines et leur représentant."

## MR. STILLMAN AND MR. RUSKIN.

TO THE EDITOR OF THE NATION:

SIR: You reviewed, last winter or spring, a book entitled 'The Life and Work of John Ruskin,' which contains an attack on me so malignant in its utter misrepresentations of some personal relations between the great critic and myself that, as they appear to have been written under the shadow of Brantwood, with the range of the family documents and the assistance of the Severns, they seem to be official. I have therefore a right to consider myself absolved from any obligation of silence as to those relations. Those misrepresentations are not merely malignant, but malicious to mendacity, and as they point to matters which have been *res publicæ*, and are still subject of comment, and involve more than my own personal feelings, I beg you to allow me a place in your columns to put them right. I have never said, nor do I mean to be provoked to say, a word in disrespect of Ruskin or derogation of his noble humanitarian passion. I have never written a word against the man, though I consider his art doctrines disastrous; of his honesty and his earnest Christianity, in the truest sense of that word, I have never made a question, and to the vulgarity of Mr. Collingwood's attack on me I have nothing to reply. To Mr. Ruskin's kindness to, and interest in, me I owe the greatest misfortune of my life; besides that, I owe him various kindnesses which I have put in my life's account *per contra*, so that if on the other side of the matter nothing had ever been said, nothing would have been replied on mine.

Some years ago, while I was still in the East, Ruskin wrote a letter in abuse of my Government, in which he said that when it had transferred me from one consulate to another, he had been obliged to furnish me with the means to make the journey. I never saw the letter, and only heard of it long after through an imperfect résumé in an American paper; but that was the substance. It not only was an affront to my Government, but resulted in personal injury to me, as I learned later; but, hearing of it only after all the harm had been done, I kept silence from respect for Ruskin. This last shaft from headquarters deserves a return.

I was invited by Mr. Ruskin to spend the summer with him in Switzerland, because he thought I might be able to realize some of the things he wanted "his young pre-Raphaelites" to do. I believed in his knowledge of art in general, and was grateful for his interest in me, and did my best to conform to his ideas of painting. I had acquired a certain ability in painting from nature, and certain methods which he disapproved, and I tried to reform according to his instruction. I worked too hard, as he always did, and, as he had a way of breaking off abruptly in the midst of a drawing if anything discontented him, I tried to make the most of the time. Our evenings were passed generally in discussions till midnight, and our days in drawing. At Neufchâtel, after nine hours a day of hard drawing, I felt something give way and a cracking behind my eyes, followed by immediate loss of distinct vision. Everything was blurred before my eyes, and I had to give up drawing. A few days' rest seemed to remedy the trouble, and at Laufenburg I got to work again, to be stopped by a worse attack, which this time stayed, and I had to give up work, as the indistinctness returned when I attempted to look closely at anything, and I lost the perception of color, so that I was unable for two years to do any painting of any value. Immediately after I had discovered that I was practically paralyzed in my vision, Ruskin found it necessary to return to England, and left me in Switzerland. I returned to Paris, and from there maintained my old friendly relations with Ruskin, interrupted during the next ten years only by his indignation at the conduct of my Government once or twice. During my prostration and inability to paint, Ruskin had several times written me, with his usual generosity in money matters, that if I had need at any time of money to carry out my plans, to write him, "and not trouble yourself about money matters, but get well—or I shall never have any peace about that Chamounix walk and other such businesses." Later, when I was transferred from Rome to Crete, I wrote him accordingly, asking him, in case I should be in need, to allow me to draw on him for what I might need within the sum of £100, to which he replied by sending me the entire amount. Before receiving it, and being unable to get to my post, Mr. Marsh, our then minister to Italy, had lent me the money, so that in point of fact Mr. Ruskin did not serve my Government, but showed his kindness to me just the same.

I do not know whether the abrupt paralysis of my artistic faculties, due to Mr. Ruskin's taking me under his protection, was a misfortune to anybody but myself, but it is to that, and the long consequent suspension of work, with a chilling of all my enthusiasm and loss of headway at a most critical time in life, compelling me to seek other avocations, that is due my not continuing in the practice of art. I had acquired certain methods of working which Ruskin assured me were all wrong, and this added to my discouragement, for, not knowing that he knew less than myself of technical methods, I had added to my perplexities by adopting those which were purely whimsical and impossible, and altogether I made a complete wreck.

The sin which has called down on me the extinguishing wrath of the author of 'The Life and Work of John Ruskin' and his friends and those of Mr. Ruskin is that, having learned by bitter experience the utter futility of Ruskin's system of art teaching, I ventured to criticise it freely in an article in the *Century*, from which, in the spirit of fanatical insincerity which characterizes the book, the author of it has made some garbled and discolored quotations. I have said nothing against Mr. Ruskin, and perhaps hold as much reverence for the man and his higher mission as Mr. Collingwood—so much, at any rate, that I consider his book a derogation of the teacher; not as teacher of art, but of morality.

Yours truly, W. J. STILLMAN.

ROME, November 21, 1893.

# Notes.

THE New York Shakspere Society purpose issuing, in their "Bankside" style, the Shakspere plays which were rewritten and remodelled by Dryden, Davenant and others in the period of the Restoration. Each play will form one volume, with brief historical prefaces, printed in an edition of 500 copies. Subscriptions may be sent to L. L. Lawrence, P. O. box 423, Westfield, Union County, N. J.

Mrs. Edwina Booth Grossmann is writing some Reminiscences of her father, Mr. Edwin Booth, and begs her father's friends who possess letters from him to send her transcripts of such as they may wish to add to her publication. They should be addressed to Mrs. Ignatius R. Grossmann, 12 West Eighteenth Street, New York.

A. C. McClurg & Co., Chicago, have in press 'Russia and Turkey in the Nineteenth Century,' by Elizabeth Wormeley Latimer; 'The Book-Hunter in Paris,' by Octave Uzanne; 'The Spanish Pioneers,' a book for young people, by Charles F. Lummis.

The Open Court Publishing Company, Chicago, announce 'The Redemption of the Brahman,' a novel, by Richard Garbe, Professor of Sanskrit at the University of Königsberg, Prussia.

Bishop Polk's biography, by the son of that prelate and Confederate general, will shortly be published by Longmans, Green & Co.

'Mental Development in the Child and the Race,' by Prof. J. Mark Baldwin; 'Pain, Pleasure and Æsthetics,' by Henry R. Marshall; lectures on modern mathematics, by Prof. Felix Klein, of the University of Göttingen; 'Catherine Furze,' by the author of 'Mark Rutherford'; and 'The King of the Schnorrers, and Other Grotesques,' by Isaac Zangwill, are in the press of Macmillan & Co.

Ginn & Co. will issue in January 'The Contemporary French Writers,' edited and annotated by Rosine Mellé.

Porter & Coates, Philadelphia, send us an illustrated edition of 'Tom Brown's School Days,' in which the photogravures are wholly of buildings and local scenery in Uffington and Rugby; and there is a portrait of the author by way of frontispiece. The binding is in dark blue cloth with much gilt. Perhaps this array of topographic "documents" is better fitted for the second than for the first reading of Mr. Hughes's story.

'Cathedrals of England' (T. Whittaker) is a collection of seven essays, on Westminster Abbey and half-a-dozen of the English cathedrals, each paper written by a canon or other dignitary of the church he describes—or, rather, illustrates, for there is little real description of the buildings in the essays. They are made up rather of such fragments of history, antiquarianism, and occasional criticism or description, as would naturally fall from any of their scholarly writers in a walk about the churches. Archdeacon Farrar, whose name alone appears on the title-page, leads the book with the longest paper, on Westminster Abbey, which is like the talk of a cultivated and instructed cicerone: the other papers are more or less in the same vein. The book contrasts, therefore, with Mrs. Van Rensselaer's 'English Cathedrals,' being of less importance as a record of the churches and their history; but it has the advantage in its weight of style and in the varying individual tone of the different writers. The illustrations show that they are from divers sources. In this American reprint they have suffered considerably, particularly those from Mr. Herbert Railton's drawings, for to blur the clear accent of his touch is to rob him of his most vital characteristic.

Mr. Samuel Adams Drake has added 'Our Colonial Homes' (Boston: Lee & Shepard) to the several books of antiquarian study by which he has been known. It includes a score of papers about old buildings in various parts of New England, which are described in his lively fashion, with all the zeal of the antiquary, and with abundance of collateral gossip. Most of the papers are reprinted from *Appletons' Journal:* they are set off with handsome letterpress and with good half-tone prints, albeit these have been spruced up for the service with brushwork which does not always improve their effect, though, in a way, it increases their brilliancy.

'A Gentleman of France,' by Stanley J. Weyman (Longmans), is a romance after the style of Dumas the elder, and well worthy of being read by those who can enjoy stirring adventures told in true romantic fashion. The time is the close of the civil and religious wars in the sixteenth century; the subject, the carrying off, for political purposes, of a very charming young lady by a graybeard of forty, who falls in love with her. The great personages of the time—Henry III. of Valois, Henry IV., Rosny, Rambouillet, Turenne—are brought in skilfully, and the tragic and varied history of the time forms a splendid frame in which to set the picture of Mersac's love and courage. The story rattles along bravely, notwithstanding occasional dull bits and weak points; the troublous days are well described and the interest is genuine and lasting, for up to the very end the author manages effects which impel the reader to go on with renewed curiosity.

The translation of Dumas the elder's 'Olympe de Clèves' (Boston: Little, Brown & Co.), in two volumes, is a very good translation in which the spirit of the original is well preserved. But are not the publishers in error when they claim that this is the first English version of the novel? In 1864 Brady of New York brought out a translation under the title of 'Olympia of Cleves,' and possibly there may be still another, for Dumas's romances have been as popular abroad as in France.

A fine edition of 'The Heptameron of the Tales of Margaret of Navarre,' newly and admirably translated into English, has been printed in London for the Society of English Bibliophilists. The text used is that edited by Le Roux de Lincy. Mr. George Saintsbury has contributed an erudite essay upon the 'Heptameron,' which, although interesting, is heavy and even somewhat labored. His conclusion, after a repeated and careful study of the book, is that the setting is almost wholly Margaret's work, and that other authors had a hand in the stories, or in some of them at least. And it seems to him that "the secret of the Heptameron," that which distinguishes it from other similar works, is "the fear of God, the sense of death, the voluptuous longing and voluptuous regret for the good things of life and love that pass away." Besides this essay there is prefixed a Life of Margaret, well written, and appended are the prefaces of the earlier French versions, a complete bibliographical summary of the various editions, the notes of the best French commentators, and a digest of the principal suggestions offered for the identification of the characters in the book with well-known persons of the Queen's day. The full-page illustrations, which are numerous, are printed from the plates engraved by Longueil, Halbon, and others from Freudenberg's designs, made originally for the famous Berne edition of 1778–81. The Clouet drawing in the Bibliothèque Nationale has been reproduced as the portrait frontispiece. The five octavo volumes are turned out in perfect fashion.

Mr. J. B. Bury's 'History of the Roman Empire,' from its foundation to the death of Nero, is the latest volume in the well-known Students' Series (London: Murray; New York: Harper & Bros.). Well informed as our students generally are about the Republic, the Empire is a period of which they are apt to know very little with any exactness, and this work is therefore welcome. Though it is evidently written chiefly from the ancient sources themselves, yet Mr. Bury has made the best use of the writings of Mommsen and Herzog, as well as of numerous monographs, and the result is a book brief indeed, but attractively written and certain to be useful. The exposition of the latest views about the development of the imperial constitution and the succinct account of the administration of the provinces may be particularly commended. Besides the political and literary history of the times, there are good biographies of the leading figures; and the subjects of private antiquities and religion, including the growth of Christianity, are not neglected. There are several maps and about seventy-five illustrations, both photogravures and woodcuts. The former are well executed; the latter are most of them old cuts already used in well-known books, uninteresting, and of little or no artistic value. Worse than this, many of the so-called portraits are unauthentic. All the illustrations have lately been the subject of well-deserved and searching criticism in the *Classical Review*, and the majority of them are certainly discreditable to the author of the book and to the two great houses which have published it.

By far the most interesting and important of the illustrations in the *American Annual of Photography* for 1894 (Scovill & Adams Co.) is the stuffed bird, a poll parrot, printed in three colors by Mr. Kurtz's Coloritype Co. We will not undertake to say how many impressions would be required by the methods heretofore in vogue, but the difference in cost must be very great. Strange to say, this outgrowth of "process," which promises an undreamt-of popularization of color work in the highest as well as the humblest walks of art, is undescribed in the *Annual*, or at least we can discover nothing on the subject in the very primitive index. For the rest the volume contains the customary articles from a wide circle of amateur and professional photographers, beginning with a brief account, with portrait, of Johann Heinrich Schultze, "the Columbus of Photography." There are the usual lists of American and foreign photographic societies, with their officers, and of hotels having darkrooms for the convenience of tourist photographers.

Robida's etchings detract from the general daintiness of the *Book-Lover's Almanac* for 1894 (New York: Duprat & Co.), nor are the other illustrations an advantage to the pretty presswork with variegated borders. We remark an account of William Bradford, New York's first printer, and a contribution in French from Octave Uzanne, who is very flattering to New Yorkers in the matter of private libraries. To Chantilly, London, New York, he says, for the richest collections.

The first volume of *Putnam's Monthly Historical Magazine* (Salem, Mass.: Eben Putnam) lies before us. Apart from the notices of Gen. Israel Putnam and Gen. Rufus Putnam,

the matter of most current and permanent interest is the New England pedigree of President Cleveland exhibited in six charts with annotations, but upon this we have already commented on its first appearance. No one medium of publication seems to satisfy the New England genealogical curiosity.

*Around the World*, the new monthly just founded by the Contemporary Publishing Co. of Philadelphia, and edited by Prof. Angelo Heilprin, has in it the promise of a very useful popular magazine scientifically conducted. It aims to keep its readers abreast of the latest tours, travels, and explorations, supplying "an analysis of the progress of research in all departments touching the physical history of the earth and of its productions," and reviews of geographical literature. Prof. Heilprin's taste goes hand in hand with his solid learning to produce a very handsome journal with charming illustrations. The price is very moderate.

The last number of *Petermann's Mitteilungen* opens with an attempt to solve some of the problems connected with the geological history of Celebes by an examination of its lakes. This is followed by a similar examination of the plain lying to the east of the Sierra de Cordova in the Argentine Republic. Among the other articles are the first of a series of papers on the regions under German protection, beginning with an account of the Marshall Islands, a discussion of the variations of longitude through the periodic movements of the poles, and the distribution of heat over the earth's surface.

In late numbers of the *Historical Magazine* of the Imperial University of Japan, besides articles of local and national interest, there is an interesting paper on the *soroban*, or abacus, showing its comparatively late introduction among the Japanese. In the summer of 1612 a Chinese came to Nagasaki with one of these handy calculating-machines, then in use from Moscow to Nanking. An officer named Shobei Kataoka, attendant upon the *bunio*, or governor of Nagasaki, requested the loan of the mathematical machine, and, after learning how to use it, made a copy. This identical original copy and first Japanese abacus was on exhibition in Tokyo at the recent second National Exposition, confirming by visible proof and contemporaneous documentary evidence the ordinary accounts in the popular histories and the annals of the Kataoka family. The original Japanese maker, on going to Yedo, showed the instrument to the Shogun's Government, and explained its great value. Besides ordering a number for the Bureau of Accounts in the Treasury Department, the Shogunate, after examination and approval, issued seals patent, and the public were allowed to buy it. Its use soon became general. With it one can quickly add, subtract, multiply, divide, extract square and cube-roots, and work decimals and fractions. A valuable paper on the philosophy of the soreban, by Cargill G. Knott, formerly chief constructive engineer of the imperial railway system, is contained in the Proceedings of the Asiatic Society of Japan, volume xiv.

The catalogue of the library of the late Dr. Döllinger, the completion of which has been so long delayed, is now published under the title of 'Bibliotheca Döllingeriana.' It is a stately volume of 672 pages, containing 18,495 numbers, and costs ten marks ($2.50). Offers for the purchase of the library as a whole will be received until June 1, 1894; if none of them are satisfactory, it may then be divided and sold at auction. Further information can be obtained from the "Verwalter der Döllinger-Stiftung der Universität," Munich, Germany. Breviaries and prayer-books are excluded from the catalogue, with the exception of two (Nos. 383 and 384), which are interesting and valuable from a bibliographical point of view. We may add that this noteworthy collection of books shows marked deficiencies in some departments, owing to the fact that Dr. Döllinger had the Library of the University as well as the magnificent State Library of Munich at his disposal.

The literary and artistic collections of the eminent Austrian encyclopædist, Dr. Constantin Ritter von Wurzbach-Tannenberg, who died at his villa in Berchtesgaden, August 18, 1893, in the seventy-sixth year of his age, have been secured by the Vienna City Museum, where they have been placed in a distinct compartment bearing the name and adorned with a bust of the deceased. About a year ago we called attention to the proposed sale of these choice and really unique collections, and it is to be regretted that they were not purchased by some institution in the United States. The library is not very large (6,500 volumes), but is very valuable, and among the 50,000 portraits of distinguished persons, consisting of copper-plates, steel engravings, woodcuts, etchings, etc., are many exceedingly rare prints. The municipal council of Vienna has also named one of the streets of that city Wurzbach Strasse.

With the death of Dr. Julius Froebel at Zurich, Switzerland, on November 6, in the eighty-ninth year of his age, a remarkable man has passed away, whose scientific attainments won the respect and friendship of Alexander von Humboldt, and who played an important part in the political history of Germany before and during the Revolution of 1848, and exerted no small influence upon the course of events which led to the reconstitution of his fatherland in 1866 and the final founding of the Empire in 1870. The two volumes of his autobiography were reviewed in these columns soon after their publication in 1890 and 1891. He was a man of the strictest integrity and sterling merit, and might have died a millionaire if he had used the opportunities for accumulating wealth which were opened to him and fairly thrust upon him during his connection with the Austrian Government from 1862 to 1865.

—The fortunes and character of Montrose are of perennial interest to all good Scots. Yet the "Commentary" concerning his "Deeds," by his friend and chaplain, Wishart —a book which probably did more than any other save the 'Eikon Basilike' to win sympathy in Europe for the royalist cause—has not been printed in an English translation since 1819, and the Latin original has never been reissued at all since 1649. The new translation (followed by the text) which has just been prepared by Messrs. Murdoch and Simpson ('Deeds of Montrose,' Longmans), ought to be welcome; the more so as it is accompanied by the text and a translation of a "second part," or continuation, telling the story of Montrose's tragic end, which has apparently never before seen the light. The editors have added a wealth of notes which make the volume a very storehouse of historical detail, especially of that personal and genealogical sort so dear to the Scottish antiquary. They have also obtained and printed a number of documents from the Danish and Swedish archives, which add to our knowledge of Montrose's wanderings immediately before his last ill-fated attempt. The book is somewhat too ponderous and sumptuous for the shelves of the ordinary historical student, unless he is giving special attention to this particular theme; but every great library and every Scot of means ought to secure a copy.

—London's latest literary excitement has been Paul Verlaine's lecture on "Contemporary French Poetry." It virtually resolved itself into a reading from 'Sagesse' and 'Romances sans Paroles.' In M. Verlaine's estimation, apparently, contemporary French poetry begins and ends with his own. In the few words with which the reading was preluded, he referred to De Musset, to Baudelaire, to Mallarmé, to Merrill, to *les Jeunes*. But, so far as can be gathered, with this reference he was content. He was more concerned to set forth his theory, to repeat that which he has said before in his poems: The poet should *live;* he should be sincere. "*L'art, mes enfants, c'est d'être absolument soi-même.*" And then, at once, he passed on to the reading of proofs of his own sincerity, of his own truth to himself. About the wilder period of his career, that period when he plunged into what —as he expressed it—the church calls sin, the world debauchery, he held his peace. 'Parallèlement,' its record, he never opened. But the emotions of the years that followed, years when he wore his robe of penitence, found expression in some of the most exquisite religious poems in the little volume 'Sagesse,' the cry of repentance which he sent to the world from his monastery in Picardy. It is worth adding that he drew, for London, a small audience, but still, one large enough to repay him for his visit, the tickets selling for a high price. He has lectured before, as he reminded his listeners—in Belgium, in Nancy, in Metz, his birthplace. A couple of years ago a benefit was given him in a Paris theatre, and "tout Paris" crowded to it; twenty francs, however, was all it represented for him. London has proved more profitable, as it probably did in the days of his first visit, some twenty years since, when he played the incongruous part of teacher. It would seem impertinent to dwell on this side of his latest venture, were not his poverty a fact impossible to forget; he himself, with his inveterate tendency to autobiography, not having hesitated to help make it conspicuous. Invalid as he now is, it is a pleasure to know that something has been done to add to his comfort.

—Early in the year we directed attention to the speculations of Mr. Charles Johnston on the multifarious inhabitants of India, as discriminated by color. These speculations he has continued to prosecute in the last issue of the *Asiatic Quarterly Review*, to which he contributes a well-written article entitled "The Red Rajputs." In sequence to every scientific ethnologist, he dismisses, as being altogether without even shadow of foundation, Colonel Tod's idea that this race is Scythian by derivation. In general physical features, and more especially in point of stature and color, not to speak of customs and habits, as he goes on to particularize, the Rajputs differ from any other of the various tribes scattered over Hindustan. Yet their color, though in all cases sufficiently marked to distinguish them, is not uniform, but varies, as we are told on the best authority, from light red, or almost orange, to dusky reddish or reddish brown. In fact, a Rajput is, to the eye, in many respects very like one of our own red men, whose hue is much more coppery in some cases than it is in others. And, according to Sanskrit literature, a complexion styled *rakta* or *lohita*, "red," was one of the differential peculiarities of a highly important division of the Hindus of

olden times. Dependent on the statements premised is Mr. Johnston's contention for the identity of the Rajputs with the Kshattriyas, or Râjanyas, the second of the four ancient Hindu classes, that to which, it is noteworthy, belonged the founder of Buddhism. Not only for venerableness of ancestry is the Kshattriya quite on a level with the Brahman, but, as indicating his status at one time in the distant past, a remarkable passage in a work of indisputably considerable antiquity, one of the Upanishads, speaks of the latter as sitting at the feet of the former. Whether the actual representatives of the primeval Kshattriyas are "Aryans," is a question which the essayist contents himself with admitting to be insusceptible of present solution. The term *ârya* is often found applied to the royal or martial caste; and he endorses the supposition of recent investigators, that it may have a wider denotation than that which was long attached to it. Mr. Johnston's conclusion that the Rajputs are descended from a race wholly distinct from the Brahmans will doubtless provoke discussion.

—An esteemed correspondent who found himself in disagreement with our review of Naomi Tamura's 'Japanese Bride' last April, calls our attention to the fact that the reverend author was reprimanded "for having falsely slandered his countrymen" in the book just named, by "the local synod of the Church of Christ in Japan," held at the Shiba Church, Tokyo, October 3-7. Further, that, pending Mr. Tamura's appeal to the General Conference, which meets in July, 1894, his appeal to the central church body at Kyoto has resulted in the confirmation of the local body's action. And finally, that the Japanese press censor has just suppressed the translation into Japanese. We have not overlooked these proceedings. In spite of the heat of the prosecution, the vote was a tie, and the reprimand was carried only by the casting vote of the moderator. Mr. Tamura alleged in his own behalf that his American literary advisers exposed him to misconception by striking out from his MS. the oft-recurring phrases, "in old Japan," "in old time," "under the feudal system," as repetitious and wearisome. We are not concerned with this defence or with Mr. Tamura's character, since our judgment of his book was based upon its intrinsic merits as tested by our own experience. On its face, we are disposed to regard the incident as a symptom of the present temper of over-sensitive Japan. The press censor who, as late as last year, punished Prof. Kumi for historical criticism, might have been expected to fall foul of a trenchant social criticism like that contained in 'The Japanese Bride.'

—We have received Catalogue No. 2 of Alinari's new photographs, comprising the various works of art in the wide-extended province of Umbria. The reproductions have all been made afresh, for an artistic spirit has found its way even into professional view-taking, and photographers are beginning to realize that the skill required in keeping a building or a piece of sculpture in focus is no less than in making creditable reproductions of pictures. The photographs Alinari Brothers (Florence) now offer, although they remain at the same low price, are indescribably superior in quality to those of a few years ago. The catalogue contains a number of works of primary importance that have never been photographed before, such as the many fine churches and public buildings at Todi, and that gem of Renaissance architecture just outside its walls, the Madonna della Consolazione. The Bramantesque Cathedral porch, the early Christian basilica, the Romanesque decoration on the portal of S. Pietro, and the so-called "Temple of Clitumnus," all in or near Spoleto, are now to be had in perfect reproductions. Another item of great value in the catalogue is Rocco da Vicenza's sculptured altar at Terni. Much space would be needed to give an adequate idea of the importance of many of the pictures which these new photographs for the first time make accessible to the public. Benozzo Gozzoli can now be appreciated in his first bloom without the long drive and weary climb to Montefalco; a painter like Fiorenzo di Lorenzo, a great figure in Umbrian art, is at last brought within the compass of comparative study; and an adequate notion can now be formed of such interesting but not over-delightful masters as Niccolò Alunno and Lo Spagna without the tedious pilgrimages hitherto required. The Giottos, Simone Martinis, and Lorenzettis at Assisi, the Signorellis at Orvieto, Perugia, and in the upper valley of the Tiber, the Pinturicchios at Spello, and the Peruginos scattered all over Umbria, have been photographed isochromatically, and are to be had even in carbon prints. In short, no work of art of the first importance has been overlooked in this catalogue. It is, however, to be regretted that, while they were in the Cathedral of Gubbio, Messrs. Alinari failed to photograph the finest and most interesting picture it contains, Timoteo Viti's "Magdalen"; and one would like to see the series of Signorellis made complete by the addition of those at Fajano and Umbertide.

—Baroness Jemima von Tautphoeus, author of the popular novels, 'The Initials,' 'Quits,' 'At Odds,' and 'Cyrilla,' died at Munich on November 12, in the eighty-sixth year of her age. Her maiden name was Montgomery, and she was of Irish birth, with a strain of Scotch blood in her veins. In 1836 she visited Munich, where she married Baron von Tautphoeus. The fruit of this union was one son, who died some eight years ago as Bavarian ambassador at Rome. The shock occasioned by the sudden death of their only child so affected her husband that he fell into a decline and expired a few weeks later. Baroness von Tautphoeus was a cousin of Maria Edgeworth, and one of the pleasantest and most vivid recollections of her youth was her association with this charming lady and with the versatile and somewhat eccentric Lady Morgan. She was endowed in an eminent degree with the fresh and kindly humor which is the heirloom of her race, and which in her case age could not wither nor the severest blows of fate wholly destroy. It was this genial quality which in her childhood and early maidenhood caused her family and friends to pun on her name and call her "the gem." Her novels, like Jane Austen's, have taken the rank of English classics, and seem to have suffered no diminution in popularity during the forty years that have elapsed since she published her first work of fiction. Edition has succeeded edition with remarkable regularity up to the present time, and only a few weeks before her decease a new German translation of 'Quits' appeared at Weimar, and was warmly greeted by the German press. It is also pleasant to note that she received from the sale of her works in the United States, where there was no legal obligation to pay her anything, a much larger sum than from her London publisher. In her contract with the latter she was far too modest, and consented to accept whatever pittance he chose to offer, so that her pecuniary compensation was very trifling, and bore no proportion to the literary and commercial value of her writings. A like modesty led her persistently to refuse to furnish editors of biographical dictionaries and compilers of cyclopædias with any information concerning her life; to the numerous applications of the kind received she uniformly replied that her place in literature was not sufficiently conspicuous to render personal items of this sort of any interest to the general public. For this reason her name nowhere appears in such books of reference, and not the slightest sketch of her life derived from authentic sources has ever been printed. No urgency on the part of her friends could overcome this native reserve; even her husband knew nothing of her literary work or ever saw her engaged in it, and was as surprised as any stranger would have been when the finished volumes lay on the table before him. After his death she shrank from forming new acquaintances, and confined her social intercourse to a sympathetic circle composed of her nearest kin and a few congenial friends. She now lies at rest by his side in the family vault at their country-seat, Castle Marquardstein, in the Bavarian Highlands.

## DODGE'S 'RIDERS OF MANY LANDS.'

*Riders of Many Lands.* By Theodore Ayrault Dodge, Brevet Lieutenant-Colonel U. S. Army. Harper & Bros. 1893.

MR. HOWELLS has recently said in *Scribner's* that the author who is so fortunate as to have his articles gathered together from the numbers of a magazine and made into a book, must expect little pecuniary reward—that he should regard the money it brings him as money found in the road. But this handsome and attractive book, which has made its pilgrimage through *Harper's Magazine*, looks as if it were destined to bring its author substantial returns. It is attractive in its outward form, attractive in its sixty-eight illustrations, ranging from the statue of Alexander the Great by Lysippus to an Hawaiian girl riding astride in her divided skirt; attractive in its subject, which is literally as wide a one as its title indicates, for its discursive comments run from the treatise of Xenophon to the platitudes of an Anglomaniac. It is the work not only of a horse-lover and critical observer, but of an old soldier, and contains no end of odd bits of information, as that, in the Loyal Legion, "whoever refers to politics at a meeting of the commandery is for the first offence fined thirty dollars, and for the second is dismissed the order"; that in Persia a viceroy is appointed with a salary and emoluments of, say, four thousand lashes per annum; that, "after making himself agreeable to his new subjects and getting settled in his duties," he sends word to a rich man of his district that "out of his own loving kindness he awards him two hundred of his four thousand annual lashes"; that St. Paul was mistaken, and if he was not that his translators are, etc., etc.

It is one of those delightful books in a conventional world which one comes upon not once in a decade, wherein the author says just what he pleases and when he pleases and where he pleases. The reader who has a grain of humor in him no bigger than a pinch of snuff will find endless entertainment in it. At page 178, in the midst of a discussion on "the high school of equitation," a paragraph bursts forth with "I once knew a charming old maid in England," and then follows a disqui-

sition on old maids which many silly young men may read with interest and profit. On the next leaf Colonel Dodge tells a story about a well-bred Englishman, a visitor in this country, who was fed by his American cousins "constantly"—we fear that this is an exaggeration—"on that confection yclept Washington pie." One day, after he had been fed too much of the confection, unless, perhaps, it was underdone, he felt uncomfortable. Instead of growling and grumbling, and alluding to the blasted climate, like the proverbial Englishman of fiction, he meekly and quietly remarked: "Doubtless General Washington was a great and good man, but d—— his pie." Then the Colonel has something to say about Browning, and then he goes back to "the high school of equitation" and "delicacy in the use of the legs."

It is just the book for a good, old-fashioned *London Quarterly* criticism of an American book. When we reflect what delicious mince-meat it would have made in the hands of a British critic fifty years ago, it seems a book born out of due season. It is of the sort in which you can never find something you want where you expect to find it, and in which you unexpectedly come upon it the moment you have stopped looking for it. Of course there is neither index, nor table of contents, nor explanatory note, nor preface—the nominal preface is not about the book, but about the author and an old Yankee who read Webster's Unabridged through from beginning to end. Col. Dodge frequently refers to Col. Dodge: "Dodge" tells us this and "Col. Dodge" records that. The reviewer of course knows that he is citing that remarkable and not half appreciated book, 'Forty Years on the Plains'; but a reader who has not met with that most instructive and interesting study of Western barbaric life must wonder why our Col. Dodge speaks of himself sometimes in the first person and sometimes in the third, unless his eye has noted in the middle of a page the unexpected declaration: "When I refer to Dodge I mean Colonel Richard Irving Dodge of the Army."

A person "well up" in the matters discussed will gather new facts and ideas and suggestions, and will have little difficulty in deducing the real views of the impulsive author. But a youth going to the book for practical information on a given topic must be a good deal mystified as to what *our* Colonel Dodge really does think about it. The explanation is that he consistently says what he thinks, when he thinks it. Thus, at pp. 24, 51, 52, he thinks that the Indian is a brute, "a lazy brute," "a brute pure and simple who has always been so," "the most vicious brute that the sun ever shone upon," "a brute whose nature is a fit hotbed for our worst vices"; that the only good Indian is a dead Indian, and the problem "a simple question whether this broad land of ours is for the paleface or the redskin." But at p. 59 he thinks that "if the Indian could be given over to the army to care for, he would behave himself." Why? Because he is in deadly fear of the army? No, but because "he knows that he receives justice from the bluecoats." Again, at pp. 24, 90, he thinks that when the Indian "has sated his passion for adornment by wearing Uncle Sam's uniform for a few months, his greed for ease overcomes all sense of discipline, and he relapses into the indolent savage," and that the enlistment of Indians in the army has been attended "with questionable results." But at p. 55 he thinks that "the Comanche is capable of making as fine cavalry as exists, if subjected to discipline and carefully drilled"; and at p. 93 that the Indian has "two qualities which make him a servant of the republic equally tractable and reliable"; and finally, that "we are indebted to him for much of the best service, and in his ranks have been numbered many men whose names are household words." Really it seems to one accustomed to turbulent Caucasians, that a race which will behave itself on the extremely reasonable condition of "receiving justice" from Government officials, must be a mild and well-mannered people; and if it be the duty of the crowned heads of Europe to disband their armies and restore their soldiers to the ranks of industry, why should not the crowned heads of America do likewise, and content themselves with making Comanches into "as fine cavalry as exists"?

The trot is a gait which, metaphorically speaking, exercises Col. Dodge a great deal. On the one hand, he appreciates the trot, and on the other he abhors the Anglomaniac. On the one hand, he cites the Englishman who claims that a "horse can go seven miles on a trot for six he can go on a canter" (and "our cavalry officers on the plains—and they are the best judges of distance-riding alive"—"have arrived at a similar conclusion"), and he confesses that "the trot is unquestionably an easy gait for the horse." On the other hand, he avers that "nine-tenths of all animals belonging to the horse tribe in the world" use the other gait; that it is "more natural for a horse to rack than to trot." "Unquestionably," he cries, "*quoad* the saddle-horse, the rack must be called natural, the trot artificial." In one place he tells the young inquirer that "it [the trot] is the perfection of gaits [for the rider] if you rise to it"; in another, when advising the young inquirer as to the true requisites of a saddle-horse, he says: "If you have to choose between a good single-foot and a good trot, by all means take the single-foot, unless you prefer fashion to comfort."

Col. Dodge's "field is the world," and he has certainly gone around his field with commendable care, yet there are still two spots within it concerning which we greatly desire his criticisms. The first is Spain. We wish that he had taken illustrations from the wonderful canvases of Velasquez, showing, as has never been shown by artist, the graceful ideal seat of the gentleman rider of his time. And Spain, the home of the Andalusian steed, the horse of romance, is also an historical link in an important chain; for both the horse and his saddle passed from the Moor to the Spaniard; from the Spaniard to the Mexican; from the Mexican to the American. The second overlooked spot is Brazil. We confess it to be most unreasonable to ask Col. Dodge to take so long a sea voyage merely to make a study of the mounted Gaucho, but he might have found material for criticism in Sir Francis Head's 'Journey across the Pampas.' In this connection, too, we call his attention to a remark of Darwin's in the 'Voyage of the *Beagle*.' The Gauchos, it seems, ride with such apparent ease that it has been supposed that they use no muscular force; that they exercise no grip, but stay on a horse's back as a girl in a circus does, by being there. But, says Darwin, a Gaucho who had been employed for fifteen years as a porter in a warehouse was sent on a ride of twenty miles and back which required haste, and the next morning he was as stiff as any other old man would have been. Hence, concludes the great observer, he must have used muscular force, unconsciously and unapparently, for if there had been no strain on the muscles there would have been no stiffness.

We regret, too, that Col. Dodge should have quoted, as a rule for riding, the cockneyism, 'ands and 'eels low, 'ead and 'eart 'igh, instead of telling his readers of the Englishman who laid a wager of £50 (which we rejoice to say he won) that he could state all the essential principles of good riding in a stanza of four lines—which, for the benefit of younger readers, we repeat:

> "Your head and your heart keep boldly up;
> Your hands and your heels keep down;
> Your legs keep close to your horse's sides,
> And your elbows close to your own."

## RECENT NOVELS.

*David Balfour:* Being Memoirs of His Adventures at Home and Abroad. By Robert Louis Stevenson. Charles Scribner's Sons.

*A Native of Winby, and Other Tales.* By Sarah Orne Jewett. Houghton, Mifflin & Co.

*Two Bites of a Cherry, and Other Tales.* By T. B. Aldrich. Houghton, Mifflin & Co.

*Balcony Stories.* By Grace King. The Century Co.

*Sweet Bells Out of Tune.* By Mrs. Burton Harrison. The Century Co.

*The Petrie Estate.* By Helen Dawes Brown. Houghton, Mifflin & Co.

*The White Islander.* By Mary Hartwell Catherwood. The Century Co.

*Pastorals of France, and Renunciations.* By Frederick Wedmore. Charles Scribner's Sons.

*True Riches.* By François Coppée. D. Appleton & Co.

*The Prince of India; or, Why Constantinople Fell.* By Lew Wallace. Harper & Brothers.

If there were no other reason for pleasure in the appearance of 'David Balfour,' it is enough that Mr. Stevenson has shaken off the spell of the South Seas and returned to those scenes which have provided his strongest literary inspirations. In his dedication he anticipates for the continuation of 'Kidnapped' the common doom of sequels, even going so far as to suggest a reception of hoots and missiles, but his fears were groundless, for he has achieved the exception and established a precedent. His foot is as free on the heather as if he had never known the shadow of the palm, and his long absence in the flesh seems only to have bound his spirit more closely to his native land. Early and loving attachment accomplishes description more vivid and—alas! for the photographer of the moment and the spot—more exact than the most careful observation consciously undertaken for artistic purposes.

There is no gap between the end of 'Kidnapped' and the beginning of 'David Balfour.' Davie has his hand on Fortune's hair and his foot on Respectability's threshold, but he is still in the thick of the trouble brought about by his accidental association with a detested cause in the person of his beloved Alan Breck. His capacity for hatred of an issue is laughably small in comparison with his personal loyalty. If all of the professed Jacobites had worked for their cause with half the heartiness of David's devotion to one of its representatives, how different might have been the course of English history. Mr. Stevenson plays a very clever hand when he exposes the dastardly Whig policy in Scotland after the '45 through the lips of a Lowland Whig. His arraignment of the Duke of Argyle and lesser Campbells, with their attendant

horde of spying, trafficking ex-Jacobites, may well be considered history rather than fiction.

For sustained imagination and breathless action, there is perhaps nothing in this volume equal to the chapters in 'Kidnapped' narrating the flight through the heather of David and Alan after the murder of the Red Fox, Colin Campbell. There is no situation so passionate and touching as the quarrel at the fag end of the flight between these queer comrades in peril. The interest, on the whole, is not so keen, but it has more scope, more side issues of character and event closely allied to the heart of the narrative. Compensation for speed is great in such characters as Charles Stewart the lawyer, disposed to peace, books, and a game of golf, but obliged to dance when the clan pipes; in Prestongrange, the Lord Advocate, willing to be human when not imperatively political; in James More Drummond, the "long false fleeching" son of Rob Roy. As Alan Breck stands for Highland virtues, loyalty, courage, and reckless generosity, so James More stands for their vices—vices to which only Mr. Stevenson's dauntless pen can give a just expression. How beautiful here is the spectacle of a modern novelist calmly ignoring science, not so much as touching his cap to that *bête noire*, heredity! Side by side with the despicable father stands the passionate, sensitive daughter, Catriona Drummond. Mr. Stevenson has hitherto shown women the cold shoulder, but now makes ample amend. Catriona's nature has serious, even tragic, depths, while her foil, Miss Grant, is gay and mischievous, with an eighteenth-century touch at once dainty and stately. The charm of each is indisputable, defying curiosity about its essence and baffling definition. If David had not first fallen in love with Catriona, he must have grovelled abjectly before Miss Grant. His love was, however, fortunate. Like his friendship, it appealed instantly to his fighting instinct and his sense of moral responsibility; it chastened his self-conceit and rubbed the edge from his asperities. A character so thoroughly realized and developed in circumstances of extraordinary interest cannot easily perish. The volumes of David's adventures make the author's most substantial claim to fame, and may well endure to testify to the sincerity, beauty, and living force of the art of fiction in these later years of our century. Such work is the solution of the case of subject versus style. The subject is worthy, and worthily supported by the style; the result seems to be literature.

Miss Jewett's 'Native of Winby' is another example of the natural and proper unity of idea and expression. It would be hard to name stories better from any point of view than are four at least of those included in her latest volume. There was a time when she trembled on the verge of fashionable art, the art of writing a tale wherein no tale is discoverable; but she never went over to the unintelligibles, and is now firmly reëstablished on the old, sure ground of something to tell. One of the most vivid of general impressions about New England is given by those innumerable women very interesting for reasons which have nothing to do with being in love or being made love to. Most of them have passed, happily or unhappily, the years when love-making is very important. They are reticent and inexpressive to the stranger, who can only guess at their sorrows, personal or vicarious, from physical signs and tokens. It has been given to Miss Jewett to express these women, to paint their external life and manners, to reveal the secret emotions of the heart and yearnings of the soul. The dominant tone is sad, but the wail of despair is seldom heard; poverty does not shriek for alms, nor sickness of body or soul for pity. The "Stern Daughter of the Voice of God" compels repression, and the beneficent spirit of national humor in its most delightful mood lightens profoundest misery. A poorhouse would not be half bad if one could be sure of the company of a Betsey Lane. Several writers have won success in Miss Jewett's field, but not one has a similar grasp of situation and character, her tenderness or anything like her sense of proportion. So free is she from strain and extravagance, so easy and adequate in expression, that she goes far to remove any doubt about whether great naturalness is or is not the final phase of great literary art.

This great naturalness is just the phase which Mr. Aldrich, with all his skill, has failed to reach. He is inexpressibly neat, his polish is brilliant, but one smells the ink. Then he has that trick of the surprising end which, though very clever, has for years been confidently counted on. He is, however, supremely ingenious, and nobody else can do his trick half so well. In the volume entitled 'Two Bites of a Cherry,' he is far from dependence on the trick for success. The episodes are interesting and the characters clearly though sketchily indicated. The mission is not to furnish thought, but distraction. The story which best bears a second reading is "My Cousin the Colonel," which, to use a school-girl phrase of approbation, is simply splendid. Though the material of which Col. G. W. Flagg is created has been frequently used, Mr. Aldrich has given the tattered and torn wanderer from Dixie the spirit and freshness of a genuine inspiration. The predicament into which the genial colonel forces poor Tom Wesley, not to mention his wife, is perfectly comic, and the fun is admirably sustained. The Wesleys' joy in him would be purely reminiscent, creeping slowly, after assurance of safe return to their lonely status of people without a relation, temporarily disturbed by Flagg; yet the hour must have come when the thought of him brought inextinguishable laughter, and when they agreed that it was better to have known and suffered than never to have known at all.

Miss King's 'Balcony Stories' resemble an exercise in composition for the abolition of the verb. An attempt to boycott the adjective might be commendable, but what the unobtrusive and useful verb has done to be so slighted, and why the dash should be treated as the most enlightening symbol known to typography, are things past finding out. Aside from the studied insult to the verb, Miss King appears to have taken great pains to achieve the unintelligible. Her compositions are not stories, but hints at stories, and most of the hints are so vague, so mysterious, that to take them with certainty would need phenomenal acuteness. Miss King is an impressionist; her observation is colored by her temperament, and she aims at the production of effect by suggestion. An impressionist who has not positive literary genius, like Pierre Loti's, for instance, is apt to appear to be a person quite bereft of human reason. Miss King has sympathy, decided ability for graphic description, and a very great tenderness for various kinds of misfortune; but all these things can avail her nothing so long as she clings to a declamatory, interjectional manner, and scorns the counsels of common sense.

There is nothing fragmentary or elusive or incomprehensible about 'Sweet Bells Out of Tune.' It has no more mystery than have newspaper descriptions of social functions, and much of it might have been written primarily for a "society column." In justice to Mrs. Harrison it is to be assumed that she intended to satirize her sordid and vulgar assemblage of snobs and flunkeys, but in defence of letters it must be said that she has quite missed her point. The force of social satire largely depends on that sense of his perfect aloofness from his subject that the satirist contrives to give the reader. Here the author is thoroughly identified with her subject. She gives no sense of standing apart and scorning an ill-bred, ill-educated mob, insistent about its butler and footman, and imagining that perpetual iteration of a few phrases which are sparingly used by a limited number of English people proclaims rank and distinction. To use one of these phrases, she appears to be "awfully in it." So much is the author taken up with this mob, its external gorgeousness, its ignoble strivings, spats, and bickerings, that she has no space in which to develop rationally the estrangement between Mr. and Mrs. Vernon leading to the crisis of separation. They are mere shadows of a virtuous woman, sentimental and incapable of tackling a serious situation, and of a selfish and worthless man. It is useless to assert that Gerald is a good fellow, all right at heart, etc., and to effect his reformation through an attack of typhoid fever. Not one circumstance supports the assertion, or inspires the belief that Gerald's reformation could be a bit more sincere than that of the devil in the ancient saw.

The 'Petrie Estate' is a conscientious endeavor towards solid construction and character-drawing. Conscientiousness is its conspicuous quality, and enough of that applied to any undertaking generally produces something respectable, if not brilliant. Miss Brown has boldly anchored her plot to a lost will, and has managed to do great things with her testament during the period of concealment. Her story covers the doings of Miss Coverdale during her brief enjoyment of the Petrie estate. Miss Coverdale is an elaborate evolution from the author's mind; she is intended to realize that high standard of all-round perfection, to attain which the modern teaching and writing women are always lashing the others on. We may say at once that she *is* perfection, that she is compounded of all that's best in man and woman, and that she is securely removed from human proneness to error. It is our unbiassed opinion that no living woman has yet reached Miss Coverdale's height, but we have little doubt that if all women keep on shouting, some one athletic woman will get there some day, then immediately and gladly die. Several minor characters are very well sketched, particularly John Hathaway, the overworked business man. Mrs. Bisbee represents one of those pits that the young-lady novelist often digs for herself. She is heralded as a sparkling wit; her past witticisms are enthusiastically referred to; she herself is not above mentioning that on such and such an occasion she said a pretty good thing. But, cruellest of her sex, she refuses to gratify us with even one scintillation, and obliges us to part from her with a feeling of extreme vindictiveness.

Mrs. Catherwood's 'White Islander' is a French girl, the adopted child of a Chippewa chief whose lodge is on the Island of Mackinac. The incident is the double rescue of an English trader, first from the tomahawk on the mainland and afterwards from the stake on the island. Here is matter for raising the hair and curdling the blood, but the manner of

narration is so heavy and lifeless that the pulse declines to hasten its beat. If it be possible for an Englishman with peril of a hideous death hanging over him to conceive a violent passion for a woman, Mrs. Catherwood's instance carries no conviction. What chiefly strikes one in the scene where Henry, bound to the stake, the flames licking his feet, calls on the priest to marry him to Marie, is not the intended pathos or tragedy, but the novelty of such attachment to the marriage rite. A man here and there may prefer the prospect of the altar to that of the stake, but who ever before heard of one voluntarily adding to the horror of death by flame that of the nuptial ceremony?

Mr. Wedmore's volume of stories is well named 'Pastorals of France.' In the tales of Pornic, of Croisic, and of Chartres, the influence of nature on character and the harmony between them are admirably marked. The sentiment of scene is beautifully given, and the particular description is neither dry nor categorical. The incidents illustrate sadness in love rather than joy, yet are not oppressively melancholy. Even the old Curé of Chartres is not a wholly desolate figure. One knows that he has run the gamut of earthly disappointment, and also that he cannot be overwhelmed. His character is drawn with great strength and delicacy, which qualities are indeed conspicuous throughout the book. The first of the "Renunciations" is a good sketch of a prosaic life illumined by one wonderful incident. It may be objected that the incident is too fantastic for probability, but it is so well imagined that the objection can only be an afterthought. The volume closes with a tragedy swift and shocking in fact, and told with fine restraint.

'True Riches' could be easily spared from the works of François Coppée without injury to his reputation. It is a great pity that a French author cannot be good without also being dull or trivial. Here M. Coppée is very, very good, and fairly prattles forth his illustrations of the happiness to be achieved by the practice of virtue. The translator's method is a childish one of literal rendition of French forms and idioms, whereby the infantile air of the volume is much heightened.

An obvious reflection on 'The Prince of India' is that General Wallace builds his novels with single reference to the dictum of the prosaic *Director* in Faust:

"Die Masse könnt ihr nur durch Masse zwingen."

He means to appeal to the multitude, and relies on quantity to see him through. He has hitherto been so successful with his multitude and his quantity that he can afford to disregard the handful that feebly sigh for quality. To give concisely any notion of the contents of the two volumes lies not within the modest powers of a reviewer. There are arguments political, philosophical, religious, the latter taking cursory notice of the controversy about the procession of the Holy Ghost; there are wars and intrigues and abductions; there are princesses and Hegumens, sheiks and emirs, a Gul Bahar, an Emperor, and a Sultan, all madly loving and hating, and all as wax in the hands of the Prince of India—the Wandering Jew.

The shining characteristic of this legendary figure is, according to the author, vindictiveness. He got up a splendid scheme (somewhat similar to the Congress of Religions at Chicago), which was designed eventually to bring all nations and creeds to worship one God—a God, to quote Gibbon, "without a rival and without a Son." When Constantine declined to consider the project, its instigator turned to the Sultan, Mohammed II., and conducted him, by the aid of the stars in heaven, even to the temple of St. Sophia. Both the Jew and the Sultan are picturesquely imagined, and their genuine life shines through the dense cloud of distressing verbiage. The Emir Mirza, presumably adapted from Scanderbeg, is an attractive person, relieved from the burden of inevitable treason by Mohammed's generosity. When so much is done it can hardly be expected that it should be done well. Still, more care might have been exercised in the distribution of pronouns, and it would seem easy to avoid telling us that people shot "menacious" glances, and that roses, or trays (we are uncertain which), "rouge" the daylight. As for the salaam "left outside the door," we are consumed with curiosity to know whether the author thinks that a salaam is portable property, and if so, whether the gentleman who left it came back for it.

## IN MASHONALAND.

*Travel and Adventure in South-East Africa.* By Frederick C. Selous. With numerous illustrations and map. London: R. Ward & Co.; New York: Scribners. 1893. 8vo, pp. xviii, 503.

THE author of this very timely and interesting book is the most famous of living sportsmen. He went to Africa in 1871, at the age of nineteen, and the greater part of his life since then has been spent in hunting in the region bordering on the Zambesi. A hunter by profession, he is also favorably known as a naturalist, and his services as an explorer have won for him the gold medal of the Royal Geographical Society. During the last four years his employment has been that of a pioneer, and to him more than to any other man, except Mr. Rhodes, the occupation of Mashonaland by the Chartered Company is due. When the Matabele war broke out, he was in England, but immediately returned to Africa and acted as guide to the detachment of imperial troops. In the battle of November 3 he is reported to have been slightly wounded.

The first part of his book, containing an account of the incidents and adventures of his various hunting trips during the years 1882-'88, though less valuable, will prove to the general reader more entertaining than the historical part. Many of the stories are, naturally, of experiences common to every hunter of the great game of South Africa, but several of the incidents narrated are very remarkable. Mr. Selous has been specially fortunate in the number and variety of his encounters with lions, and in the story of the two night attacks by them upon his camp he is seen at his best as a writer. A powerful piece of description, also, from its simplicity, is the account of his escape from the Mashukulumbwi after the looting of his camp. It would be hard to parallel his situation for desolateness and danger—alone in the heart of Africa, more than three hundred miles from his wagons, surrounded by hostile natives, with nothing but what he stood in and a rifle with four cartridges—and he was robbed of this the next night.

Pictures of life in camp, or in the bush, or while "trekking" across the plains, are frequent, and give one a vivid idea of its fascinations. And though the reader may become weary and at times wax indignant over the continuous slaughter, still the author's protest should not be forgotten, that he shot only for specimens for museums or for meat for his people. He has an unfavorable reputation for the wanton killing of large game, mainly because, in an account of his earlier adventures, he gave, in an appendix, an extraordinary list of his various "bags," a mistake which he has not repeated here. The speedy extinction of the larger South African animals which some have predicted does not seem to him likely, with the exception of the white rhinoceros, of which only a few individuals are now known to exist. The chiefs Khama and Lobengula, and the British Government also, if we are not mistaken, carefully "preserve" the hunting in their respective countries, and the day of indiscriminate and wanton slaughter has past. The only serious difficulty which Mr. Selous had with the famed Matabele chief was in regard to killing a hippopotamus without permission. In some regions, especially those raided by Lobengula's "impis," all wild animals of late years have greatly increased.

Mr. Selous had little elephant-shooting, but one encounter with a herd was remarkable for the extraordinary conduct of his horse. Being suddenly charged by an elephant at close quarters, our author resolved to dismount and run for the rocks.

"My stallion was, in some respects, a perfect shooting-horse, and immediately I leant forward and seized his mane he stopped dead. I was off and in front of him in an instant, and running for the rocks, which were not twenty yards away. As I got round the first rock I turned, and this is what I saw: The horse was standing absolutely still, with his head up and his fore feet planted firmly in the ground, as if carved in stone, and the elephant, which had then ceased to scream, and was making a curious rumbling noise, was standing alongside of him, smelling about with her trunk. In front of my saddle was tied a leather coat, with a red flannel lining—a present the preceding year from my friend poor Montagu Kerr—and I suppose that the elephant must have touched the horse with her trunk, as he suddenly gave a jump round, throwing the red-lined coat into the air. He then walked slowly to the rocky ridge behind him, and again stood still about fifteen yards away from the elephant."

This might have been ascribed to the paralysis of fear, had it not occurred a second time in the same hunt. Incidentally Mr. Selous gives some account of the habits of the animals he hunted, though less than might have been expected from one with so strong a taste for natural history; nor has he much to tell of the different native tribes with whose manner of life he was so familiar. On the other hand, references to his guns are not infrequent, while hints to sportsmen are scattered throughout the volume. Occasionally there is a graphic bit of description, as when, writing of a thunder-storm at night, he says, "the rain came down solid, in such a way that, although the soil under foot was deep loose sand, the lightning showed a sheet of water, for the sand could not absorb the rain as fast as it fell."

The pioneer work began in 1889 with the conducting of a gold-prospecting party through eastern Mashonaland. This necessitated a visit to the Portuguese settlements on the Zambesi, of which Mr. Selous gives an interesting account, as well as of the whole expedition. On his return to the Cape his favorable report of the apparent richness of the gold region, and also of the active preparations of the Portuguese to occupy it, led Mr. Rhodes to take immediate steps to anticipate them, and the author was engaged to act as guide to the Chartered Company's pioneer force. Before telling this part of his story, however, he describes, at some length, Ma-

shonaland, its resources, inhabitants, and antiquities. In treating of these he argues strongly against Mr. Bent's theory that a high form of civilization once existed here, which, with the foreign race of gold-seekers who brought it, was destroyed in some great catastrophe. As the natives within fifty years washed and mined gold, built stone walls round their kraals, and ornamented their knife-sheaths and pottery in a manner similar to the builders of Zimbabwi, and as there is to be seen in them a tendency to revert to the Asiatic or Semitic type, he holds that there has been a "gradual fusion of a numerically small number of a race of traders and merchants, who were themselves in a low state of civilization, with the aboriginal inhabitants of the country."

At the time of the British occupation in 1890 Mashonaland was almost an uninhabited wilderness, though before the Zulus settled in Matabeleland, about 1840, it had a large population who cultivated the ground, were rich in herds, lived, many of them, in walled towns, and practised some rude arts. Now the miserable remnant have fled to the top of almost inaccessible rocks, where existence is made yet more wretched by ceaseless dread of their terrible neighbors. Of this abject state of fear Mr. Selous had frequent experience. In one of his hunting trips his whole party "only numbered ten; yet, after crossing the Manyami, until I passed the extreme limit of the Matabele raids, the people everywhere fled precipitately at our approach, the old women running from the cornfields, wailing and shouting, and the cattle-herds and goat-herds leaving their flocks to shift for themselves." A raid was described to him by one who took part in it:

"When the impi came to Musigaguva, they camped close to the Mashona kraals, the inhabitants of which brought down food and beer for the Matabele soldiers, who seemed on very friendly terms with them, they on their side suspecting nothing. On the day of their arrival everything remained quiet, but the following morning the Matabele, acting on the orders of their endunas, suddenly surrounded the different small kraals, and then at once fell upon the unsuspecting inhabitants. None were spared, but men, women, and children were ruthlessly slaughtered, many of the infants, according to John Matoli, having been seized by the ankle and their brains dashed out against stones. It was in April, 1883, that this cruel massacre took place, and towards the end of the following November, on my way back to Matabeleland, I passed through the country, and, camping one night amongst the ruins of the deserted kraals, saw with my own eyes the devastation that had been wrought."

These Mashonas, it should be said, were tributaries of the Matabele, had large herds of their cattle in their keeping, wore the dress and spoke the language of their lords; nor was any reason ever given for their massacre except that it was the King's command.

The rights of this robber-clan seem to have been even scrupulously respected by the Chartered Company. The only wagon-road to the Mashonaland plateau from the British frontier led through Buluwayo, the residence of Lobengula, and when he refused to permit the pioneer force to use it, a new road was cut, under the guidance and superintendence of Mr. Selous, to the south and east of Matabeleland through a trackless wilderness for 460 miles. This was finished in the extraordinarily short time of two months and a half. Had the author foreseen the nearness of the inevitable conflict, which was successfully avoided in this and several other instances at that time, he would probably have given some description of the now fugitive king. As it is, he only leaves upon his readers the impression of a once strong personality somewhat weakened with age and infirmities. Of Khama, chief of the Bamangwato, he speaks, as all other writers have done, in terms of the highest commendation, calling attention at the same time to the ungracious return made by the Government for the great services which he has rendered the English. Mr. Selous naturally feels much confidence in the future of the new British territory, regarding it as valuable, apart from its mineral wealth, for stock-farming and agriculture. Although well within the tropics, its elevation of from three to six thousand feet above the sea-level gives the higher portions a "thoroughly temperate climate," with cool nights the whole year round. In winter it is "apt to become so keen and cold that an Englishman suddenly transplanted from home, and deposited, without knowing where he was, on some portion of the Mashona uplands, would never dream that he was in tropical Africa, but would rather be inclined to believe that he stood on some wild moorland in northern Europe; and the sight of a bed of bracken, looking identical with what one sees at home, would only lend color to this belief."

After the completion of the wagon-road, the author was engaged for two years in various ways in opening up the country and in making treaties with the Mashona chiefs, returning to England at the end of 1892. During this time he had an exciting night adventure with five lions which he describes admirably. It only remains to say of his book, which is by far the most interesting of recent works on Africa, that it is very attractively got up, with illustrations of unusual merit, a good map, and an index.

*French Illustrators.* By Louis Morin. Preface by Jules Claretie. With fifteen plates and many text illustrations. In five parts. Charles Scribner's Sons. 1893.

It is somewhat curious and not uninstructive to compare this sumptuous publication with the similar one on 'American Illustrators' brought out some time ago by the same firm. The comparison is not altogether to the disadvantage of the Americans, even though the ranks of the Frenchmen are filled with foreign recruits whose only claim to be considered French is that they reside in Paris. Caran d'Ache, though half-Russian, may properly be considered French, but Rossi and Marchetti are thoroughly Italian in their art as well as in their names, and Vierge is a Spaniard to the marrow. Kaemmerer is a Belgian, and Lynch a South American, and there are a number of other names with a suspiciously foreign sound. Even with these reinforcements, however, the "all Paris" team is not unquestionably victor. The Americans are as decidedly superior in some directions as the Frenchmen are in others, and the particular points in which each group excels are worthy of note. In some cases the result seems at first rather surprising.

France is the home of classic draughtsmanship, and the first of these surprises is to find that French illustration, as here represented, contains nothing in the line of the serious treatment of the human figure, nude or classically draped, that can compare with such American works as Vedder's 'Omar Khayyám' or Low's illustrations to Keats, to name no others. The men in Paris who can do that sort of work do not condescend to illustration, it would seem. It is perhaps so much the worse for our men that they are obliged to put much of their best thought into black-and-white, but it is certainly the better for our books. Neither can the Frenchmen match Abbey for delicate fancy, charming handling of pen-and-ink, and the dainty presentation of seventeenth and eighteenth century types and costumes, or Pennell for architectural drawing. In pure landscape the Frenchmen show little, while in pure decoration the honors are perhaps divided. Where Paris beats us thoroughly is in caricature and humorous drawing. The group of men headed by Caran d'Ache and Forain, and which includes such names as Renouard, Jeanniot, Steinlen, and Willette, is unapproachable. In some of them the humor is only in a slight accentuation of the type, in others it takes the form of broad farce, but in all of them the power of draughtsmanship, the vigor of line, and the economy of expression are such as to make our work in the same sort seem feeble and amateurish by contrast. The French comic draughtsmen are many of them the strongest and most vital draughtsmen of France. Ours are too apt to be either untrained artists, in whom fun supplies the place of knowledge, or trained artists who make pretty drawings and leave the fun to the text. We are improving in this respect, but we have still much to learn from the French.

Another class of men that we have not, and are not likely to have, in America are the purely "military painters," like Detaille, who figures here by right of his remarkable series of drawings of the "Armée Française." The precision of gaiter-buttons, the intense interest in the smallest things that touch the life of the soldier, is a French trait, and the *peintre militaire* is a French institution. Perhaps it is to the extension of this love for precision in military matters to other things that is partly due what is, after all, the distinctive note of this collection. Certainly some of the military subjects are among those most clearly belonging to the photographic school. The school, however, is everywhere, and the extent to which realism has been pushed in France is astonishing and disquieting. One turns to plate after plate which is almost deceptively like a photograph from nature, as accurate and as stupid, until one begins to wonder if art and style and the personal element are all to disappear from modern art together, and, if so, why the artist might not as well disappear too and leave the field to the camera. We remarked recently on the degree of success with which the late Mrs. Cameron tried to turn photography into art, but here are men turning art into photography with even more complete success. Fortunately, the reaction has already begun. In painting we have Puvis de Chavannes and others. In illustration there seem at present to be only the humorous draughtsmen and the frivolous draughtsmen who maintain the tradition of selection and personal style; but even in serious illustration we are sure, sooner or later, to be delivered from the tyranny of the photograph.

The text which accompanies the drawings is of no importance whatever, and may be dismissed with a word. M. Morin is himself an illustrator, and, to avoid criticising his brothers-in-arms, has invented a tiresome fiction of an American millionaire and his friends visiting the studios of the artists and conversing with them. There are a few personal facts about the artists represented and some mention of what they have done, and, occasionally, a remark by one of them of some interest; but most of the writing is at the same time slight and dull. Fortunately no one need read it. The reproductions are admirable, and leave

little to be desired from the point of view of mechanical perfection.

---

*Twenty Years at Sea;* or, Leaves from My Old Log-Books. By Frederic Stanhope Hill. Boston: Houghton, Mifflin & Co. 1893.

This is a very readable book, having the genuine flavor of the sea and sea life. In addition to being as interesting as the fiction of Clark Russell, it gives in a healthy and natural manner many interesting and exciting phases in the life of the author in times of storm, battle, and blockade. Capt. Hill, who in the narrative uses the *nom de plume* of Capt. Kelson, had a long and successful career in the merchant service, followed by an active and honorable experience during the civil war as a volunteer officer in the navy of the United States.

The description given of his first voyage, as a boy of thirteen, from New York to Rio, is excellent, without glamour or apparent exaggeration. Service in the merchant marine was chosen by the author's father as affording the best test for the strength of the boy's sea-longing, and also providing the quickest relief if sea life proved unpalatable. Good judgment was here shown, and when the first voyage confirmed the author in his desire for such a life, he still remained in the merchant service; his observations of the gray-haired lieutenants of our navy stationed on board vessels in Rio harbor assured him of the better possibilities of advancement in the merchant service. That he was not mistaken in the latter his narrative shows, for he commanded a full-rigged ship before he reached the age of twenty-one. The merchant service holds forth fewer opportunities in these days, at least under the American flag, while the naval service is about the same if not worse, so far as the possibilities of advancement are concerned; command rank being now attained in the neighborhood of fifty years of age, and retirement following at sixty-two years.

While serving as a mate on board of the ship *Thomas H. Perkins*, the writer accompanied a detachment of Col. Stevenson's regiment of New York volunteers in its somewhat famous voyage to California before the days of the discovery of gold. These men were a rough set, and the experience with them at the time must have been far from pleasant. An amusing incident occurring shortly after the arrival at Rio, on the part of the company of Captain (now General) Lippitt, must in these later years provoke a smile from him, no matter how vexatious it was at the time.

Captain Hill had a trying experience with his first command. It reads like a romance. While detained in Santiago in Chile, securing a permit to ship copper, the mate left in charge of the ship at Valparaiso tampered with the crew, secured a gang of beach-combers from shore, and ran away with the ship and seventy thousand dollars in silver on board and disappeared from the sight of man. Falling in, fortunately, with an old boon companion of the runaway mate, the writer ascertained the probable whereabouts of the ship, and, fitting out an expedition in a fast-sailing schooner, found his lost ship on the other side of the Pacific in the Admiralty group north of New Guinea. Recapturing his vessel after some fighting, he proceeded upon his way to Hong Kong, and, after a later encounter with a typhoon, finished his voyage most successfully.

After seventeen years of constant sea-going, the sea was abandoned for business life on shore. In two years, however, our author was afloat again, this time in the navy, at the beginning of the late war, as a volunteer officer. His first service was upon the *Richmond* in a stern chase after Semmes, then in command of the *Sumter*, and the service was continued through the blockade of the mouth of the Mississippi, the passage of the forts below New Orleans with Farragut, the fights off Vicksburg and Port Hudson, and finally the passage of the forts and the following engagement which ended in the possession of Mobile Bay. Promoted to be an acting lieutenant for his creditable service, he was given the command of a sailing vessel transformed into a man-of-war, and stationed upon the coast of Texas for blockading purposes. Here the tedium of blockades was relieved by the excitement of narrow escapes from seizure on shore and by some clever captures of blockade-runners. Transferred to the upper Mississippi River in the latter part of the war, he was engaged, while in the command of several vessels, in the patrol of the river to prevent the trans-Mississippi forces of the Confederacy from crossing over and joining the main armies of the Confederacy. This monotonous but most important duty was faithfully performed, and a hitherto unwritten episode of the war is related of a proposed betrayal and delivery of a steamer by a Union naval officer of the volunteer service, who, bewitched by a beautiful Southern girl, was about to be faithless to his trust when the timely discovery of his treason was made.

We can commend this book as one of the best of sea tales recently issued, and a worthy successor of the classic book of Dana, written also by a fellow-New Englander.

*Schuld oder Unschuld des Templerordens:* Kritischer Versuch zur Lösung der Frage. Von Dr. phil. Julius Gmelin. Mit einer besonderen Mappe enthaltend 20 Tafeln. 8vo. Stuttgart. 1893.

In the long-debated question as to the guilt of the Templars the scale seems at last to be inclining in favor of the accused. Prof. Hans Prutz of Königsberg is now almost alone in maintaining that they were infected with the heresies ascribed to them, and, while his special studies on the subject naturally give his opinions weight, even he has felt obliged to modify those opinions considerably, and in his latest work on the subject he contents himself with attributing to the members of the order a far less flagrant deviation from orthodoxy than he had asserted in his earlier publications.

We have now to welcome a new combatant in the lists—one who has already won his spurs by a learned and exhaustive essay on the Templar Rule, printed not long since in the *Mittheilungen des Instituts für Oesterreichische Geschichtsforschung.* Dr. Gmelin has devoted many years to the investigation of the subject in all its aspects—no previous writer has probably examined with such searching minuteness all the voluminous evidence extant relating to the trials; and the result is his conviction of the false and fraudulent nature of the charges put forward by Philippe le Bel, on the strength of which hundreds of Templars were tortured to confession, scores of them were burned alive for retracting, the order was suppressed, and its large possessions were confiscated, nominally for the benefit of the Knights of St. John, but to a great extent seized by those who were in position to profit by its ruin. One special feature of Dr. Gmelin's work will render it indispensable to all future students of the subject. He has been at the infinite pains of tabulating the controlling points in the confessions of about four hundred Templars in France—the cases on which the prosecution mainly relied—and he presents the results in a form admitting of ready examination and comparison, with such indications concerning the individuals as have a bearing upon the credibility of their statements. With this aid it will be comparatively easy hereafter for any one familiar with the general circumstances to estimate for himself the character and weight of the evidence, and to recognize the contradictions which deprive it of all significance, save as an illustration of the facility with which the inquisitorial methods of torture enabled a judge to secure from the accused whatever admissions were desired.

The Templar catastrophe is one of those dramatic events in history which can never lose their interest. The distinguished station of the victims, the suddenness and completeness of their fall, the horrors to which they were subjected, the sordid motives of the prosecution, and the savage means by which that prosecution was conducted to a successful issue, all conspire to invest the affair with a sombre picturesqueness akin to that of the most skilfully constructed tragedy. The whole course of action is dominated by the unflinching ferocity of Philippe le Bel, in striking contrast with the initial irresoluteness of his accomplice, Clement V., whose easy good-nature becomes even more remorseless than Philippe's rapacity when he finds himself inextricably compromised, and recognizes that, if he cannot destroy the order, the failure of the attempt will morally destroy him; while between the two stands the pathetic figure of De Molay, who abandons his comrades in the delusive hope of self-preservation, and then, after seven years of harsh incarceration, redeems his error by the voluntary self-sacrifice of an heroic death.

In such a story there is no element of interest lacking, and its able and vigorous presentment by Dr. Gmelin ought to secure many readers for his book, albeit it is not written for a popular audience, but is a scholarly investigation into all disputed points, polemical sometimes to the point of combativeness, but informed throughout with a thorough knowledge of the subject, in the light of the most recent research.

---

*The Pilgrim in Old England:* A Review of the History, Present Condition, and Outlook of the Independent (Congregational) Churches in England. By Amory H. Bradford. London: James Clarke & Co.; New York: Fords, Howard & Hulbert. 1893.

One of the pleasant signs of the decadence of that spirit of hostility towards England which characterized the average American of the first half of this century, and which demagogues do their best still to foster, is the interest now manifested in the details of English social, political, and religious life by a large portion of the reading public. The book under review is an outgrowth of this interest, and it makes a further appeal to the curiosity of a large American religious body to know something of the habits and thought of its counterpart in name on English soil. Under the fanciful title of 'The Pilgrim in Old England,' Dr. Bradford has put into print a number of addresses, chiefly made to the students of Andover Theological Seminary. His aim is modest; as he states it himself in the preface, his book "is not intended to be an exhaustive

study of ecclesiastical polity, nor a history of the rise and growth of an ecclesiastical order, but rather an exposition of the working of the principles which are taught and illustrated in the Independent, or Congregational, churches of England." Under these self-imposed limitations, Dr. Bradford gives a colloquial account of the rise of the body of which he treats, running hastily over its history, its organization and methods of government, its doctrinal tests, its present preachers and leaders, and its attitude on problems of the relations of Church and State. With his facts and impressions Dr. Bradford interweaves much of his own theories, and he writes with the American churches of his own fellowship always in mind. His admiration for the leaders of English Congregationalism is intense and rather undiscriminating, and his appreciation of the services of the body of which he treats in English religious development is always warm; but he believes that disestablishment would largely end Dissent.

Nothing is, perhaps, very new or very profound; but these addresses, as a whole, constitute a pleasant guide to a general acquaintance with the present condition and tendencies of one of the oldest of English Nonconformist bodies. They are of importance in that they gather together, as no other work does, the scattered facts of denominational life in the Independent churches; and the spirit in which they are written is that of hearty international good-fellowship.

BOOKS OF THE WEEK.

Adler, Liebman. Sabbath Hours: Thoughts. Philadelphia: Jewish Publication Society.
Aspects of Modern Oxford. Macmillan. $2.
Barrows, Rev. J. H. The World's Parliament of Religions. Vol. I. Chicago: Parliament Publishing Co.

# J. B. LIPPINCOTT COMPANY, Publishers and Booksellers,

715–717 MARKET STREET, PHILADELPHIA.

# A. C. McClurg & Co.'s New Books.

**Russia and Turkey in the Nineteenth Century.** By ELIZABETH WORMELEY LATIMER, author of "France in the Nineteenth Century, 1830-1890." Handsomely illustrated with 23 portraits of celebrated characters. 8vo, $2.50.

The author of "France in the Nineteenth Century," which has become very popular during the past year, presents to her readers a companion volume which must take its place among the valuable contributions to popular historical literature. Dramatically and vividly she pictures the important events which have occurred in the two countries from the time of Alexander I. of Russia to the present, including the Crimean War, the exile system, the persecution of the Jews, the conflict between Mohammedanism and Christianity, etc. Both this work and Mrs. Latimer's "France in the Nineteenth Century" possess unusual interest, at this time, in view of the cordial relations existing between France and Russia and the prospects of an alliance being formed between these two great powers

**The Book-Hunter in Paris.** Being Studies among the Bookstalls of the Quays. By OCTAVE UZANNE. With an introduction by Augustine Birrell, and 144 characteristic illustrations interspersed in the text. Large 8vo, *net*, $5.00. Large-paper edition, limited to 25 copies for America, *net*, $13.50.

## *Back Numbers of "The Nation."*

In response to frequent inquiries from subscribers:

*An incomplete set* of THE NATION has little or no market value. Partial sets, bound and unbound, are always obtainable (usually lacking the earliest volumes), and do not command high rates. The bindings generally count for nothing, owing to great diversity of styles. Volume I. has readily brought $10 and upward when complete, bound or unbound, but will bring very little in proportion if a single number is missing. Volumes II. and III. are also scarce, but not so high-priced as the first.

*Complete sets*, both bound and unbound, have sold for $100, with tolerably quick bidders, and have an increasing value year by year.

*Single numbers* not more than a year old can usually be supplied by the publishers at 10 cents each. For numbers more than a year old purchasers are referred to Mr. J. W. Christopher, 47 Dey St., Mr. A. S. Clark, 34 Park Row, or H. Williams, 195 West Tenth Street, New York.

The publishers no longer undertake to buy or sell numbers or volumes more than a year old, and can only recommend sellers or purchasers to negotiate with a dealer or to advertise in THE NATION.

[Publication was begun July 1, 1865, Vol. I. comprising the last half year. Two volumes per year have since been issued, Vol. LVII. comprising the last half-year of 1893.]

# HOLIDAY BOOKS

PUBLISHED BY

## Joseph Knight Company,

BOSTON.

**Lorna Doone.**

By R. D. BLACKMORE. *The only complete Illustrated Edition, with 208 half-tone and woodcut Illustrations and 30 Photogravures.* A superb set of books. 2 vols., octavo, bound in full olive or old rose silk and white cloth with cloth jacket, $6.00; the same in half levant, gilt tops, $12.00.

**A Princess of Thule.**

By WILLIAM BLACK. With 80 half-tone or pen-and-ink sketches by ETHEL ISADORE BROWN, and a colored frontispiece of Sheila, the heroine of the story. 1 vol., small quarto, fancy cloth binding, gilt top, $2.00; the same in half levant, gilt top, $4.50.

**Cranford.**

By Mrs. GASKELL. With an Introduction by Rev. BROOKE HERFORD. An entirely new edition of this charming volume, with 100 Illustrations, including a colored frontispiece from an original drawing by FRANK T. MERRILL. 1 vol., small quarto, fancy cloth, gilt tops, $2.00.

**John Halifax (Gentleman).**

By Miss MULOCK. A new edition of a story of which readers, young and old, never tire. With 40 new half-tone illustrations, and a colored frontispiece from an original drawing by Miss LAURA C. HILLS. 1 vol., small quarto, fancy cloth, gilt tops, $2.00.

**Through Evangeline's Country.**

By JEANNETTE A. GRANT. An historical and descriptive account of the Acadians, and the Evangeline story newly written. With 35 half-tone illustrations, and a colored frontispiece of Evangeline. 1 vol, square 12mo, fancy cloth binding, $2.00.

**A Sentimental Journey**

THROUGH FRANCE AND ITALY. By LAWRENCE STERNE. Illustrated by MAURICE LELOIR. With 12 full-page photogravures and numerous photo-engravings. 1 vol., 16mo, daintily bound, cloth, full gilt, gilt top, $1.50.

**The Abbe Constantin.**

By LUDOVIC HALEVY. Illustrated by MADELEINE LEMAIRE. With 18 full-page photogravures and 18 half-tone illustrations. 1 vol., 16mo, daintily bound, cloth, full gilt, gilt top, $1.75.

**A Dog of Flanders.**

A Christmas Story, By LOUISE DE LA RAME (OUIDA). A new edition of a beautiful Christmas Story, already prized as a classic by all who know it. With 42 original illustrations and a photogelatine reproduction of Rubens' great picture, "The Descent from the Cross." 1 vol., small quarto, cloth, gilt top, $1.50.

**The Nurnberg Stove.**

By LOUISE DE LA RAME (OUIDA). Another of Ouida's fascinating stories, delightful alike to old and young. With 50 original illustrations and a color frontispiece of a German stove, after the celebrated potter, Hirschvogel. 1 vol., small quarto, cloth, gilt top, $1.50.

**Cap and Gown.**

Some College Verse. Chosen by JOSEPH LAROY HARRISON. 1 vol., square 16mo, white and gold, ornamental binding, gilt top or gilt edges, $1.25.

By WILLIAM CULLEN BRYANT. With an Introduction by Rev. JOHN W. CHADWICK. Illustrated by 13 photogravures from nature and original drawings. Printed in red and black, and daintily bound in vellum cloth. Gilt top, 1 vol., square 12mo, $2 00.

**The Song of the Brook.**

By ALFRED TENNYSON. Fifteen original and beautiful photogravure illustrations, after original drawings by WILLIAM J. MOZART. The title-page and text of the poem is printed in red and black, and each stanza is illustrated. 1 vol., square 12mo, vellum cloth, $2.00.

**Tales from Shakespeare.**

New Edition. By CHARLES and MARY LAMB. A pretty edition of this well known classic. Illustrated with 20 etchings by the celebrated French artist H. PILLE. Etched by L. MONZIES. 2 vols., 16mo, half white vellum cloth and silk side, gilt tops, $3.00.

*For sale by all booksellers, or will be sent by mail, postpaid, on receipt of the price by the publishers.*

# THE ATLANTIC FOR 1894

Will contain, among other attractions,

**Philip and His Wife, a Serial Story, by Margaret Deland.**

This is undoubtedly the most important work of the author of "*John Ward, Preacher*," involving some of the leading problems in modern social life, studied very thoroughly, and treated with admirable skill and grace.

**Short Stories,**

By Miss Jewett, Mrs. Catherwood, Joel Chandler Harris, Mrs. Wiggin, and others.

**History and Biography**

Will be very effectively presented by papers from Capt. Mahan, Professor McMaster, the historian, Hon. J. C. Bancroft Davis, Professor Mendenhall, and others.

**Literary History and Criticism**

Will be made attractive by letters of Coleridge and Thoreau, and by papers on engaging themes from Sir Edward Strachey, Professor Kittredge of Harvard, Professor Tyrrell of Dublin, and other very competent writers.

**Nature.**

Delightful sketches on the seasons and the aspects of Nature in Florida, Utah, and Canada, are promised by Miss Thomas, Bradford Torrey, Frank Bolles, and Olive Thorne Miller.

**Educational Topics**

Will be treated with the care and thought due to their importance. This is regarded as one of the most useful parts of the work of the *Atlantic*. Articles are assured from Professor Shaler, Horace E. Scudder, and others who are able to speak with authority.

**Music and the Drama.**

Special attention will be given to dramatic criticism and to the development of the theatre in America, with reminiscences of famous actors and actresses.

A careful critic recently said: "The *Atlantic* keeps right on in the even tenor of its way, looking precisely as it did in its first number, away back more than thirty-five years ago, and still presenting a large variety of the very best literature that appears in this country. What books and books, and what books of enduring value, have been compiled from its teeming pages! It has had some editors who have made great names in the literary history of this country—Lowell, Fields, Howells, Aldrich—and yet the uniform quality of its contents has not varied in all these years from the highest standard. The old contributors, who made its reputation in its early days, are all dead. Only Dr. Holmes of the old set remains, apparently with as young a heart as in his glorious prime. New names have taken the honored places of those who have gone hence. And yet, the *Atlantic* seems to us just as good as it was twenty-five years ago. Under the most able editorship of Mr. Scudder, it is all that it ever was—sometimes we even dare to believe that in many respects it has been improved, if that were possible."

*N. B. Now is the time to subscribe.*

**TERMS:** *$4.00 a year in advance, postage free.*

November and December numbers free to new subscribers remitting before December 20th.

*Postal Notes and Money at risk of sender. Remit by money-order, draft, or registered letter, to*

**HOUGHTON, MIFFLIN & CO., Boston.**

## The Thoughtful Citizen

Looks back of the present condition of national life in the United States, knowing that a right knowledge of the complex forces that have contributed to the growth of the nation is essential to any but a half-blind exercise of citizenship.

The historian who can best aid him must be keen and sympathetic and just; he must be logical and thorough; he must show not only effects but causes; he must show the life of the nation, and then his work may rightfully be called a history. Such a history is

## Von Holst's Constitutional and Political History of the United States.

Few, if any, works in the field of American History are so frequently cited and so highly commended in the Universities of our land as this. A pamphlet descriptive of it will be sent you on request.

*A FEW CRITICAL OPINIONS.*

Its reflections are always astute and incisive — *Harper's Monthly.*

Written for all time.—*New Orleans Picayune.*

Learned ingenious, subtle, brilliant, dashing, and sometimes almost rollicking in his lively and glowing style.—*New York Herald.*

The peculiarities of Von Holst's historical clinics are, first, a multitude of side-lights which he throws on them from every quarter, and, second, the remorseless pertinacity with which he follows up every nerve and muscle to its end.—*Alexander Johnston.*

Masterly analysis of events.—*The Nation.*

Omits no significant detail.—*David Swing.*

In the front rank of American histories.—*H. C. Lodge.*

Marked by comprehensiveness of statement, amplitude of detail, and clearness of exposition.—*New York Tribune.*

We seem to feel, from page to page, the onward march of destiny.—*The Independent.*

It is perfectly just and impartial in weighing argument and estimating character. Young America may well read and ponder this graphic narrative.—*Harper's Weekly.*

*Complete in Eight large octavo volumes containing nearly 4,000 pages. Prices, in cloth, $25; sheep, $30; half calf, $38. Sold by leading booksellers everywhere.*

**CALLAGHAN & CO., 114 Monroe St., Chicago.**

# MY ARCTIC JOURNAL.

A Year Among Ice-Fields and Eskimos.

BY

## Josephine Diebitsch-Peary

WITH AN ACCOUNT OF

*THE GREAT WHITE JOURNEY ACROSS GREENLAND*

BY

## Robert E. Peary,

Civil Engineer, U. S. Navy.

"It would be difficult to exaggerate the charm and the interest of Mrs. Peary's work. . . . In a style delightful for its directness and simplicity, Mrs. Peary takes the reader into the daily life of the little encampment in the far North, and pictures the thousand and one incidents of the Arctic winter and the long months of preparation for the 'great white journey' in a vivid and living story, which seems to make the reader a member of the company itself, and acquainted with the characters and personal traits of every one in it. . . . Much credit is due the publishers of the volume for the excellence of its illustrations."—*Brooklyn Standard-Union.*

This sumptuous work, which issues from the De Vinne Press, contains 22 plates (including four in tint), besides numerous illustrations in the text.

CLOTH, on fine coated paper, price, $2.

AUTOGRAPH EDITION, on large paper, gilt top and rough edges, handsomely bound in ornamental cloth, with the written signature of Mrs. Peary on the frontispiece, $5.

---

OPEN EVENINGS.

# The Nation

Is published every week at Broadway and Fulton Street. It was founded by E. L. Godkin in 1865, and Mr. Godkin is still the editor.

THE NATION is an independent weekly review of literature, science, art, and politics, with a serial commentary on the most important American and foreign events, special and occasional correspondence, editorial and miscellaneous articles on prominent political and social topics, and thoroughly competent criticism of the latest developments of literature, science, art, music and the drama. The two hundred contributors who prepare this feast for the scholar and the thinker include the foremost names in American literature and thought, besides many famous men in England and France, Germany and Italy, South America and Japan. THE NATION has been pronounced by the *Saturday Review* to be "on the intellectual level of the best European periodicals." It has a large and widely distributed circulation in all the States of the Union and in foreign ports. The development of that class of independent voters who control the balance of power in several Northern States is largely the work of THE NATION, which has always fought for purity, wisdom, and independence in public life, and for honesty and integrity in legislation.

*Subscription, $3.00 a year, postpaid; shorter term at a proportionate rate.*

*Sample copy sent free on application.*

## TO ADVERTISERS.

The weekly circulation of THE NATION is about 10,000 copies. This number represents, however, but a portion of the actual readers of the journal, as it goes to all the leading libraries and reading-rooms throughout the country, and to the homes of people of intelligence and means everywhere. It stands alone in its field. The announcements of the leading publishers are a feature of THE NATION, which contains more book-advertising than any other weekly paper. Prominent financial houses, the best schools, and other high-class advertisers of all kinds use its columns constantly. The utmost care is taken to exclude all unpleasant or unworthy advertising.

*Advertising rates or other information given on application.*

**206 to 210 Broadway, New York City.**

## SIR FRANCIS BACON'S CIPHER STORY.

**Discovered and Deciphered by O. W. OWEN. M.D.**

This book positively proves that Sir Francis Bacon wrote all the works now bearing the names of William Shakespeare, Robert Green, George Peele, Christopher Marlow, Edmund Spencer, and the Anatomy of Melancholy of Robert Burton. In this remarkable story, Bacon claims to be the lawful son of Queen Elizabeth and Robert Dudley, Earl of Leicester—those two having been secretly married in the Tower of London. He, therefore, was the rightful heir to the throne of England.

This Cipher Story is the most remarkable discovery of the century. It gives to the public hidden facts of English literature and history in such a way that they cannot be denied.

The first volume of this book is now ready. Price 50 cts., paper cover; bound in cloth, 75 cts.

**HOWARD PUBLISHING CO.,**

DETROIT, MICH., and

Lincoln Building, Union Square, New York.

*JUST FROM THE PRESS.*

## Biography of the English Language.

By ARTHUR MACARTHUR, LL.D., author of Education in its Relation to Manual Industry, Essays, Addresses, etc. 12mo, cloth, 417 pp., $1.50.

The subject of this work is the English Language, and the object is to furnish an account of its rise and progress from the earliest periods of its history. This naturally reaches back to the primeval races from whom the English people sprang, and relates to the manner in which their varied dialects finally merged into our present form of speech.

Comparative Philology is the science of scholars, but a knowledge of our own language can easily be acquired by those who speak it.

The intention is, therefore, to give a plain and popular history of our mother tongue alone, and to set it off with critical remarks and slight biographical sketches of ancient and modern authors who have used it in composing their works.

A table of contents is printed and a general index is added. W. H. LOWDERMILK & CO., Publishers,
1424-1426 F Street, Washington, D. C.

**UNIVERSITY TOWN OF INNSBRUCK, TYROL, AUSTRIA.**

1,900 feet above the sea, with dry, bracing climate.

*JUST FROM THE PRESS.*

## Biography of the English Language.

By Arthur MacArthur, LL.D., author of Education in its Relation to Manual Industry, Essays, Addresses, etc. 12mo, cloth, 417 pp., $1.50.

The subject of this work is the English Language, and the object is to furnish an account of its rise and progress from the earliest periods of its history. This naturally reaches back to the primeval races from whom the English people sprang, and relates to the manner in which their varied dialects finally merged into our present form of speech.

Comparative Philology is the science of scholars, but a knowledge of our own language can easily be acquired by those who speak it.

The intention is, therefore, to give a plain and popular history of our mother tongue alone, and to set it off with critical remarks and slight biographical sketches of ancient and modern authors who have used it in composing their works.

A table of contents is printed and a general index is added. W. H. LOWDERMILK & CO., Publishers, 1424-1426 F Street, Washington D. C.

*An Exquisite Little Series that every book lover will appreciate—and buy.*

## THE BIBELOT SERIES.

For the season of 1893 the following volumes are now ready:

I. SONGS OF ADIEU.
A little book of recent English lyrics, compiled from sources not generally known, or inaccessible in this country.

II. OLD WORLD LYRICS.
A little book of translations from Villon Du Bellay, Ronsard, and later French poets.

The Bibelot Series is modelled on an old-style format, narrow 8vo, beautifully printed on Van Gelder hand-made paper, uncut edge, done up in unique vellum cover, and each issue limited to 725 copies.

Price per volume, $1 net.

*For sale by all booksellers, or sent postpaid on receipt of price by the publisher.*

*A New and Important Law Book.*

ON

## Trusts and Monopolies

*A Treatise on Trusts and Monopolies, containing an Exposition of the Rule of Public Policy against Contracts and Combinations in Restraint of Trade, and a Review of Cases, Ancient and Modern.*

By T. C. SPELLING of the San Francisco Bar.

**8vo, Law Sheep, $3.50 net.**

This important and rapidly growing subject has not been treated in any other work. The author is well known to the profession through his very successful work on Extraordinary Relief. The advantage of the book as *a collection of cases is great*, aside from other merits.

*BY THE SAME AUTHOR.*

**A Treatise on Extraordinary Relief in Equity and at Law.** Embracing Injunction, Habeas Corpus, Mandamus, Quo Warranto, Prohibition, and Certiorari. By T. C. Spelling. 2 vols., 8vo, 1,969 pages, law sheep, $11 00 *net.*

"It is likely to prove a useful text-book on all these heads, some of which have never, to our knowledge, been so thoroughly and systematically treated."—*N. Y. Nation.*

"The great advantage of a complete and careful treatment of all the extraordinary remedies in one work will commend itself to the profession."—*S. F. Bulletin.*

"Mr Spelling's work has many merits of its own, and will prove to be a useful and acceptable book to the profession. The citations of cases seem to be very full and complete. The topics are well arranged, and the treatment adequate."—*American Law Review.*

*New Editions of Three Great Works.*

### Pomeroy on Code Remedies. Third Edition.

Remedies and Remedial Rights by the Civil Action according to the Reformed American Procedure. A Treatise adapted to use in all States and Territories where that System prevails. By John Norton Pomeroy, LL.D., author of "A Treatise on Equity Jurisprudence," etc. Third Edition, by John Norton Pomeroy, Jr., A.M., one of the editors of "Pomeroy's Equity Jurisprudence" One volume, 8vo, law sheep, $6.00 *net.*

Pomeroy on Remedies was accepted as soon as published by code practitioners and judges as an authority, and the author's conclusions have frequently been sustained by the courts. The present edition has been prepared by the author's son, who has added the recent cases, and embodied valuable material from the author's manuscript notes.

### Parsons on Contracts. Eighth Edition.

A Treatise on the Law of Contracts. By Theophilus Parsons. Eighth Edition, carefully revised by Samuel Williston. Three volumes, octavo, law sheep, $18 00.

*The only work covering the entire subject of contracts with all the authorities.*

In this new edition the text has been carefully revised, omissions supplied, the chapters on *Consideration* and *Assent* greatly enlarged, and extensive annotations furnished on the subjects of *Agency, Partnership, Infancy, Bills and Notes, etc., etc.* Cases decided during the last ten years in all the courts of the United States have been freely referred to, and the total number of cases cited is now enormous.

### Parsons on Partnership. Fourth Edition.

A Treatise on the Law of Partnership Fourth Edition, revised and enlarged by Joseph Henry Beale, Jr., Assistant Professor of Law in Harvard University. One volume, octavo, law sheep, $6.00.

The editor has entirely rewritten the important chapters "*Nature of Partnership*" and "*Who are Partners,*" and has added a new chapter on "*Business Combinations and Trusts.*" He has thoroughly annotated the entire work, and cited all cases of value down to date

## Little, Brown & Co., Publishers,

# All that's Yellow is not Cottolene

There's hardly a housekeeper in the country but has heard of **Cottolene** the new vegetable shortening. It is a strictly natural product; composed only of clarified cotton seed oil, thickened for convenience in use, with refined beef suet, pure and sweet. So composed,

## COTTOLENE

Was bound to win, and to drive out lard from the kitchens of the world. When housekeepers wish to get rid of the unpleasant features and results of lard, they should get **Cottolene,** taking care that they are not given cheap imitations with vegetable names, spuriously compounded to sell in the place of **Cottolene.**

It's easy to avoid disappointment and ensure satisfaction. Insist on having **Cottolene.**

## J. W. BOUTON,

*Importer and Publisher,*

No. 8 West 28th St., New York.

# The Nation.

NEW YORK, THURSDAY, DECEMBER 21, 1893.

## The Week.

It is an unmistakable fact that the demand of the country at the present time is for speedy action on the tariff bill, and that a conclusion of some sort is really of more importance than the nature of the bill itself. The reason for this is very easy to see. With a duty of 1,000 per cent. or with absolute free trade, the manufacturer, the importer, the jobber, the country merchant, the moneylender, and the housekeeper, all know what to expect. Foresight is the first element and factor of commerce. Foresight is impossible in the present state of uncertainty respecting the new tariff, which is to go into effect on the 1st of June—perhaps. Carpet-making, for instance, one of the country's greatest industries, depends on foreign wool as its chief raw material. The duty on these wools is 32 per cent. There never was any reason for any duty at all on these wools, as they are not produced in this country. A duty was enacted, however, in obedience to the dictates of the grand tariff "combine." The wool-growers were afraid that some carpet wool would be used in the manufacture of clothing if there were no duty. So it was enacted that 32 cents tax should be paid on every dollar's worth of carpet wool, and then goat's hair, and camel's hair, and other materials never produced here were taxed lest they should be used as substitutes for wool. In respect of carpet wools the McKinley tariff became a perfect hornet's nest of difficulties to the honest manufacturer. No legislation of the middle ages could be worse. Nevertheless, the manufacturers know now what it costs to get wool. They have measured all the difficulties and have fixed the prices of carpets accordingly. But what can a manufacturer do now, with the prospect of free wool after the first of June? He cannot "stock up" with wool at 32 per cent. duty. He cannot load the market with carpets made at high cost when he has reason to think that low-cost carpets will make their appearance by the 1st of July.

---

President Cleveland is criticising the former administration, say the Hawaiian annexationists. That is true if it is a criticism to present in very clear light the fact that President Harrison sent in the treaty of annexation on the 15th of February, 1893, or about two weeks before the expiration of his term, evidently hoping that it would be ratified and become an accomplished fact before the new President and Senate could assume the offices to which they had been chosen. This was an attempt to forestall not only the new President and Senate, but also the people of the United States. Time and again it had been proved that the people were opposed to the annexation of distant islands. They had rejected the island of St. Thomas against the most urgent efforts of Mr. Seward to compass its acquisition. They had rejected San Domingo against the repeated and persevering efforts of President Grant. They would even have refused Alaska but for the feeling that its rejection would be in the nature of an affront to the Czar of Russia, to whom we stood under some obligations at that time. The traditional policy of the country, handed down from George Washington—and he left us nothing better, nothing which time has more fully approved—was opposed to such acquisitions. It was a most unjustifiable act on the part of Mr. Harrison to attempt a snap judgment on the people in the brief interval of two weeks before leaving office. It was also discourteous to his successor. The offence is aggravated by the fact, that in order to take the snap judgment, it became necessary to ignore the Queen's very reasonable request for a hearing. To give such a hearing would have involved delay till the new President and Senate should come in. If such a transaction in the ordinary concerns of life should come for review before a court of law, it would be characterized in terms which we should not like to see applied to a President or an ex-President of the United States.

---

Senator Hoar is often amusing in debate, but was never more amusing than when he said on the 13th inst. that of the three hundred-odd cases of appointments of diplomatic commissioners by the President, without the consent of the Senate, only twenty or thirty were exactly like the appointment of Blount. Twenty or thirty will do. The fuss made over Blount's appointment and about the use of the word "paramount" in defining his authority is as childish as most of the other talk in this affair. Mr. Blount's report has put our Minister Stevens and the insurgents in the wrong, and has therefore set their friends in this country raging like angry fishwives. The insurgents now see their mistake. They see that they ought to have risen against the Queen without Mr. Stevens's help or connivance, and have overthrown her in a stand-up fight, and proclaimed themselves an independent republic if they had succeeded. Their position then before the world would have been unimpeachable, and President Cleveland would have had no right to investigate them; and they could have based their government on anything they pleased—men, cattle, sugar, or bananas. But they did not want to expose themselves to the Queen's bullets, and therefore got Stevens to lend them the United States marines; and when the Queen gave way to the United States, they hurried to Washington to get themselves into the Union, not foreseeing that this move would expose them to unpleasant inquiries, and would throw the ægis of the Constitution over the brown men whom they are trying to disfranchise on account of race and color. They now say of themselves that they are "Americans," and the only "respectable" people on the island, but this is what the Southerners said in the reconstruction period, and what they said when the Force bill was passing in the House. How did Reed meet this, and Lodge, and Hoar, and Frye, and the *Tribune*, and the whole Republican phalanx? We could, if we chose to give the space to it, dig out from their speeches some sad passages about the denial of the suffrage to poor colored men by respectable and rich whites; and yet the native Hawaiians are far more civilized than the negroes of the South, for they have had for eighty years a government with which we have had diplomatic relations and made treaties.

---

Ex-Minister Stevens has suddenly discovered that he found authority for all that he did at Honolulu in instructions given by Secretary Bayard in 1887. He cites from Mr. Bayard's despatch to Minister Merrill the statement that "American citizens in Hawaii must be protected in their persons and property by the representatives of their country's law and power, and no internal discord must be suffered to impair them." Now, if Stevens considered this sufficient authorization for his conduct, why did he ask, from both Blaine and Foster, explicit instructions to aid the revolution? Was it because he noted Bayard's injunction, in the same despatch, to "abstain from interference with the domestic affairs of Hawaii"? However that may be, it is a pure afterthought for Stevens to pretend that he landed the troops to protect the persons and property of American citizens. He was asked by the committee of safety to land troops because "we are unable to protect ourselves without aid, and therefore pray for the protection of the United States forces." Not a word in their appeal referred to American citizens. When the local and the general government protested against the landing without permission—a thing which had never before been done in Hawaii—and asserted that life and property were per-

fectly secure in the city, Stevens himself was not able to say, in his evasive replies, that there was any danger to American interests. Indeed, there is overwhelming evidence that the city was quiet and business going on as usual, and that the landing of the troops was a great surprise to all not in the secret. For example, Vice-Consul-General W. P. Boyd testified that there was "no suggestion of disorder," and that it was the general impression that the troops had landed because they were "friendly to the movement of the committee of safety."

---

The reported agreement of the city banks to furnish $30,000,000 of gold for export, if so much should be required in order to prevent a drain on the gold reserve of the Government, is an apt illustration of the changed condition of affairs brought about by the repeal of the Sherman act. Not only have the gold resources of the banks largely increased, but the mental attitude of the bankers on the subject of gold and gold hoarding is very much changed. Before the silver-purchase act was repealed, the yellow metal was much more highly prized than it is now. Everybody wanted all he could get. The apprehension of a time coming when gold would be at a premium caused a mental premium to exist all the time. Now, however, the bankers as well as the public are perfectly content that the gold standard exists and is not to be shaken. This point being settled, it is immaterial whether the banks have $30,000,000 more or less of that metal, provided the supply in the Treasury remains sufficient. If the country must part with $30,000,000 gold, it is better that it should come from the bank vaults, for the reason that people are accustomed to keep an eye on the Treasury stock, which is published every day, and to draw certain conclusions therefrom, while they are not in the habit of scrutinizing the bank returns, and, even if they were, they would not be likely to draw any unfavorable conclusions from a diminishing gold balance. In other words, the public imagination is worked upon by the gold in the Treasury, while it remains unaffected by that of the banks.

---

Really there is no difference between the two sources for paying an international balance. As long as the Government is solvent the banks will remain so, and the distribution of gold between them is of little consequence. It is of much less consequence now than at any former time in our history whether the gold reserve of the banks is large or small. As time advances, we learn more and more clearly the priceless advantage we hold by reason of our distance from powerful neighbors, which enables us to dispense not only with a large army and navy, but also with a large hoard of gold, of which an over-supply is useless and costly. We learn that, to a nation which is not on the *qui vive*, expecting the tocsin of war to sound at any moment, gold is useful only for two purposes, viz.: as a test of the soundness of its paper currency and as a means of settling international balances.

---

It is not strange that the bill for the admission of Utah as a State passed the House last week without a division, and that the Republicans did not feel anxious to go on record upon it under a call for the yeas and nays. Their party in 1890 admitted Idaho, which had only 84,385 people by the census of that year, and Wyoming, which had but 60,705; whereas Utah had three years ago a population of 207,905, and is growing much more rapidly than either Wyoming or Idaho. Nevertheless, it is a mistake to admit Utah or any other Territory now. Because we have several States which ought to be Territories is no reason for making another mistake of the same sort. Congressman Harter of Ohio put the argument against the proposition very forcibly when he said that we do not want any more States until we can civilize Kansas; in other words, that so long as Western States of the age of Kansas are capable of the follies we have seen in the past three years, we ought not to increase the risks of the nation by making new States of even less promising material.

---

One reason why the Republicans in the House made no more serious opposition to the bill for the admission of Utah is the hope, which many of them entertain, that their party, instead of the Democratic, may profit by the movement. Although the present Democratic delegate from the Territory was elected by nearly 3,000 majority last year, the Republicans have been gaining ground of late years, and it is by no means impossible that they will be in control before a great while. But it is the height of folly for either party to pin its faith to the future of a new State. The Democrats consented to the admission of Colorado in 1876 because they thought they were sure to carry it, and then found that, but for Colorado, Hayes could not have been seated even after South Carolina, Florida, and Louisiana had been counted for the Republican candidate. When Idaho was admitted in 1890, with only 84,385 people, the Republicans regarded it as sure for their party, and yet only three years later the Republican candidate for President lost its three electoral votes.

---

The proposition to make Arizona a State is most indefensible. The population of the Territory in 1890 was but 59,620, and the gain in the ten previous years was only 19,180. The case of Wyoming was bad enough—a Territory which, we repeat, had only 60,705 people when it was made a State in 1890; but Wyoming had trebled its population during the previous decade, while Arizona gained less than 50 per cent. during the same period. It is to be hoped that the Senate will show more discrimination than the House in this matter of making new States.

---

Senator Voorhees has recovered from the lucid interval with which he was mysteriously afflicted when the repeal of the Sherman law was before the Senate, and is now quite himself again with his bill, introduced on Thursday, to "go the Sherman law several worse" and play the mischief generally with the currency. He acutely remarks that "no one will be surprised by my introduction of such a bill." Neither by that nor by any other bit of demagogy on his part. The Indiana Senator talks in his large way about the bill's being certain to pass the Senate "by a large majority" and to "cure the present deficiency in the Treasury," but that, of course, is only part of the farce. All he wants to do is to prove to his followers of the baser sort that he is just the same old Voorhees that he always was, and that his heart still beats true to all that is wild and dangerous in finance. He thinks his ridiculous bill will do that; and if it is never heard of again, as we believe it never will be, it won't trouble him in the least.

---

The official returns of the election in this State make it perfectly clear that the Democratic defeat was due entirely to Maynard's candidacy. The majority against him exceeds 101,000, while the highest majority against any other candidate on the Democratic ticket is only a little more than 25,000. It is very plain from these figures that it was Maynard's candidacy which pulled down the entire ticket, for it is strictly within the bounds of moderation to say that the entire adverse majority against the other candidates on the ticket was cast by Democrats who were so indignant over Maynard's nomination that they voted the straight Republican ticket. It would be necessary for only 12,500 Democrats to do this to bring about the result recorded. Undoubtedly a great many more than that number did so, for the fact that Maynard was beaten by 76,000 more votes than any other Democratic candidate shows how strong the Democratic opposition to him was. The surprising thing, under the circumstances, is, that the remainder of the ticket fared as well as it did.

---

The sentence of John Y. McKane, the boss of Coney Island, to thirty days in

the county jail for contempt of court, in disregarding an injunction, at the time of the recent election, will be welcomed by all good citizens. The only regret will be that the punishment for such an offence cannot be more severe, the extreme penalty having been inflicted. But criminal proceedings have also been instituted against him, and there are strong hopes that he may ultimately have to suffer an adequate penalty for his crimes. Meanwhile it is a consolation that the scandal of his serving as a Sunday-school superintendent is to be abated for a month.

---

One of the commonest forms of flattery of the American people, by politicians, is the assertion that "they are the most confiding people on the face of the earth." Croker evidently holds this view, for he printed an interview in the Sunday morning papers which is a wonderful attempt on popular credulity. As we have often pointed out, the only subject on which Croker, Gilroy, and the like, can possibly give the public any information is the source and amount of their own revenue and that of Tammany Hall. Croker's opinions, for instance, about the new anti-Tammany movement can be interesting only to people who expect him publicly to declare that it is good and formidable. And did any rational man expect him to admit that Tammany government was wasteful, and that blackmail was levied on liquor-dealers or gamblers, and that there was politics in the School Board, and that it would be a good thing for the Legislature to investigate the city departments? What he says on these subjects is what everybody knew beforehand he would say. It is only when he begins to talk about his own wealth and "position" that his talk becomes interesting. What his "position" is, he never mentions, but he speaks of resigning it, and not resigning it, and of "his duty to Tammany Hall and the Democratic party to retain it." Be it remembered that he holds no public office, and has no visible means of livelihood, and yet he talks as if he were mayor of the city or governor of the State. What is his "position"? What are its powers and duties? Is it a salaried "position"? What is the salary? Who pays it? These are questions to which his answers, if truthful, would be very instructive.

---

With regard to his wealth, his confidence in the popular simplicity is almost amusing. We have his own oath that in 1888 he was a poor man. He has a stock farm now worth, he says, $250,000. He has a house which cost, he says, $80,000. He has race-horses which, he says, won $91,000 last year, evidently hoping we will believe that it was these winnings which put him in possession of the horses. But no man sets up a racing stable, buys a large stock farm and an $80,000 house who does not feel himself a very wealthy man. Racing and keeping stock-farms, far from being money-making employments, are, in fact, the amusements of very rich people. It is true there is a mortgage of $50,000 on the $80,000 house, but it was put there after the house was bought, probably in some temporary financial stress. Moreover—and this is the most important thing of all—this sudden accumulation of wealth was coincident with the acquisition by Tammany of complete control of the city and of the Legislature.

---

The Richmond *Dispatch* comes down heavily on the proposed State-bank laws of Virginia and of the other Southern States which have passed or are meditating such laws. It can see no points of superiority in any of them over the present national-banking law, except, perhaps, in greater facilities for enabling speculators to get away with the money of a confiding public. As regards the bill pending in the committee on banking and currency at Washington for the issue of State-bank notes, it says very correctly that not a single bank would be established under it, or a single note issued, because the old system would be better. The new Georgia bank law gets a deserved whack also. This law provides that the capital of the banks shall be divided into two parts, one half specie and the other half bonds, and that both halves shall be locked up tightly before the bank begins business. In all these State-bank laws there is one controlling idea—the idea of the slot-machine. You drop in gold dollars (first invested in bonds), and then paper dollars come out. There is no economy in that except in the mere matter of luggage, paper being lighter than gold. The object of banking is to offset debts with credits, with just sufficient gold to insure continuous solvency. This is effected with a variety of instrumentalities, of which the bank-note is one. The true theory of banking is as foreign to the slot-machine methods as it is to the Eleusinian mysteries. Yet whenever a State legislature sets itself to work to frame a new banking law or to amend an old one, it begins as a child does with a tin savings bank that it has received as a Christmas present. It impounds the bank's capital and then tells it to go ahead. The present national-banking law is subject to the same criticism.

---

Mr. Damrosch deserves and unquestionably has the support of the public in his struggle with the Musical Mutual Protective Union, which succeeded in preventing him from giving a concert on Sunday evening. He is making the same fight which Theodore Thomas made several years ago, and which every conductor who tries to maintain a competent orchestra will have to make until the power of this union is broken. Mr. Thomas was subjected to constant annoyance for years, and was put to heavy expenses in various legal proceedings in his efforts to recruit his orchestra with satisfactory players without first obtaining the consent of the union. So long as the union's rule that no musician shall be allowed to play with its members until after a residence of six months in this country is in force, conductors are practically estopped from bringing from Europe such artists as they consider necessary for their orchestras. As the union is controlled by men who are not artists, but very indifferent musicians, their rule acts as a compulsion upon conductors to accept the services of unfit or second-rate players. They place the fine upon their members for playing with artists who are not members so high that it is ruin for members to incur it. The members of Mr. Damrosch's orchestra endeavored to get him to assume the risk of their fines, but he very properly refused to do so. The consequence is that his men are put to the alternative of either abandoning the union or their contracts for twenty-five weeks' employment at good wages. At present they say they will stand by the union and remain idle rather than abandon the union and retain employment. Under these conditions they can expect no sympathy from the public, for they are suffering in an unjust and indefensible cause.

---

The sworn returns of candidates under the British "Corrupt Practices Prevention Act" for the elections of 1892 show that the amount spent in England was £796,588 (against £864,190 that would have been permitted); in Scotland, £111,761 (against £129,460); in Ireland, £50,182 (against £135,780). The average expenditure in England per candidate was £831, averaging per elector polled 4s. 2d.; in Scotland, £740 and 4s. 8d.; in Ireland, £253 and 2s. 9d. The dearest and cheapest elections in England are noted as £1,968 and £28 respectively; in Scotland, £1,717 and £94; in Ireland, £1,231 and £20. The average number of electors in an English constituency is 9,715; in Scotland, 8,401; in Ireland, 7,222. The following are the percentages of total expenditure: Sheriff's expenses, 20.6; agents, 20; clerks and messengers, 10.4; printing, advertising, and postage, 32.3; meetings, 2.1; hire of committee-rooms, 3.1; miscellaneous, 6.3; candidates' personal, hotel, etc., 5.2 = 100. From the above it will be seen what a happy hunting-ground Ireland appears to be for aspiring legislators. Yet perhaps nowhere throughout the United Kingdom are a man's principles more closely, and, alas, his general character or fitness more lightly, scanned; and nowhere has the carpet-bagger, pure and simple, less chance.

### *THE HAWAIIAN MESSAGE.*

No one who cares for the honor of American diplomacy and statesmanship can read the President's Hawaiian message without a touch of honest pride. One of the most distinguished judges on the Federal bench writes to us concerning it: "What a superb thing this is of the President! I never read a state paper of such lucid, forcible, caustic narrative, and yet as smooth as a chapter of Macaulay." Nothing that Mr. Cleveland has written, nothing, as far as we can recollect, that any of his predecessors has written, has surpassed it as a feat of rhetoric. There are but few adjectives or epithets, but the march of the narration is as close, as orderly, as irresistible, and for the Hawaiian oligarchy and poor Mr. Stevens as crushing, as that of a Roman legion. From the first sentence to the last, the writer drives them before him in disorder, never allowing the smallest pause or stand in their flight. And the secret of this rhetorical success is, of course, that he had a good story to tell. Every step taken, from the moment he found himself face to face with the treaty of annexation down to the last instructions to Mr. Willis, was what every American who cared for the honor of his country must have wished. The situation as he found it had all the marks of what the French police call a "ténébreuse affaire." The haste with which the treaty was sent to the Senate in the very last days of the Harrison administration, the pains taken to prevent any representative of the Queen getting to Washington simultaneously with the representatives of the Oligarchy, the passionate interest of the American minister, the eagerness to launch the country on an absolutely new policy in the matter of territorial expansion without discussion by Congress or the country, were all signs that there was in the transaction something that would not bear the light; something for which haste and secrecy were absolute necessities.

As soon as the President reached this conclusion he did what every statesman and every business man does when he suspects. He sent the best person he could get to inquire and report, the *locus in quo* being 2,000 miles away, and only one side of the story having been heard. The abuse which the Oligarchs and their organs began to heap on Mr. Blount from the day he started was further proof, if further proof were needed, of the irregularity of their proceedings. When he made his report, it developed into positive raving, Mr. Stevens leading them all in vituperative incoherence, in falsehood and tergiversation. But luckily the President was not obliged to rely on Mr. Blount's report. The documentary evidence which accompanied it was a complete exposure of the annexation plot. Mr. Stevens was destroyed by his own despatches, and by the dates of the various events of the revolution. These showed beyond question that there would have been no revolution, and the Queen would have remained easily mistress of the situation, if Mr. Stevens had not literally put himself at the head of her adversaries and lent them the aid of the United States troops. Mr. Cleveland has here only to narrate clearly, but his account of Stevens's activity becomes at times almost picturesque.

In passing judgment on Stevens, however, simple justice requires us to mention that he was in diplomacy as well as in journalism the protégé and pupil of Mr. Blaine, and that almost the first act of Mr. Blaine's administration, when he took charge of the State Department in 1881, under Gen. Garfield, was to formulate designs on Hawaii. He wrote a despatch to Mr. Comly, the then American minister to Hawaii, in December, 1881, instructing him that the native population would soon disappear; that Hawaii "was part of the productive and commercial system of the American States"—whatever that may mean; and that "the problem of the replenishment of the vital forces of Hawaii presents itself for intelligent solution in an American sense—not in an Asiatic or a British sense." "A purely American form of colonization," he says, "would meet all the phases of this problem," and he hints that it would be a good place to send our Southern negroes. After a good deal more of the rather cloudy jargon in which he knew so well how to envelope a subject of this sort, he commended the matter to Mr. Comly's "earnest and immediate attention." We may be sure, then, that when Mr. Stevens went to Hawaii as our representative, in 1889, under Mr. Blaine, he was carefully filled with these same ideas, and acted in perfect confidence that any measures he chose to adopt to secure the political control of the Islands would be welcomed, *as they were welcomed*, at Washington. Mr. Blaine's life-long jealousy of the British, which he never lost an opportunity of expressing, became in Mr. Stevens a fixed belief that the British were trying to get the Islands away from him; and probably if we knew the secrets of his heart, we should find that no man was ever more astonished than he when he found that no protest against his proceedings came from London.

In his refusal to send the annexation treaty back to the Senate, and in his refusal to use force to restore the Queen, which his enemies were sure he would do, Mr. Cleveland leaves the Oligarchs on the Islands to get along as best they can. They have, as they openly avow, got nearly all the real and personal property in the Islands away from the natives, and perhaps it is best that they should now be allowed to carry on the government as long as they are able.

In washing his hands of them and their affairs, Mr. Cleveland has rendered the country the inestimable service of closing what must be considered the most discreditable chapter in our diplomatic annals, to which we can give no better name than that of Blaine diplomacy. It has consisted in the main, ever since Mr. Blaine took office in 1881, of a series of departures of the gravest nature both from the old and fixed traditions of the Government and from the rules of international morality. His first encounter with Lord Granville about the Nicaragua Canal showed only ignorance, but his quarrel with Chili, which President Arthur nipped in the bud, had all the marks of an indecent commercial enterprise. His "Pan-American" schemes, too, though probably a product of pure restlessness, promised for us, in case of success, a series of mortifying, because ridiculous, complications. His seal imbroglio was possibly an idea borrowed from Mr. Phelps. In the Barrundia affair he openly discarded the settled law of the land in dealing with a weak but friendly power; and the annexation of Hawaii was probably the last conception of a disordered and reckless ambition. To Mr. Cleveland, for ending this confusion, the country is under the deepest obligations. His statement of the reasons why we cannot annex Hawaii is the finest expression of real Americanism which this century has heard. Foreigners could not have a better report of the law of our national life in peace and war, and the best of it is that it is not new. It is the old gospel preached first by the founders of the republic.

### *THE CONDITION OF THE FARMERS.*

THE publication of the advance synopsis of the year's crop figures by the United States Department of Agriculture gives an opportunity to compile some important statistics on the prices and profits of wheat and corn production. Prices for 1893 were the lowest for years. The following table of prices at the farms, averaged for the whole country, tells the story briefly:

| | Ave. 1870 to 1879 in cts. | 1880 to 1889 in cts. | 1890 cts. | 1891 cts. | 1892 cts. | 1893 cts. |
|---|---|---|---|---|---|---|
| Corn per bu.. | 42.6 | 39.3 | 50.6 | 40.6 | 39.4 | 37.0 |
| Wheat per bu | 104.9 | 83.7 | 83.8 | 83.9 | 62.4 | 52.1 |

Although the decline in average prices for the last four years is apparent, we must take the matter a little more in detail to understand its significance. Certain States produce all the surplus wheat and corn consumed in the rest of the country or exported. Four representative States are treated below. The figures are taken from the official publications of the United States Department of Agriculture, except the yields per acre for 1893, those being estimated from the best obtainable sources. The following tables

give the gross receipts per acre, the amounts being found by multiplying the average farm price into the average yield for each crop, for each State, and for each year:

CORN.
Gross receipts per acre.

| | 1890. | 1891. | 1892. | 1893. |
|---|---|---|---|---|
| Ohio | $19 33 | $14 27 | $16 93 | $14 00 |
| Illinois | 14 53 | 15 06 | 12 21 | 9 30 |
| Iowa | 11 44 | 12 30 | 10 88 | 8 75 |
| Nebraska | 6 00 | 10 17 | 9 38 | 7 50 |

A few years ago the Illinois Board of Agriculture made a careful computation by counties of the cost of producing corn and wheat. In corn the cost of working averaged $5.50 per acre, including ploughing, planting, tending, gathering, and marketing. The census gives $36 as the average value of an acre of land in Illinois, including improvements, and 7 per cent. as the usual interest. Adding $2.50 for rent of land, we have $8.00 per acre as the cost, including interest, of raising corn in Illinois. Allowing for differences in value of land in the States named (adding for Ohio and deducting something for Nebraska), it is seen that the returns of the corn farmers were large in 1891 and 1892, and about even with expenses in 1893. Producers of corn are not suffering as are their wheat comrades, but the former, nevertheless, have this year no large sums of money to spend for anything but the necessaries of life. Four representative wheat States were also chosen:

WHEAT.
Gross receipts per acre.

| | 1890. | 1891. | 1892. | 1893. |
|---|---|---|---|---|
| Illinois | $11 23 | $15 56 | $11 91 | $5 61 |
| Missouri | 10 71 | 14 08 | 8 64 | 4 70 |
| Minnesota | 10 29 | 15 52 | 7 44 | 4 59 |
| North Dakota | 4 83 | 15 26 | 7 49 | 4 30 |

The average receipts for the present year are less than half those of 1891. The first two States grow winter wheat, the two latter spring wheat; but both classes show the same decline. The Illinois estimate of the cost of working an acre of wheat is $6.50, which, added to $2.50 for rental of land, gives a total of $9.00. A glance at the table on the basis of $9 cost per acre (which would more than cover interest on mortgages) shows a very large surplus for 1891. At a profit of $6 per acre a farmer who had 100 acres in wheat would clear $600 over all expenses and interest from that crop alone. All the wheat States, winter and spring, shared in this great profit. Another glance at the table reveals the fact that the receipts for the following year, 1892, about covered expenses, including in the latter term interest on investment or mortgage. But trade with the farmers was brisk in 1892 because the large profits of 1891 were not yet all spent. There was enough in 1891 to pay off some of the mortgages and to indulge besides in a better house, or a piano, or whatever the fancy dictated. These good times were continued through 1892.

But the figures for the present year tell a different story. The receipts per acre in wheat did not meet the cost of production. If any surplus remained from the phenomenal year 1891, it was needed to make up deficiencies. We enter the year 1894, therefore, with the resources of wheat-producers exhausted. It is, indeed, most unusual to find low prices concurrent with a poor yield per acre; just as we were conspicuously fortunate two years ago in having heavy crops and high prices. The present situation, of course, cannot continue indefinitely, but when the change will come is a matter of conjecture. Statistically, it was declared last fall that low prices for wheat could not long rule, but the demand—consumption—is a factor which varies with the ability to buy. If our own people, because of the silver struggle and the panic of last summer consequent thereupon, and if foreign peoples, because of business depression and money losses, find themselves unable or unwilling to purchase large quantities of grain and flour at high prices, figures setting forth the world's supposed need of wheat are to be received with caution. And as to business generally it is to be observed that if a large part of the Western farmers are working without profit and even selling their product below cost, it follows that their purchases of manufactured goods must be reduced, and that trade, so far as they are concerned, must be dull until better prices or larger yields, or both combined, restore the normal condition of a reasonable profit.

## *THE POPE ON BIBLE STUDY.*

POPE LEO'S latest encyclical has been long preparing and has been awaited with much curiosity, inasmuch as it was going, so report said, to set at rest many vexed questions about Biblical interpretation. We believe that those who know most about those questions have been somewhat sceptical in regard to the power of any one man, even an infallible man, to speak the last word on them, but nevertheless they have been anxious to learn from the Pope, if he had anything to teach them, and doubtless turned with eagerness to the epitome of the encyclical given out on Tuesday by Cardinal Gibbons.

It is a document which will doubtless seem to some timid Catholics as innovating and dangerous as some other of Leo's utterances, but which, tested by the real achievements of Biblical scholarship, must be pronounced commonplace where it is not self-contradictory. It would scarcely seem to require twenty-three quarto pages of Latin to prove that the Church ought to study diligently the supernatural revelation it has to communicate to men. Yet the Pope goes gravely and painfully at it, with citations from apostles and saints and fathers, in a way that irresistibly reminds one of the Committee on Political Reform of the Union League Club powerfully arguing that a government without a revenue cannot exist. All this is simply by way of preparation for the really important part of the encyclical, which lays down, in twenty quarto pages of Latin, "detailed rules for a thorough and scientific course of Biblical interpretation."

This looks promising, but on examination we find that his Holiness has simply got himself into two contradictions from which no one who tries to reconcile the historic Catholic position with modern methods of investigation can possibly escape. One of them is his certificate to the text of the Vulgate, "as the true and generally accepted text," conjoined with his the exhortation to a diligent use of Greek and Hebrew originals. Now it is precisely the use of the Greek and Hebrew originals which shows that the Vulgate is not the true text, the decision of the Council of Trent to the contrary notwithstanding. No conclusion of modern Biblical scholarship is better established than that the Vulgate is a poor translation of unsatisfactory original manuscripts, or that the comparison of documents and early versions and monuments which has been going on so busily for three hundred years has brought about a text of the Scriptures incomparably nearer the original than the Vulgate can possibly be. Thus the two parts of the Pope's exhortation eat each other up. He might have stuck valiantly to the Vulgate, or he might have come out boldly for the best Greek and Hebrew texts, but he tries to do both, and that is too much even for infallible dexterity.

The Tridentine decision that the Vulgate is the authoritative text was one great fetter laid upon modern Catholic scholarship, as regards Bible study, and in part accounts for the fact that so few names of Catholics appear on the long list of those who, since the revival of learning, have revolutionized our ideas about the Bible. The other great fetter was the equally historic Catholic view that the Church is the appointed and infallible interpreter of Scripture. With the text settled and the interpretation settled too, what was there left for scholars to do? Into this contradiction, also, the Pope plunges just as if he were an ordinary man. He speaks of the "divinely ordained sacerdotal faculty of ecclesiastical teachers," as the only ones by whom the Bible is to be interpreted, but then he goes on

to declare that "these must be well versed in Oriental and classical lore and languages." Why so? If it is a question of scholarship, why is not a man not divinely ordained competent to pronounce an opinion; and if it is all a matter of divine ordination, why summon scholarship into the question at all?

It is clear, in short, that the Pope is moving about in a world not realized when he undertakes to instruct mankind concerning the proper interpretation of the Bible. That question has been settled, just as other questions of historical and literary investigation have been settled, on scientific principles. Charles Kingsley's advice to the young fellow about to read for orders, to take words for just what they meant in the New Testament, precisely as he would in Plato or in Strabo, contains the gist of the matter. Cardinal Newman's assertion, on the contrary, that "orthodoxy stands or falls with the allegorical interpretation," is undoubtedly the correct position for an historic Catholic to take, and from which he cannot escape without getting into serious difficulties.

## THE DRY-ROT IN ITALY.

ITALY, December 6, 1893.

"DOVE ANDIAMO?" (Whither are we drifting?) is the title of a very remarkable article by the well-known professor (now Senator) Villari in the *Nuova Antologia* for November. The date has to be taken into account, as it precedes the public reading, in the Chamber of Deputies, of the report of the seven commissioners chosen by the president of the Chamber to inquire into the banking scandals, or, rather, to ascertain what ministers or deputies or public officials had, in their public capacity, any share therein. The seven commissioners, chosen impartially from all parties down to the radical republican Professor Bovio, after seven months of patient, unremitting, noisome toil, have done their level best to be impartial, to expose all sins of omission and commission which affect the public service. Taken as a whole, the "revelations" are far less scandalous than well-wishers feared or enemies of Italy hoped. Against successive ministers the one accusation brought is, that, knowing the financial conditions of the Roman Bank, they kept silence in order not to create a panic; that one and all urged the Roman and other banks to lend large sums to building and other societies, which is strictly against their rules; that more than one minister favored the loan of over three millions to a scamp who, it was well known, had received three millions from the Tuscan Bank ten years previously without paying a farthing—this to assist works in a part of the southern provinces where workers were many and labor scarce. None are accused of pocketing any of the loans. The deputies come off less cleanly: some had large loans while they were on the committees that were chosen to investigate the situation of the banks; journalists and editors of papers received annual subsidies, either to sustain or to oppose the vital question of a single bank. The individual chiefly affected by the revelations is the present minister of the interior and the president of the cabinet, Commendatore Giolitti. He is shown to have known the state of virtual bankruptcy of the Roman Bank, yet to have proposed and stanchly supported the extension of its rights as a bank of emission for the next six years; and, despite his knowledge that a double series of notes with the same number had been issued by the director, Tanlongo, to have proposed him as Senator and to have obtained the royal signature to the decree. To the question whether the 60,000 lire handed over to the present Government by the Roman Bank had been expended in electioneering corruption, the commissioners answered in the negative; but the other facts were considered so serious that several members of the Extreme Left proposed the impeachment of the minister. The proposal could not be put to vote, as the Speaker left the house, and on the morrow the premier announced that the cabinet had tendered their resignation to the King, but that the ministers would remain in office for the despatch of current business.

I doubt whether even the United States, even a federal republic, could hold its own without the providential law which enables the President to choose his own ministers and prevents the chambers from upsetting them during the presidential term of office. Without the slightest sympathy for or belief in the statesmanship of Signor Giolitti (his total failure in restoring peace to Sicily proving the absence of this *sine qua non* of a prime minister), it seems scarcely fair to make him the scapegoat for all the previous blunders and concealments and the continuous impunity extended to all the banks of emission since 1866, nor will his downfall and the substitution of other men of the same party effect, without a change of system, any amelioration in the financial conditions of Italy, any betterment in the social or economical state of the working and agricultural populations which form two-thirds of the population of the continent and of the islands. There is something sadder than all the banking scandals in the present attitude of public men, in the comments of the press, on the question of the reconstruction of the ministry. With exchange at 16 per cent., rentes at 80, and now with the stoppage of the Credito Mobiliare, which till yesterday was the one mainstay of public credit, but which had too many irons in the fire and had been led to commit quite lately some gross financial blunders, it is pitiable to hear a discussion as to the partisan right of A, B, or C to this or that portfolio, without any relation to his technical knowledge of finance, of industry, of commerce, or of agriculture, but simply because he sits with the Left or the Left Centre or the Right Centre.

As Crispi, who has been brought before the public because of a debt incurred with the national bank before he became minister or had anything to do with banking commissions or committees, is, for the time being, out of the run, the King intrusted the present Speaker of the House with forming a ministry, and if perfect honor and honesty and purest patriotism could insure success, Zanardelli would have been enabled to present himself to the House on the eve of the day that he received the commission. But party spirit and personal antipathies stand in the way. Hence the question, "Whither are we drifting?" which Senator Villari asked before there was any idea of this sudden crisis, is even less easy to answer in a satisfactory manner now than then.

"Since the kingdom of Italy came into being," he writes, "we have had many anxious days; but all our past misfortunes resulted from a visible, or apparently visible, cause. All seemed to see the possible remedy, so hope never abandoned us. . . . This is the first time that we are assailed by apprehensions which make us doubt about ourselves and our future." He then portrays the situation in gloomy colors—the alleged corruption in high places; the financial position, which could hardly be worse (and this before the Credito Mobiliare had asked for a moratorium); the state of public insecurity, which does not brighten the picture, while "the spectre of socialism, which no one ever dreamed of as possible in Italy, suddenly presents itself in Sicily." He next examines the causes that have brought the country to such an *impasse*, and asks "how on earth despotism bred heroes while liberty has bred scamps," "while, what is worse, our moral decline, once begun, has continued, and still continues without showing any sign of stopping."

"In order to understand our political character, our present social conditions, we must bear in mind that the masses, especially the peasants, took but a slight share in our revolutions and none whatever in our political life. Everything was effected by the *borghesia*, the middle classes, which hence became arbitrators of everything. The history of other peoples teaches the dangers that society is menaced with whenever it is abandoned to the power of a single class, especially when that is the burgher class. Government assumes the aspect of a company of shareholders (*consorteria*), a *camorra*, an association of malefactors which exploits the country for the benefit of its members."

Ths writer here quotes Tocqueville's strictures on the burgher class, then points out their first acts on entering into their kingdom, built on the ruins of six dynasties:

"If the individuals who then directed affairs had possessed the moral, civic, and political qualities of freemen (*i. e.*, of men accustomed to the use of liberty), they would have annexed the provinces, and, on coming down to the south, have constituted a new government with a very simple programme—alliance with such honest men, few or many, as could be found, without counting numbers, and thus reconstructing the country, convinced that the only solid foundation for liberty is justice! And those who were in the southern provinces [in 1860] could see with their own eyes that this was the desire and the hope of the so long oppressed and ignorant multitude who understood nothing of politics. Each act of justice, each repression of violence and of arbitrary acts so common among us, gave a moral force, a prestige, an authority beyond words. It formed a propaganda far more efficacious than all the new laws, all political guarantees, all proclamations of principles. But the hopes formed were soon deluded. No one took into account, no one understood, the sentiments of the masses, who seemed to have no existence in the presence of the *borghesia*, of the so-called *galantuomini*, who were the all in all, who dominated everything, and often oppressed the others. The generous enthusiasm which had initiated and ennobled our revolutions vanished. It was said: The masses are ignorant, corrupt; honest men cannot govern them. Then began the search for the most audacious, no matter if they were dishonest, because it was believed that with such it would be easy to command, to govern, to found liberty. This conception, which was, in fact, a heritage of our ancient slavery, was accepted by our best men, even by true Liberals. . . . How often have we seen politicians of whose private life, of whose personal character, the most atrocious things were affirmed, sought after, caressed, flattered, by the same persons who attacked their private life, simply because they were eloquent, audacious intriguers! Did we not at one time adopt the theory that in order to combat the malefactors, the *malandrinaggio*, in the country, it was necessary to enrol other malefactors in the police? And then we were surprised when, instead, we saw that the evils rapidly increased, because the miscreants on both sides entered into a secret alliance."

At this point Villari shows how everything was corrupted—the press, subsidized by the

Government, transformed from an instrument of moral and civic education into a fresh instrument of corruption; how the law on public instruction was falsified; how the object in all financial questions was, not to repair the deficit, but to hide it, to deny its existence. "The agricultural inquiry revealed the awful condition of the tillers of the soil? What remedies were applied? The tillers of the soil, who, in Italy, are literally the producers of national wealth, in many of our provinces, after a day's toil longer and harder than that of any other worker in the civilized world, do not earn sufficient to satisfy the cravings of hunger." No communist or socialist or even anarchist could say harder things of the middle classes than does this representative of that class; but when it comes to proposing remedies, the mistrust, the fear, of "the people" paralyzes his pen. Professor Villari points to the people in Switzerland, in Scandinavia, in the United States, as cultured and civilized in comparison with the masses in Italy, and affirms that, "for some time yet, the burghers must remain the only class which can, which ought to, direct society and retain the reins of government." Of course the burghers are to get reformed, but who is to reform them? Villari recalls the fact that the Italian revolutions succeeded because all parties rallied round the house of Savoy and monarchy.

"We ought to have the abnegation and the patriotism to rally anew round monarchy, and call upon it, now that such supreme duties lie before us, to reassume its historical importance. Monarchy is placed and ought to remain superior to all parties and could easily unite us. It is not a party government which is necessary for our salvation, but an honest government of no party, which should reunite all, reëstablish concord and harmony between Parliament and the country, between social classes; a government based upon the enormous majority of the people who care nothing for Right or Left, or for this parliamentarism which has worked and still works so much evil."

Adverse critics of this article, which has excited considerable interest, accuse the professor of proposing a *coup d'état*. This was not his intention, assuredly, but it would have been well if he had entered into details as to ways and means. What could the monarch do in this special crisis? By the sixty-fifth article of the *Statuto*, "The King nominates and revokes his ministers." Now, the peculiarity of the present situation is, that the Giolitti ministry has a large majority in the House; it has not been overthrown by a hostile vote of either chamber, but has felt itself bound to resign on account of the verdict of the seven commissioners. This on the 24th of November. Today, the 6th of December, Zanardelli has not yet succeeded in forming a new ministry. Why should not the King, who well knows that the cabinet which will be formed sooner or later cannot hold its own because the House is divided on the question of taxation, nominate a working cabinet pro tem., and dissolve the House, intimating that this time there shall be no pressure exercised by the men in power? The general elections would thus be the result of the popular will, which they never have been yet save in one instance. The people would send up to Parliament men whom they really believed to be honest and capable; the workingmen would send representatives of their own class, and even the agricultural populations would unite in certain provinces to secure individuals who would demand certain urgent and simple remedies for their desperate condition. Thus we might have a government such as Prof. Villari demands, based on the enormous majority of the people. As, by their own confession, the burghers have brought the country to the brink of ruin, it does not seem an exaggeration to demand that the people who have a right to elect and be elected should be allowed, nay helped, to exercise that right. But even those who would not stickle at the King's exercise of his undoubted prerogative are too timid to advise it. They fear the people, fear that a really popular chamber would propose the diminution of the expenses of the army and navy, insist on the reduction by one-half of the bureaucratic expenses, on reduction of the civil list (it is affirmed that the King has offered to forego three of his annual fifteen millions) and of the salaries of ministers, on the diminution of the enormous numbers of civil servants and of the extraordinary expenses in which the provinces and the communes indulge, on a progressive income tax, to range from 2,000 lire of income, which should remain untaxed, gradually, at so much per cent., until the millionaires are made to contribute their just share to the *necessary* national expenditure.

These are the fears that assail the *haves*, who will keep the *have-nots* out in the cold as long as moral or physical force avail them. But, sooner or later, such steps must be taken. "To-day the country itself is in danger," writes this moderate professor, this Senator of the realm, but last year minister of the crown. "The fatherland is in peril; it is menaced not by foreigners, but by ourselves; it invokes an initiative, a common action, the concord of all. Our very moral existence is at stake."

J. W. M.

## TAINE'S POSTHUMOUS WORK.

PARIS, December 5, 1893.

"THE dead ride fast," says the ballad. Taine has not been dead long, and the posthumous appearance of the last volume of his 'Origines de la France Contemporaine' has passed almost completely unperceived. This volume, which is the sixth of the series, is the second of what Taine has called "Le Régime Moderne." In the first volume Taine attempted to describe the "ancien régime." He followed the modern documentary method, and took innumerable notes of the correspondence of the intendants, the tax-collectors, the *fermiers-généraux* during the last thirty years of that régime. He plunged into the one hundred and seventy-six volumes of the *procès-verbaux* and *cahiers* of the States-General. The conclusion was the condemnation of the political and social organism of the old régime, and in consequence the necessity of the Revolution.

Volumes ii., iii., and iv. were the result of an immense labor: in order to understand the work of the Revolution, Taine condemned himself to read and analyze the correspondence of the military commanders during the years 1789 and 1790, the letters, memoirs, and statistics of the committees of the Chambers, the correspondence of the administration with the departments and the municipalities. This somewhat tedious analysis was fortunately mingled with some vigorous portraits of the principal revolutionists, such as Mirabeau, Danton, Robespierre. Taine had deliberately killed in himself all party spirit. Having no political ambition, he deliberately devoted himself entirely to the search after Truth: he therefore described such men as Danton and Robespierre as a naturalist would describe a new species. His volumes on the Revolution caused great consternation in the camp of our revolutionists; they were condemned by the republicans as severely as the first volume had been by the monarchists. I may add, however, that these criticisms were of what may be called a Platonic kind. Taine lost nothing by it, as republicans as well as monarchists well knew that his 'Origines' could never become a popular work, that its influence, if it had any, could be felt only in the most cultivated class of the nation, and, even in that cultivated class, by a select few, having leisure and imbued with the most disinterested love of truth.

The fifth volume scandalized the admirers of Napoleon as much as the preceding ones had scandalized the partisans of the monarchy or of the republic. Following his usual analytical method and his theories of the influence of the medium on the development of character, Taine saw chiefly in the Emperor Napoleon the Corsican, the Italian; he described him as one of the petty tyrants of the Italian cities of the Renaissance, as the "Prince" of Machiavel transported by circumstances to a higher sphere, and allowed to control the affairs of the world. Napoleon was, in his eyes, as selfish, as unmerciful, as cruel, as devoid of morality as a Borgia or a Malatesta. The portrait drawn by Taine has some truth, has even much truth; but it is too systematic and, on the whole, gives but an imperfect and fragmentary reproduction of the original. It is made up of small facts, of small details; the ensemble is not satisfactory. There is something in genius which cannot be analyzed. The popular and legendary view of Napoleon is not absolutely exact; but it is more exact, on the whole, than the documentary and analytic view taken by Taine. It cannot be wondered at if his criticism had no influence on the popular mind. No better proof could be found of this affirmation than the Napoleonic revival we are now witnessing. Is it not extraordinary that, so few years (comparatively speaking) after Sedan and the fall of the Second Empire, French literature should suddenly be so completely imbued and saturated with Napoleon and Napoleonic memories?

If many objections can be made to the portrait of Napoleon drawn by Taine, there are few or none to be made to his appreciation of the administrative work of the Emperor. The whole machinery of the French administration remains about the same as Napoleon left it. French centralization was, at first, the work of the Revolution, but it was still very imperfect and very rudimentary when Napoleon became First Consul. It was during his Consulate that Napoleon astonished all the members of his Council of State by the clearness of his perception, his immense power of work; he introduced order into everything—finance, legislation, the organization of the army, all departments of the administration. Taine, after his usual method, studied not only the voluminous correspondence of Napoleon, he made himself acquainted with the reports of the councillors of state in commission at the end of 1801, with the correspondence of the prefects under the Consulate and the Empire. He had proved that the administrative machine of the old régime could work no longer; he studied every part of the new machine, which was begun by the Constituent Assembly and brought to perfection by the Consulate and the Empire. The substitution of the departments for the old provinces destroyed all remains of the old provincial life; the prefects were the successors of the intendants; they became as powerful as the ancient proconsuls of Rome. Nothing was left of the old parlements; the judicial power was completely separated from the executive power. A department, with its prefect and sub-prefects, its consuls-general,

its municipal councils, its courts of justice, resembles every other department; it is a unit, and all these units depend on the central government. This prefect centralization suited the despotism of Napoleon; it has not yet been found incompatible with parliamentary government; the ministers change, the prefects do not change with them—that is to say, they do not necessarily change: the machinery of the administration is constantly in motion, and so far the instability of the ministries has not had its immediate and direct reflection in the administration.

There is, however, now in our political and administrative life a new element: you will find in each department electoral committees, which are formed of the politicians of the department; they are the wire-pullers in the elections. These committees are self-constituted bodies without any responsibility; the Deputies and Senators are in great fear of them, and the prefects are obliged to count with them. Taine has described with his customary force the advantages as well as the defects of French centralization; on the whole, he cannot be said to be a great admirer of it; he considers it destructive of individualism. In his opinion, to sum up in few words, the isolation of individuals has rendered them incapable of associating themselves; the power of the State has paralyzed the individual. The consequences of it are an exaggeration of egotism, especially in the provinces, great political incapacity, a slow commercial and industrial development. He dwells at length on the consequences of the Civil Code (which is the written law of the Revolution) on the French family. The family is the first group, the fundamental association, in a society. Its mission is to perpetuate itself, to prolong its own life. "The wholesome ideal," says Taine, "for a young man is to create a family, a house of indefinite duration—to create and to govern." The French Revolution was not content with abolishing the right of primogeniture, it also regulated testamentary liberty and the right of entail; it aimed at equality in all things, and one of the consequences of the Code Napoléon has been a continuous subdivision of the land and of property, which has acted as a bar to early marriages. The birth-rate of France is continually decreasing. Statistics are very instructive in this respect. The system of universal military service introduced in France since the war of 1870 will certainly contribute to diminish this ratio even more; our young men are obliged to serve in the ranks, and can be called at any moment between the age of twenty and the age of forty-five; the number of marriages, especially of early marriages, will therefore become relatively smaller than ever.

The social consequences of the new régime are alarming. Marriage, instead of being the great object of life, the great ambition of youth, becomes too often a mere end, the last chapter in the drama of life instead of the first. Not only in the diminution of the birth-rate does Taine discern a great danger for France; his philosophical mind finds other reasons for disquietude. What he says on the development of science, of popular and vulgarized science, is perhaps too pessimistic. He believes that science cannot be learned by halves, and that scientific notions spread by the press among an ignorant public may do more harm than good. First of all, he considers that science has substituted for the time-honored notion of the universe

"a new conception, which is coherent and logical in the higher minds, but which becomes disturbed and deformed as it goes slowly down among the masses. . . . The new ideas spread as a beneficent or a pernicious dogma according to the nature of the brains in which they establish themselves; they are capable of arming men and of throwing them like savages into a work of pure destruction if they are not wholly understood, as well as of organizing them in a novel manner if their real meaning is grasped."

A Catholic orator, some time ago, speaking of Catholic dogmas and the socialist movement, was explaining the progress of socialism by the decrease of religion. "You have," said he, "taken Heaven away from the workingmen; they ask you now for the Earth." Popular science has done much towards weakening the religious feeling. In so far, Taine holds it responsible for the increase of materialism in the masses and of pessimism in the most cultured classes. The applications of science have greatly enhanced the comforts of the rich; but increase of comfort does not increase happiness, and the ancients knew already that it was possible "propter vitam vivendi perdere causas." The literature of almost all European countries, France not excepted, is at present inspired by and saturated with a curious pessimism, which is largely owing to the unconscious apprehension of great social dangers and the dread of new wars and revolutions.

Taine's work is singularly interesting for the political philosopher. History seems to have been in his eyes nothing but a conflict of ideas. He is never dramatic, he does not give new life to the past. He does not view it, as most historians do, as a mere battlefield; the past appears to him like a crucible; he is waiting, like a chemist, to see what reaction will next take place. Strangely enough, nobody has said more to prove the influence of the medium on the development of man, and nobody has been more free from its influence. No political party, no philosophical school, can claim him; he preserved during too short a lifetime a most extraordinary intellectual independence and moral serenity. He was among us, but not of us.

# Correspondence.

## MR. CONWAY AND THE VIRGINIA HISTORICAL MAGAZINE.

To the Editor of The Nation:

Sir: The following sentences occur in the *Nation* of November 16:

"It is refreshing to see the editor of the *Virginia Magazine of History and Biography* bringing all the wealth of his antiquarian knowledge to dispel those old and widespread notions of his countrymen that the early Virginians were for the most part Cavaliers, that they lived in superb mansions, and that they engaged in frequent duels. Mr. Moncure D. Conway, in his 'Barons of the Potomac and Rappahannock,' recently published, has given additional currency to these antiquated views, etc."

Your justice will, I trust, allow me space to state that I have written no book with the above title; that my 'Barons of the Potomack and the Rappahannock,' though printed, has not been published, and that it contains no such statements about the early Virginians as are ascribed to me. I cannot find in the article referred to ascription to me of such nonsense, but, as you have commended it to your readers, to many of whom my book may be inaccessible, your fairness will no doubt permit my further statement that the attack on my volume, in the *Virginia Historical Magazine*, is a tissue of misrepresentations and misquotations. It could not have been written by any Virginian, for it misspells several old family names of that region; and it could not have been written by any one with the book before him, as, after making two mistakes in its title, it repeatedly gives wrong page references, and has a dozen other errata evidently due to a copyist's blunders or bad writing. "He who has one enemy will meet him everywhere."

Moncure D. Conway.

London, November 30, 1893.

[Mr. Conway convicts us of copying with the greatest exactitude the insignificantly inexact title given by his reviewer in the *Virginia Magazine* to Mr. Conway's "unpublished" book, which was not before us. We did not ascribe the "notions" in question, as formulated, to Mr. Conway, but said that his work had "given additional currency to them." This is true if the reviewer be not a forger, for he cites from Mr. Conway (p. 94) "that ancient mansion of the Fauntleroys, . . . that superb mansion," as a text for a general denial that there were ever "any 'superb mansions' in Colonial Virginia"; and quotes from the same passage Mr. Conway's calling Moore Fauntleroy a "great cavalier," in order both to deny that this emigrant's politics were known, and to discourse on the common ill-informed talk about "Virginia Cavaliers"; and finally quotes from page 123, "'Duels about sweethearts were not infrequent' [in Colonial Virginia]," for the sake of a similar denial and discourse.

We have, we trust, shifted the burden of Mr. Conway's complaint where it belongs. In the absence of any signature to the review, we inferred the editorial hand. If so, the writer can speak for himself as to whether he is a Virginian, and whether he has the distinction of being Mr. Conway's ubiquitous enemy.—Ed. Nation.]

## GERMAN PONDEROUSNESS.

To the Editor of The Nation:

Sir: In the *Nation* of December 7 there is an incidental reference to a subject which we often find mentioned nowadays in connection with German thoroughness in matters of science, namely, "ponderousness," used in a sense opposed to lucidity. Thus, in the paragraph devoted to the memory of Tyndall, the *Nation* speaks of the union of German thoroughness with French lucidity, and later of the ponderous scientific learning of the Germans.

Now, I beg leave to say that I have often been vividly impressed with the feeling that the charge of want of clearness was due in great part to the critic's insufficient knowledge of idiomatic German. It is true, let me premise, that a few German writers, whose works have been eagerly studied abroad, deserve the reproach to the fullest extent, foremost among them Hegel; and Hegel alone has perhaps contributed as much as all other writers together to the ill-repute. Attempts have been made to translate Hegel, but who can translate an author who at every turn invents his own terminology and uses his new terms

without previous definition? So confusing is the study of Hegel that the anecdote told of his dying hour seems altogether credible: "One man only," said he, "understood me" (meaning Massmann), "and," he added after a pause, "*he* misunderstood me." And here I am tempted to remark parenthetically (and in lighter vein) that if Hegel could look down from the better world upon ours, and could see what effect his writings have produced here in St. Louis upon minds not muddled by nature, his serenity would be seriously dis turbed.

Lotze, it seems to me, is an excellent example of an author whose writings must appear ponderous and wanting in clearness and simplicity to all but those intimately acquainted with idiomatic German, and these only can appreciate the beauty of his diction and, I may add, its loftiness. Lotze is by no means easy to translate. His fine periods, often longer and more involved than is compatible with good English, do not lend themselves readily to translation, and unless the translator possesses the talent of rendering the precise meaning in classical English, much is lost; the text will appear more or less clumsy. This remark applies especially to the works of Lotze intended for readers not strictly scientific, such as his 'Mikrokosmus.' Read the introduction to this work, and you will be impressed with its candor, its beauty, its inspiration. But, I pray you, read it in the original.

But German philosophical writers do not usually, as Lotze did in his 'Mikrokosmus,' endeavor to write with artistic beauty. Clearness of exposition, on the contrary, ever since Schopenhauer's unmeasured tirades against Hegel and Hegelians, seems now the chief aim; and Schopenhauer himself surely is a model of clearness and simplicity. Who could excel Hartmann in lucidity and ease? Indeed, the great and immediate success of his 'Philosophy of the Unconscious' was due in great part to the fact that his meaning is always clear and set forth in simplest terms. Again, to name a few more of the great lights, who could find fault with Wundt or Paulsen?

Turning now to the great masters in natural science, can any one be more clear than Helmholtz, both in his purely scientific writings and in his lectures before larger audiences? Among the great masters thus excelling I would especially mention Ostwald. It is not my aim to give a long list of illustrious names in connection with our subject; but I wish to repeat what has often been said, that the student of science and philosophy must not depend upon translations, but should read the works in the original.—Respectfully,

WERNER A. STILLE.

ST. LOUIS, December 11, 1893.

## PRIMARY ELECTION AND REGISTRATION.

TO THE EDITOR OF THE NATION:

SIR: Why can we not push to adoption the recent very happy thought of one of the Philadelphia papers, which seems to me one of the best and brightest, while yet one of the simplest ideas in recent practical politics, and one which would set us forward with a great stride in the direction of political reform? I refer to the proposal that *the occasion of registration shall be availed of for primary elections also;* the latter, like the former, being under State regulation.

We are constantly saying, and truthfully enough, that it is *at the polls* that reform must strike the enemy; but what if at the polls I must either make Hobson's choice of candidates or throw my vote away? We must have good men offered us on *some* ticket, or our righteous indignation at the polls will burn fruitlessly away. But, for all our preaching, men will not, before every election, go three times out of their way—for the primary ballot, for registration, and for the election, or will do it only when they have some axe to grind; and we all know the frequent results when they do go, as things are at present arranged. But now if, when we go to register, we could also designate the men whom we should wish to represent our side of the question at issue, and to receive the suffrages of the people in behalf of that side, then the final visit to the polls would mean something, and the candidates be more nearly the nominees of their party.—Respectfully yours,

H. D. C.

EASTPORT, ME., December 12, 1893.

## A LYNCHING CANARD.

TO THE EDITOR OF THE NATION:

SIR: I read with some surprise your recent comments on a lynching purporting to have taken place at Whitehall, only twelve miles from my home; and, not having heard of the affair before, I made inquiry and soon found out that nothing of the kind had ever been heard of at Whitehall. At or near Winchester, in Scott County (Whitehall is in Greene County), Mr. Morrison, the piano-tuner, was set upon by two men, brothers of a girl who claimed (?) Morrison had insulted her, but doing him little if any damage, as he is and has been attending to business ever since.

Who could have invented the story, and despatched it to the *Herald*, is more than I have been able to learn. A SUBSCRIBER.

GREENFIELD, ILL., December 11.

# Notes.

COPELAND & DAY, Boston, announce 'The House of Life,' by Dante Gabriel Rossetti, with restoration of the original readings in the edition of 1871 and with the lyrics which formed part of the original sequence. Initial letters and borders designed by Bertram Grosvenor Goodhue, and clear black type, promise a very handsome work, which the University Press (Cambridge, Mass.) will manufacture.

Elizur Wright's still unsurpassed version of Lafontaine is to be brought out once more by Estes & Lauriat, in two volumes, with thirteen etchings by Le Rat.

Fleming H. Revell Co. will publish directly 'The Ideal of Humanity in Old Times and New,' by Prof. John Stuart Blackie, and 'None Like It,' a defence of the older school of Biblical criticism, by the Rev. Dr. Joseph Parker.

Macmillan & Co. issue at once 'The Lovers' Lexicon,' by Frederick Greenwood.

The *Electrical Engineer* will issue 'The Inventions, Researches, and Writings of Nikola Tesla,' a Servian electrical investigator now domiciled among us. The work has been prepared by T. C. Martin, editor of the periodical just named.

That the third volume of the illustrated edition of Green's 'Short History of the English People' (Harpers) is not the last will prove a trial to many in this Christmas time; but happily one can give promises as well as volumes, and the fourth and last cannot be far off. The third deals with Puritan England, the Civil War, the Revolution—the period which possesses the greatest interest for Americans. Almost every page has its illustration, and each illustration is fully described in a note at the front of the volume. Mrs. Green and Miss Norgate show no falling-off in their aptitude for selecting designs, views, portraits, caricatures, facsimiles, which embody the spirit of the age. There is a fine view, the earliest, of London Bridge in 1600, in color, folded; there are two portraits of young Milton; and specially noteworthy is the portrait of Elizabeth Steward, Cromwell's mother, a strong face. The narrative ends with 1679.

It is hard to make out what class of readers will be benefited by Frances Minto Elliot's showy and expensive 'Old Court Life in Spain' (2 vols., Scribners). The scholar will learn nothing from a writer about Spain who mentions among her authorities the Romancieros (*sic*) and the Ballads of Bernardo da Carpio (*sic*), calls the brother of Pedro el Cruel persistently Don Fadique, writes Castila (*sic*) as often as Castilla, and allows an innocent word like *jefe* to masquerade now as *jefé* and now as *jeffe*. On the other hand, even the romantic reader is likely to find two volumes of sentiment and ejaculations a trifle wearisome. The author's original idea was, however, not a bad one—*i. e.*, to render in a popular manner for the English public those episodes in the lives of the Spanish kings and queens up to Ferdinand and Isabella which touched the imagination of the people and were sung in the ever fresh and interesting Spanish ballads.

In perfect keeping with the 'Cranford' illustrated by Hugh Thomson, is Miss Mitford's 'Our Village,' which the same artist has adorned, and the same publishers, Macmillan, issued. Mrs. Anne Thackeray Ritchie furnishes by way of introduction an easygoing biography of Miss Mitford. The popularity of this charming edition is assured. So is that of Dent's faultless three-volume edition of Frances Burney's 'Cecilia' in the Jane Austen style, long since approved of amateurs and of the public (Macmillan). Canon Ainger easily finds a bridge from Lamb to Hood in the preface to Macmillan's holiday edition of the 'Humorous Poems' of the latter, and Charles E. Brock contributes an ample number of designs not irresistibly comic, but always graceful, and much in the vein of Hugh Thomson. This volume, too, must be heartily commended. From the same house we receive the revised edition of Miss Swanwick's translation of the first part of Goethe's 'Faust' (London: George Bell & Sons), to which, as if to emphasize the age of this version, more than forty years, Retzsch's outline illustrations have been added; and neither will be found quite out of date. From A. C. McClurg & Co., Chicago, we have two dainty volumes in the "Elizabethan Library" of Elliot Stock, 'Thoughts that Breathe,' from Bacon, and 'A Bower of Delights,' from Nicholas Breton, both selected by A. B. Grosart, with indications of the sources and with occasional annotations. They are both, in form and contents, most companionable.

'Paragraph-Writing' (Boston: Allyn & Bacon) is an enlarged and improved edition of an excellent little pamphlet published a few years ago by Profs. Scott and Denney. Until very recently the word and the sentence were the only units assumed in the study of composition, and text-books on rhetoric thought their duty done when they had treated the uses of words and the various forms of sentence structure. Of late years, however, it has been cus-

tomary to recognize the importance of the paragraph, and even of larger units of structure. Falling in with this theory, and relegating to the background discussion as to proper and improper uses of words, the authors of the present work aim "to make the paragraph the basis of a method of composition, and to present all the important facts of rhetoric in their application to the paragraph." More than half of the book is devoted to exercises of various kinds, or to lists of subjects or topics which the student may treat.

Some weeks ago we called attention to Mr. G. P. Baker's 'Specimen Briefs,' as admirably designed for use in teaching argumentative composition, a rhetorical exercise of great practical value to which many colleges are beginning to give special attention. The same author has now compiled and edited a little volume of 'Specimens of Argumentation' (Henry Holt & Co.). The specimens are some half-a-dozen in number and consist mostly of political speeches, beginning with Lord Chatham on removing his Majesty's troops from Boston, and ending with Henry Ward Beecher's defence of the North at Liverpool in 1863. All will be found valuable for illustration of logical and argumentative principles and as a basis for exercises in constructing briefs. In a second edition we suggest that it would be well to insert a table of contents, and, as the book is one of a uniform series, to letter it on the back as well as on the side.

Mr. W. S. Jackman of the Cook County, Ill., Normal School has published a little book, entitled 'Number Work in Nature Study,' in which he develops a method whereby the scholar is led to prepare his own arithmetical examples, on the basis of elementary scientific observation. In this way, while the scholar becomes expert in matters of ratios, percentages, and so on, his interest is properly directed to the results that he gains rather than to the method of obtaining them. For example, an exercise adapted to the early months of the school year is in part as follows: Of one hundred leaves examined, how many have not been injured or used in any way by animals? How many have been in part devoured? How many have been used in making nests or cocoons? Of a hundred leaves from the oak, from the maple, the elm, etc., which has the greatest number of leaves injured? Then, what part of the entire number of leaves has been stung by insects in laying their eggs? What is the ratio of those injured to those uninjured? What percentage of the whole number has been more or less eaten? And so on, with many different exercises, arranged for successive autumnal months.

A number of publications of the United States Geological Survey have been distributed during the past season. Chief among these is the Eleventh Annual Report of the Director, long delayed, and less interesting than its predecessors from lack of variety in its essays. It is in two volumes, of which the second treats of irrigation, a subject which no longer touches the duties of the Survey; but a bibliography of irrigation in this volume will be of permanent value. The volume on geology has nearly two hundred pages of administrative reports, and the rest of the book is taken up with McGee's monographic essay on Northeastern Iowa, nearly four hundred pages, and with Phinney's briefer report on natural gas in Indiana. The chief lesson of the latter is the same as is taught by all students of this new fuel, namely, the wastefulness of its use under high pressure and for rough purposes, and the certainty that the wells now in use will be exhausted faster than they are supplied by the production of gas within the earth.

In the second edition of his charming book entitled 'Nos Adieux à la Vieille Sorbonne,' M. Gréard adds a note describing his discovery, on September 30 last, of a tablet commemorating the rebuilding of the Sorbonne by Richelieu in 1627. The tablet is of copper, 51 cm. broad and 60 cm. high. The inscription is well preserved, and is reproduced in full by M. Gréard. The importance of the tablet is that it establishes the fact, hitherto suspected by M. Gréard, that the old Sorbonne had an *aula magna* or *major*, in which large gatherings were held, as well as the *aula minor*, still known as the "Salle de Robert Sorbon," which is the only one mentioned by the historians of this building.

The Calendar of the Imperial University of Japan for 1892–'93 shows the steady development and healthy growth of that institution, and of the colleges of law, medicine, engineering, literature, science, and agriculture which compose it. While most of the instructors are Japanese graduates of foreign universities, there is yet a goodly number of Europeans and Americans associated with them. A map accompanies the book, showing how the spacious enclosure known as the Kaga Yashiki, and once occupied by the retainers of one of the richest and most powerful of the feudal daimios, is now full of substantial structures devoted to science, instruction, and residence of the professors. Of the full graduates, reckoning from 1876, 1,785 are now living, most of them in active public or private service. Their average age is twenty-five. The length of the curricula in the college of law is now four years. On the 18th of August, 1892, the new and imposing library buildings were completed. The papers representing the results of original research in the departments of medicine and science are numerous and creditable, but on the page devoted to "contents of the memoirs of the literature college," Prof. Chamberlain's Aino studies stand in lonely majesty. How long can the Japanese allow this disproportion to exist?

Parts 19–23 of the great Atlas of the Civil War, in course of issuance by the War Department, are largely occupied with Virginia, in which State the region about Richmond and Petersburg, and the battlefields of Winchester, Fisher's Hill, and Cedar Creek, are particularly well mapped. Notable, also, are the battlefields of Gettysburg and Chickamauga, and the military department of New Mexico; Sherman's course from Atlanta to Savannah, with the route pursued by each army corps; the defences of Louisville, Bowling Green, Nashville, Murfreesboro, Chattanooga, Mobile, etc.

Porter & Coates, Philadelphia, have begun publication of an attractive "monthly repository of literature and miscellaneous information," called the *Literary Era*. Its contents are largely at second-hand, as in the duly acknowledged notices of new books. We notice a timely list of "Napoleana" (as the editor designates the Napoleonic memoirs, new and old), and other similar lists of "Choice Books" are to follow.

Dr. Ellis's long article on "A Non-Sectarian Theological School" is the most valuable in the contents of the current *Harvard Graduates' Magazine*. Historically, as to the original aim of that college to train ministers especially, and as to the origin of the Divinity School, with its absence of tests for students or instructors, it is instructive if not complete in its survey. Without allusion to Parker or Emerson, it makes a just distinction between Unitarianism and Liberal Christianity, intimating the author's sympathy with Channing in his dislike to the denominational name. It casts doubt upon the success of the proposed addition to the Harvard Divinity School of "courses representing different systems of theology," as an absolute novelty. "Schools of theology," says Dr. Ellis, "have always and without exception been identified with and pledged exclusively to some distinctive system in doctrine and belief." Yet, if we understand him, he does except the Divinity School in the intent of its founders and in its organic constitution, which were Liberal Christian and not Unitarian. He seems to attribute the decline of the School to the creeping in of the Unitarian designation and control, and he certainly regrets the failure of his efforts forty years ago to effect a legal separation of the School from the College. Mr. Bolles's skilful summary of the University at the opening of the academic year possesses the usual interest, and will be widely approved for its frank remarks on the duty of the faculty to suppress the remnant of "Bloody Monday" rioting and the scandalous disorders of Commencement Day.

The London *Times* publishes an appeal from Mrs. Agnes S. Lewis to British and American scholars in behalf of the library in the famous convent of St. Katharine on Mt. Sinai. This lady, well known as a Syriac and Greek scholar and the discoverer in this library of apparently the earliest known version of the Four Gospels, says that there is no room in the convent suitable for a library, but that the manuscripts are kept in wooden chests in various small chambers and are suffering from want of light and air. Nor is there any place where they can be conveniently consulted. Plans have been prepared by a competent architect for a separate building, provided with bookcases, tables, etc., for the use of foreign scholars, at a cost of from $15,000 to $20,000. The monastery is now too poor to raise this sum, "its landed property in Russia, Rumania, and Egypt having become depreciated, so that it has barely enough for the frugal sustenance of its thirty-five monks and of the troops of Bedaween who have to be kept by it from starving during the long months when travellers do not want their camels." Mrs. Lewis adds that the monks are not the unlettered men which some travellers have represented them to be, but that they appreciate the value of their library and desire to give every facility to scholars to make use of it.

University Extension has reached the continent of Europe. Courses of instruction of this character have been undertaken under the auspices of the University of Ghent with great success. A similar movement has been started in Brussels, where the society having the work in charge is presided over by the rector of the University. In both cases the lines marked out by the University Extension movement in England are closely followed.

How cheap flag-patriotism is, is shown by the current demonstrations in behalf of the Hawaiian usurpation. Still, as it seemed to need strengthening, a movement was initiated a few years since to supply every public schoolhouse in the country with the stars and stripes, and it has been at least as contagious as tree-planting. A Boston firm of expert engravers, A. W. Elson & Co., have conceived the notion that every school should have a portrait of Washington, at least, and this we take to be a more useful undertaking than the other. Among all the available portraits, they have

wisely chosen the Stuart head in the Boston Athenæum, and have copied it and the Martha Washington in photogravure nearly at scale, and with very striking success. The public will certainly not let these prints be monopolized by the schools. Messrs. Elson propose to popularize the likenesses of other great men in the same manner: as John Jay and Longfellow, to mention those we have seen, Lincoln and Marshall, which are to follow. Of these, too, we may hope the schools will get their share. What the men represented stand for can be shown them or they can learn; what the flag stands for at any given moment is known to how many of us—even to the patriotic author of 'The Man without a Country'?

—There is very little of Washington in Dr. J. M. Toner's latest issue of his series, containing the journal of the Fort Necessity adventure, 1754. The journal is known only through a translation into French, in which the personal "flavor" was lost and the original writing probably garbled. To render the record back into English must have still further diluted this flavor, and left less of the personality of the writer. The French journal ends with the entry of June 27th; Dr. Toner has compiled a continuation, "gathered from sources believed to be reliable," but, of course, not containing a line by Washington as diarist. Upon this material the editor hangs copious notes, and expands the volume to 273 pages. In the absence of the young Virginian, attention may be directed to Dr. Toner's methods. There are the same minute study of detail, the same wide knowledge of men and affairs of Virginia in colonial days, the same love and enthusiasm for his subject, as have marked his other issues of Washington material. For all this the editor is to be praised, and the general accuracy of his comments compensates for their diffuseness. He has drawn largely upon the rolls of the companies, and account-books, letters, and notes, and no student of early Virginian history can pass by these volumes, which contain so much, and are made so convenient for use by a full index (Albany: Munsell).

—Attention must still be called to a certain error of method. No one man can hope ever to master all the lore of Washington's life and character. If Dr. Toner wishes to make his edition the *final* compilation, he should draw freely upon the work of those who have labored in the same field. Sparks, Brock, and other editors are frequently mentioned, but it is strange that, with all his wide reading, Dr. Toner has apparently never met with Ford's 'Writings of Washington,' the latest attempt to give a general survey of the material at hand. Had this work been consulted, the notes of the editor could have been more complete, and his sense of justice would not have permitted him to make the claim of discovering that the MS. of the journal was captured at Fort Necessity, and not at Monongahela, as Sparks asserted. Nor would he have been in such doubt about the date of Washington's commission as a lieutenant-colonel, for Mr. Ford notes that Washington began to draw the pay of a lieutenant-colonel on March 20, 1754, and the pay would naturally begin with the commission. Nor would he have named the cadets taken with Jumonville as he did. Faulty as Mr. Ford's collection may be, there is much of value to complete such a record as Dr. Toner sets out to make. Some other errors have also crept into this volume. Vanbraam could not have been in the "thirtieth" battalion of the Sixtieth Regiment, as no regiment had more than four battalions. He was in the third battalion. The Indian Half-King is sometimes given Tanacharison and sometimes Tenacharison. The old form *anglois* appears as *anglais* in the capitulation, and Peyton is printed Payton.

—In 'Ballads and Poems relating to the Burgoyne Campaign,' Mr. W. L. Stone has brought together well-nigh three-score poems, as various in merit as in length. Some are only couplets or quatrains, others drag their slow length along through fifty pages; but all have a sort of interest, even those inspired in later generations; most of all those struck out in the burden and heat of the day. It is a satisfaction to see these effusions, so fugitive and evanescent, now, thanks to Mr. Stone's steadfast endeavors, committed to the art preservative. The volume figures as No. 20 in Munsell's Historical Series (Albany), is printed on substantial paper, with broad margins, and in large type. Half-a-dozen previous monographs by Mr. Stone concerning divers specialties in Burgoyne's campaign have made him an authority on all minutiæ regarding it. His pains to learn the truth if possible by personal observation, or at least by interviews with witnesses as nearly as possible contemporary, his indefatigable correspondence and research in archives, prove his work to be a labor of love, and leave scanty fragments for any who shall glean after him in his chosen field. In regard to one particular, however, namely, the color of Miss Jenny McCrea's hair (discussed on page 206), which was sometimes described to have been "dark as a raven's wing," we can strengthen Col. Stone's proofs which demonstrate rather thinly that that hair was a blonde or golden brown. The present writer has often heard his grandmother, Hannah Barbara Hufnagel Harris, who in 1777 was a neighbor of Miss McCrea (for she lived about a mile north of Sandy Hill, which lies but two miles from the McCrea home in Fort Edward), say that Miss McCrea's hair was *red*—a blunter term for golden.

—Miss Katherine Lee Bates's 'The English Religious Drama' (Macmillan) shows independent study of the old miracle plays, as well as study of the best and most recent authorities. The four cycles, the Chester, Coventry, Towneley, and York plays—the last after Miss L. T. Smith's complete edition—are treated, and the Digby Mysteries, the Cornish plays, and several isolated miracle plays are also included. The work is written in a popular style, as it consists of "a brief course of lectures delivered in the summer school of Colorado Springs, July, 1893," growing out of which circumstance are occasional bits of "fine writing" that might have been toned down in the revision for publication. The Moralities are treated much more briefly in the last chapter, and the scope of the work seems to exclude Heywood's Interludes, as they are barely mentioned on the last page, but they form a natural appendix to the Moralities and a transition to regular comedy and tragedy. There seems to be an oversight on p. 238: "Ralph Roister Doister" is said to have been played "before 1551," and "Gorboduc" "by the following year." "Gorboduc" was first represented on January 18, 1561 (O. S.), as the title-page of the first edition of 1565 states. Prof. Hales, in a recent number of *Englische Studien*, has endeavored, with much plausibility, to show that "Ralph Roister Doister" was written in 1552. The chief fault we have to find with Prof. Bates's book is the lack of a suitable table of contents and an index. A useful bibliography, based on Prof. Stoddard's "References," is appended. The general reader will find Miss Bates's lectures a handy guide to more serious study of the subject.

—M. Gabriel Compayré, the well-known psychologist and writer on educational subjects, devoted the whole of his address as rector of the Academy of Poitiers, delivered at the recent *Rentrée des Facultés*, to his impressions of America received while in this country as a delegate to the educational congresses at Chicago last summer. M. Compayré was duly impressed with the fact that "universities" in this country are on as large a scale as the country itself, and not a little perplexed by their great variety in standard. "What first struck me," he says, "was the considerable number of distinct buildings that occupy the college campus. An American university is a world by itself, and perhaps a little mixed up with schools of a widely different character. The American university comprises not only the four or five traditional faculties of the Old World, but it maintains, in imitation of the universities of the Middle Ages, a college where secondary instruction is given. It stretches out towards intellectual activity of every kind, and does not disdain to enrich its domain by adding to the search for theoretical truth the study of the practical applications of all forms of knowledge." M. Compayré regards with justifiable surprise the fact that in 1889 we maintained twenty-one schools of law that had less than ten students each. At Yale he was astounded to learn that the method of instruction in law was by memorizing the pages of a text-book, and evidently is restrained by a feeling of courtesy towards his hosts from expressing himself on this point as strongly as he feels. This sentence, too, should not be overlooked: "It must not be forgotten," continues M. Compayré, "that the United States have no standing army. I have, it is true, seen colonels; but they were in command of normal schools. I have even seen a general; but he had directed the Bureau of Education before Dr. W. T. Harris, the present Commissioner."

—Barnard's Inn, London, the scene of Paul Verlaine's recent lecture on French poetry, is about to be transformed. For several years now it has been the headquarters of the Art Workers' Guild. In it have William Morris's best speeches been made. Busts of him, of Mr. Crane, of Mr. Brett, and other masters of the Guild stand in a row above the wainscotting. A long bas-relief by Mr. Crane stretches across one side of the hall. Only a year ago Vierge's drawings were hung there, when that artist was first introduced to London. And now it is to go the way of London's other landmarks of earlier and more picturesque days. The Art Workers are to be turned out. The hall, so lovely and impressive with its high-pitched roof, its beautiful panelled walls, its great fireplaces, and its coats of arms, as decorative as those which hang in many an Italian *palazzo pubblico*, is to be altered into a dining-room for the children of one of the city companies' charity schools. With just as hearty an appetite could the children eat in the schoolhouse hastily "run up" by the modern jerry builder. But the hall, once ruined, can never be restored. Already, we learn, the little, quiet, sombre court has been defaced. In a few weeks' or months' time Barnard's Inn will be as sorry a place as Clement's in Fleet Street.

## THE BRONTËS IN IRELAND.

*The Brontës in Ireland;* or, Facts Stranger than Fiction. By Dr. William Wright. London: Hodder & Stoughton; New York: Appletons. Pp. xx, 308. 1893.

THE extensive and deeply interesting literature relating to the Brontë sisters has hitherto treated of little previous to the period of their father, Patrick Brontë, leaving his home in the county of Down, in 1802, and entering at St. John's College, Cambridge. Dr. Wright has evidently for many years given himself conscientiously to the task of tracing the family history back to its source, and we have now the result of his labors in a volume graphically written, beautifully printed, and profusely illustrated. Yet we cannot say that we rise from its perusal with feelings of unmixed satisfaction. The interest attaching to names brought prominently before the public is of different degrees and kinds, and what we desire to know regarding one is not altogether the same as what we desire to know regarding another. We should welcome the slightest hint of truth, or legend presumably based on truth, relating to Shakspere or Washington. Any author would claim attention and our thanks who threw fresh light upon the relations between Swift and Stella, or between Shelley and Harriet. But it appears to us a mistake to suppose that all that could be told regarding the family antecedents of Charlotte, Emily, and Anne Brontë would be of necessity welcomed. Our interest in them is of a tender if not of a sacred character—sacred almost as should be the hidden details of their private life. The manner in which Mrs. Gaskell realized these undefined limits of interest and reticence is that which, apart from her delightful style, gives such a peculiar charm to her biography of Charlotte Brontë. That book has rendered Haworth sacred ground to thousands. It suggests thoughts of all that is womanly and refined, all that is gentle, much that is sad. That veil of mystery which must and should envelope each human being, is not unduly raised. On the other hand, the book before us gives a certain sense of strain and incongruity—strain in heavy demands upon our credence as fact of much which is evidently only surmise and amplification; incongruity, in connection with the Brontë sisters, in the elaborate recital of incidents such as a prize-fight in which a member of the family came off victorious, and cock-fighting, and the particulars of the somewhat boisterous surroundings of a circle some members of which kept country liquor-stores. We welcome illustrations of old Brontë residences, and maps of the Brontë district; we cannot feel interest in a full-page engraving of a pool simply because it was the scene of a ducking that led to a fight in which a Brontë was one of the combatants.

In truth, all seems shadowy regarding the family until Hugh (father of Patrick and grandfather of Charlotte), an adopted child, brought up by an aunt and her husband (who, also an adopted child, had taken the name of Brontë), appears in the County Down, and, marrying a Catholic girl, Alice McClory, founded the family from whom the occupants of the Haworth parsonage were descended. One-fourth of the volume is devoted to the adventures of Hugh as a child. An impression of exaggeration and want of reality in the narrative is confirmed by the admission (p. 131): "Hugh Brontë seems to have had the rare faculty of believing his own stories, even when they were purely imaginary." And our belief in the excessive brutality of his abductor or guardian, Welsh "Brontë," on which these recitals are based, is shaken by the fact that Hugh gave one of his sons the same name. Dr. Wright has not satisfied us that Brontë was the true family name. Admittedly, the accent was added by the father of the novelists some time after his removal to England, previous to which the name is found entered as Bronte, Brunte, or Bronty. There are, or were lately, Pruntys in other parts of Ireland—so far as we are aware, no Brontes or Brontys. We are still of the opinion of authors before Dr. Wright, that the name was originally Prunty.

He has certainly established the existence in the family of a vein of realistic, often weird, story-telling power. He describes well and truthfully many customs of peasant life once prevalent in Ireland, now so rapidly disappearing. He points many a moral relating to the present and late agitations. Hugh Brontë, the grandfather of the young Yorkshire novelists, was evidently an original, remarkable man. Dr. Wright says (p. 152): "The doctrine of common honesty enunciated by Hugh Brontë has lately received the approval of Liberal and Conservative governments in what is known as 'tenant-right' or the 'Ulster custom.'" But, we must be permitted to add, to find the origins of the Ulster tenant-right custom we must search much further back than the teachings of Hugh Brontë or any other village Hampden of the middle of the last century. The following quotation refers to Hugh Brontë's family (p. 165):

"We had never seen men like the Irish Brontës, and we had never heard language like theirs. The quaint conceptions, glowing thoughts, and ferocious epithets that struggled for utterance at their unlettered lips revealed the original quarry from which the vicar's daughters chiselled the stones for their artistic castle-building, and disclosed the original fountain from which they drew their pathos and passion. Similar fierce originality and power are felt to be present in everything produced by the English Brontës; but in their case the intensity of energy is held in check by the Bramwell temperament and kept under restraint by education and culture."

The family genius was certainly not characteristically Irish. The almost grim earnestness and absence of humor remind us of the Scotch nature, to which, indeed, that of the northern Irish is more akin than to the temperament of their fellow-countrymen in the south of Ireland. The Yorkshire Brontës were evidently not proud of their connection with their father's birthplace. Charlotte's most intimate friend and frequent visitor never heard any reference from the family to their Irish history or the Irish relatives with whom they were in constant communication. The only Irish character depicted by Charlotte Brontë is the reverse of admirable, and the only allusion to Ireland in her novels is by no means flattering.

Of Patrick Brontë, the future vicar of Haworth, in his Cambridge days, we read (p. 265): "As the handsome youth and distinguished scholar drilled shoulder to shoulder with Lord Palmerston and with the late Duke of Devonshire, few could have suspected his humble origin in Emdale, or the titanic struggle by which he had gained a foothold at the University." Perhaps to many readers the most interesting passages in the book are those in which are described the reception in the district of 'Jane Eyre' and sister volumes. The uncles, aunts, and cousins of the authoresses were incapable of appreciating them.

"The Irish Brontës had never seen a book like 'Jane Eyre' before—three volumes of babble that would have taken a whole winter to read. They laid down the work in despair; but, after a little, Hugh resolved to show it to Mr. McKee [the minister]. . . . He tied up the three volumes in a red handkerchief, and called with them at the manse. . . . Hugh Brontë began, in a low, mysterious whisper and with a regretful air, to unfold his sad tale to Mr. McKee, as if his niece had been guilty of some serious indiscretion. Mr. McKee comforted him by suggesting that the book might not have been written by his niece at all. At this point Hugh Brontë was prevailed upon to draw up to the table and partake of the abundant tea that had been prepared for Mr. McKee, while the latter proceeded to examine the book. Both gentlemen devoted themselves to the task in hand. . . . The afternoon wore on. . . . When the servant went in to remove the tea-things and light the candles, both men were sitting silent in the gloaming. Mr. McKee, roused from his state of abstraction, observed Brontë sitting by the *débris* and empty plates. 'Hughey,' he said, breaking silence, 'the book bears the Brontë stamp on every sentence and idea, and it is the grandest novel that has been produced in my time.'"

The account of the visit of this uncle to London, carrying a carefully prepared blackthorn shillalah, in order to wreak vengeance on the anonymous *Quarterly* Reviewer of his niece's book, is striking if not overstrained. The surmises as to the authorship of the review are probably correct. We are glad to have our conception as to the severity of the Rev. Patrick Brontë's character modified by the fact that he regularly allowed his mother £20 per annum from his narrow stipend.

## ASHLEY'S ENGLISH ECONOMIC HISTORY.

*An Introduction to English Economic History and Theory.* Volume II.: The End of the Middle Ages. By W. J. Ashley. London: Longmans; New York: Putnams. 1893.

THE first volume of this treatise was published in 1888, and has recently been reprinted. The second volume, which is much larger and also exhibits more originality than the first, is entitled "The End of the Middle Ages." The reader does not ascertain, until after the perusal of many pages of the book, that the period covered is approximately from 1350 to 1550. The work really consists of six disconnected essays on the towns, the crafts, the woollen industry, the agrarian revolution, poor-relief, and the canonist doctrine. To some critics this method of treatment may appear desultory, but it has certain advantages, and the author has succeeded in giving the reader a clear idea of the general economic development of England from 1350 to 1550.

The first two chapters, entitled respectively "The Supremacy of the Towns" and "The Crafts," are perhaps the most valuable parts of the book. Prof. Ashley may now, in fact, be regarded as the best authority on the subject of crafts and craft fraternities. The sections on municipal granaries (§28), journeymen's societies (§35), the disendowment of religion, and the continuity of craft life (§§38, 39) are particularly interesting, and contain much new matter. On the other hand, his treatment of the decay of municipalities (§§29, 30) is open to some criticism. He does not explain away the clear statement of the statute 3 Henry VIII., that "the most part of all the cities, boroughs, and towns corporate within this realm be fallen in ruin and decay." And he speaks as though this were the only important proof of the decline of towns. He ignores the testimony of contemporary literature regarding "the grete mysorder of everi cytee," and the evidence of town muniments, which shows that many cities like Winchester were in a

languishing condition. Whether there was an increase in the general volume of wealth or not, there seems to have been a diminution of civic prosperity in many once powerful boroughs.

While the general excellence of chapter ii. must be acknowledged, it contains some conclusions which cannot be accepted without reservation. In the first place, though the author's terminology is in the main correct, he seems to lay too much stress upon the distinction between gilds and misteries or companies. His own citations from various sources (pp. 129, 142, 146, 149, 156, 157) show that the term "gild" continued frequently to be applied to craft societies, and that the word was not exclusively associated with religious fraternities. The author also makes a sharp distinction between gilds of craftsmen existing for religious purposes, and craft organizations having more or less supervision over their industries. He contends, moreover, that in many cases the latter emanated from the former, or that the two might even exist side by side for one and the same occupation (pp. 74, 140, 141, 151). But his evidence in support of these assertions is not convincing. For example, he maintains that various societies of craftsmen in Lincoln and Norwich were at first religious fraternities entirely distinct from the machinery for the supervision of trade and industry, and that this function was a later acquisition. The evidence here presented is that little or nothing is said of industrial control in the regulations of these fraternities printed in Smith's 'English Gilds.' But the regulations may be incomplete. In the statutes of the tailors' gild of Lincoln it is expressly stated that they were "written in very great haste." Probably most craft fraternities had certain religious features, and doubtless some had more than others; but it is very difficult to draw the line between religious gilds of craftsmen, on the one hand, and craft societies with industrial functions, on the other.

A more serious defect in the author's history of the crafts is his account of their relations to municipal government (see especially §26). He speaks of their extensive administrative and political functions, but does not clearly indicate what these functions were. He intimates on p. 7 that, as a rule, the crafts were represented in the town council; we should be glad to know "the many instances" in which "the town council itself was wholly or in part composed of the elected representatives of the companies" (p. 23). The sources seem to indicate that this was rarely the case. One might infer from Prof. Ashley's account of the crafts that the tendency since 1350 was towards the democratization of municipalities, towards allowing the craftsmen greater participation in the government of boroughs. But it is certain that the drift after 1350 was decidedly towards the formation of aristocratic "select bodies," which monopolized political power and the control of government in many boroughs. Prof. Ashley does not take this aristocratic tendency sufficiently into account. He says, indeed, that "the government of the towns had by this time [early in the sixteenth century] fallen into the hands of select bodies" (p. 48); but this development does not square with his theory that in the fifteenth century the misteries had a large share in the government of the town, that thenceforth they were represented in the civic council, that they were political organs of local administration, and only their members could take part in municipal government (pp. 25, 26).

Our author does not attempt to reconcile these two opposite tendencies, one of which was democratic, the other aristocratic. His position is all the more difficult to understand owing to his opinion (strongly expressed in volume i.) that in the twelfth and thirteenth centuries the government of English towns was aristocratic. If that was the case, how came the crafts to participate in borough government? What factors or forces caused "the exclusive privileges of a small governing class" to vanish? When did the transition from conflict to harmony between the crafts and the municipal authorities occur? What evidence is there of such a transition? These are questions which Prof. Ashley leaves unanswered. The transformation from the one régime to the other should be accounted for, especially in a book which lays such great stress upon continuity of social development. On p. 209 we are informed that the exclusive privileges of the old oligarchy had passed away in the two centuries following the reign of Henry II., but on p. 129 we are told that the struggle "between the organized misteries and the classes that had previously ruled" was still raging at the close of the fourteenth century. The only evidence of this struggle produced by the author is a conflict in Norwich, which, however, seems clearly to have been a contest of the commons of Norwich, not with an old aristocracy, but with a new "select body." Probably the only important political function which the crafts as such exercised in many boroughs during the fourteenth and fifteenth centuries was to act as a medium of citizenship, the freedom of the borough being obtained by entrance into a mistery. But this function of the crafts implied comparatively little political influence or participation in municipal government in towns controlled by a select body, and hence it is misleading to say that "only members of misteries could take part in the government of the town" (p. 26).

The tendency to ascribe to the crafts an undue increase of power in the fourteenth and fifteenth centuries has also led Prof. Ashley to underrate the authority and degree of organization which they possessed during the two centuries preceding 1350. He thinks that before the fourteenth century there was no marked desire on the part of the crafts to limit competition by diminishing the influx of new-comers into the town or into the gilds (§32). But the early charters gave the members of each craft fraternity the exclusive right to carry on their particular industry in the town, and to prevent all other persons from intermeddling with their occupation. In the case of the craft fraternity, as in the case of the gild merchant, this meant protection from the competition of new-comers, or what the Germans call *Zunftzwang*. But Prof. Ashley's language implies that this was not the case, that the crafts became "organized communities with exclusive rights" late in the Middle Ages, and that previously there had been no marked "delimitation of the crafts towards the outside world." These conclusions cannot be accepted unless more evidence is produced to support them. The most that the author proves is a tendency during the fifteenth century towards a somewhat narrower and more exclusive spirit among the craftsmen. It is only fair to add that these various strictures touch only a very small portion of the chapter on crafts; the chapter as a whole is scholarly, and adds much to our knowledge of the subject.

Chapters iii. and iv., which deal with the woollen industry and the agrarian revolution respectively, require little comment, as they are revised editions of papers published some time ago. Among the sources we miss Höhlbaum's 'Hansisches Urkundenbuch,' which contains material illustrating the history of the woollen industry and other phases of English economic development. In his chapter on the agrarian revolution, *i. e.*, the substitution of pasturage or sheep-farming for tillage, the author holds that in the period from 1450 to 1550 "enclosure meant to a large extent the actual dispossession of the customary tenants by manorial lords," and that this often took place "in the form of the violent ousting of the sitting tenant" (§50). Mr. Leadam, in the October number of the *English Historical Review*, presents some strong arguments against this view. Prof. Ashley states that "proofs abound" in support of his position, but he does not produce many of them. Most of his evidence does not directly touch the question of actual dispossession, but bears only on the legal theory regarding the lord's right to oust the villein from his tenement.

The last two chapters are entitled "The Relief of the Poor" and "The Canonist Doctrine." The author has made use of only a small part of the literature relating to the history of English tithes, and does not seem to be acquainted with Hasbach's 'Englisches Arbeiterversicherungswesen,' which deals with the charitable functions of gilds. Both chapters are interesting and valuable, though chapter vi. shows less original investigation than any other in the book, and only a small portion of it directly relates to England; it "is based upon a study and comparison of a number of modern German writers on the history of canon law and of commercial law," whose works are little known to English scholars. In this chapter he shows how men invested their money in the Middle Ages; hence he considers the subjects of usury, rent-charges, the various forms of partnership, and the attitude of the Church towards these different kinds of investment. On p. 437 he says: "The mere fact that statutes were passed against usury from time to time, with the usual pessimistic preamble, no more proves that the law was generally broken than the frequent new criminal laws of modern times prove that all men are thieves or murderers." But in another connection, on p. 309, he considers repeated legislation as an argument to show that the law regarding tithes was not being observed.

In conclusion, we venture to add one general criticism on the book as a whole. The author not infrequently exhibits a tendency to generalize from insufficient data. He relies too much upon the records of London and upon Continental analogies. Here and there he seems to be unduly influenced by German writers, and hence is sometimes inclined to identify by analogy the development in England with that on the Continent (pp. 107, 141, 142, 297, 309, 314, 422). Several important generalizations rest wholly or in large part on data derived from the history of London (§§26, 32, 36, 44, also pp. 89, 384, 462). This is a dangerous tendency, for we do not think that "the difference between London and the other towns . . . was one of degree rather than kind, of quantity rather than quality" (p. 11). The mediæval constitution of London was in many respects anomalous when compared with that of other towns, and unless this fact is clearly recognized, little progress will be made in the investigation of the history of English municipalities. But Prof. Ashley has not gone as far astray as most of his predecessors in laying undue stress upon the annals and muniments of London. He makes considerable use of the printed records of other towns. Only

few of these have, however, been published. Hence it is to be regretted that he did not explore the town archives, the British Museum, and the Public Record Office. They are particularly rich in records relating to crafts, and the assertion may be ventured that, during a summer's vacation, Prof. Ashley could easily have doubled his data, at least for the history of crafts. All generalizations on this last-mentioned subject must, in fact, be accepted with reservations until more craft statutes have been published or utilized. The author often complains of the meagreness of the sources, for example in connection with such subjects as journeymen fraternities (p. 124), the growth of livery companies (p. 132), foreign weavers (p. 202), the woollen industry in the fifteenth century (p. 218), monastic almsgiving (p. 314), and the attitude of the Church toward usury and toward business practice (§76). Doubtless there is plenty of material on most of these topics in the central and local archives of England, and probably no considerable search need be made to find much of it.

Those who know what discouraging obstacles the historian has to surmount in the investigation of the social and constitutional history of mediæval England will understand what Prof. Ashley means by the statement in the preface that he has been obliged in a large measure to do his own work of excavation, and they will not feel inclined to exaggerate the few defects which his book contains. The volume before us will add much to the reputation which he already possesses as one of the leading authorities on the economic history of England. We hope that the public will not have to wait long for the appearance of the third volume.

## CHILDREN'S BOOKS.—IV.

THE children, and we are sure there are many of them, who remember Mr. Joseph Jacobs's 'English Fairy Tales' of three years ago, with the bell and cord on the back and the key on the side, will be delighted to know that, after Celtic and Indian Fairy Tales, Mr. Jacobs has come back this Christmas to his first love, and given them 'More English Fairy Tales' (Putnams), with illustrations by John D. Batten. Stories and pictures are, if possible, better than those in the former collection, and although there are no surprises for folk-lore students in the notes, the volume is of equal interest, to the old as well as to the young. The editor disarms criticism by the frank avowal of his method of compiling his collection. In the dearth of English fairy tales, which have disappeared to a greater extent than in any other country in Europe, Mr. Jacobs has gleaned in Australia and America, and has pressed into his service ballads (sometimes reduced to prose and sometimes left in their original shape) and tales from across the border. As before, he has largely rewritten the stories as he fancies they should be told, and introduced changes here and there in the interest of his juvenile readers. The result is a charming book even if it is not an authority on English folk-tales. The stories represent every class except the legend, and some are variants of those in the earlier collection. One of these, "The Wee Bannock," is a variant of "Johnny-cake." In a note to the former Mr. Jacobs supposes that johnny-cake is a corruption for journey-cake. This etymology is unsupported by Webster or the Century Dictionary, and we must wait for Dr. Murray to catch up with it. To the notes on No. lxiii, "The Pedlar of Swaffham," Mr. Jacobs might have added the interesting lecture by Jacob Grimm, "Der Traum von dem Schatz auf der Brücke" ('Kleinere Schriften,' iii, 414), where the Oriental origin of the story was first pointed out.

While Mr. Jacobs is continuing his series of fairy tales, Mr. Andrew Lang, although he has not exhausted the colors of the rainbow which he has employed to designate his annual collection, has reluctantly turned his hand to true stories and given us 'The True Story-Book' (Longmans), twenty-four tales of adventure, only one of which, "The Spartan Three Hundred," is borrowed from ancient history. The others are more or less modern, "The Tale of Isandhlwana and Rorke's Drift" (contributed by Mr. Rider Haggard) being of yesterday, so to speak, and just as heroic as the story from Herodotus. There are escapes from prison and captivity (Casanova, Baron Trenck, Cervantes, and Cæsar Borgia), tales of pirates, the story of Kaspar Hauser, Grace Darling, etc. The adventures of the Young Pretender and his followers after the battle of Culloden are told at considerable length; but the largest space is devoted to "The Conquest of Montezuma's Empire," reduced by Miss Wright from Prescott's history. Mr. Lang says of it: "That is a very long story, but, to the author's taste, it is simply the best true story in the world, the most unlikely, and the most romantic." There are but two stories from North American history, "A Boy Among the Red Indians" (from Tanner's 'Captivity,' 1830), and "The Shannon and the Chesapeake" (in which Commodore Bainbridge is incorrectly called Bairbridge). In case the American boy does not relish the latter story, the editor has made his peace by observing at the end, "As a rule, however, this good fortune did not attend our arms in the conflict with the American marine." Mr. Lang has made an attractive book, but we think his young readers will echo the sentiment expressed in the dedication—

> "For Fairyland's the land of joy,
> And this the world of pain,
> So back to Fairyland, my boy,
> We'll journey once again."

Mr. Stanley tells us that, during his second expedition (that described in 'Through the Dark Continent') in 1875, it became the custom to gather at night about the camp-fire and listen to stories told by the natives. Some of these have already been published in the great explorer's books of travel or in the magazines, "but a considerable number of the choicest and most curious of those related during seventeen years" remained, and these Mr. Stanley has now given to the public in the volume 'My Dark Companions and Their Strange Stories' (Scribners), with numerous illustrations. The first story is "The Creation of Man," a curious legend repeated by a Basoko. The first living creature was a toad, the origin of which is not known; "it is suspected, however, that the water brought him forth out of some virtue that was in it." The Moon proposed making a man and woman, but the toad pleaded so hard to be allowed himself to create them that the Moon consented, but declared that the toad and his creation should be mortal. The other stories have for actors the various African animals; the rabbit and terrapin playing the part of weakness and cunning triumphant over strength and stupidity. While there are no parallels to the stories in the collections of Harris, Jones, and Owens, the resemblance is striking, and confirms the hypothesis of the African origin of our own negro tales. The stories are well told and are extremely interesting. Mr. Stanley appears in the new light of an accomplished collector of tales, and his book will be welcomed by all.

We are inclined to view askance the artificial fairy tale, manufactured to order, and not the product of organic evolution. The volume before us by George MacDonald, 'The Light Princess, and Other Fairy Tales' (Putnams), shows how difficult a task it is to write a fairy tale with malice prepense. In one story, "The Giant's Heart," the author has simply rewritten the theme of "The Giant who has no Heart in his Body," and it is easy to see how inferior the result is to the tale in Dasent or to "Punchkin" in 'Old Deccan Days.' In the other stories, which are original, Mr. MacDonald displays a delicate fancy, which frequently reminds us of that best of modern fairy tales, 'The Water Babies.' Many of the stories, too, deal with the water and recall in this way Kingsley's classic book. One of the tales, "The Shadows," is very powerful, but was surely written for very old children. The author has been ably seconded by Miss Maud Humphrey, whose illustrations are very pretty, and the book is tastefully bound.

## A FOURIERITE APOSTLE.

*Albert Brisbane:* A Mental Biography, with a Character Study. By his wife, Redelia Brisbane. Boston: *Arena* Publishing Co. 1893.

THE editor of this volume and the author of its "character study" married Mr. Brisbane in his old age, when he was already much broken with chronic dyspepsia and epilepsy. Presumably his children to whom the book is dedicated were the product of a former marriage, of which nothing is said, an omission only one of many touching matters of which we would gladly have been informed. From beginning to end the book is nothing if not vague, but the wife's part is much vaguer than the husband's. It abounds in phrases of exaggerated admiration, with here and there a genuine perception, as, for example, where it is written:

"His very mental constitution rendered it impossible for him to attain to a commonplace, common-sense appreciation of the matter-of-fact world; and he never dealt successfully with either men or matter. This was why he made so many mistakes in his practical efforts, why he overestimated the element with which he attempted to deal; why his imagination projected an ideal transcending all possible realization—at that time, or even at the present time, for that matter."

The autobiography which follows the introductory sketch was not written by Mr. Brisbane, but dictated by him at odd times and intervals, and has the loose and desultory character to be expected from such a method. It is but fair to him to say that he was not satisfied with it, and that, as it stands, much in the form and order is from the editorial hand. He would have had the document "an exposition of principles and laws, and the experience of the individual objective life illustrative of them." He would have had it a history of his intellectual life, "a mental biography"; but it is continually running out into concrete details—sketches of individuals and events—and the value of the performance lies in these to a much greater extent than in the account of his own mental progress. In truth, there was no real progress. There was only a frequent exchange of one notion or set of notions for another. A mind more notional, more visionary, it would be hard to single out. He is always talking about science and imagines

himself its rigid devotee. But there was seldom anything more scientific in his processes than in the lucubrations of the esoteric Buddhists and that kind in general. An ardent disciple of Fourier, like his master he was impatient of the bounds of science, and was ever eager to be soaring into the infinities and immensities, so that from sociology he passed quickly to cosmology, and from the reconstruction of society to the construction of the universe, on which he dilated with the loftiest disdain for the plodding methods of such fellows as Newton and Darwin. He was "soon satisfied that Darwin's theory was one of those superficial creations which the human mind evolves when dealing with universal subjects without the aid of adequate laws to guide it"—meaning by "laws" a framework of subjective notions into which the facts of our experience should be made to fit.

For a life so vague, so shiftless, that of a mere intellectual and moral tramp, Albert Brisbane had all possible furtherance in the circumstances of his parentage and material condition. He inherited from his mother his liberal self-estimation, for it was her opinion that "if she had followed a career of her own, she should have made millions." He inherited from his father his persuasion that whatever is is wrong. When, in 1843, a Millerite asked the elder Brisbane, "Do you know that the world is coming to an end to-morrow?" the answer he got was, "Damned glad of it, sir! Damned glad of it! This experiment of the human race is a total failure." The son also inherited from the father the fortune which permitted him to do nothing for a livelihood, and afforded him indefinite opportunity for travel. Once, when he was eating ice-cream in Paris, it suddenly occurred to him to ask who paid for it, and this circumstance is spoken of as marking an epoch in his life; but that he ever attempted to pay for his own ice-cream or any other satisfaction he enjoyed, these pages give no sign.

Seeking an education in New York, he was fortunate in a French teacher, one John Manesca, and, afterwards studying German in Paris with the once famous Ollendorff, he communicated Manesca's method to the latter, who made it the basis of his well-known system of teaching French and incorporated the exercises which Brisbane lent him bodily in his book. In 1828, being then nineteen, Brisbane went abroad, and, attending the lectures of Cousin, conceived a low opinion of his abilities, in harmony with the general verdict of the more recent students of philosophy. Guizot he barely met. Going to Berlin, he attended the lectures of Hegel and got nothing out of them. His account of the man is very interesting, but his account of his teaching is absurdly vague and thin. He visited Goethe in Weimar, as did Thackeray about the same time, but the Englishman wrote about Goethe much more feelingly than the American. Certainly Brisbane was extremely fortunate in the personal contacts of his life. He saw much of Felix Mendelssohn in Berlin and afterwards in Rome; was intimate with the Meyerbeers, in whose house he had frequent observation of Hegel's social side; also with the Varnhagens and the Arnims, including the celebrated Bettina, and he speaks of Goethe's "Correspondence" with that marvellous child as if it had never been regarded as mendacious. In Vienna, where he saw Napoleon II., with nothing of his father's genius in his face, only his mother's weakness, he assumed the title of count to get into the best society, and succeeded with the trick. From Austria he went to Turkey and Greece, where his experiences were sufficiently romantic. Dallying here and there in Italy, he at length worked round to Paris, where his usual good luck in such things made him acquainted with Heine, not so famed as now. He saw a good deal of the St.-Simonians, but had for their doctrine only a qualified admiration.

After further travels in Great Britain, Ireland, and Holland, he went again to Berlin, and there for the first time read one of Fourier's books and was swept away by it in a torrent of unqualified approval and delight. The book contained Fourier's exposition of "Attractive Industry," and perhaps it was because Mr. Brisbane had heretofore found all industry so little attractive that Fourier's views delighted him so much. He became intimate with Fourier and engaged him to coach him in his theories. The account of them here given is miserably inadequate. It is fullest on the side where they run out into the wildest cosmological vagaries. These had for Mr. Brisbane a more permanent interest than Fourier's reconstruction of society. For the proper comment upon this we must go to Emerson's 'Historic Notes of Life and Letters in New England.' His feeling was "that Fourier had skipped no fact but one, namely, Life." Mr. Brisbane is discreetly silent on that part of the system which elicited Emerson's particular disgust: "The Fourier marriage was a calculation how to secure the greatest amount of kissing that the infirmity of human constitution admitted."

Returning to the United States, Mr. Brisbane was not wholly taken up with the propagation of Fourier's doctrine. He was deeply interested in a scheme of currency which fell into the ground and died, but afterwards bore much fruit in the doctrines of the greenback party. His only popular distinction heretofore has been that of the chief apostle of Fourier in this country, but it is precisely on this point that he is most general and brief. About his relations to the North American Phalanx and to Brook Farm in its degenerate Fourierite state, we have only a few words. George William Curtis is set down as one of the founders of the Brook Farm experiment, when, in fact, he merely went there to board in his seventeenth or eighteenth year. When in 1839 Brisbane was translating Fourier, and Park Benjamin was reading his proofs, the latter suddenly exclaimed, "There is Horace Greeley, just damned fool enough to believe such nonsense." He proved to be so, was active in the North American Phalanx, and opened the columns of the *Tribune* to Brisbane for the propagation of his views. Mr. Brisbane finds the cause of the Fourierites' failures in their lack of scientific completeness. By "scientific" he means mechanical. There are those who think that they died of too much mechanism. Certainly Brook Farm has little charm for us, as it had generally for its best spirits, after the substitution of the Fourierite for the original and less mechanical régime.

There is much more of the autobiography after the collapse of Fourierism in America. Mr. Brisbane again went to Europe, and participated in the revolutions of '48 in Paris and Berlin and Vienna and Rome. To the long list of his notorious acquaintances he now added Karl Marx and Proudhon. Many incidents of the narrative are interesting. There is a long episode on French wines, with a plea for the use of wines as a substitute for more alcoholic drinks and as a prevention of intemperance, with a theory of the harmlessness of the alcohol in wines, which, like many others that he cherished, lacks verification. At the end, the book escapes into a region of wild-cat speculation in the fancy stocks of pseudo-scientific theory and imagination. The final and the general impression which it makes on the reader is a sad one. It is that of a life naturally gifted, and with great opportunities for culture and observation, through some defect of training or inherent fault afflicted with a remarkable sterility, and producing little or nothing in the way of help for us in the solution of any of the problems pressing upon our ethical and social mind.

---

*Scotland's Free Church:* An Historical Retrospect and Memorial of the Disruption. By George Buchanan Ryley. With a summary of Free Church progress and finance 1843–1893, by John M. McCandlish, F.R.S.E., late President of the Faculty of Actuaries. London: Archibald Constable & Co.; New York: A. D. F. Randolph & Co. 1893.

THIS handsome volume is a timely incident of the fiftieth anniversary of a great ecclesiastical event—the separation of the Free Kirk from the Established Church of Scotland. For frontispiece there is a beautiful etching after a portrait of Dr. Chalmers, and this is as it should be, for no one was more prominent than he in the disruption, or in the initiation of that "Sustentation Fund" which, if it did not make the Free Kirk possible, saved its ministers from many a hardship which otherwise they would have had to undergo. The origin and growth of this fund are set forth separately and with much more elaboration than any other part of the history. Some sixty pages are given to this and other financial aspects of the Free Church's history, and only a few more to the disruption and the events which preceded it and followed it. It is a showing which does credit both to the generosity and the shrewdness of a great body of people, and is in refreshing contrast with the average business management of individual churches in the United States. At the same time there is something preëminently Scottish in the prominence which is given to it relatively to the general account of the origin and progress of the Free Kirk.

If the proportion of sixty pages to three hundred and fifteen seems meagre for the author's exhibition of his special theme, it is only partly because he set out with too large a plan—nothing short, in fact, of a complete history of Scottish Christianity from the earliest times; for this, down to the disruption of 1843, could hardly be treated more compactly than it is, and for a treatment so compact the interest of the narrative is well sustained. First we have three chapters on the monastic period, "The Rule of the Monastery," illustrious with the great names of Sts. Ninian and Columba and Cæda, and then eight chapters on "The Rule of the Palace," the subjection of the Church to the control of kings and bishops. Here, among many interesting incidents, we have the Macbeth to whom Shakspere has given such a questionable shape, figuring as particularly friendly to the Church, and going as far as Rome upon her errands. A high moral character must not too hastily be inferred, for when civilization was much more advanced, we find James IV. making a bishop of his bastard at the age of sixteen, and if James had not been a good churchman this would not have been allowed. The narrative increases somewhat in fulness and interest when we come to Reformation times, and such dramatic charac-

ters as Knox and Mary Stuart appear upon the scene. From these times forward the recital of events has a distinct bearing on the secession of 1843. It makes clear that the controversy which resulted in that secession had its beginnings centuries before:

"The great point of the controversy was not the question of the establishment of a church, nor even the patronage of church livings, in itself. But it was what the existence of the establishment had made a bitter necessity, and what the exercise of patronage had driven to the forefront and key-position of a battle that had been fought at intervals for generations, viz., the protection of spiritual authority from interference and domination of a majority of lawyers [in a civil court] and of a nondescript House of Commons and very unreligious House of Lords."

This contention is made wholly good, and, consequently, the corollary, that it was not the Established Church, but the seceders, who were conservative of their traditions and loyal to the principles of their most trusted guides. Chalmers himself was very far from being hostile to an establishment as such; he was much more hostile to pure voluntaryism, and it was to escape from this and a ministry wholly dependent for its support on the good will of a parish that he threw himself with so much energy into the raising of the Sustentation Fund whereby a kind of voluntary establishment was assured. It was conceded that the patron's presentee might have the stipend and the manse; it was insisted that he could never be the minister of a parish without its free consent; and it was the endeavor of the civil courts and Parliament to nullify this principle that resulted in a schism which for unselfish heroism is almost without a parallel in the course of Christian history.

"In May, 1843, four hundred and seventy-four ministers of the Church of Scotland voluntarily, and under the impulse of constraining principle, made an absolute surrender of their whole incomes, their homes, of the churches in which they had conducted the worship of God —in fact, of every privilege and advantage which the ministers of an established and endowed church could possess. One hundred and ninety-one probationers surrendered at the same time all their hopes and expectations of succeeding to these advantages."

When Jeffrey heard of the event, he cried, "I am proud of my country; there is not another country upon earth where such a thing could have been done." But two thousand evicted ministers had done as brave a thing under Charles II., and our historian does not conceal the fact.

Bacon's proverb of the greatest weights upon the smallest wires never had better illustration than in the beginnings of the Free Church of Scotland. Our author's treatment might have been more expansive than it is, and have gained in interest by being so, but if his narrative is meagre, it is in good part because the events which led up to the disruption were few and had no dramatic interest. The attempt to force three or four patrons' presentees upon unwilling parishes was the occasion of the trouble—the occasion, not the cause. *This* was the long-standing principle of opposition to the intrusion of the patron and the civil power into the settlement of ministers. The act of secession was in itself exceedingly dramatic, and could we follow the fortunes of the seceding ministers into the sandpits and homelier places where they gathered their people together, and into the details of their domestic misery and want, they would, no doubt, abound in the pathetic and the picturesque. Nevertheless, it was a significant fact that in the hall where the 470 seceders convened to organize the Free Kirk, a service of Communion plate was displayed upon a table before the desk. It contained no sacramental bread and wine, but was an advertisement of an article that could be furnished the new churches at a stated price, and it was an amusing symbol of the extremely business-like and matter-of-fact character of the men who organized the Free Church of Scotland and of the work which they performed.

---

*In the Track of the Sun:* Readings from the Diary of a Globe-trotter. By Frederick Diodati Thompson. With many illustrations by Mr. Harry Fenn and from photographs. D. Appleton & Co. 1893.

Mr. Thompson's volume must have been intended for a holiday book, and it is an ideal of its class. Purple and gold or orange without, and within of ivory lustre, leaves expanding freely and broadly, and more pictures than pages—what more could be desired? As the eye catches in an instant what the ear cannot learn in an hour, no one who glances at the multitudinous cuts will fail to learn something. When we pass to the letterpress, we trace in a terse but minute detail the author's movements during seven months, within which, leaving New York in October, 1891, he went westward round the globe. Some rough weather was encountered on the Pacific, the Gulf of Manaar, and the Syrian coast, and some earthquake shocks in Japan; but no serious accident clouded the sunshine of the wayfarer in the track of the sun. Mr. Thompson's narrative of what he saw will make his readers wish that his experience might be theirs also, and hence it may lead many of them to follow him round the great circle. His specifications of all the steamers and hotels with which he had to do are so precise that even a timid tourist would dare go alone on the path he pursued. It might even be fancied that Mr. Thompson was sent round the world by transportation companies as a decoy agent to lure after him a troop of globe-trotters.

His eye was so inevitable, and his pencil so sure to note what he saw, that travellers who have passed before him on his route will confess that he has detected much that had escaped their observation. But his movements were manifestly too rapid. He who learned so much in seven months, how much more he would have learned, and that with fuller comprehension, in seventeen. The steady celerity of his progress would have been a physical impossibility unless for a man of exceptional vigor. Then, as to mental impressions, he reminds us of ramblers through the Columbian Fair who trusted that they could swallow it all, and, behold, it swallowed them. He was climbing an infinite series of stairs with no landing-place for looking before and after. No sooner had he cried hail to a cityful of wonders than his farewell must follow at once. Such was his usual course, but preëminently on his visit to China. His arrival at the wharf in Canton was at 6:30 A. M. He breakfasted on board the steamer, and "soon after" started in a sedan to see the temple of Buddhas, a butcher's shop, the place of execution, the examination cells, a pagoda, the temple of Confucius, and a prison—only this and nothing more. At five the same evening he sailed away. Yet with pictures and padding of various qualities he fills twenty ample pages, entitling one chapter a "Visit to China." Since Mr. Thompson's travels were a forced march all through, he rode or drove everywhere, and scarcely beheld any scene with the eyes of a pedestrian. Worse than that—he discovered nothing, but all things were shown to him. Always and everywhere he was bound hand and foot and delivered over to what he calls "that necessary evil —a local guide." The true traveller, if it be by any means possible, will journey not as a passive recipient, but as an active seeker.

In looking at Mr. Thompson's pictures one must sometimes turn to his text to learn what they mean, but in many instances that text furnishes no explanation whatever, nor even allusions. Some pictures, as of hotels, steamers, etc., originally produced for advertising purposes—or for books where they really illustrated the letterpress, as in Caine's 'Picturesque India'—are scattered along in Mr. Thompson's gallery "to make up a show" and amuse those who do not care to read. Readers would gladly exchange a dozen of them for sectional maps.

Disregard of the maxim, "Make haste slowly," led our traveller into inaccuracies which mar pages we should be glad to see immaculate. We read, p. 197, "It was from Jericho that the prophet Elijah went forth with Elisha and witnessed the translation of the *latter* in a chariot of fire, carried by a whirlwind up to heaven." Many Sabbath-school scholars will get Mr. Thompson's book as a Christmas gift. Some of them will lose faith in a writer who thinks that Elisha was translated. Others of them will discover in Mr. Thompson a faith that moves mountains. As he was going down to Jericho he saw Mount Hermon beyond the mouth of the Jordan (p. 196). Again, when he had journeyed north beyond the source of the Jordan, which was 120 miles as the crow flies—and further than from Dan to Beersheba—he beheld "Mount Hermon overlooking the city of Damascus" (p. 210). Our great American traveller was swift, but Hermon outstripped him. The children will read that "Beyroot is much superior to the ordinary Turkish cities —a fact which is the result of the American mission schools" (p. 206). Then they will wonder that Mr. Thompson, while "going to and fro in the earth and walking up and down in it," never visited a single one of the thousand missions which belt the globe more truthfully than the British drum-beat.

The more beautiful a book, the more do misprints disfigure it. Knas for Khas, Horis for Horus, and Ledia for Sedia will exasperate scholars. Others are worse. Martinière is a memorial name of an educational foundation by Martin, an Indian Rockefeller. But its significance is hid in the Thompsonian form, which is Maitinière. Edwin Arnold's rhapsody on Queen Mumtaz over whom the Taj was reared is quoted in full, but her name is misprinted Munataz. We can notice but few of the mistakes which cannot be charged to printers. Parsees are said to lay their dead on the *top* of the Tower of Silence (p. 155). Its shape is that of a wash-tub, and so it has no top, and the dead are laid on its floor. The Colosseum is said to cover nearly as much ground as the Great Pyramid (p. 222). Its actual area is less than half as great. It is said of Trichinopoly, "the sojourner may spend a night at railroad refreshment-rooms, but the next day he must move on. It is not permitted to him to remain longer" (p. 109). But the present writer lodged two successive nights at the station rooms next to those in Trichinopoly just before the date of Mr. Thompson's tour, and was welcome. Only one other blunder can be noticed, and that more surprising than any other, in a writer who from first to last makes railroad matters a specialty. We read (p. 108), "The South In-

dian railway is fenced for its whole distance with a hedge of cactus." Can Mr. Thompson have mistaken the century-plant for cactus? It is of the century-plant, and of little else, that that hedge, and most others on railroads and off them in India are formed. Gaps in the hedge (and usually only gaps) are filled with cactus. Who that has seen them can forget the interminable files of flower-stalks rising like masts or contorted like trunks of elephants, because truncated in order that the interlocking leaves may spread sturdy as rails?

---

*Inigo Jones and Wren;* or, The Rise and Fall of Modern Architecture in England. By W. J. Loftie. Macmillan. 1893.

Mr. Loftie has made an entertaining book out of Inigo Jones and Wren. It is essentially a plea for return to what is commonly called Italian architecture, but what he rechristens Palladian. His plea is seasoned by truculent and persistent scoring of modern English Gothic and all the architects who have practised it, and by no indulgent treatment of those who have followed them with "Queen Anne." His quarrel with them is that they have no care or sense for proportion, and are lost in detail. He finds not one modern Gothic building worthy of praise, nor one architect of the style to whom he allows merit, unless it be Barry, who practised it against his will, and with less success than others.

"Ignorance of the fundamental rules of proportion, as they were understood by Inigo Jones and Wren," says Mr. Loftie, "is the great fault of the modern architect. His Gothic training has turned his attention to detail only. He thinks beautiful or well-imitated parts must produce a beautiful whole. He flounders about among small features, and is surprised to find that the wildest combination will not result in picturesqueness, just as pressing down the whole keyboard of the piano will not give harmony. Until proportion is again acknowledged, and sought for as the most needful thing in architecture, and as something which may be reduced to mathematical rules like those which govern the sister art of music, we may have buildings, but we cannot have architecture."

He writes, he tells us, not for architects, but for their employers, to whom he looks to constrain them to better things; and he expects that architects will accuse him of flippancy and ignorance. His ignorance, he says, is his own concern; yet when a writer comes forward, uncalled, to instruct the public, his ignorance becomes the concern of the public. We will not call him ignorant, but it appears that there are things which he does not know, and others, probably, which he does not consider.

Doubtless, no one element is more indispensable to good architecture than proportion. But architecture is not so simple a thing as to depend on one element alone. Proportion is essential to architecture for the sake of harmony, which—call it by what name you will, unity, ensemble, breadth, or what not—is the ever underlying excellence of every work of art as art. Other elements than proportion enter into it, of which the chief is, architecturally, that undefined but perfectly recognized thing which we call style. The English Gothicists failed first of all in style—in the beginning because they did not understand the style they tried to work in; afterwards because they deformed it with an eclecticism that they had not skill to reduce to harmony. Their leaders, Scott and Waterhouse, for instance, introduced many forms foreign to English Gothic, which they never succeeded in making at home. The most successful were those who, like Street and Sedding, held most closely to the forms they were born to. There is no knowing what they might have attained, but the architects tired of the style, and flung it away before they had mastered it.

There is truth in Mr. Loftie's complaint that the Gothicists failed in proportion, but he neglects to consider what proportion is. Proportion is as present and as essential in little things as in great, in detail as in mass, in a capital as in a façade. But men are so made that some have a keen sense of it in small things and cannot apply it to great, while others are alive to it in masses but incapable or impatient of it in detail. Scott, for instance, whom Mr. Loftie vilipends with gusto, had a very nice sense for proportion in detail, but was curiously helpless in his grasp of great masses; and here he justifies Mr. Loftie's criticism. But the thing which it is hard for an Englishman to discover is that this defect is characteristically English—that it belongs not to the style of architecture, but to the race. It is their native tendency to do things piecemeal, to look at details rather than wholes; and the foreigner can see that this limitation belongs to their polity, their literature, and their art. It is offset and neutralized in their polity by practical sagacity, sobriety, and administrative force, but it infects all their art, which for this reason lacks the large qualities of form. Mr. Loftie's readers may discover that it affects their criticism also. Doubtless the Gothic style, by the fulness and variety of its detail, offers temptation to this tendency of the English, but it also offers scope for their inventiveness, their vivacity, and their picturesqueness. Here history is our witness. An outside observer can hardly fail to see that the English have succeeded according to the freedom of the style in which they have worked; that their Gothic work has on the whole been superior to their classic. The Englishman, in fact, is very sensitive to restraint, and stiffens under it. In a dress suit and under a stovepipe hat he is a much more rigid person than a Frenchman or an Italian, as much as he is freer and easier in the saddle. The others have worn the restraints of the classic styles with freedom, have worked spontaneously and gracefully under them; the Englishman seems cramped and benumbed by them: his work loses its charm, becomes bald, jejune, and stiff. It is safe to say that, except perhaps in America and the Low Countries, and leaving out the work of two or three exceptional men, the architecture of no civilized country is duller, less interesting, and less beautiful than the work of English architects in the classic vein, from Elizabeth's day to ours.

In truth, the battle of the styles is as idle and futile as a mediæval tourney to decide between the charms of blonde and brunette. One style may better than another suit a particular temperament, but no change of style will turn bad architects into good ones. Moreover, any system of mathematical proportions is as inert a nostrum for the cure of bad design as moral excellence or constructional frankness. Accurate measurement will, of course, procure accurate repetition, and arithmetical ratios will furnish a few simple forms that every one may use in every style; but the subtleties of fine proportion, although they may be registered by arithmetic, are not to be acquired by it any more than color. They depend on an educated sensibility, which is reached by no royal road.

We have said that Mr. Loftie's book is entertaining; it is more. Being the work of a clever and practised writer, it is well done, and it contains much historical information of value. But its point of view is too one-sided and its visual angle too narrow to make its criticism safe.

---

*The British Seas.* Picturesque Notes. By W. Clark Russell and Other Writers. With many illustrations. Macmillan. 1893.

In early days, when England's claim of jurisdiction and special sovereignty was wide-reaching, the "British or Four Seas" began where the sixty-third parallel touched the coast of Norway at a point near Christiansand, then, stretching southward along the western coast of Europe to Cape Finisterre, extended west in the latitude of that cape to the twenty-third meridian, and thence northward along this meridian to the sixty-third parallel again. But in the now current acceptation of the term the British Seas are much more contracted, and the area covered by the descriptions of the authors of the interesting volume before us is smaller still, being confined to the coast waters of the most important island in the world, viz., that containing the former kingdoms of England and Scotland and the principality of Wales.

The conditions past and present of the British Isles have been such as to create a maritime people. The country is no longer capable of sustaining its population, and a large proportion of the food supply is sea-borne; the native material for shipbuilding is abundant; the prevalence of stormy weather and the dangers of the coasts and currents exact of the mariner both skill and endurance; his safety and commercial enterprise are provided for by harbors which offer shelter for vessels of all kinds and at all times. Add to these conditions a great producing capacity beyond the country's own needs, from raw materials in part brought by sea. The waters, coasts, and harbors of Great Britain are, then, naturally rich in matters of interest; and, with their bold and rugged scenery, peculiar coastwise population, fisheries and multifarious sea craft, furnish many opportunities for the picturesque, which have been drawn upon largely by the writers and artists of this book.

Of the writers, Clark Russell easily leads the rest, both in graphic ability, in sustained interest, and in realism. Six of the eleven chapters of the book are from his pen, the first two chapters treating of the Downs. The Downs, properly so called, is the great roadstead between the famous Goodwin sands and the main land, south of the Thames entrance, at and about Deal; but the name is sometimes employed to cover all the water area between the North and South Forelands. This anchorage has been used from the very earliest times. Russell well says of it:

"Here were adventured most of the attacks of the foreign foe against the country; up yonder bight, called Pegwell Bay, floated Saint Augustine to as high as Ebb's fleet; a little further along, Julius Cæsar is supposed to have landed. Enough yet remains of old Sandown Castle to bring Col. Hutchinson to the memory, and to fire the imagination with thoughts of deeds done here while it was yet such another fortress as the grim-looking castle of Deal, and the one beyond it at Walmer, where Nelson left a card upon Billy Pitt on finding him in bed, and where the old Iron Duke fetched his last breath. The history of these waters is a panorama of splendor, a gorgeous arras into which is woven very much indeed of what has gone to the making of Britannia. Just past the Goodwin Sands yonder, the ships of the great Armada were chased by those lions of the deep, Frobisher and Fenton and Drake and the others of them. Abreast of that cold height of South Foreland, Blake curled his

whiskers and let fly a throttled and sulphurous intimation to Tromp to lower his flag; in other words, to pull off his hat to Britannia's sea-sovereignty."

After describing the towns within the Forelands—Ramsgate, Broadstairs, Sandwich, and "cold and windy" Deal—the writer takes us northwards to the estuary of the Thames, and up the river to the bridges. This he does briefly, and then, returning to the sea, gives a running description of the coast through the Straits and down the Channel by Dover and Folkestone, Lydd and Hastings, Eastbourne and Brighton, all well known to us as seaside places, and familiar as household words to English ears. Coming to the Isle of Wight, historic waters are again entered in those of Spithead and the Solent, with their tributary waters and harbors of Portsmouth, Cowes, and Southampton. Those who have seen regatta week at Cowes know what a spectacle it is when the "butterflies of the deep" congregate from the Continent and even from across the Atlantic. But Spithead and Portsmouth near by have weightier associations. Here is England's greatest naval port and dockyard, established first in the days of King John. Here kings came to be wedded to queens from beyond the sea; here Admiral Byng was shot, "pour encourager les autres"; here the *Royal George* capsized; here Nelson hoisted his flag upon the *Victory* for the last time. These waters, above all others of England, are linked with its naval history and with its great sea heroes, Anson, Hawke, Rodney, Howe, St. Vincent, and Nelson. Here, also, have been gathered in modern times the greatest and most powerful fleets the world has ever seen under a single flag. From here we are carried on to Bournemouth, called the best wintering-place on the coast, to Torquay, "a crowd of villages on hilly ground exquisitely vivid with perennial growth," to Plymouth, another great naval port, to Falmouth, with its mild climate and Quaker element, to Penzance, with its quaintness and beauty, and then, rounding Land's End, to Bristol Channel, and finally to the docks of Cardiff on the Welsh coast.

We now fall into the hands of a more prosaic writer, who continues on, through St. George's Channel, the Straits of Menai, and finally to Liverpool and the coast of Scotland. On the west coast of Scotland we follow both the inner and outer coast lines, more barren and more rugged than those we have passed. We cruise among the famous islands off the Highland Coast, the scenes of Black's novels, the home of the Princess of Thule. The coast-line becomes more rocky and wild until, reaching the extreme end of Scotland, we round Cape Wrath with its massive rocks looking out into the Northern seas. Turning then southward along the east coast of Scotland, with its fishing-villages and fisher-folk, we reach the busy waters of the Firth of Forth, where again the fertility of the soil allows the ploughers of the sea to meet the ploughers of the land, and the ship to change her tack close to where the plough turns at the end of the furrow. Coming again to England, on the North Sea coast, Clark Russell once more takes the helm, and conducts us along this industrial east coast to Newcastle-on-Tyne, to Sunderland and Middlesbrough, until the old Whitby of whaling days is reached, then Scarborough, and at last the Thames, when the circuit is complete.

The illustrations of this volume are many and various in quality. Those of Colin Hunter are the best, while, of the others, those of Hook, Wells, and Barlow Moore seem to suffer least in the reproduction. We can heartily commend this work as one of general interest, having an especial value for those who sail in the British Seas described or spend any time in the seaside places of England.

---

*The Silva of North America.* By Charles S. Sargent. Vol. V. Boston: Houghton, Mifflin & Co. 1893.

THE fifth volume of this important work completes the Polypetaleæ, and makes a beginning with the Gamopetaleæ, describing twenty trees of the former division and twenty-five of the latter. Eleven of the trees described are found east of the Alleghanies and north of Virginia, three belong to the Pacific coast, four are natives of the far southwest, and twenty-seven are peculiarly southern, mostly West Indian species which extend their range into Florida or along the Gulf coast, though two or three follow up the Mississippi valley into Illinois. The eleven northeastern trees are *Hamamelis Virginiana*, the witch-hazel; *Liquidambar Styraciflua*, the sweet-gum; *Aralia spinosa*, Hercules's club; *Cornus florida* and *C. paniculata*, two species of dogwood; *Nyssa sylvatica*, the tupelo; *Viburnum Lentago* and *V. prunifolium*, sheep-berry and black-haw; *Oxydendrum arboreum*, sour-wood or sorrel-tree; *Kalmia latifolia*, the mountain-laurel, and *Rhododendron maximum*, the great laurel or rose-bay.

Of these eleven the sweet-gum and the tupelo are the only trees which grow to a great size, both of them sometimes having trunks four or five feet in diameter, and both reaching the height of 100 feet, the sweet gum alone sometimes far exceeding this stature. In New England the sweet-gum has not been found native outside of Fairfield County in Connecticut; it is not rare on Manhattan Island, and is very common on Staten Island, and from there southward to Florida and westward to Missouri and Texas, reappearing in southern Mexico and in Guatemala. A second species is found in Asia Minor, and a third in China. Other species existed in North America and in Europe during the Tertiary epoch, one of them even in Greenland. Our species forms usually an erect trunk, rising many feet to the first permanent branch, the leaves are almost regularly star-shaped, and turn to a brilliant crimson in autumn; the twigs bear commonly curious ridges of cork, so as to be fairly winged with them, and the fruits are gathered into a hard, round, burr-like body, an inch or more in diameter. This tree is a fine object in parks or on lawns, and deserves far more attention than it has yet received in New England. The tupelo, commonly called pepperidge in the Middle States, is native as far north as Maine. It has a higher polish on its leaves than any other Northern tree, and they turn to an even brighter scarlet than the leaves of the red maple. Mr. Emerson has described one tree of this species at Cohasset, and notes particularly that its "enormous horizontal branches push out as boldly seaward as in any other direction, though the northeast wind sweeps from the bay in this quarter with a violence which has bent almost every other tree towards the land."

Among the other Northern trees are three which have especial beauty when in flower, the flowering dogwood and the two so-called laurels, though neither of them has the slightest relationship to the laurel of southern Europe. The great white flowers of the dogwood shine on our northern hillsides in early spring, and are profusely gathered for home decoration at that season. Botanically they are almost an anomaly in vegetation, for the four large white involucral leaves of each apparent blossom are really the four winter bud-scales expanded and become petal-like. The same thing occurs in the low bunch-berry, and in the dogwood of the Pacific States (*Cornus Nuttallii*), well described in the present volume. It is also seen in two nearly related Asiatic trees. A variety with pinkish, or even red, involucre is now advertised by nurserymen. The mountain-laurel was named *Kalmia latifolia* by Linnæus in honor of his friend Peter Kalm, who travelled in North America from 1748 to 1751, and brought back to Europe the first knowledge of many of our native plants. In the Northern States it is only a very crooked shrub, which grows a few feet high on dry hillsides, but forms high and almost impenetrable thickets in the lowlands, as every one knows who has tried to carry a trout-rod through a laurel-swamp. The clusters of white or rosy blossoms are very showy in early summer, and are then gathered in great quantities, while the evergreen foliage is our chief reliance for decorating churches at Christmas. The peculiar adaptation of the flower to insect-aid in cross-fertilization is now very well known. The great laurel, or rose-bay, has its range from Nova Scotia to the mountains of Georgia. It was abundant thirty years ago in a swamp on the western side of the Hackensack Valley in New Jersey, and may, perhaps, still be found there. Some single plants formed hemispherical masses fifteen feet in diameter, and, when in full bloom, early in July, were unsurpassed in magnificence by any shrub known to the North American flora.

The strangest of the trees of the Arizona region is the *Cereus giganteus*, or candelabrum cactus, for which the native name of Suwarro or Saguero is here adopted, both these words being apparently Spanish corruptions of the names of other trees. The trunk forms a grooved column thirty to fifty, or even sixty, feet high, and one or two feet thick, slightly tapering both ways from near the middle. The branches, but little slenderer than the trunk, come out horizontally, but presently curve upward, and rise to nearly the height of the trunk, parallel to it; so that the trees have much the appearance of colossal candelabra. Mr. Faxon's plate represents only the flowers, fruit, and spines; but a good portrait of a tree is seen in Engelmann's 'Cactaceæ of the Boundary.' The Madroña of California (*Arbutus Menziesii*) is a lofty tree with fine evergreen foliage. The author justly remarks that it "is the noblest of all its race; no other inhabitant of the North American forests with persistent leaves and petalous flowers equals it in size; and among our evergreen trees only the great magnolia of the Southern Atlantic States, the kalmia, and the rhododendron, produce more beautiful flowers."

The twenty-seven Southern trees include the mangrove and several kinds of gum-trees (*Nyssa*) which bear larger berries than our Northern tupelo: the berries of *Nyssa Ogeche* are the Ogeechee limes, which are used for a very delicious acid conserve by the housekeepers of southeastern Georgia. *Eugenia*, a myrtaceous genus, is represented by four species in Florida, mostly rather small trees with entire leaves, and red or black barely edible berries. *Chrysophyllum oliviforme* is a Florida tree for which no English name is given, though the West Indian name, wild star-apple, was ready to hand in Grisebach's Flora. Its chief beauty is in the leaves, which are three or four inches long, pointed oval in

shape, smooth above, but beneath having a velvety covering which is described by various authors as "brilliant copper-colored," "ferruginous aurate," or "golden-tomentose." The handsome, dark-purple berries have a "juicy, sweet, mawkishly flavored flesh," and are in this respect no better than many other tropical fruits.

The next volume of the 'Silva' will probably begin with the persimmon and the silver-bell tree, will include the several species of ash and the fringe-tree, the catalpas and our true laurel-like trees, such as the red-bay and the sassafras, and may possibly reach the elms and the buttonwood, all trees of general interest, and some of them of the greatest value in the arts or for ornamental purposes.

---

*General Johnston.* By Robert M. Hughes. (Great Commanders Series.) D. Appleton & Co. 12mo, pp. 353.

THIS memoir of Gen. Joseph E. Johnston, by his kinsman, is a very acceptable addition to the series of military biographies. It is pleasantly written, and its high appreciation of the great Confederate general does not prevent a candid treatment of the portions of his career which have been the subject of more or less controversy. His relations to Jefferson Davis became unfriendly soon after the first battle of Bull Run, when the Confederate President issued commissions as general to the five senior officers of the army with dates which put Johnston fourth on the list instead of first. Johnston thought this was in direct contravention of a statute passed by the Confederate Congress, and protested. Davis insisted, and the confirmation by the Senate seemed to put redress beyond the general's reach. The relations between the two men were never cordial afterwards, and Johnston felt the effect of the unfriendliness through his whole career. Controversy also arose between him and Beauregard with reference to the actual command at Bull Run; between him and Gustavus W. Smith in regard to the battle of Seven Pines in front of Richmond, and between him and Bragg concerning the Atlanta campaign. All of these disputes seem to have been the cause of deep and permanent feeling, and nearly every depreciatory estimate of Johnston has been traceable to the enmities thus created. The general judgment of the Southern people has coincided with that of intelligent people elsewhere in awarding to Johnston a place as one of the two greatest commanders whom the Confederate army developed. It is only by the results of actual and responsible leadership of great armies that the abilities of a general can be measured. Those who had not this opportunity may be thought by their intimates to have had quite as great talents, but this is mere opinion. The test of actual and continued supreme responsibility is the only one which history can estimate. No second in command can be admitted to the list, nor can the plea be heard that ill-fortune took from any commander the opportunity for a true exhibition of his powers. All such considerations belong to the "might-have-beens."

The controversial part of the biography naturally occupies a considerable space in Mr. Hughes's book; but his tone is so fair and his advocacy so good-tempered that the interest is rather increased than diminished. Certainly much light is thrown upon the springs of personal motive which may affect great affairs, even when the actors are fully persuaded that they are controlled only by highest patriotism. In every way, therefore, the biography will be found to be a valuable as well as an attractive book.

The author's treatment of the national commanders is entirely fair and respectful. Their abilities are recognized and their characteristics are intelligently analyzed. The bias towards the Confederate side is nowhere shown in any exaggerated or offensive form. The one question on which agreement between representatives of the contestants seems most difficult, is that of relative numbers of soldiers in the opposing armies. It is here that the most fair-minded writers find their prejudices running away with them, and we fear Mr. Hughes can hardly claim to be an exception. We have tried hard and on repeated occasions to bring out clearly the fact that the Northern and Southern soldiers use the words "effectives" and "effective force" with distinctly different meaning. In the statistical returns of the Confederate forces, officially made, there is a column of figures marked "effective," from which all commissioned officers and the non-commissioned staff are excluded. There is no such column and no such use of the word in the statistical returns of the national army. In the national return the total "present for duty" includes all officers and non-commissioned officers from the general downward. When such a writer as Gen. Sherman uses the phrase "effective strength" in reference to his army, he does so to distinguish the "present for duty" from the "aggregate present." The latter includes those present who are sick, or are doing some duty which takes them out of the ranks, like clerical work, etc. Yet Mr. Hughes gravely argues that because Gen. Sherman uses the phrase "effective strength," he is justified in assuming that it means the same as in the Confederate returns. If he had examined the original returns in the Archives Office at Washington, or asked for a copy of the blank on which they were made up, his mistake would have been evident. He would then have found the officers and non-commissioned officers stated in all totals, and a comparison of the figures would show that Sherman uses the phrase "effective strength" as meaning "officers and men actually present for duty."

Mr. Hughes notices very frankly "a notable article on the subject of Johnston's strength" by Maj. Dawes, in 'Battles and Leaders of the Civil War,' vol. iv., p. 281, and points out what he thinks are errors in it. First, as to artillery, he says that if Johnston's reserve of thirty-six pieces is counted, all that Sherman had "in all his departments" should also be counted. This at first seems plausible, but the plausibility disappears when we state the fact that Sherman had control of organized forces on the Mississippi and elsewhere, as well as in Georgia. These had their separate tasks and their distinct opponents. Johnston had only to meet the army in Georgia, and his reserve artillery was at the front with his infantry. Thomas at Nashville was under Sherman's command when Johnston for the last time confronted him in North Carolina. What would Mr. Hughes say if Thomas's forces were counted as part of the army which Johnston fought at Bentonville?

Second, Mr. Hughes says that Maj. Dawes states at 2,800 the strength of Mercer's brigade which came up from the Gulf to reinforce Johnston, but that the latter says it was 1,400. This is worthy of consideration, but a note appended to Johnston's return for April 30 shows that a single regiment of that brigade had 927 present. The regiments seem to have been in garrison on the Gulf and not to have been reduced by casualties. This makes it probable that Johnston meant only that 1,400 of that brigade arrived at the date he mentions.

Third, Mr. Hughes says that Major Dawes had included one brigade twice in Cantey's division. If he had compared the figures more closely, he would have found that the duplication was carefully avoided.

Lastly, he says Major Dawes puts at 5,000 the Georgia militia which Gov. Brown brought into the field; whereas Gen. Gustavus Smith, who commanded them, puts them at 2,000 prior to July 22, when Johnston turned the army over to Hood. Smith's report says that when they took the field they numbered "a little over 3,000 men." He then adds that somewhat later, but before reaching the Chattahoochee, Gov. Brown called out the "reserve" militia, which numbered "about" 2,000 "effective muskets." These reserves were not the original call, but additional, and when the whole were in Atlanta, Smith again says of them, "The greatest number of effective muskets in the trenches at any one time was about 5,000" (Official Records, vol. xxxviii., part 3, pp. 970, 971). About 5,000 "effective muskets" means about 6,000 officers and men. At Richmond, the militia and reserves with Johnston were estimated in June at 7,000 to 10,000 men (O. R., xxxviii., pt. 4, p. 805).

Detailed criticism of this kind should be heartily welcomed. In this instance it makes more clear the excellent work which Major Dawes did in the paper referred to—work which ought to be imitated in the statistics of every campaign of the war. The result shows that solid ground is fairly attainable, and that the period has come at last when historians must abandon the cry, formerly so often raised in a retreat, "We were fearfully outnumbered."

---

*Things Chinese.* By J. Dyer Ball. Charles Scribner's Sons.

FOR such a book as this we are very thankful, even though in title and plan it is a transparent imitation of Prof. Basil Hall Chamberlain's work entitled 'Things Japanese,' the first edition of which was issued in 1890. Indeed, so close are the resemblances at many points that a recognition of the fact at which we have glanced would have been highly appropriate in either preface or index to this volume on China. We do not find such a desired expression of courtesy, though we note quotations from Chamberlain of the source of which no hint is given.

Comparison is naturally provoked. The original projector of a handy cyclopædia of things far Oriental (and we trust that 'Things Corean' is soon to see the light) is a cosmopolitan scholar. An Englishman by birth and loyal to his country, language, and ideals, his facile mastery of many tongues and literatures, and familiarity with various countries and races, lend a gloss of style and a touch of sympathy not found in the author of 'Things Chinese' or in his book. The signal abilities of the typical English civil-service officer are no less manifest than his limitations, and the latter occasionally appear in these pages with almost ludicrous effect. For example, when writing of printing in China, he tells us of the "imperial order reproducing the classics in A.D. 952, thus anticipating Caxton's discovery in Europe by about five centuries." The idea of the Englishman's (who learned his noble trade from the Netherlanders) "discovering" printing, compels the suggestion that, possibly, Chinese conceit is contagious. The author's

references to America also seem to show that those sections of the United States not bearing the name of England are sadly deficient in civilization. In his treatment of Chinese subjects, however, the author is candid, judicial-minded, and very far above the average immigrant from the British empire, whether "griffin" or veteran resident. His knowledge of the language and nature of the people fills him with a sympathy, and his volume generously illustrates British fair play, vastly beyond the ordinary.

It would be difficult to point out all the merits of this excellent work, but especially luminous and informing are the articles on the abacus, Buddhism, ancestral worship, dialects, education, food, Mohammedans, Mongols, secret societies, and the status of woman. Of course, it would be easy to point out omissions, yet it is wonderful that one small book has been made to contain so many things known to Mr. Ball. The style is clear, lively, and suggestive, as, for example, in the sentence closing the article on printing: "There is a softness and mellowness about the character (printed on blocks) which is wanting in the clear-cut metallic type"—a sentence which every lover of the richly toned Chinese books heartily appreciates. The foes, ever greater than thieves, or fire, or time, to the preservation of wood blocks, are insects, the white ant leading a great host. In addition to the articles treating of the selected themes, there is appended to each a list of the best books, and articles in periodicals. It is interesting to note that the American S. Wells Williams's book, 'The Middle Kingdom,' leads the long list of those recommended by the author. The essay on bibliography is one of the best in the book. A valuable index completes this interesting work of half a thousand pages. For the general reader, the busy man, the intending tourist who needs a guide through the labyrinth of literature on China, this handy work of reference is without a peer.

---

*The Country School in New England.* Text and illustrations by Clifton Johnson. D. Appleton & Co.

He whose mind has no natural and kindly leaning towards the subject of the country school is an exceptional person indeed, and must be sadly destitute of country cousins, old-fashioned relatives, or a fondness for the early biography of worthies of our own land. The writer (and illustrator) of the volume before us starts out with the ancestral cradle of learning as his theme, and with the privilege of treating it at length, from the days of Webster's Speller, plummets, and samplers, to the pedagogically illuminated present. The text is honestly and soberly done, and carries conviction that facts have been duly authenticated, and that whatever is stated is worthy of implicit credence. But the harvest of quaint, picturesque, or instructive items fairly to be expected from the chapters on old-time school days is disappointingly scant, the observation throughout is commonplace and unpenetrative, while a long collection of definitions and compositions by school-children rather lamely and impotently concludes the whole. The illustrations, from photographs chiefly, are what one hardly cares to call amateurish, after the triumphs of the amateur operator and exhibitor. In the absence of artistic qualities they may please by the honest human nature in the faces of the boys and girls who stiffly or diffidently pose before the lens. On the whole, the reader's bill of complaint is more against the second than the first party to the book. Why the publishers should have thought the contents worthy of the dress of a holiday *édition de luxe* is matter for surprise. The gilt edges, full-page process plates, and unpleasantly shiny thick paper give an air of false merit to what might have better passed muster in more modest guise.

---

BOOKS OF THE WEEK.

Badenoch, L. N. Romance of the Insect World. Macmillan. $1.25.
Beard, W. H. Action in Art. Cassell. $2.

*50 cents a number; $5.00 a year.*

D. APPLETON & CO.,

NEW YORK.

## NEW AND RECENT BOOKS.

### Darwiniana.

By Thomas H. Huxley, author of "Physiography," "Manual of the Anatomy of Invertebrated Animals," etc. The second volume of the author's Collected Essays. 12mo. Cloth, $1.25.

These essays, ten in number, treat of evolution and the criticisms which followed the publication of "The Origin of Species," and endeavor to sum up Mr. Darwin's work and indicate its enduring influence on the course of scientific thought.

### Science and Education.

By Thomas H. Huxley. The third volume of the author's Collected Essays. 12mo. Cloth, $1.25.

The subjects comprised in this volume include: "Technical Education," "Medical Education," "The School Boards," "Science and Culture," "Universities: Actual and Ideal," "Emancipation: Black and White," "A Liberal Education and where to Find It," and several other allied topics.

### How to Study and Teach History.

With Particular Reference to the History of the United States. By B. A. Hinsdale, Ph.D., LL.D., Professor of the Science and the Art of Teaching in the University of Michigan, author of "Schools and Studies," etc. Volume 25, International Education Series. 12mo, Cloth, $1.50.

The aim of this book is practical, and was written with particular reference to the needs of elementary and secondary teachers, although it will be found of interest and value to teachers and students of all grades. Its main purpose is to state the uses of history, to define in a general way its field, to present and to illustrate criteria for the choice of facts, to emphasize the organization of facts with reference to the three principles of association, to indicate sources of information, to describe the qualifications of the teacher, and finally to illustrate causation and the grouping of facts by drawing the outlines of some important chapters of American history.

*ROMANCE OF HISTORY SERIES.*

### The Brontës in Ireland.

By Dr. William Wright. With Portraits and numerous Illustrations. 12mo. Cloth, $1.50.

"Dr. Wright has faithfully traced the current of Bronte life and thought back to the hidden sources. The biography has some surprises in store for the reader. It is fully illustrated, and presents a varied and romantic tale without a touch of the commonplace."—*Philadelphia Ledger.*

### A Friend of the Queen.

By Paul Gaulot. With 2 Portraits. 12mo. Cloth, gilt top, $2.00.

This is the true and intimate life history of the Swedish soldier, Count Axel Fersen, whose romantic friendship with the ill-fated Marie Antoinette led him gladly to peril his life again and again in vain attempts at rescue. The hero's career is one to which history offers few counterparts.

### The Gilded Man
**(El Dorado),**

And other Pictures of the Spanish Occupancy of America. By A. F. Bandelier. 12mo. Cloth, $1.50.

"As Mr. Bandelier is an acknowledged authority on the subjects discussed in this volume, historical students will see that it is well worth a careful perusal. Nor does it appeal to them alone; every lover of tales of adventure will find entertainment in its pages."—*Chicago Journal.*

### Great Commanders Series.

Brief biographies of the highest order of excellence, of distinguished American military and naval men, from Washington to Sheridan. Edited by Gen. James Grant Wilson.

The volumes of this series thus far issued, all of which have received the highest commendation from authoritative journals, are:

ADMIRAL FARRAGUT. By Captain A. T. Mahan, U. S. N.
GENERAL TAYLOR. By General O. O. Howard, U. S. A.
GENERAL JACKSON. By James Parton.
GENERAL GREENE. By Captain Francis V. Greene, U. S. A.
GENERAL J. E. JOHNSTON. By Robert M. Hughes, of Virginia.
GENERAL THOMAS. By Henry Coppée, LL. D.

*Several others in preparation.*

Each 12mo, cloth, gilt top, $1.50.

### Appletons' Hand-Book of Winter Resorts.

For Tourists and Invalids. Giving complete information as to winter sanitariums and places of resort in the United States, the West Indies, The Bermudas, The Sandwich Islands, and Mexico. New edition, December, 1893, revised to date. With Maps, Illustrations, Table of Railroad Fares, etc. 12mo. Paper cover, 50 cents.

*READY NEXT WEEK.*

### Germany and the Germans.

By William Harbutt Johnson, author of "German Socialism and Ferdinand Lassalle," "Prince Bismarck and State Socialism," etc. 2 vols., 8vo. Cloth, $6.00.

### The Romance of an Empress.

*Catharine II. of Russia.* By K. Waliszewski. With Portrait. 12mo. Cloth, $2.00.

### Natural Resources of the United States.

By Jacob Harris Patton, A.M., Ph.D., author of "Four Hundred Years of American History," "Political Parties in the United States," etc. Revised with Additions. 8vo. Cloth, gilt top, $3.00.

*NEW EDITION OF*

### The Orthoepist:

A Pronouncing Manual, containing about Four Thousand Five Hnndred Words, including a considerable number of the Names of Foreign Authors, Artists, etc., that are often mispronounced. By Alfred Ayres. Revised and Enlarged. 18mo. Cloth, $1.25.

*For sale by all booksellers, or will be sent by mail on receipt of price by the publishers,*

D. APPLETON & CO., 1, 3, and 5 Bond St., New York.

# The Nation.

58TH YEAR. Prepares thoroughly for College, the Government Academies and Business. Military organization. BISBEE & AMEN, Principals.

## *Teachers, etc.*

*WANTED—AFTER CHRISTMAS* Holidays, in the Bryn Mawr School in Baltimore, a college graduate (woman) to teach mathematics two and a half hours daily. Applications may be addressed. PRESIDENT BOARD OF MANAGERS, Bryn Mawr School, Baltimore.

*PARENTS OR GUARDIANS WISH-*ing to place children in a comfortable, happy home in England, where a thorough education is offered, may apply for terms and particulars to Mrs. ATTCHISON, Lancrigg, Grasmere, Westmoreland, England.

*WANTED IMMEDIATELY—BY A* lady in Baltimore, an expert stenographer and typewriter (woman). Applications may be addressed to D. G., care of the *Nation.*

*AN INSTRUCTOR IN PHYSICS IN* one of the foremost Western Universities (A.B. Harvard, Ph.D. Germany) desires a change. Also tutorship. Willing to travel. Address Dr. X. B., care *Nation.*

*PARISIAN HOME FOR YOUNG LA-*dies.—Madame ALYS BARRAULT GIROUX, Bureau des Champs Elysées 49, Paris.

*CHARLES W. STONE, Tutor for Har-*vard, 68 Chestnut Street, Boston.

## *School Agencies.*

*AMERICAN AND FOREIGN TEACH*ers' Agency supplies Professors, Teachers, Tutors, Governesses, etc., to Colleges, Schools, and Families. Apply to

Mrs. M. J. YOUNG-FULTON.
23 Union Square, New York.

*THE FISK TEACHERS' AGENCIES,*
4 Ashburton Street, Boston, 371 Main Street, Hartford, 70 Fifth Avenue, N. Y., 106 Wabash Ave., Chicago, and 120½ South Spring Street, Los Angeles. Agency Manual free. EVERETT O. FISK & Co.

*THE NEW AMERICAN TEACHERS'* AGENCY.—Teachers seeking positions and those wishing a change at an increased salary should address C. B. RUGGLES & Co. (Palace Hotel Building), Room C, 237 Vine Street, Cincinnati, O.

*AMERICAN AND FOREIGN Professors,* tutors, governesses, teachers, etc., supplied to colleges, schools, and families. MIRIAM COYRIERE, 150 5th Ave., cor. 20th St., N. Y.

*NATIONAL BUREAU OF EDUCA*TION, Miss CROSTHWAIT, Prop., cor. Church and High Sts., Nashville, Tennessee. The Leading School and Teachers' Agency of the South and Southwest

*THE ALBERT TEACHERS' AGENCY,* 211 Wabash Ave., Chicago, has now vacancies for Fall and winter terms. C. J. ALBERT, Manager.

*SCHERMERHORN'S TEACHERS'* Agency. Oldest and best known in the U. S. Established 1855. 3 East 14th St., N. Y.

*THE BRIDGE TEACHERS' AGEN*cies, 110 Tremont St., Boston, and 211 Wabash Ave., Chicago. Agency Manual free to any address.

## Drawing Self-Taught.

Freehand drawing from objects may be learned by any one by the use of the Cross Transparent Slate (patented) and the Cross Pencil (patented). Equally useful for schools. Recommended by the artists and art teachers.

*Send for full descriptive circular (free).*

**GINN & CO., Publishers,**
BOSTON, NEW YORK, CHICAGO, LONDON.

## THE STUDENT'S FROEBEL.

Adapted from

**FROEBEL'S DIE ERZIEHUNG DER MENSCHHEIT**

By WILLIAM H. HERFORD.

The purpose of this little book is to give a brief, yet full account of Froebel's Theory of Education. Cloth, 128 pages, 75 cents.

**D. C. HEATH & CO., Publishers,**
BOSTON, NEW YORK, CHICAGO.

## CORTINA TEXT BOOKS.

Intended for Self-Study or for use in Schools.
SPANISH IN 20 LESSONS. Introduction from H. H. Don CARLOS DE BORBÓN. 11th Edition. Cloth, $1.50.
INGLÉS EN VEINTE LECCIONES. Prologue by Don EMILIO CASTELAR. 4th Edition. Cloth, $2.00.
AMPARO. A charming novel in Sp. and Eng., reading book for universities, colleges, etc. 75c.
EL INDIANO. In Sp. and Eng. 50c.
DESPUES DE LA LLUVIA. Annotated in English. 35c.
VERBOS ESPANOLES. 40c.
MODELOS PARA CARTAS. 40c.

**"Cortina School of Languages,"**
111 W. 34TH ST., N. Y.
Liberal discounts to Dealers. Professors and Colleges.

## UNIVERSITY TOWN OF INNSBRUCK, TYROL, AUSTRIA.

1,900 feet above the sea, with dry, bracing climate.

**HOTEL TIROL.**

Open all the year. CARL LANDSEE, Proprietor. Large, airy, sunny rooms; modern conveniences; superior cuisine. Reduced rates in winter. Eminent medical care if desired. Unusual educational advantages on moderate terms. Excursions a specialty. Best references. Illustrated pamphlets sent on application.

## TYPEWRITERS.

Unprejudiced advice given. All makes half-price, shipped anywhere for examination. Exchanging a specialty. Monthly payments. 52-page cat. free.
TYPEWRITER } 45 Liberty Street, New York.
HEADQUARTERS, } 186 Monroe Street, Chicago.

## FOR SALE.

PROUT'S NECK, MAINE. Two lots, beautifully situated on the Marginal Way, overlooking beach and ocean. Address F. MOSS,
37 West 22d St., New York.

*WANTED TO PURCHASE.*—NUMbers, Vols., and sets of the *Nation*. Address with lists, A. S. CLARK, 34 Park Row, N. Y. City.

OFFICE OF THE

## Atlantic Mutual
INSURANCE COMPANY,

NEW YORK, January 24, 1893.

*The Trustees, in conformity with the Charter of the Company, submit the following Statement of its affairs on the 31st of December, 1892.*

*JUST FROM THE PRESS:*

## THE GOVERNORS OF VIRGINIA.

A Brief Review of the Discovery of the Continent of North America, with a History of the Executives of the Colony and of the Commonwealth of Virginia. By MARGARET VOWELL SMITH. 8vo, cloth, illustrated, 457 pages. Price, $2.50, postpaid.

The purpose of this book is to lay before the public, in a convenient form, a review of the Governors of Virginia from the establishment of the Colony to the present day.

Wh ist a history of the State is not attempted, this work may yet be considered a running commentary upon it, and a coup d'ceil is offered of many important events connected with the early settlement of the country.

The foundation of the Colony of Virginia was the foundation of the United States; the two facts are one and inseparable, and every lover of America must take an equal interest and pride in both.

Various rare and explanatory State Papers are embodied in this volume, and the personal sketches are gathered from the most authentic sources.

The author has done the work from pure love of it, without thought of pecuniary compensation, and with a view only to placing so much history easily and attractively within reach of the general reader, and of those interested in the old Commonwealth. The style is smooth, terse, and clear. The book is well printed and bound, and the price a moderate one.

W. H. LOWDERMILK & CO., Publishers,
1424-1426 F Street, Washington, D. C.

# JANUARY ATLANTIC.

*Ready Saturday, 30th.*

Contains the opening chapters of

**Philip and his Wife.**
A striking serial story by
Mrs. DELAND.

Mynors Bright, M.A., from the Shorthand Manuscript in the Pepysian Library, Magdalene College, Cambridge. With Lord Braybrooke's Notes. Edited, with additions, by Henry B. Wheatley, F.S.A. In 8 volumes. *Now Ready.* Vols. I. and II. 12mo, cloth, $1.50.

*** *Also an edition on large paper, limited to 100 copies sold only in sets. $5.00 per volume.*

# MACMILLAN & CO., 66 Fifth Avenue, New York.

# The Nation.

NEW YORK, THURSDAY, DECEMBER 28, 1893.

## The Week.

THE calm with which Chairman Wilson's proposal to abolish the reciprocity clauses of the McKinley bill has been received, shows how little interest has really been taken in that business. Mr. Wilson properly characterizes it as a scheme of retaliation, and truthfully states that its main effect has been to provoke ill-feeling and diplomatic remonstrances. It was never intended seriously, McKinley and Reed approving it at the time of its passage with their tongues in their cheeks; and it was only the immense unpopularity of the tariff of 1890 that afterwards caused the Republican managers to seize upon reciprocity as a means of diverting attention from what they were really at. There is surely no occasion to keep up the pretence any longer, and it will pass into oblivion along with its twin humbug, the "Bureau of American Republics."

---

Some interesting remarks on the new tariff bill by Mr. Arthur T. Lyman, the well-known carpet-manufacturer of Lowell, Mass., appeared in the *American Wool and Cotton Reporter* last week. He considers the bill "on the whole a useful and fair one," and declares that "the rates generally are as high as most manufactures that are well established and in good condition should require." He proceeds:

> "It is admitted by many manufacturers, I think I may say by most manufacturers, that many of the rates under the McKinley bill were far too high, and actually hurt them in their current business, besides creating throughout the whole country a strong and well-founded opposition to the McKinley bill and its enormous rates. The McKinley bill, in fact, was the most effective free-trade argument ever brought forward in this country, and many people consider that the next most effective one would be obstruction and defeat in the Senate of the Wilson bill."

Mr. Lyman does not think that the recent elections can be considered as deliberately reversing the votes of the whole country in 1890 and 1892 "in opposition to the McKinley excesses," and he does not think it would be safe for the protected manufacturers to go before the country on a high-tariff issue at the general elections of 1894 or 1896. These are not the views of a "doctrinaire" or "theorist," but of one of the shrewdest business men in New England.

---

It is gratifying to see Republicans recovering their faith in the intelligence of workingmen. After the Presidential election of 1892 it seemed as if that faith was for ever gone, leading Republicans vying with ex-President Harrison in making epigrams about the stupidity and selfishness of the laboring men who voted for Cleveland. But now all that has been changed, and we see Republican newspapers profoundly impressed again with the political capacity and character of workingmen. Why is this? Simply because Republican politicians are getting up mass-meetings of the unemployed to protest against the Wilson bill. The committee on ways and means, we are told with much solemn wagging of newspaper heads, are becoming terribly alarmed at these workingmen's protests, and may yet pause in their mad career. Perhaps they may pause, but if they do, it ought only to be to remark that business is poor and wages are cut down under a tariff which was going to make such things impossible, and which has at least six months more of life in it. They might also remark that mass-meetings in the far West attribute the evil to the stopping of the silver purchases, and that there is just as much reason in one contention as the other. It would be easy to get up mass-meetings of the unemployed and induce them to resolve that the hard times are due to the failure to annex Hawaii. Indeed, Senator Morgan has openly argued that if the United States Government would only guarantee the bonds of the Nicaragua Canal Company, the thousands of the unemployed would at once find work at good wages. With so many nostrums suggested, why should the protection nostrum be given the preference?

---

The Knights of Labor do not attract so much notice nowadays as a few years ago, and it is not a matter of so much consequence as formerly what sort of a man the general master-workman is. Nevertheless, it is a satisfaction to find that Powderly's successor has sensible views on the subject of strikes. Although he has been connected with labor organizations for years, he has never been in a strike, and he is "inclined to think their day is over." He says further: "They are the very last extremity to be resorted to, and even then they should be unaccompanied by force, and should be a dignified and peaceful protest on the part of labor against the terms given them. The ballot is much more effective in redressing wrongs than strikes or arbitration." While Powderly was a protectionist, Master Workman Sovereign is "an out-and-out free-trader," and considers so-called protection to American labor "a delusion." He says that "invested capital receives a bonus in the form of protection, and it is then optional with the capitalist to give a share of the bonus to labor in the form of increased wages. But this option is seldom if ever exercised."

---

Congressman Boutelle took his place on Thursday among the great army of those who lash themselves into patriotic fury over Hawaiian affairs without stopping to read the evidence. He was suffering terribly about the hauling down of the flag in Honolulu last spring, and was wildly demanding to know by what authority Mr. Blount had caused that act to be done. By the authority, dear Congressman, of the person whom the Constitution declares to be "the commander-in-chief of the army and navy." Doubtless if Boutelle had been in Admiral Skerrett's place, he would have refused to obey the orders, on the ground that the Constitution could not have foreseen that such a dastardly letting go of booty would ever be commanded by a President of the United States; but in that case Boutelle would only have got himself imprisoned or shot, and then we could not have had him in Congress to keep on driving Republicans to the support of the President.

---

As a general rule Senator Hoar does not need to be followed seriously, but by his remark that "the President has not a word of disapprobation of the private and public profligacy of the Queen," he has outdone himself as a comic orator. The notion that the President of the United States should discuss in a message to Congress the chastity of foreign potentates must surely have been obtained from an unpublished work of the lamented Offenbach. He should get a chapter on royal profligacy into the next edition of Wheaton. An awful account of the morals of Catharine II. of Russia will be found in Bancroft, but Alexander Hamilton took no notice of them, whereas he ought, according to the luminous Hoar, to have written her long despatches on her weakness and evil behavior.

---

With every successive statement ex-Minister Stevens gets farther and farther away from the evidence against him, and may now be dropped out of consideration with great relief to all concerned. The country will take no interest in any more of his essays on "human government in its best form," or in his animosity against George III. and Lord North. To show how reckless he is in his assertions it is only necessary to point out how one of his own friends among the Hawaiian revolutionists gave him the lie on Thursday last. Says Stevens: "My opinions were so privately held that,

both in Honolulu and in California, it was believed that the American minister was averse to annexation." Says Mr. P. C. Jones, a member of President Dole's cabinet: "Of course, I will not contend for a moment that Minister Stevens was not in sympathy with us. Every one knew that he was in favor of annexation." Oh, Stevens, Stevens!

---

It was not, perhaps, to be expected that the religious press would read the evidence in the Hawaiian case, and so earn a right to speak upon its legal aspects, but it did not seem a violent supposition that at least some proper appreciation of the morality and high justice of President Cleveland's position might be seen in the professional expounders of religion and morals. It would be quite possible to acknowledge this, one would think, even if the President should be held to be mistaken in the details of his policy. But, alas! the *Independent* has only a sneer for Mr. Cleveland's "moral homily on international justice," and the *Outlook* observes that the President's course appears to be "based on analogies between the nation and the individual which have no sound basis in logic or morals." But it is precisely on such "analogies" that the whole conception of international justice is based, and it ought not to be from a religious paper that men learn the doctrine that what would be wrong for one individual to do to another is right for one nation to do to another. Is this a remnant of the old theological hocus-pocus whereby it used to be said that an act or a sentiment which would properly be called revolting in man, was in the Creator only a peculiarly exalted kind of virtue? However that may be, it is a deplorable and alarming thing that professional moralists should be debating about the sin of dancing or going to the theatre, and tithing the other mint and cummin of morality, and should go helplessly wrong on the question whether the nation should play the bully and highwayman. There is a moral paralysis evidenced by all this in full keeping with the wonderful dictum of McKane's presiding elder, who said, in regard to one of the sins with which that good Methodist is charged, that his contempt of the court which was undertaking to check him in his course of crime was "only a matter of court discipline," and therefore had nothing to do with Christian morality.

---

Why the hubbub about Hawaii is still kept up it is hard to see. The Oligarchs may have their independent republic, but have not the least chance of annexation, so why do their friends here not keep quiet and let them go on "developing" the Islands and getting rid of the natives? The Queen has declined to be restored on condition of respecting the persons of the Oligarchs, and without this President Cleveland has distinctly said he cannot and will not help her, in spite of Stevens's misconduct. Congress, even if it were disposed, could not annex without a two-thirds vote, for the President would veto any bill for the purpose; and that a two-thirds vote, or even a majority, could be got for any such purpose, nobody pretends. Therefore, the best thing to be done would seem to be to let the Hawaiian Republic work out its own salvation or destruction. The experiment will be interesting because it will be the smallest independent republic on the globe, much smaller than San Marino, which, besides, can hardly be called independent. The statement that the few hundred foreigners own three-fourths of the property in the Islands, shows that, though few in numbers, they are gifted with no ordinary commercial sagacity. "Think of this," as Blaine said, "in one small island." If they were let loose in Wall Street, stocks would certainly be pretty "lively" for a few days.

---

Thursday's despatches from Honolulu reported a "growing sentiment" there that "the formation of a republic is the only way out of the present difficulty." The process is not explained, but we suppose it can only be in accordance with Minister Thurston's declaration that "the royalists must be stamped out." A glance at the material for a republic in Hawaii will show how promising it is, and what a new glory it is likely to bring to representative government. One-fifth of the population is Chinese, and they, of course, cannot vote. A seventh more is Japanese, and it would not do to let them vote either. They and the Chinese would just do to make up the helot class which most republics have to import, but which the lucky Hawaiian republic would find on hand to start with. There are also 8,602 Portuguese; they might be allowed to vote provided they would vote right, and the fact that 6,276 of them cannot read or write makes it highly probable that they would vote right. Then there are 40,622 natives whom it would not be safe to allow to vote, as they do not want a republic at all. This would leave a snug little nucleus of about 15,000 miscellaneous foreigners, something like one-fifth of the total population, who could make —provided they were all of one mind— one of the tightest little republics known to history.

---

Admiral Stanton having been restored to his command, or to another "equally as good," after an interval of two months' disgrace or discredit, and, we presume, of diminished salary, with no other charge against him than "a grave error of judgment," we think it fair to ask once more whether Mr. Herbert does not consider this practice of punishing officers of high rank before trial a most unfortunate one for the discipline and reputation of the navy? It has been the custom, both under him and under his predecessor, whenever an officer at a distant post did something which looked bad, or which, if proved, would subject him to punishment, to deprive him of his command by telegram, and fill the newspapers with all sorts of disparaging reports about him, and then inquire into the matter later. This was done in the case of Commanders Whitehead, Reiter, Higginson, and Admiral Stanton. Now it so happens that, under the naval regulations, this operates as a terrible punishment, for not only does it discredit the officer at home and abroad, but it also suddenly cuts down the salary on which, probably, his wife is living in a rented house and educating his children in some city of the Union. In other words, along with disgrace it inflicts a tremendous fine. That it is entirely unnecessary, as well as unjust, we need not say. In Admiral Stanton's case, for instance, it was the easiest thing in the world to disavow the salute of Mello's flag, and then ask Stanton for his explanation. It was very plain from the beginning that the revolt of a navy against its own government in its own harbor was so unusual that it created a situation which made a mistake in the matter of saluting very easy. Peixoto was not such a terrible fellow that we had to go down on our knees to him on the spot. Why not, then, disavow the salute, and ask Admiral Stanton for his report, and wait till he was heard from before condemning him? Why not, in short, give commanding officers of our ships of war the treatment accorded to gentlemen all over the world—that is, ask for an explanation before slapping their faces?

---

The President could hardly have made a better selection for the Italian mission than Mr. Wayne MacVeagh; the pity is that he did not think of him sooner. The public does not need to be told who Mr. MacVeagh is, and the papers of all parties of his own city vie with each other in singing his praises. He will be what is rare in our diplomacy, the right man in the right place.

---

Senator Proctor introduced a bill in the Senate last week providing for the annexation of Utah to Nevada, and the making of one State out of the two. This is the ideal solution of a problem which otherwise must apparently always remain on our hands. There is no reason to expect that Nevada will ever have a population large enough to fit it for statehood, but the privilege cannot be taken from it without its consent, which cannot be looked for. On the other hand, Nevada and Utah together would make

a State of considerably over 250,000 people to-day, and one which would steadily grow in population, instead of dwindling, as has been the case with Nevada for the past fifteen years. There was a time when Nevada was anxious to secure a slice of Utah, and the Constitution authorizes the addition if it can be brought about. If the whole of Utah could be annexed, all the difficulties of the existing situation would vanish. The office-holders and office-seekers of both will object to the movement, but their opposition ought not to prove effective.

---

It would also be a good thing if Arizona and New Mexico could be brought into the Union as a single State. There is grave danger that Arizona will turn out a second Nevada, for, in spite of all the boasting about her rapid growth, the population increased between 1880 and 1890 only from 40,440 to 59,620, and a considerable proportion of these are Indians. Nor is New Mexico growing rapidly. It had 119,565 people in 1880, and only 153,593 in 1890; and the vote cast in 1892 for delegate to Congress was several hundred smaller than in 1890. It would be the grossest sort of an outrage to give two Senators, one Representative, and three votes in the electoral college to the few thousand men who are eligible to the suffrage in Arizona. New Mexico and Arizona together have scarcely as large a population as a State ought to have, and the idea of making two States out of them now is certainly intolerable. We trust the Senate will show more discrimination about these questions than was manifested in the House.

---

The Democrats in Congress did a very discreditable thing, just before taking the recess, by the passage of a mileage grab. The law provides for the payment of mileage for each "regular session," of which there are two during the term of each Congress. But when the extra session opened last August, a resolution was adopted making available then the amount provided in one of the regular appropriation bills for the payment of mileage during the session opening in December, 1893, and it was at once drawn by Senators and Representatives. No intimation was given that this was anything more than it appeared on its face—an anticipation for the sake of convenience in the drawing of money which was to be drawn once and might better be drawn in August than in December. But last week a provision was brought forward for the appropriation of $175,000 in the urgent deficiency bill for the payment of mileage a second time, and it went through both branches by an overwhelming majority. There have been a dozen extra sessions of Congress, but never before has mileage been voted for one of them; and it is peculiarly outrageous that a party pledged to "economy and retrenchment" should make such a grab out of the public treasury at a time when the Government must borrow money to pay its necessary expenses.

---

The report of the Inter-State Commerce Commission must be unpleasant reading for those who strenuously advocated and still uphold the act to regulate commerce. The greater part of that report is taken up with indirect defences against attacks upon certain sections of the law and with requests for additional legislation. In both cases the failure of the act to accomplish its original purpose is by implication admitted. When Judge Dillon stated that the insolvency of the Union Pacific Road was in part attributable to the inter-state commerce law, he voiced a sentiment common among railroad men and financiers. Against this the commission protests, because "the law operates only to prevent unjust charges and undue partiality"; which merely begs the question. This opinion is further discredited by the next clause in the report, in which a strong argument is made in favor of giving authority to the commission to prescribe minimum as well as maximum rates. If railway insolvency comes only through "unjust charges," then authority to stop the decline would be against public policy. As a matter of fact the spirit and terms of the inter-state act have always been inequitable. The law was framed to operate against the railways, not to be simply just. It is of course true that abuses existed, but it was entirely overlooked that in most cases these were themselves effects rather than causes; so that the law, by forbidding unjust discrimination and at the same time prohibiting agreements as to rates, was contradictory. So high an authority as Judge Cooley declared in effect in one of his first decisions that the act did not contemplate any relief to the carriers, but only to the shippers. And to this day there exists an idea that railway corporations may become bankrupt without injury to the community, provided only that charges continue to decrease. In this spirit the act to regulate commerce was conceived.

---

It is not reasonable, perhaps, to blame the commissioners because these gentlemen have carried out the intent of the law. Since its enactment in 1887 a few cases involving questions under the act have been passed upon by the Federal courts, with the result that in nearly every instance the decisions have been adverse to the law or the commission's interpretation of it. Doubtless many objectionable features would be in time thus whittled away, but it would be to the lasting advantage of the public if we could now have railway regulation framed on principles of justice to both parties. For example, the report under review declares the prohibition of a greater charge for a shorter distance to be "nothing more than an extension to places of the rule forbidding unjust discrimination between persons," when the facts show the analogy to be false. Just discriminations between persons are not forbidden by this one-sided law, only unjust ones, but in the short-haul clause no such distinction is made; just and unjust differences between places (as to short-haul charges) are alike condemned.

---

The burdens of rulership must seem heavy to Mr. Croker in these days. With between fifty and sixty of his deputy-sub-assistants under indictment and arrest for cheating at the polls; with Dr. Parkhurst in pursuit of the Police Department with such a very sharp stick that all the police captains as well as the police commissioners are kept dancing with uneasiness all the time; with one police captain under indictment and another in danger of a similar fate in the near future; with one police commissioner convicted by the *Times* of having been a defaulter in Buffalo before he was brought here to help Mr. Croker govern us; with another police commissioner pursued by the *World* with most disagreeable evidence as to his suddenly acquired wealth on a small salary; with nearly the entire press of the city in open and increasing hostility to Tammany, seeking for new evidence of its corrupt and criminal character for daily publication—with all these causes for worriment and others too numerous to catalogue, Mr. Croker must sometimes wish that he had retired from rulership after the last election, and devoted the remainder of his days to the peaceful enjoyment of his great riches—an enjoyment, alas, which the impertinent meddling of a legislative investigating committee may soon make for ever unattainable.

---

The business and financial troubles of the leading South American countries and of the United States have had a marked effect in checking emigration from Europe during the past two years. From tables lately published by the chief of the Italian statistical bureau, it appears that a decline in emigration is to be seen in its returns from Great Britain and Germany and Italy—that is, the great fountains of emigration. The falling off was greatest of all in Italy, in 1892, and it is no doubt true that the present distress in Italy is intensified by the fact that some 70,000 Italians who, under ordinary circumstances, would have found work abroad, were kept at home to swell the numbers of the unemployed. This is only one of the ways in which the business dependence of one country upon others is shown.

*SECRETARY CARLISLE'S REPORT.*

THE report of the secretary of the treasury has been looked for with eagerness by the business community this year on many accounts. The Treasury is facing a deficit of greater or less magnitude, and has been for a long time postponing all payments that were not pressing. It is necessary that the Government should have more revenue, and it is clear also that new taxes cannot be put in operation soon enough to meet the exigency. Hence some kind of temporary borrowing must be resorted to.

The repeal of the silver-purchase act has opened a new series of financial questions. What shall be the future currency of the nation? How shall it be regulated? What principles shall it rest upon? These are questions properly falling within the purview of the secretary of the treasury, and his opinion ought to be influential with Congress and with the country.

The secretary's views as to the method of laying the new internal-revenue taxes are of great importance and interest, especially when the committee of ways and means appears to be in doubt. Usually the committee makes up its own mind, as it does with reference to tariff details, without much heed to the secretary's opinions, but in the present case it is assumed that his opinions are likely to be controlling, or perhaps have been formed in consultation with the committee.

These are the three points which have insured unusual attention to Mr. Carlisle's report. In regard to a temporary loan, which seems to be unavoidable, the secretary shows that the old laws of 1870 and 1875 are inapplicable, in a financial sense, to present conditions. The bonds authorized bear too high a rate of interest and run too long. It is needless to dwell upon this subject. Argument upon it was exhausted long ago. The secretary recommends in lieu thereof alternative plans. One is the issuance of bonds running five years at 3 per cent. interest, of denominations of $25 and upwards, to be sold through the sub-treasuries and post-offices. The other is a plan for issuing "obligations," presumably Treasury notes, not exceeding $50,000,000 in all, payable one year after date and bearing interest not exceeding 3 per cent. The latter method we consider decidedly preferable. It is very likely, indeed almost certain, that the Government will be able to pay off this temporary debt in the course of two or three years, in which case it ought to have the option of doing so. Moreover, a great many creditors of the Government would gladly receive their pay in these very notes, while all that were not so taken would find a ready market without the payment of any commissions whatever, and probably at 2½ per cent. interest, if not less. They would form a ready investment for "call money." The demand for such an investment is so great at present that a large part of the $50,000,000 might be taken at as low a rate of interest as 2 per cent. Of the two plans for borrowing, the second is therefore the preferable one and likely to be the more popular of the two.

The whole drift of the secretary's report touching the currency is towards the retirement of all kinds of Government paper and the withdrawal of the Treasury from banking business of every description. It is a great pity that Mr. Carlisle, having stepped into this cold brook, did not pass over completely and say: "I recommend that steps be taken to redeem and cancel every scrap of Government circulating notes, of whatever name and nature, and that when they are so redeemed the Treasury confine itself to the collection of its revenues and the payment of the public expenses." This is perhaps the first time since the close of the war when the public mind has been ripe for such a communication from the chief financial officer of the Government. The fact that Mr. Carlisle went as far as he did is evidence of this state of mind. He has deprecated Government paper money and shown that it is unreasonable, unphilosophical, and unfinancial. But instead of saying to Congress, "Reform it altogether," he has thrown out a hint that $55,000,000 more of the same kind of stuff might be issued under the guise of "coining the seigniorage"—that is, putting into the form of silver dollars the imaginary difference between the cost of the silver bullion in the Treasury and what it would have been worth at a former period of the world's history when sixteen ounces of silver was worth one ounce of gold. This is the fly in the secretary's pot of ointment. It is true that he does not recommend coining the seigniorage, but merely says that he has made such preparations that he could coin the whole of it in the course of five years. He speaks of this step as a manufacturer might speak of a plan for keeping his works going, turning out carpets or chairs.

The mint does not exist for the purpose of keeping workmen employed, nor is the coinage of silver dollars necessary to the issue of fiat money. The Government printing-press can furnish all of the latter that is really needed, at lower cost and with greater expedition than all the mints put together. Under the conditions of the single gold standard, which now prevails and which will not be changed, all the "seigniorage" past, present, and to come, as well as all the silver dollars, are "fiat," to all intents and purposes. It is as needless for the secretary to inform Congress that he has the means to coin the seigniorage as that he has facilities for printing more greenbacks.

The secretary's recommendation that the gold reserve be increased is altogether wise. This, however, is only a part of the larger recommendation that the Government be provided with a surplus of revenue over expenditures. When this requirement is realized, the gold reserve will build itself up with very slight attention on the part of the secretary, or perhaps with none at all.

*THE TARIFF REPORTS.*

THE tariff report of Chairman Wilson of the ways and means committee is a very impressive document. It not only goes to the root of the subject argumentatively, but it displays the sort of courage needed for the present crisis. The times are hard, many people are out of employment. All of the Republicans and many Democrats are saying that the trouble is due to expected tariff changes. These changes consist in the removal of unnecessary taxes which have been heaped upon industry from time to time since the beginning of the war, more than thirty years ago. The piling up of these burdens has been continuous. There was no place to stop, so long as the protected classes had any control of the Government, any more than there is for a victim of alcoholism. The more they had, the more they wanted, and the more they wanted, the more they managed in one way and another to secure. But obviously that sort of debauchery could not last for ever. There must come a time when protection would cease to protect. That time really came in 1882, and the chief priests of protection acknowledged that it was so, in the report on the tariff which they made in that year. But the protected classes broke away from their leaders and demanded more of the strong drink to which they were accustomed, and they got it in the tariff of 1883. This lasted only a few years. As soon as the effects had worn off they called for another dram and a stiffer one. This they got in the McKinley bill. But there was no reason to suppose that the McKinley tariff would be a finality any more than its predecessors since the beginning of the war.

During this period of dram-drinking all the ideas upon which the doctrine of protection was founded were overturned and supplanted. The principal one—the theory of giving new industries time to get established—was completely superseded, and its place was taken by the theory that, after the industry is established, the Government must guarantee it a certain rate of profit, and that the persons who are engaged in it must be the only persons to decide what the rate of profit shall be, and whether the method employed will result in producing it. Take wool-growing, for example. It required a great deal of "cheek" to speak of wool-growing as an infant industry or one that needed to be established in this country. So the pretended promoters of

wool-growing omitted that formality, and took the ground that, although they were established, they had as good a right to protection as others which affirmed that they were not yet established. What was more to the purpose, they took the ground that if they didn't get "their share," nobody else should have any. The iron, coal, copper, lead, zinc, salt, lumber, and other indigenous industries took the same ground, and completely subverted the ideas upon which protection was founded. As long as the idea of industrial infancy prevailed, we were told that domestic competition would bring prices down to the proper level as soon as the industries were established. That seemed reasonable, but just as it was on the point of going into effect the Trusts and combines took possession of the field wherever they could do so, and, under shelter of the tariff, kept up their prices to the old level wherever they could do so by destroying competition.

This is the situation in which the country found itself at the last presidential election. The people resolved to turn over a new leaf. They put the Democratic party in power with express orders to reform the tariff. This order has been executed in part by the committee of which Mr. Wilson is chairman. We need not analyze his report in detail. What we especially admire is the courage with which he assails a venerable abuse that is one-half delusion and the other half fraud. It is most unfortunate that the silver panic, and the dislocation of trade which it caused, should have come at this juncture, giving a certain plausibility to the enemies of tariff reform, but this accident is largely offset by the determined character of Mr. Wilson's report, which gives promise not only of unyielding purpose to carry out the promises of the presidential election, but to do so without a moment's unnecessary delay.

Ex-Speaker Reed's report on behalf of the minority of the ways and means committee refers to the Wilson bill as a "tariff-tinkering bill," as though that phrase carried sufficient condemnation of the measure. The meaning of this phrase is not left in doubt by Mr. Reed. He says that it is "only another tariff-tinkering bill, the like of which has disturbed the conditions of business so many times *the last thirty years.*" Mr. Reed has a very discerning mind, as we shall proceed to show. The tariff-tinkering bills that have disturbed the conditions of business the last thirty years are the following:

| | |
|---|---|
| Act of March 2, 1861, | Act of July 14, 1870. |
| Act of August 5, 1861, | Act of May 1, 1872. |
| Act of December 24, 1861, | Act of June 6, 1872, |
| Act of July 14, 1862, | Act of June 22, 1874, |
| Act of March 3, 1863, | Act of February 8, 1875, |
| Act of April 29, 1864, | Act of March 3, 1875, |
| Act of June 30, 1864, | Act of July 1, 1879, |
| Act of March 3, 1865, | Act of June 14, 1880, |
| Act of May 16, 1866, | Act of May 6, 1882, |
| Act of July 28, 1866, | Act of March 3, 1883, |
| Act of March 2, 1867, | Act of May 9, 1890, |
| Act of March 25, 1867, | Act of June 10, 1890, |
| Act of February 24, 1869, | Act of October 1, 1890. |

All of these bills were passed by the Republican party. The first one in the list was the first Morrill tariff, but it was not a war tariff. The war had not begun at that time, and it was not absolutely certain that there would be one. The bill was ostensibly a revenue measure, but was mildly protective, according to the Republican sentiment of that day. It was followed in August by another Morrill tariff which was likewise a revenue measure. The protective features were not increased in this bill or in that of December of the same year, which was a bill to increase the duties on tea, coffee, and sugar. This bill was framed in accordance with the recommendation of the secretary of the treasury. Mr. Morrill, in his remarks on the measure, expressed a doubt whether it would really increase the revenue, but he said that if it did not have that effect, it would "prevent money from going out of the country." This he considered very important under the circumstances, his idea being that we were going to put down the rebellion with money, not with the things which money buys. Tea, coffee, and sugar were certainly as important to the health and vigor of soldiers, as well as of the people who sustained them, as anything else that could be imagined, but the chief authority on tariff legislation at that time and during the last thirty years until McKinley arose, had the idea that keeping money in the country was a good thing *per se* and a worthy object of tariff legislation.

The tariff of July 14, 1862, was a general revision, "increasing *temporarily* the duties on imports." It was under this apologetic phrase that the first decidedly protective tariff, after the beginning of the war, was introduced. It increased the duties on many textile fabrics avowedly for the purpose of protection, but the explanation was made both in debate and in the title of the bill that it was to be temporary only. Two acts were passed in one day, March 3, 1863. These dealt with only a few items. On the 29th of April, 1864, a brief but comprehensive act was passed increasing all duties, except those on printing-paper, 50 per cent. for sixty days.

June 30, 1864, another increase of duties all around was called for. This was likewise a Morrill tariff. The author of it, apparently anticipating by nearly thirty years the objections raised by Mr. Thomas B. Reed to tariff-tinkering bills, said: "While sudden and frequent changes of tax and tariff bills are undesirable because of the shock and revolution they bring upon the trade and commerce of the country, the reasons for some change now are potential and obvious." The principal reason was that the internal-revenue system imposed taxes on manufactures, and it was deemed necessary to increase the tariff on the corresponding articles of domestic production.

Between this act and that of March 2, 1867, the celebrated wool-tariff act, there were a few small "tariff-tinkering measures" passed which do not require much attention. The act of March 2, however, was a very important one, since it introduced a new idea into our system, that of protecting, or rather of giving bounties to, old-established industries. Hitherto the theory of protecting the infants only had been adhered to. Raw wool, which had before paid nominal duties only, was put on the list at about ten cents per pound and eleven per cent. ad valorem, and the duties on woollen goods were increased not merely in a corresponding degree, but much more. The result was an immediate and severe decline in the prices of domestic wool, leading to the slaughter of vast numbers of sheep and such distress and bankruptcy among the woollen manufacturers as has seldom been known in this country. Two years later, February 24, 1869, came the copper tariff, a measure absolutely inexcusable, as we were exporting copper largely at that date. It was shown at the time to be a mere scheme of speculators. The effect of it was to enable the copper-producers on Lake Superior to charge American consumers four cents per pound more than they charged foreigners for the same article, and to close all the copper-smelting works on the Atlantic seaboard which depended upon foreign ores for their raw material.

The internal-revenue tax on manufactures was repealed in 1870, but there was no reduction of the duties which had been enacted in 1864 to compensate for this tax—a circumstance which caused Senator Sherman of Ohio, in a subsequent debate, to bring a severe reproach upon the beneficiaries of the tariff. Tariff-tinkering continued, as the list above published shows. The protected classes, like the daughter of the horse-leech, cried, "Give, give," till McKinley took hold in 1890. Then they got all that they asked for. In fact, they got more, for their shameless demands and the shameless manner in which they were granted produced a reaction in the public mind which upset the Republican party in all branches of the Government simultaneously. Tariff-tinkering during the past thirty years, and especially during the past three, has caused Mr. Wilson, and not Mr. Reed, to be leader of the House at the present time.

## *WHAT TO DO WITH THE UNEMPLOYED.*

Dr. Stanton Coit has written a letter to the papers complaining of misrepresentation of his utterances about labor and capital. There is no doubt that he has been grossly misrepresented by the *Times*, in making him set the poor on against the rich, and putting other kindred matter in his mouth. But his demand that the city must employ

the poor is likely to produce much misconception and disappointment. The only employment which the city can give the poor, of which we have thus far had any mention, is street-cleaning and the repair of sidewalks. We grant that more men might be employed in street-cleaning, but they can only be so employed by releasing Mr. Andrews from the obligation under which he now lies to clean the streets "thoroughly." For this he has been furnished with abundant means, and if the work is done for him by charity, what is to become of the money? Moreover, cleaning the streets in winter is no child's play. It means great exposure by night and day, for which those of the unemployed—the Jewish tailors, for instance—who are only accustomed to indoor work are utterly unfit, particularly in their present ill-fed and ill-clothed condition. As to the repairing of sidewalks, the Department of Public Works has told the East-side Committee that if they will report to it cases of sidewalks in need of repair, it will make the landlords repair them. Five hundred such cases have, we believe, been reported, and probably double as many could be found. But repairing sidewalks is skilled work, and cannot be done in frost. Moreover, what capacity do the great bulk of the unemployed possess for any such jobs? How many of them could repair a sidewalk, and how is the landlord to be compelled to employ them? What man in his senses who had a sidewalk to repair would get them to do the job?

Dr. Coit's suggestion about the new parks is equally impracticable. Park work cannot be done in winter, and if it could, those who usually do it are all here and want the work. In short, the plain truth is, and it ought to be faced, that all city work is outdoor work of a peculiarly laborious and exposing condition, and in winter the city has no such work to bestow. Moreover, if it had, the bulk of the unemployed are utterly unfit for it. A large body of them are women and girls and tailors, and seamsters of some kind. It is absurd to talk of sending them at this season to clean streets or mend sidewalks or make parks.

Even if these objections did not exist, others equally strong would be found in the character of the city officials. In the expenditure of the city revenues they are tied up by a good many legal rules and regulations and checks. In expending vast sums for charity or for charitable work, they would be under no such restraints, and the result would probably be what reporters call a "carnival of corruption." The jails and gambling houses would be searched for foremen and directors of the work, and the beneficiaries of the charity would be converted into Tammany voters next fall. This is a consideration which cannot be overlooked in this city. When we see the kind of men Tammany puts on the police bench, in the Police Commission, and in the Department of Public Works, we may guess the kind of men to whom they would give the handling of the charity money. Possibly this objection might be overcome by the creation of some sort of commission of outsiders, like the Aqueduct Commission, but something of this kind would be absolutely necessary. All the theories of the state socialists break down ludicrously when "the state" turns up in the persons of Gilroy, Croker, Martin & Co. Furthermore, if any municipal system of relief were set on foot, the rush of paupers and poor persons from the neighboring towns and villages would be immense, and we may be sure city officials would do little to keep them out. And in thinking of throwing any such burden on the city, we have to remember that the bulk of the taxpayers are persons who, at crises like this, are themselves just struggling to keep their heads above water, and need but very little pressure to fall into the pauper crowd.

What, then, is to be done? Well, we think the very first thing to be done—and in this all the charitable associations should unite, and the city officials can render important aid—is to find out what the number of the bona-fide suffering unemployed is. As yet we have had nothing but "estimates," and the estimates vary from 100,000 to 30,000. Surely it is possible in two or three days to find out how many of the real resident poor of this city have lost their work and are in distress. Can employers not be got to say how many people they have discharged? Cannot the district visitors of the Charity Organization Society, of the University Settlement, and of the Society for Improving the Condition of the Poor make returns on this point which would have some approach to accuracy? When this is done, the calculation of the cost of keeping them from starvation, say, till the middle of March, would be easy enough, and our belief is that if the well-to-do of this city knew what it was, they are quite equal, if properly approached, to the task of providing it. But they must know exactly what is expected of them. The conditions under which collections are now made are very discouraging, for no man who gives anything has the least idea of what impression he is making on the total mass of poverty. According to all the accounts we hear, the real unemployed are not grasping or discontented or anarchical; they are resigned and patient to an extraordinary degree, and it ought not to be difficult to keep them afloat until industry revives.

# Correspondence.

## THE EXPLOSION IN PARIS.

To the Editor of The Nation:

Sir: With the feelings of distress and indignation which your article of this week expresses, all your readers will assuredly and justly sympathize. Yet there would seem to be certain considerations, not unworthy of attention, which might have the effect of modifying some of the impressions which the article is likely to produce.

It has indeed been true, in a general way, in regard to particular periods and particular countries, that there was often "no distinction worth mention between the anarchists and the Continental socialists." But as applied to the last few years and to the three great countries Germany, France, and England, such a judgment—though there may still be something to be said for it—would hardly appear to give an adequate impression of the direction in which the movement of thought has really been going. The number of socialists has certainly increased with great rapidity; but at the same time the great socialist bodies, led by their most influential chieftains, have entered upon a policy of "parliamentarism" and legal agitation and piecemeal change—of what the French call "possible-ism"—in marked contrast to their previous revolutionary fervor. The nature and extent of this change of attitude will be found set forth (to mention but one among many accessible authorities) in the new edition (1891) of the 'Contemporary Socialism' of Mr. John Rae, an observer who errs, if at all, from want of sympathy with what he describes. Speaking of the Halle Congress of Socialists in 1891, he gives this account of the speech of Liebknecht, the chief leader of the German socialists:

"People spoke of revolution, he said, but they should remember that roast pigeons don't fly into one's mouth by themselves. It was easy enough to make bitter speeches, and any fool and donkey could throw bombs; but the misadventures of the anarchists showed plainly enough that nothing could be done in that way. The socialists had now 20 per cent. of the population; but what could 20 per cent. do against 80 per cent. by the use of force? No, it was not force, it was reason they must use if they would succeed. . . . 'Well, then,' suggested another old-world [old-time] socialist, 'let us, at any rate, issue a pamphlet describing the glories of this socialist State, and get the people prepared to flock into it'; but this suggestion was also frowned down. 'For,' said Liebknecht, 'who would say what the *Zukunftstaat*—the socialist State of the future—is to be? Who could foresee so much as the development of the existing German State for a single year.'"

And Mr. Rae's conclusion is, that

"the revolutionary ideal seems to be retreating, perhaps insensibly, in the socialistic mind into an eschatological decoration, into a sort of Second Advent which is to come and to be believed in; but the practical concerns of the present must be more and more treated in their own practical way."

Precisely the same tendency is illustrated in France, though in a different manner, by the increasing strength of the municipal socialists who follow Brousse, and the dwindling numbers of the Marxian revolutionists who follow Guesde. In England it is sufficiently indicated by the prominence of the Fabian Society and the disappearance from practical politics of the Social Democratic Federation.

But it can be easily understood how that, while the great body of the socialists has thus been marching in the direction of what we

may conveniently call "moderation," some of the less practical and more fanatical of them should have been disgusted by the new policy, and should have gone off in a rage into anarchism. The effects of this reaction are apparent on almost every page of a collection of anarchist sheets which I have recently had an opportunity of glancing over. Thus, the London *Freedom*, "a Journal of Anarchist Communism," complains (April, 1892) that "it is enough to make the angels weep to see John Burns," who "has over and over again shown his capacity as . . . an apostle of revolutionary truth," "spending his life on the petty details of local government" in the London County Council; and a Brussels journal, *La Misère*, "organe anarchiste," can find nothing worse to say of "le parti ouvrier belge, qui se croit bien pur et bien sérieux," than that "il n'est, au fond, qu'un parti de *possibilistes*" (August 27, 1892). At the Zürich Congress last August there took place a final struggle of strength between the socialist leaders and the anarchist dissidents, ending in the expulsion of the latter. Thus the world sees a strange and apparently inconsistent spectacle: the growth of a moderate socialism and the parallel growth (inconsiderable, however, in comparison) of a rabid anarchism. The latter is very largely a result and an indication of the former.

There is a bit of recent history which may suggest a lesson for to-day. The effect of Bismarck's legislation, which made legal agitation impossible, was to give the party of violence the upper hand in socialist circles in Germany, and to cause the substitution, in the Wyden programme of 1880, of the ominous phrase "by every means" for the previous phrase "by every legal means." The abandonment of the Bismarckian policy of indiscriminate repression has been followed, as we see, by the victory of moderate counsels in the socialist ranks. But there is always some danger of the reverse taking place. The devising, therefore, of legislation to punish and prevent anarchist outrages needs the coolest judgment and the most careful draughtsmanship. Enactments framed in a panic are only too likely to put obstacles in the way of a socialist propaganda—in the proper sense of the term "socialist"—which has evidently as much right to freedom of utterance as the individualist propaganda so ably and usefully conducted by the *Nation*. And such a lumping-together of very different sorts of people in a common condemnation is only too likely to produce a common resistance. Tendencies in this direction are already to be seen in the French Chamber. The *Nation* has itself, on many occasions, pointed out the like effects of an undiscriminating policy of repression in the case of Ireland. And what is true of legislation is true also in a degree, one cannot help fearing, of an undiscriminating public opinion.

Without raising, then, any of the other questions suggested by your vigorous article—about which one might argue at great length without arriving at any conclusion which could be briefly stated—attention may properly be called to a distinction which does seem to be pretty clear *now*, whatever it may have been until recently; a distinction, moreover, which just now it may be of some practical importance to observe.

Yours very respectfully, W. J. Ashley.

Cambridge, Mass., December 16, 1893.

## PROTECTION AND SOCIALISM.

To the Editor of The Nation:

Sir: I have read with great interest from time to time your observations on the socialistic nostrums which, unfortunately, are rapidly spreading among the unprosperous and discontented masses both in the Old World and in the New. But I do not think it fair to lay the blame upon institutions like universal suffrage, or upon the higher intelligence induced by the growth of facilities for learning to read and write.

Is there not a more obvious cause, which, if cut off, would not be regretted by thoughtful people, and which explains more clearly the reasons for the development of ideas contrary to the spirit of liberty and civilization? Is it not true that the sub-treasury scheme of the Farmers' Alliance had its origin in the "American system" of governmental "protection to industry," and that the silver-purchase act took its rise in the same source? Once commit the nation to a policy of disregarding the rights of property, and undertaking the "encouragement" of special interests by abuse of the taxing power, and what wonder that even college professors and clergymen should often be misled into supposing that state socialism is the goal towards which manifest destiny is bearing us? What difference is there between confiscating property by customs officers and taking it with troops? From "fostering enterprise" is it not but a step farther to acquire the "instruments of production," as the socialists urge, and give employment directly? Admitting the doctrine of protection, why is its extension unnatural?

The fact is, that there is a fundamental misconception in the popular mind regarding the proper sphere of government. It is fancied by many that a community has more rights than the individuals composing it, or, in short, that a stream can rise higher than its source. Once establish a theory that the "State" has more rights than the individual, and you practically destroy the sacredness of private property, and there is no telling to what lengths socialistic schemes will go. The cure for them is to revert to the principles of true democracy as expressed in the Constitution: "No person shall be deprived of life, liberty, or property without due process of law." We apprehend that the fundamental purpose of government is to enforce respect for life, liberty, and property, or, in other words, to prevent crime; but if the paternal purpose of the tariffites is conceded to be legitimate, it follows that public education will be stamped with paternalism, thus supplying a favorable soil to germinate the seeds of socialism. T. Wistar Brown, Jr.

Philadelphia, December 18, 1893.

## THE RIGHT OF EXPATRIATION.

To the Editor of The Nation:

Sir: There is no escape from the logic of the article on "An Abandoned Position," printed in your issue of December 14. To repeal the act of July 27, 1868, however, would either compel us to change our present practices radically or to fall into even greater inconsistencies. The remedy, therefore, would seem to be to amend the act of 1868 so that it shall read: "The right of expatriation is a natural and inherent right of all people *of the Caucasian and negro races*, indispensable to the enjoyment of the rights of life," etc. It is only necessary to make the language of our declared principles fit our practice to render the absurdity apparent. But practical politics is above consistency in either the one or the other.—Very respectfully,

F. W. Gookin.

Chicago, December 18, 1893.

## THE DEFICIT AND THE REMEDY.

To the Editor of The Nation:

Sir: Almost all the measures recently proposed for the relief of the United States Treasury have been schemes for additional taxation. During the latter part of Mr. Cleveland's last administration he was somewhat bothered with a surplus. The Dependent Pension bill was a Republican afterthought, and was passed for the purpose of showing how easy it was to manage a surplus. As a surplus-extinguisher its success cannot be denied. Have we not now a Cato lurking somewhere who will undertake the repeal of this law? The extraction of an aching tooth no more effectually relieves the pain than would this relieve all brain-racking over the deficit.

W. M. H.

St. Louis, December 18, 1893.

## CIVILIAN PAY IN THE NAVY.

To the Editor of The Nation:

Sir: You are in error, in the *Nation* of September 28, 1893, concerning the additional rank and pay given to assistant surgeons and assistant paymasters over young men "holding similar positions" in the line of the navy. The motive or intention of the statute in giving such appointees from civil life a "ranking date" of six years prior to their actual appointment, and a slight increase of pay over officers of corresponding rank in the line—that of ensign—is *not* to enable the appointing power to pay political debts or confer personal favors. On examination you will find that the seeming inequality of rank and pay is based on *simple justice*. Men appointed to the medical or pay corps of the navy have attained the age of twenty-one or more years, and, unlike the young men of the line, have not been during those six years (prior) a tax on the public treasury for their education, but have acquired the latter at a considerable personal expense to themselves; hence the meagre measure of compensation, "a ranking date of six years prior."

The slight difference of pay is based on the greater responsibilities attached to the duties of the junior officers of the staff over those of the same rank in the line, together with the provision of larger pay (relatively) for the latter as they advance in rank. The real injury done the service by the last Administration was the appointment of young men to the pay corps of the navy who had been "dropped" from the Naval Academy. Such appointments should be made only from *graduates* of our colleges and universities or the Naval Academy. B.

November 24, 1893.

## A WOMAN'S DOCTORATE AT HEIDELBERG.

To the Editor of The Nation:

Sir: Friends of the highest education for women will be interested to hear a German university report progress. The Philosophical Faculty of the University of Heidelberg has just determined for the first time to admit a woman to examination for the doctorate. The candidate is the daughter of the famous Pandectist, Professor Bernhard Windscheid of Leipzig, and her major subject lies in the field of Romance Philology. This startling innovation upon settled academic usage, and, what is more, upon the recognized proprieties of life, was not effected without a struggle, in which

the champions of the successful cause were Professors Osthoff, Braune, and Neumann. Professor Osthoff has broken many a lance for various goodly heterodoxies, and it seems to be characteristic of German present-day liberalism that it develops all-round heretics; but still, the World's Congress which brought the professor on a visit to America and incidentally to various universities, will claim some of the credit for this particular outburst of heresy. Those who had opportunity to note the interest shown by the various German professors travelling in the country the past summer in the problems of woman's higher education and in all our accounts of practical experience concerning it, will continue to put their trust in the seed department of the World's Congresses. BENJ. I. WHEELER.

ITHACA, December 18, 1893.

## SICILY AND IRELAND.

TO THE EDITOR OF THE NATION:

SIR: On page 344 of the *Nation* for November 9, 1893, in a letter on the "Unrest in Sicily," by "J. W. M.," it is stated that in Ireland the land question is simply a question between landlord and tenant, whereas "in Sicily it is the question of two-thirds of the population—of the real, actual sole tillers of the soil—that is at stake." The writer of these words is probably quite unaware that they describe almost exactly the position and circumstances of the Irish tenant farmers, the great majority of whom are peasants, tilling with their own hands their small plots of ground, averaging about thirty acres, and in thousands of cases not exceeding four or five acres, in extent; said peasant farmers forming, with their families, not far from two-thirds of the population of Ireland.—Yours truly,

E. HARVEY.

GRANGE, WATERFORD, IRELAND, December 9, 1893.

## VANDALISM OF THE AUTOGRAPH-HUNTER.

TO THE EDITOR OF THE NATION:

SIR: If the preservation of court records intact should hereafter become a matter of importance to litigants, what disappointment and annoyance, not to say injustice, is in store for our posterity! Here and there the mutilation of such documents has been found out, but it may be believed that vastly more of it has not been. For instance, it is doubtful whether a single signature of Abraham Lincoln to a court paper can be found attached thereto. They have been cut out by curiosity-hunters without compunction or regard for possible future complications. I have it from the mouth of an ex-judge, who knew Lincoln, that this is true of several counties. An officer of the present government not long since boasted at an evening party that he had stolen such signatures by connivance with the custodian of the county papers. If similar plundering has been committed in other parts of the country, the records must be in a sorry plight. The descent from autograph-stealing to the pilfering of whole papers is easy, and suggests an ugly state of affairs. M.

## MR. CONWAY AND HIS CRITICS.

TO THE EDITOR OF THE NATION:

SIR: There are several expressions in the communication of Mr. Moncure D. Conway, printed in the *Nation* of December 21, which call for some reply from me as the editor of the *Virginia Historical Magazine*, in which was published the review of the 'Barons of the Potomack and the Rappahannock' which has given him so much umbrage. Mr. Conway speaks of this review as an "attack," declares that it is a "tissue of misrepresentations," and, in substance, asserts that it was the work of a lurking enemy. Now I wish to deny most emphatically the correctness of all these imputations. As the person responsible for the admission of the review to the pages of the magazine, I desire to say for myself that I have no personal acquaintance with Mr. Conway, have never had any correspondence with him, and feel only such interest in him as I do in a hundred other living authors who enjoy an equal degree of reputation. In order that he might have the fullest opportunity to defend himself, it has given me sincere pleasure to admit to the pages of the January number of the magazine a reply from him to the original review in detail—a reply which, as soon as it was submitted to me, I accepted unhesitatingly. The reply, accompanied by notes by the writer of the review, is now in print and will appear in the magazine when issued in January.

So far as the writer of the review is concerned, Mr. Conway is entirely mistaken in his surmise. The writer is a Virginian by descent, birth, and education; a young man bearing a name of the highest respectability in Virginia, a resident of the State during the whole of his life, and yielding to no one in his love of Virginia or his interest in all that is promotive of its true fame. With the possible exception of President Lyon G. Tyler of William and Mary College, there is no one in our commonwealth who has the same fund of information relating to the more obscure aspects of its social and economic history in colonial times—an information acquired after long and careful study of the great mass of original manuscripts now in our county courts, our State Library, the archives of our State government, and in private collections.

Like myself, the writer had no personal acquaintance with Mr. Conway and not the smallest desire to be unjust or unfair to him. The tartness of the review arose from the excusable impatience of a thoroughly informed historical student in noting the inflated tone, the inaccurate statements, and the careless methods which the 'Barons of the Potomack and the Rappahannock' exhibits in so marked a degree. The review was not signed, for the same reason that the review of Campbell's 'Puritan in America, Holland, and England,' which appeared in the previous number of the magazine, was not signed—namely, it is not customary under the circumstances. A certain brusqueness in the tone of the review was in a measure due to the fact that I was forced to prune and condense the manuscript in many parts owing to restriction in my space. It is only proper to say that a volume of Mr. Conway's book is in our State library, and was, therefore, a legitimate subject for review.

I not only thought the criticism a fair one, but it seemed to me to be peculiarly appropriate to the character of the new magazine of the Virginia Historical Society, a periodical which begins its existence with a determined purpose to promote in Virginia a more exact, searching, and exhaustive spirit in historical inquiry, by condemning all tendency to foolish overstatement and empty partisanship, and by insisting upon a thorough examination of all the unpublished, as well as the published, documents of our history as the only true means of reaching a correct judgment. It is an unfortunate feature of the situation of the people of our State, rapidly as they are now recovering from the ruin of the war, that the men among us who are most capable of doing the most valuable historical work are compelled to devote their time exclusively to bread-winning. There are, however, many indications of a growing interest among cultivated Virginians in the history of their State, and I have reason to think that with few exceptions they are disposed to agree with me, as well as with the reviewer of Mr. Conway's book, that Virginia has too many substantial claims to the respect of the historian to attach any real value to romantic exaggerations shadowed forth by vague tradition or created by an opulent and irresponsible imagination.

PHILIP A. BRUCE.

VIRGINIA HISTORICAL SOCIETY,
RICHMOND, Va., December 22, 1893.

## SUNDRY "AMERICANISMS."

TO THE EDITOR OF THE NATION:

SIR: The following passage is transcribed from p. 32 of Colonel T. W. Higginson's *Hints on Writing and Speech-making*, which has only just fallen in my way:

"To be sure, the inelegancies with which we are chiefly reproached are not distinctively American: Burke uses 'pretty considerable'; Miss Burney says, 'I trembled a few'; the English Bible says 'reckon'; Locke has 'guess,' and Southey, 'realize,' in the exact sense [*sic*] in which one sometimes hears them [*sic*] used colloquially here. Nevertheless, such improprieties are, of course, to be avoided; but, whatever good Americanisms exist, let us hold to them, by all means."

On the expressions impugned above I purpose to comment briefly.

*Pretty considerable*, found in Fielding, Smollett, and Burke, is countenanced by Hallam also:

"Of *pretty considerable* value." Fielding, *Tom Jones* (1750).

"A *pretty considerable* estate." Smollett, *Sir Launcelot Greaves* (1760).

"The booty was *pretty considerable*." *Id.*, *Humphry Clinker* (1771).

"To the faculty of law was joined a *pretty considerable* proportion of the faculty of medicine." Burke, *Reflections on the Revolution in France* (1790), p. 64 (2nd ed.).

"Divisions soon arose among themselves about the use of the English service, in which a *pretty considerable* party was disposed to make alterations." Hallam, *Constitutional History* (1827), vol. i., p. 168 (ed. 1842).

The quotations from Fielding and Smollett, the references of which are defective, are taken from marginal notes entered, by me, in the first edition of Mr. Bartlett's *Dictionary of Americanisms*, upwards of forty years ago.

Burke's *pretty considerable*—and equally that of Hallam and the rest—there is no good reason to find grave fault with; but, from the general way in which it is spoken of by Col. Higginson, it might be thought that English authority was producible for such blamable locutions as "he is *pretty considerable* of an orator" and "*pretty considerable* disappointed," familiar in some parts of the United States.

Not irrelevant, in connexion with *pretty considerable*, are these quotations:

"I attempted to fatten two middle-sized bacon-hogs with carrots; after having been two months, or near the matter, in the sty, I found that, as they were young, they had grown *pretty considerably*, but continued as lean as when I put them up." Burke (1770), *Correspondence* (1844), vol. i., p. 246.

"*Pretty considerable* shocked." Miss C. M. Yonge, *Heir of Redclyffe* (1853), ch. xxv.

"I found myself, on the day after my return,

'*pretty considerably* tired,' to borrow a phrase from our American friends." Mr. J. W. Bowden (1836), in Cardinal Newman's *Letters* (1891), vol. ii., p. 182.

Burke would, certainly, not have done amiss, if only for simplicity, in preferring *a good deal* to *pretty considerably*, and "our American friends" would better have preferred *not a little* to it. For all that, their phrase is passable, except on the view that, irrespectively of circumstances, it is reasonable and seasonable to be rigorously exacting in point of taste.

*A few*, for *a little*, occurs in Miss Burney's *Diary* (1778); and it should have been noted that she clearly intended it as mere slang, just as it is in Murphy's *Citizen* (1761): "Mind me, when I . . . throw my eyes about *a few*." And here may be mentioned, as interesting obsoletisms, Milton's "fit audience find, though *few*"; "a *few* company," which Swift wrote in 1711; and also the Scotch and provincial English "a *few* broth."

*Reckon*, in the sense of 'consider,' 'deem,' of 'make account,' 'count on it,' or of 'surmise,' 'suspect,' is not now very common, as a literary term; and yet no vulgarity attaches to its quaintness. The Bible-revisionists, among whom were Americans, have not dislodged it from *Romans* viii., 18. In conversation, it is quite as current in England as it is in our own country, and is, observedly, in better repute here than there. No judicious British critic, one may be positive, would censure the colloquialism, "I *reckon* he is at home," which, yet, Dr. Webster's editors (1880) proscribe outright. More than this, the *reckon* under discussion has the occasional support of English writers, modern and comparatively modern, of unimpeachable respectability:

"The best editions of ancient authors should be the first things, I *reckon*, in a library." Thomas Gray (1746), *Works* (ed. 1858), vol. iii., p. 13. Gray thus uses *reckon* in three other places.

"They *reckon* they were sacrificed," etc. Sir C. H. Williams (1747), *Works* (1822), vol. ii., p. 232.

"I *reckon* to go next week to Ashbourne." Dr. Johnson (1770), *Letters* (1788), vol. i., p. 26.

"I *reckon* that I shall have a hump-back." Dr. Charles Burney, *Memoirs of Metastasio* (1796), vol. ii., p. 78.

"Since that time, we have both been equally busy, I *reckon*, in gleaning up such little odd tortures, of all sorts, as we had left behind at our general harvest." Rev. James Beresford, *The Miseries of Human Life* (1806), vol. i., p. 281.

"The philosopher who contemns it [glory] has every rogue in his sect, and may *reckon* that it will outlive all others." W. S. Landor, *Imaginary Conversations* (1824), vol. ii., p. 605 (ed. 1826).

"If the Landgrave knew that Michael Klotz was in Klosterheim, I *reckon* that all the ladies in St. Agnes could not beg him a reprieve till to morrow morning." Thomas De Quincey, *Klosterheim* (1832), p. 228.

"We lost no time, after my visit to Cuddeston; for we *reckoned* that we were more likely to have good weather before Christmas than after." Rev. Dr. William Whewell (1847), in *Life* (1881), p. 347.

"You may have more to bear than you *reckon* for, when you find yourself with men of rude minds and vulgar manners." Cardinal Newman, *Loss and Gain* (1848), p. 330.

"But he wasn't likely to do the Ogre much harm, I *reckon*." Sir George W. Dasent, *Popular Tales from the Norse* (1859), p. 131.

"He makes but a tight fit, I *reckon*." "George Eliot," *Middlemarch* (1871-72), vol. ii., p. 59.

A mass of kindred quotations from Samuel Richardson, Foote, and others is, for brevity, omitted.

*Guess*, we are told above, has the sanction of Locke. But, that what is intended, namely, the reprehensible American use of the verb, was anticipated by him, is an assertion which it would be very surprising indeed to see substantiated. For the verb *guess* I find three passages from Locke cited by lexicographers; and, in all of them, it bears its ordinary signification. Mr. J. R. Lowell writes, in the Introduction to the Second Series of the *Biglow Papers:* "I have never seen any passage adduced where *guess* was used as the Yankee uses it." On the other hand, Professor Schele De Vere has the hardihood to say, though independently of anything whatever like proof: "There is no lack of evidence that the word has been used in England, from time immemorial, and by the best writers, in precisely the same sense in which it is now employed by Yankees." Moreover, Dr. Webster's Editors (1880) are so ill informed as to pronounce: "It is a gross vulgarism to use the word *guess*, not in its true and specific sense, but simply for *think* or *believe;* as, I *guess* the mail has arrived; I *guess* he is at home." On the contrary, the expressions given as illustrating "a gross vulgarism" are wholly irreproachable; their *guess* denoting 'incline to think,' 'be disposed to believe.' That, in the quotations about to follow—easily multipliable tenfold, from the literature of the fourteenth century onward—many persons, if they were to read them without being aware of their sources, would condemn the use of *guess* as an Americanism, may be taken for granted:

"And, I *guess*, this is not now ever likely to be done." Bishop Warburton (1744), *Works* (1811), vol. xi., p. 234.

"By all I can pick up from ancient authors, I *guess* he [Pelagius] was both a wise and a holy man." Rev. John Wesley (no date), in Southey's *Life of Wesley* (1820), vol. ii., p. 193, foot-note.

"Well, then, Mr. Trip, you have a pleasant sort of place here, I *guess?*" Sheridan, *School for Scandal* (1777), Act. III., Scene II.

"I should *guess* it to be one of the oldest dwelling-houses in the kingdom." Southey, *Espriella's Letters* (1807), vol. ii., p. 135.

"This, I *guess*, is all one as if you should say, it was hot or cold, white or black, round or square." Rev. Dr. Christopher Wordsworth, *King Charles the First*, etc. (1828), p. 151.

"In what manner Æschylus explained the origin of this connexion we have no means of *guessing*." Bp. Thirlwall, in the *Philological Museum*, vol. ii., p. 149 (1833).

"And, in prospect, it must, of course, have looked more alarming than we can *guess* from our retrospect." Mr. James Spedding, *Evenings with a Reviewer* (1848), vol. i., p. 325 (ed. 1881).

"But the Catholic Church isn't St. Paul quite, I *guess*." Cardinal Newman, *Loss and Gain* (1848), p. 107. This, of course, is ironical.

The true state of the case regarding the verb *guess* in America is, that, while it is employed there, rather than its practical synonyms, much more frequently than in England, it not seldom, especially in the Eastern States, "implies a confident certainty," as Mr. Lowell says. "Are you sure that your statement is correct? Yes, I *guess* I am." "Bein' the mercury is at zero, I *guess* it is pretty cold." "I must start now for Boston, and I *guess* I shall." Here are genuine Americanisms, reminding a dweller in East Anglia of the expletival "That du *fare* to rain right tidy," "How do you *fare* to be, mate?"

*Realize*, as treated by Dr. Worcester, has, for its third definition, "to make certain, to substantiate," on which the lexicographer remarks:

"This word, in the sense of *to make certain or substantial*, has been reputed an Americanism; but Dr. Dunglison says of it that 'it is universal in England in this very sense.'—It is also used in America . . . in the sense of *to feel or bring home to one's mind as a reality*, or *to feel strongly*; and this latter sense is not without English authority," etc.

Which of the senses thus illustrated Colonel Higginson has in mind, where he refers to Southey—whose *realize*, 'gain,' in three places is not, I conceive, arraigned—is not specified; but neither of them is a novelty in Great Britain, and the latter, which seems to be the older, was not unknown a hundred and sixty years ago:

"That God is everywhere present, and we always present to Him, is certain; but, that we should always be able to *realise* His presence is quite another thing." Mrs. Susanna Wesley (1733), in Mrs. Eliza Clarke's *Susanna Wesley* (1886), p. 172.

"It [faith] gives evidence and subsistence to things not seen, and *realises* the great truths of the gospel, so as that they become abiding and living principles of support and direction, while we are passing through this wilderness." Rev. John Newton, Letter VI., in *Forty-one Letters*, etc. (1777 or earlier).

Many more similar quotations, including seven from Cardinal Newman, are at hand; but, instead of copying them, I subjoin three extracts from the *Letters* (1881) of a late very learned prelate, Bishop Thirlwall, to whom the temptation to "speak Yankee" was such that, in order to deliver his mind to his satisfaction, he lost little time in dismissing his scruples about yielding to it:

"How happy it is for us that we are totally unable to *realize* (if I may speak Yankee) such a calamity as the cyclone!" Vol. ii., p. 22 (March 13, 1865).

"I am truly thankful for the sight of the photograph, which enables me perfectly to *realize* the object which presented itself to the eyes," etc. Vol. ii., p. 25 (April 22, 1865).

"I have always been better able to *realize* such stories, since I had my experience," etc. Vol. ii., p. 156 (1868).

Patronage and popular chronology are thus combined in the *Saturday Review:*

"The study of ancient coins may be specially useful in teaching us to *realize*, in modern phrase, the men whose names we read, whose lineaments we scan, on the very pieces of metal which they and their contemporaries handled." Vol. ii., p. 356 (1856).

F. H.

Marlesford, England, Sept 20, 1893.

# Notes.

A work on 'The Constitution of the United States at the End of the First Century' has been prepared by ex-Gov. George S. Boutwell of Massachusetts, and will be published at an early date by D. C. Heath & Co., Boston.

A complete edition of the works of Turgeneff, in ten or twelve volumes, newly translated by Mrs. Garnett, is the gratifying announcement of the London publisher, William Heinemann.

The first issue of the "Bulletin of the Bureau of Rolls and Library of the Department of State" (Washington) is welcome, as evidence of a desire on the part of the custodians of the historical treasures in that department to make them of use to the public. The old system of mystery, secrecy, and exclusion was defensible only on the ground that the manuscripts were not in a condition to be handled; and so rapidly has the labor of repairing, properly mounting, binding, and cataloguing the various collections progressed as to make that system no longer of avail. It is now intended to issue lists of the more important papers in the historical collections, and this Bulletin is the beginning of a plan for which we have nothing but praise. The type is clear, the margins generous, and the proof-reading generally accurate. The general titles of the volumes of records of the Continental Congress are given,

and a portion of what appear to be miscellaneous letters and papers in those records. It is well to exhibit the general character of the deposits at the start, and follow it up with more detailed and particular "calendars" of each collection. As an appendix, the appointments of delegates to the Convention of 1787 are printed from the original notifications to Congress. The Bulletin promises to be of special interest to students of American history.

After a long suspension, the "Mermaid Series," containing "the best plays of the old dramatists," has been resumed with "Ben Jonson, Vol. I.," edited by Brinsley Nicholson, M.D., with an introduction by C. H. Herford (London: T. Fisher Unwin; New York: Charles Scribner's Sons). This volume contains "Every Man in his Humour," "Every Man out of his Humour," and "The Poetaster," and will be followed by two others completing the selections from Ben Jonson. The series is useful in rendering these plays accessible in cheap form to the general reader. In the change of publishers the make-up of the volumes has decidedly deteriorated. This volume is inferior to the preceding in paper, printing, and binding, and the proof-reading seems to have been left to anybody who would do it. There are numerous errors of the press, and the impression is sometimes badly blurred. The scholarlarly introduction of Mr. Herford will not make up for these deficiencies, and if (as an advertisement informs us) the price of each volume is to be raised, after January 1, from $1.00 to $1.25, an accurate and clean text, good paper, and strong binding should be assured.

"The Ethical Library" is the title chosen for a new "series" to be edited by J. H. Muirhead, and to deal with questions of the inner and the outer life in a constructive way and from the standpoint of science and philosophy. The first volume, 'The Civilization of Christianity, and Other Studies,' by Bernard Bosanquet (London: Sonnenschein; New York: Macmillan) conforms to the prospectus in the absence of the polemic spirit, and in the unpretending, but thoughtful and analytic, fashion with which it deals with various matters of religious and humanitarian theory and practice. We would single out as especially fitted for reading by people who feel the unusual temptation, just now, to indiscriminate charity, the paper on "Right and Wrong in Feeling," wherein giving for the sake of pleasing the giver is carefully kept apart from giving for the sake of benefiting the recipient. The promise of future volumes by Prof. Sidgwick, Leslie Stephen, and others has an enticing sound.

'Socialism: Its Growth and Outcome,' by William Morris and E. Belfort Bax (London: Sonnenschein; New York: Scribners), contains an unwavering exposition of the socialistic creed, based upon what the authors consider to be the testimony of history. It might be said that if the future of society is conceived with no more verisimilitude than the past is described, our knowledge is not greatly increased; but few will deny the sincerity of these writers.

It is hardly necessary to do more than refer to 'Outlines of Economics,' by Prof. Richard T. Ely (Hunt & Eaton), as this writer has so frequently laid his views before the public. Although this book scarcely rises to the level of a scientific treatise, it may be read in places with entertainment and not without profit, but it can hardly be recommended for use in colleges where the works of Peter Parley and John S. C. Abbott are not included in the historical curriculum.

Alexander Black's 'Photography In-doors and Out' (Houghton, Mifflin & Co.) bears for sub-title "a book for amateurs," and is, on the whole, calculated to be of use to that ever-increasing class. A brief review of the history of photography, containing interesting information, precedes the manual proper, in which instruction is given clearly and succinctly. In this part a good deal of sound advice is tendered, which, if followed, will certainly enable the amateur to obtain satisfactory results instead of the abortions too frequently exhibited to friends. But there are some shortcomings: the acid fixing bath, one of the most valuable of recent improvements, is barely touched upon; there is no mention of the cold process in platinum printing, or of the hypo process in bromide work, while carbon printing should either have been fully treated of or not mentioned at all. There are many excellent diagrams and capital half-tone prints by way of illustrations.

M. Octave Uzanne's 'The Book-hunter in Paris' has been brought out in English dress by A. C. McClurg & Co., Chicago. The book, which, as we noticed a year ago, tells in pleasant, gossipy fashion of the bookstalls on the Paris quays, of the keepers and especially of the frequenters of the stalls, makes very good reading for leisure moments. It is well translated and well got up.

Tait, Sons & Co. issue a large-paper edition of Mr. Henry Irving's interesting volume of addresses on 'The Drama,' limited to 300 copies, all signed by the author and all adorned with a photogravure of Mr. Whistler's portrait of Mr. Irving—a portrait far more characteristic of the artist than of the actor.

Mr. E. G. Browne, to whom we are indebted for the translation of the 'Traveller's Narrative,' or 'The Episode of the Bab' (1891) now follows this up with the 'Tarikh-i-Jadid,' or 'New History of the Bab' (Cambridge, Eng.: University Press; New York: Macmillan). The difference between the two works is this, that while the former is written in the interests of Beha (the later leader of the movement, who died at Acre last year), the latter takes us back to an earlier period, dealing with the original Bab and his apostles and martyrs. Mr. Browne has added a long outline of Mirza Jani's still earlier history (the original text of which, it is hoped, may be published) and the Persian text of a short account of the movement by Subh-i-Ezel (the Babist leader living in Cyprus). The materials for the estimation of this strange and problematical religious movement are thus increasing in quantity, and our thanks are due to Mr. Browne and to the Syndics of the University Press for collecting and bringing out manuscripts of so important a nature.

Under the title, 'The Mummy' (Cambridge, Eng.: University Press; New York: Macmillan), Mr. E. A. Wallis Budge of the British Museum furnishes an excellent handbook for persons interested in Egyptian antiquities. The funereal archæology is full, and the author has added a descriptive list of the gods, an outline of the history, and a long and interesting account of the Rosetta stone. The illustrations are numerous and good, and the book in all respects well executed.

For the guidance of young students Prof. M. R. Vincent's 'Student's New Testament Handbook' (Charles Scribner's Sons) may be heartily commended. It contains a digested list of books bearing on the various lines of New Testament study. We miss references to Paul de Lagarde and the Oxford *Studia Biblica*.

While the French have been for years occupying themselves with the Arabic dialect of Algiers, the English have heretofore done nothing for modern Arabic, confining themselves in India to the languages proper of that land. Now, however, their occupation of Egypt has borne fruit in the 'Practical Arabic Grammar' of Major A. O. Green, the third edition of which has just been completed by the issue of Part II. (Oxford: Clarendon Press; New York: Macmillan). This Part contains a key to Part I., reading selections, vocabularies, and forms. Admirably printed, it cannot fail to be useful to the army officers for whom it was prepared. It gives, however, the modern literary, not the vulgar speech.

Prof. Max Müller, in a letter to the London *Times*, says that the King of Siam, "a Pali scholar and a student of Buddhist literature," has offered to give "a sufficient sum for the continuance of the translations of the sacred books of the East." This series, consisting of forty-nine volumes, had been closed for want of funds. It is proposed to apply the King's gift to the publication of the remaining portions of the 'Tripitaka,' "in order to enable a larger public to appreciate the truth and beauty, if not of esoteric, at least of real and historical Buddhism, of that Buddhism which teaches all men to bear affliction with a hopeful spirit, and not to return hatred by hatred, but to overcome evil by good."

M. Émile Faguet has added to his series of excellent studies on the great French writers of the seventeenth, eighteenth, and nineteenth centuries an equally valuable volume on the principal writers of the sixteenth century (Paris: Lecène, Oudin & Cie.). The accurate judgment and great didactic powers of M. Faguet are as conspicuous in the present volume as in his former ones; dull indeed would the student be who, after reading these pages, failed to have a clear understanding of the genius or talent of each of the writers treated of. M. Faguet knows exactly what points should be brought out and how much or how little they should be dwelt on, and he excels in making his meaning absolutely clear. As he thoroughly understands his author, he makes the reader also understand him. Eight writers—Commynes, Marot, Rabelais, Calvin, Ronsard, Du Bellay, D'Aubigné, and Montaigne—form the subjects of as many studies, which are in every way "literary studies." That on Calvin is particularly lucid, that on Ronsard appreciative, and as for that on Montaigne, it is as delightful as one of the "Essais" themselves.

Amblard & Meyer frères have brought out in the "Collection Lemerre illustrée" four additional volumes: Theuriet's 'L'Abbé Daniel,' Musset's 'Frédéric et Bernerette,' 'Le Fils du Titien' with 'Croisilles,' and Stendhal's 'L'Abbesse de Castro.' They are most convenient for the pocket and taking to the eye, except as regards the necessarily rather fine print.

A Russian poetess, Olga de Bézobrazoff, is the author of two volumes of French verse, 'Poussière d'étoiles' (Paris: Savine), in which the influence of Victor Hugo seems to mingle with a trace of the symbolism of these latter days. The verse is not always verse—frequently it is but rhymed prose, and hard to grasp at that; yet the poet's object, as stated in the introduction and confirmed by the dedication to Leconte de Lisle, is to unite beauty and truth, science and poetry. There are occasional fine passages, but, on the whole, the meaning of the poems is not clear, the language is vague and frequently stilted, and the inspiration slight.

Westermann & Co. send us the two great world's annuals of government and of learning

for 1894, viz., the *Almanach de Gotha* in its 131st year and *Minerva* in its third. The chief novelty in the ever self-renewing *Almanach* is to be found in the genealogical tables relating to princely non-ruling houses. In order to show (or to provide a clue to) the ramifications of the greater families, every title of prince or duke borne by any member of the class in question is inserted in its alphabetical place with a reference to the more distinguished family, as, "Civitella-Cesi, v. Torlonia," "Ayen, v. Noailles"; and again there is a reference from the patronymic name to the title, as "(Cavendish), v. Devonshire," "(Leveson-Gower), v. Sutherland," "(Lévis-Mirepoix), v. San Fernando Luis." Among the four portraits figure the new Duke and Duchess of Saxe-Coburg and Gotha, in place of the late Duke Ernest and his consort.

*Minerva* omits some introductory matter in favor of greater amplification of its essential function to exhibit the character, personnel, etc., of the universities, institutes, libraries, etc., of civilized nations; it has overhauled its transliteration of Russian names on a uniform system, in which it is refreshing at least to see the *v* expel the alien *w;* and it gives for the first time a geographical index to its contents. The invaluable personal index of officers, instructors, etc., though enlarged one-tenth, continues to be in a plain round letter which makes consultation easy. The American portion presents great difficulties from the vastness of the field, but the enlargement goes on, as may be seen under Hanover, and doubtless we shall some day see the University of Nebraska noticed as well as that of Kansas, and other Southern universities besides those now included. The frontispiece portrait, last year of Mommsen, is this year of Pasteur, in honor of his seventieth birthday.

The tenth Bulletin of the Weather Bureau is an elaborate discussion of the "Climate of Chicago," by H. A. Hazen. The lake breeze is among the most notable local features; it prevails in the wind averages for afternoon hours during the warmer months. An interesting consequence of the difference of temperature between the prairies and the lake is seen in the statement that cumulus clouds, approaching the lake from the west or southwest, may increase in size until the lake is reached; then they soon dissolve away. Day after day in the summer time, these clouds stand like giants over the land, while the sky is free from them over the lake. The Bulletin contains numerous tables and diagrams of various climatic elements, with an explanatory text.

Among the many interesting essays published by the Verein zur Verbreitung naturwissenschaftlicher Kenntnisse in Vienna, mention may be made of one by Dr. August Böhm of the technical school in that city, on the landsculpturing action of the glacial period. Dr. Böhm maintains with well-directed argument the view that the marginal lakes of the Alps and nearly all the smaller lakes among the mountains are of glacial origin. He gives a remarkable account of the disappearance of lakes by filling up basins and cutting down outlets, since the disappearance of the ancient glaciers. In the Tyrol alone, one hundred and eighteen lakes represented on the maps of the last century no longer exist, being now replaced by peat bogs and meadows. In Norway, Dr. Böhm thinks the rivers, which are hardly more than strings of lakes, represent a less advanced stage of recovery from glacial action; while in the Alps, where the old glaciers presumably retreated sooner than from Norway, a further return towards continuous river flow has been reached.

The October Library Bulletin of Cornell University describes with some detail the three remarkable gifts to the library during the current year, viz., the Moak (law) library, the Zarncke (philological and German literary) library, and Prof. Willard Fiske's Dante collection. Of these we have already spoken. They add about 27,000 volumes to the library, which now numbers very nearly 150,000.

In his Providence *Book-Notes* for December 16 Mr. S. S. Rider pieces together some recent bits of evidence touching the date of Roger Williams's death, and fixes it between March 17 and April 25, 1684.

An admirable addition to the well-known portrait gallery of F. Gutekunst, Philadelphia, is his imperial photograph of the late John Tyndall. The strongly-marked face is a frank index of character, as well as of racial affinity, and the likeness is a fortunate souvenir of Tyndall's visit to this country.

—At the last annual meeting of the Wisconsin Historical Society (December 14), 7,500 books and pamphlets were reported as added to the library during the year. A new department had been added to the museum by the purchase of 250 specimens of prehistoric pottery from graves in Missouri and Arkansas. A monograph was read concerning a curious financial feature during French domination on the Mississippi which seems to have escaped the research of Mr. Parkman. His only remark regarding French fiat money thus far discovered, is, that "the Mississippi Company within two years changed the value of the currency to the amount of 80 per cent." ('Half-Century of Conflict,' ii., p. 306). The paper, by Dr. Devron of New Orleans, first touched upon pasteboard money under Louis XIV., and his edict that a coin passing for fifteen sols in France should be current at twenty in the colonies. This was an echo of Jack Cade's decree, "There shall be in England seven halfpenny loaves sold for a penny, and the three-hooped pot shall have ten hoops." But the main ordinances were framed in the reign of Louis XV., onward from his second year. They appeared in the King's name, but were doubtless drawn up according to the caprices of the Mississippi Company, which had unlimited powers. In 1722 that corporation, having minted 200 pounds of copper, sent it to America, with orders that it pass as a legal tender for all debts, even those previously contracted. Little of it, however, was forced into circulation, and that slowly. By way of illustrating this fact, a letter from the first curate of New Orleans was cited. He wrote: "There are few offerings for masses, etc., and those are in copper coin which is valued so low that when, in my sickness, I sent everywhere to get a couple of eggs, I could not find them, though I offered several sous apiece. Those who sold reported that they could do nothing with our copper, and that if we had white money to give them, they had eggs to sell us." Then in 1724 the King—that is, the Company—issued an order that the nine-denier piece should henceforth pass for six. "This reduction," says Dr. Devron, "was of no effect in New Orleans, which to this day has never taken any fancy to any copper currency; the copper cents of the United States being used only to make payments or change at the post-office or custom-house, the nickel being now the only base-metal piece used even among the poorest residents of New Orleans in any trade." The Company still persisted, and on October 31, 1726, decreed that copper should for all purposes be equal to Spanish dollars—for instance, that holders of letters of exchange should not demand payment in anything but copper at the value stamped upon it—notwithstanding any clauses which might be inserted in said letters—under a penalty of 300 livres as a fine, payable one-half to the informer and the other half to the hospital, and under the further penalty of the confiscation of his exchange, as well as of his being himself flogged and branded by the hand of the public executioner.

—At a special general meeting of the Hellenic Society held on November 27, in London, Mr. Arthur J. Evans described a remarkable acquisition recently made by the British Museum. This is nothing less than one of the most interesting groups of Mycenæan objects ever discovered—doubly noteworthy, indeed, as having been found not at Mycenæ but on the island of Ægina. To discover "Mycenæan" pottery in various parts of the Mediterranean basin is no new experience, and gold objects like those of Mycenæ have been found in unexpected places, such as the Danube Valley and the Crimea; but the present Æginetan find is the most considerable and important since Schliemann's. Among the more remarkable objects of the treasure are "a gold cup with returning spiral and rosette ornament; an openwork gold pendant representing a kind of Egyptian figure in a lotos-tipped boat holding two water-birds, traceable to a familiar subject of Egyptian frescoes in which the fowler is seen standing in a Nile boat holding the trophies of his chase; four gold openwork ornaments with dogs and apes and pendant disks and owls; a jewel with a lion's head and pendant ducks, apparently suggested by a so-called Egyptian 'ægis' with the head of the lion-headed goddess Sekhet; a crescent-shaped gold plate with terminals in the shape of sphinx-like heads; a series of necklaces of gold, carnelian, and amethyst beads with amulet pendants; fifty-four repoussé gold plates for sewing on the dress, gold diadems, bracelets, ring-money—representing a unit of 135 grains—and finger-rings, which, like some of the other jewels, had been set mosaic fashion with a glass-paste imitation of lapis-lazuli." A variety of concordant data led Mr. Evans to fix 800 B. C. as the approximate date of the deposit, and a very important fact brought to light by the ring-money of the find was that there already existed in Ægina at the time of this deposit a pre-Pheidonian standard answering to the Euboic-Attic. This was in fact the old Mycenæan standard—probably derived from the Egyptian Kat—and could be traced in rings, etc., from the earlier shaft graves of Mycenæ. In closing, Mr. Evans made public announcement of the interesting fact that he has now discovered, chiefly upon prism-shaped gems, some sixty hieroglyphic characters belonging to an alphabet used in Mycenæan days. The area where it is found goes southward as far as Crete, and it is possible that these signs may prove to be of kin with the hitherto undecipherable Cypriote alphabet.

—The title 'Rome of To-day and Yesterday' (Boston: Estes & Lauriat) is rather misleading, for the book hardly deals at all with the modern but only with the ancient side of the city. It is a guide to the antiquities, but entirely without the dryness and brevity of the guide-book. And the writer, clearly well-read and cultivated, spares us the endless arguments on disputed questions, and the dissertations on little matters, which must necessarily beset the pages of more professed scholars. He loves rather to

linger over things which, though they may be of yesterday, yet are of all time because they speak to the heart. The figures of the worthies of old, the houses where they lived, the streets where they walked, the forum and the senate-house where they won their triumphs, the temples of their worship, and the monuments of their generosity or their ambition—we see them all and hear of each the story so familiar, yet ever welcome when well told. The book bears the sub-title of the "Pagan Centuries," and brings us down only to the middle of the fourth century of our era. "Mr. John Dennie" chats along in a familiar conversational style, and knows his subject so well and unfolds it so simply and so pleasantly that one finds it very hard to lay the book down.

—Such an outgiving as that of Prof. Ferrero, in last month's *New Review*, on "Woman's Sphere in Art," would call for no notice were not the title of professor prefixed to his name, and a preliminary scientific flourish (in which the words Darwin and *Amblyornis inornata* strike the eye) prefixed to the thoroughly unscientific pronouncement which constitutes the article. We shall not, on our side, pronounce that Prof. Ferrero is wrong in saying that because "the amatory instinct is feebler in woman than in man" it follows that women "lack the creative power in art, and, furthermore, do not even understand physical beauty"; though we do submit that a well-regulated mind ought to require some semblance of proof for such a proposition. Indeed, it is not for the purpose of noticing any of his positions in particular that we make mention of his article, but precisely to point out that it and its kind are unworthy of any more attention than the random speculations of any clever newspaper man. Even in the opening sentences, Ferrero finds room to exhibit his want of grasp of Darwinism; and in the rest of the article, not only is there a lack of even a superficial indication of scientific thinking, but the statements of fact are irresponsible in the extreme. We are told, among other things, that "Mrs. Wheeler and Miss Revere Johnson have decorated the interiors of nearly all the public buildings in the United States"! It seems like gilding refined gold to try to make this statement out to be worse than it is on its face; it becomes so, however, when, on looking up the authority on which it is based, we find it to have grown out of the following innocent remark of Mrs. Carter's: "Many interiors of dwellings and public buildings show that women decorators have worked successfully. The names of Mrs. Wheeler and Miss Revere Johnson are well known." There is, however, a test whose application, though less striking, is more truly indicative of the absence of sound thinking in the Ferreros and Lombrosos than are their errors in particular matters of fact. As soon as quantitative considerations have a bearing on the subject, they are as helpless as infants. Is it not amazing that a man of intelligence, after admitting the "great power" of several women—Sappho, George Eliot, etc.—should have the fatuity to say that "if it is impossible to find a Shakspere among women, the fact is due to the greater rarity of the higher intellectual powers among them than among men"? How many Shaksperes have there been among men? And how many Shaksperes has Holland produced, for instance? Is it necessary to explain, by essential inferiority, the fact that among the infinitesimal proportion of women whose lives have opened to them such stimulus and opportunity as is open to most men, none has reached that eminence which has been attained at most by four or five of the countless millions of men?

## LOWELL'S LETTERS.

*Letters of James Russell Lowell.* Edited by Charles Eliot Norton. 2 vols. Harper & Brothers. 1893.

Mr. Leslie Stephen, writing of the art of biography in the *New Review*, says that "letters, in the main, are the one essential to a thoroughly satisfactory Life." Certainly they are a desideratum, yet the life of a man of action is rarely revealed much through his letters; and in the life of any very busy man his "epistolary correspondence," as our maiden aunts used to call it, represents only his odds and ends of time. Thoreau's remark about keeping a diary, that "we never can write in a diary what most interests us, because writing in the diary is not what interests us," is true of correspondence also. Then there is the drawback that the most vital and essential letters of a man's whole life—those representing the very crises of emotion or purpose—are often, for that very reason, unsuited to publication, and are rightly withheld. This very consideration, for instance, has deprived the volumes now before us of the most intimate and important letters which Lowell ever wrote—those to his first wife at the most formative and momentous period of his whole career. All these considerations show that a limit is to be set to that value which Mr. Stephen attributes to private letters as an element of biography. Nevertheless, it may truly be said that, so far as Mr. Norton's volumes represent Mr. Lowell, they represent him most delightfully and yet most fairly, and that there has not, on the whole, been a collection of English letters of such rich and varied quality since those of John Keats.

It is safe to say, also, that few collections of letters have ever had discreeter editorial handling. Prof. Norton is a man of strong convictions, which he sometimes states with such vigor as to seem almost defiant; but he has before now proved himself to possess a wholesome reticence as to himself, with a judicial quality as commentator. His visible contribution to these two large volumes covers but a few pages, but his careful touch is felt everywhere. In one or two cases he may have been unguarded as to letters referring to persons still living, but this is a thing very hard to avoid. His frank revelation of Lowell's earlier moods—here and there a tinge of morbidness, a shyness masking itself under self-assertion, a glimpse of over-consciousness—is simply admirable. Nothing is extenuated, nothing held up for censure. The marked transition, in Lowell, from an impetuous and aggressive youth to a benign and genial old age makes itself apparent without formal elucidation. It would have been very easy, for instance, to omit the fact that, in the storm-and-stress period of youth, Lowell once put a loaded pistol to his head but had not the courage to discharge it (ii., 375). Yet how important this fact in the biography of Lowell, nay, in the history of youth itself! Doubtless many a young man, just on the threshold of mature life, has toyed with just such a wayward impulse. The newspapers remind us from year to year that the temptation is not always resisted; and what a lesson is given in the fact that a career so brilliant and useful as Lowell's had been preceded by just such a morbid mood. With equal frankness is given the brief letter (i.,51) announcing the fact, to him more momentous than he dreamed, of his first interview with Maria White. Here we see the door by which he escaped from this perilous period of uncertainty, and, like the hero of 'Sartor Resartus,' "immediately began to become a man." His subsequent correspondence with this strong and most attractive woman would further amplify this revelation, if we could have it thrown open before us; and all must respect the unusual dignity and courage of their only daughter in withholding these letters from the insatiable curiosity of the public.

The frankness with which these letters are edited gives us interesting self-revelations by Lowell as to some of his personal criticisms and animosities. In some cases, as in his allusions to what he wrote about Percival, Thoreau, and Masson—all these papers having been a good deal censured at the time for undue vehemence and acrimony—his letters show him quite unconscious of any such intention. The simple fact is, that he grew up under the critical school of Poe, when men practised a good deal of slugging, and thought all fair in the game. His more celebrated criticism on Margaret Fuller, which was perhaps the severest of these instances, receives a good deal of light in successive letters. It was more censured by dispassionate critics than any other of these extreme statements, because it was a mainly personal sarcasm in apparent retaliation for a purely literary criticism. Margaret Fuller had made no personal allusion, but had simply expressed the opinion, in a somewhat offhand and decisive manner, "his verse sounds no depths." The opinion showed want of discernment, though it is to be remembered that Lowell himself finally omitted from his revised works a large part of the poems on which it was founded. It is interesting now to find that Lowell himself demurred at putting her into the pillory of "The Fable for Critics," on the precise ground urged afterwards by others, that it would pass for a bit of retaliation. He writes to his friend Briggs (March 26, 1848): "I think I shall say nothing about Margaret Fuller (though she offer so fair a target), because she has done me an ill-natured turn. I shall revenge myself amply upon her by writing better" (i., 128). Nothing could have been manlier than this last sentence—but, unluckily, he says just after: "However, the temptation may be too strong for me." He yielded to it, but still convinces himself (I. 131), "with her I have been perfectly good-humored"; though he was unfortunately too hard a hitter for any one else to share this opinion. Even for himself, this bit of pleasing self-delusion did not last long, for he writes to Briggs once more (October 4), "If it be not too late, strike out these four verses in 'Miranda':

'There is one thing she owns in her own private right,
It is native and genuine—namely, her spite;
When she acts as a censor, she privately blows
A censer of vanity 'neath her own nose.'"

Unfortunately, it was too late; the verses remained in the volume; nor were they struck out in the later editions, although Lowell afterwards erased most of those relating to Francis Bowen, whose fellow-professor he had meanwhile become. The fact that, after her heroic life and death, he still retained what he wrote about her, revived the discussion which was then dying out; and it is now very interesting to see, by his successive letters, upon how narrow a chance the whole origin of the feud depended.

All the drawbacks to Mr. Lowell's prose style, so laboriously dwelt upon by such critics as Wilkinson and Kirk, may be found in these

letters; the long sentences, the mixed metaphors, the occasional bad taste, the sparkle of trivial puns, are here also. He who could write of Milton, in a printed essay, "A true Attic bee, he *made boot on every lip*," and who would assert that no poet ever got much poetry out of a cataract except Milton, "and that was a cataract in his eye," would not be more guarded in his offhand letters; and what most proves him unconscious of these qualities is that he is sometimes most rollicking and nonsensical to some of the most dignified of his feminine correspondents. Indeed, that side of Lowell's nature, the pure bubble and ecstasy, the champagne quality, has never been so thoroughly exhibited as here: and the saying attributed to one of his Cambridge intimates, that "Lowell was always one bottle of champagne ahead of us all," is abundantly exemplified, in the figurative sense in which it was intended. His animal spirits were always too exuberant to make much demand upon any artificial exhilaration, although the temporary impulse under which he followed his wife into the total-abstinence movement (i., 67) appears soon to have passed away. But it is a curious fact that, with all this insuperable vivacity, there was for many years a certain cumbrousness in his written sentences, traceable, perhaps, to the old English writers whom he loved. This he himself recognizes when he says, "My very style belongs to the last century, and drops too readily into the sententious and elaborately historical manner" (i., 369). He adds: "Believe me, I was lively once and may recover it; but I fear me much I have suffered a professor change that has gone too deep for healing." Here he deceives himself. This was written in 1866; but his style was then far less sententious and elaborate than when he wrote for the *Anti-Slavery Standard* nearly twenty years before; and this quality had been actually a ground of complaint among the readers of that paper. When Dickens established the *Daily News* in 1845 and got Lowell to write for it, there was general disappointment in the long-windedness of his communications. The truth is that he shortened his sword, instead of lengthening it, as time went on; and the probability is that "the professor change" was on the whole a help to him as to the habit of expression. There was certainly a period when his own style tended towards that quality which he calls, in the case of George P. Marsh, "congregational." The crisp and piquant quality was never far distant, but there were long paragraphs throughout which it was kept in abeyance. This was sufficiently visible in his 'Conversations on Some Old Poets' (1845), where there was occasionally a sentence half a page long.

It is a curious fact that a constitutionally shy and modest man often gets the credit of undue self-assertion from the very effort he makes to overcome his natural reluctance. This was signally the case with Lowell; he never likes his own books, constantly belittles his own poems, constantly laments, in later life, his own shortcomings. Yet he was always a great talker, always given to monologue; wherever he sat, there was the head of the table; it was even said of him in youth, among his most intimate circle of friends, that he never was quite easy unless he led the conversation. It is recorded that at the old *Atlantic* dinners which preceded the "Literary Club" in Boston, he and Dr. Holmes sat at the two ends of the table, and did nearly all the talking. Amid all his social popularity in England, there recurred at times this same imputation of excess. In the amusing papers attributed to Mr. George Russell on "Talk and Talkers of To-day" in the first numbers of the *New Review*, Lowell is highly praised for genuine wit and vast knowledge, but charged with "airy omniscience" and a "minute and circumstantial way of laying down the law." There is added a lively account, which has an irresistible verisimilitude for all who knew Lowell, about his gently taking her task out of the hands of the dignified custodian of an English castle, and telling her and the guests more about its history and traditions than she or anybody else knew before. Lowell himself says in one place: "I suppose it was the extreme solitude in which I grew up, and my consequent unconsciousness of any public, that made me so frankly communicative" (ii., 142). It should be remembered that even the love-poems of his youth were censured as unduly open to the public, and that the very letters which his daughter has now destroyed as too confidential were lent freely about, in their day, among a large circle of friends. The key to all this is to be found, no doubt, in the sentence just cited.

No book of our time is so crowded with "fine things said unintentionally," as was said of Shakspere's sonnets by Lowell's favorite, Keats. Such are his casual sketches of persons—Andrew Johnson, "whose worst was that he meant well" (ii., 7); Secretary Chase, "a weak man with an imposing presence, a most unhappy combination" (ii., 7); the poet Gray, who holds his own with "little fuel, but real fire" (ii., 86); Rousseau, "a monstrous liar, but always the first dupe of his own lie" (ii., 424); the "Adams flavor, as unmistakable as that of the Catawba grape" (ii., 431); Dana, who "convinced without persuading" (ii., 432); his cook Mary, who was a cook "merely by a brevet conferred by herself" (ii., 79); the comparison of Wordsworth's poetry to the old baronial housekeeping—"what splendor and what sordidness in one" (ii., 367); the contrast between Parnell and his successor—"McCarthy occupies his throne as the two Kings of Brentford might. The Irish half of him will be always consulting the English half, and there will be no single sharp-edged will as before" (ii., 430). Then there is the delicious characterization of Sibley's 'Lives of Harvard Graduates,' of which he says: "It is the prettiest rescue of prey from oblivion I ever saw. . . . It is the very balm of authorship. No matter how far you may be gone under, if you are a graduate of Harvard College, you are sure of being dredged up again and handsomely buried, with a catalogue of your works to keep you down" (ii., 130).

The closing letters are more pathetic, as becomes a somewhat languid old age, yet the champagne sparkles to the last. The whole book leaves a wholesome and even delightful picture of Lowell at Elmwood, surrounded in his arm-chair by vast piles of books, reading twelve hours a day, in vacation (ii., 64), "one of the last of the great readers" (ii., 154), enjoying the blossoming of his elms, loving every living thing about him, even to the centipedes, for which his gout gave him a peculiar pity (ii., 436), and effervescing all the time with strokes of wit like these. While people assumed that his heart was in England, he was homesick when abroad and happiest at home, with an Americanism so pronounced that it perhaps explains the else insoluble problem why Longfellow should have been translated into all European languages and Lowell into none. It is pleasant that he should give us, from time to time, a glimpse of the deeper philosophy which made him so full of sunshine:

> "The more I learn, . . . the more my confidence in the general good sense and honest intentions of mankind increases. . . . The signs of the times cease to alarm me, and seem as natural as to a mother the teething of her seventh baby. I take great comfort in God. I think that he is considerably amused with us sometimes, but that he likes us, on the whole, and would not let us get at the match-box so carelessly as he does unless he knew that the frame of his Universe was fireproof" (ii., 51).

How many accumulated Bodies of Divinity and Collections of Posthumous Sermons would it take to make up as solid a platform of religious consolation as is condensed into this seeming irreverence?

## EL DORADO.

*The Gilded Man*, and Other Pictures of the Spanish Occupancy of America. By A. F. Bandelier. D. Appleton & Co. 8vo, pp. 302. 1893.

In this volume Mr. Bandelier, abandoning the line of research which he has hitherto followed with such marked success, traces to their respective sources the legends of El Dorado and of the Seven Cities of Cibola, and gives an account of the different expeditions that were sent out for the discovery of these semi-mythical regions. According to him, the first of these stories comes from South America, and refers to a people among whom gold was so plentiful that, on certain occasions, their chief was powdered with it, and in that condition was conducted to a lake where he was duly washed, the assembled company meanwhile throwing their gold and jewels into the water. The truth of this story and the consequent derivation of the term "El Dorado" (or, as our author translates it, "the Gilded") has been called in question, though of the fact itself Mr. Bandelier, evidently, has no doubt. Indeed, he even goes so far as to place the scene of the occurrence among the Muyscas who dwelt on the table-land of Bogotá, at or near Lake Guatavita. In this he is probably right. The earliest versions of the story tell us that the country of the *Dorado* was somewhere in that direction; and this fact, taken in connection with the booty found there in 1537, and the recovery from the lake of certain gold ornaments which are supposed to represent the ceremony, certainly favor the view, though they can hardly be said to establish it.

Be this as it may, there can be no doubt of the prevalence of the story or of its influence in stimulating the Spaniards and others in their efforts to discover the ever-shifting region to which it referred. To this end expedition after expedition was fitted out long after the Spaniards had reached the spot; and it is worthy of note that several of them were in the interest of Welser & Co., a German house, to whom a large slice of the northern part of South America had been granted as security for loans made to the Emperor Charles V. With the one exception, however, noted above, all these expeditions were practically barren of pecuniary returns. After incredible hardships the survivors of them, often a mere remnant, found their way back to civilization, bringing with them nothing but their arms and a knowledge, more or less accurate, of the regions they had traversed. This was certainly not the reward which they had expected, but in so far as it led to the settlement of the country it may be accepted as payment in full for all their expenditure of time, money, and human life.

In regard to the Seven Cities of Cibola and the Gran Quivira, which, for our purpose, may be considered as parts of the same legend, we are told that a similar story was known in Europe before the time of Columbus. With the progress, however, of discoveries in the West Indies, the fabulous island of Antilia—the supposed seat of the Seven Cities—disappeared, and but little was heard of them until A. D. 1530, when Nuno de Guzman was told of their existence somewhere in the region north or northeast of Mexico. "When, how, or where he heard" the story is uncertain; but Bandelier is probably not far wrong when he intimates that, so far from being of native origin, it was an adaptation from the whites, just as was the "seven caves," or, as it was soon written, "seven cities" (p. 128), from which the seven Nahuatl tribes are said to have proceeded. In 1536, a few years after Guzman's expedition, Cabeza de Vaca reached Mexico, having crossed the continent in the course of his wanderings. He did not have any gold or jewels, but the accounts he brought of a people who lived in permanent settlements, wore cotton clothes, etc., strengthened the belief of the Spaniards in the existence, somewhere to the north, of a region abounding in the precious metals. To reach this region then became a paramount object, and in 1539 Fray Marcos of Nice was sent out upon a reconnoitring expedition, in the course of which he reached Cibola and looked down upon one of its seven cities, though he did not enter it.

In the report he made of his journey he did not claim to have found either gold or jewels, but he repeated the stories told by the Indians, and although they were not entitled to much credence, yet they inflamed still more the imagination of the Spaniards, and led in the following year to the expedition of Coronado for the conquest of that region. Starting from Culiacan in the spring of 1540, he arrived at Cibola, or, as we now know it, Zuni, and took possession of the seven villages. Disappointed at not finding gold, and attracted by the stories of the New Mexican pueblos, he pushed on to the Rio Grande and wintered at or near where now stands the village of Bernalillo. With the return of spring, he again took up his line of march, and did not halt until he had reached the Quiviras, a wandering tribe who were living at that time in central Kansas, within "seven hundred miles" of the Mississippi. Finding neither gold nor jewels among these savages, and totally disheartened by his want of success, he turned his face homewards, and reached the City of Mexico in July, 1542, having been gone about two years and a half. On the return of this expedition, Cibola ceased to be a centre of attraction, though Gran Quivira was still a name to conjure with. The story, however, underwent a change and now took the shape of buried treasure. Under this form it has come down to our day, and it still lingers, in spite of the fact that Gran Quivira has been identified with the ruined pueblo of Tabira, and that neither Indian nor missionary ever had any treasure to bury.

To any one familiar with Mr. Bandelier's previous publications, it is needless to say that the present volume is quite up to his standard, even though there are portions of it which add but little to the sum total of our knowledge. This is especially true in what relates to Coronado's expedition, for here he works over material which he has already used, though it is proper to say that nowhere has it been collected and arranged in such a way as to emphasize the courage and endurance of the Spaniards, the rapidity with which they overran the country, and the care and accuracy with which, under the most adverse circumstances, they recorded and preserved the details of their hard experience. Besides the investigation of these legends, Mr. Bandelier includes in this volume several other papers, in one of which he deals with the massacre of Cholula, and in another he follows the subsequent career of Jean L'Archévèque, the boy who led La Salle into the ambush in which he was murdered. In the first of these papers he examines the so-called massacre in the light of tradition and of certain Indian paintings preserved at San Juan Cuauhtlanzinco, and finds that it resolves itself into an attack upon the Indians in which Cortes anticipated by a few hours the execution of a plan they had matured for his destruction. In the second we are told that L'Archévèque, after his return from Europe, found his way into New Mexico about the year 1696. Here he married, and under the name of Archibeque his descendants may be found today. At first he is said to have been a soldier, but, abandoning this career, he became a merchant, and if we may judge from the amount of property he left, he was fairly successful. He was also prominent in the affairs of the province, and, having taken the oath of allegiance to Spain, he shared in the expedition sent out in 1720 to check the advance of the French up the Missouri, and was killed. For this curious bit of personal history Mr. Bandelier is indebted to the records of the Franciscans, preserved in the pueblo of Santa Clara. It was published a year or two ago in the *Nation*, and our object in calling attention to it at this time is to insist upon the importance of these and other records to any one engaged in studying the career of the Spaniards in America.

In conclusion we wish to acknowledge our obligation to Mrs. Thomas A. Janvier, upon whom, in the absence of Mr. Bandelier, the duty of editing this volume devolved. As a rule, she has done her work well, though there are times when the dates are somewhat confused. Thus, for example, we are told, p. 137, that Fray Marcos arrived in America in the year 1551, though we know (pp. 138, 139, etc.) that his expedition to Zuni-Cibola was made in A. D. 1539. There are other mistakes of a similar character, but it is unnecessary to refer to them more particularly. They are, fortunately, easy of detection, though they are none the less blemishes upon what is otherwise a good piece of editorial work.

## ENGLISH THEORIES OF PRODUCTION.

*A History of the Theories of Production and Distribution in English Political Economy from 1776 to 1848.* By Edwin Cannan, M.A., Balliol College, Oxford. London: Percival & Co.

THIS is a volume of importance not only to the professional student of political economy, but to all who look for guidance on the perplexing social and economic problems of the day to the writings of the economists of earlier and later fame. It is a history of the development of the essential doctrines set forth by the classic school of political economy; but it is something more than a history. Mr. Cannan is not only an accurate and scholarly historian, but an acute and unflinching critic. His book is by far the best account yet written of the history of economic thought in England from the time of Adam Smith to that of John Stuart Mill; it is also a searching examination of the doctrines of the famous writers of that epoch. Are we still to turn to these writers to find sound principles of political economy, or must we overhaul the whole subject and reconstruct the science anew?

Before considering these questions, and the answers to them which Mr. Cannan's book suggests, we must do justice to the high quality of his historical work. He has gone over his material with scholarly completeness, and gives an unquestionably thorough account of the growth of the various doctrines of production and distribution. The theories of Adam Smith, Ricardo, Malthus, Senior, Mill, and the rest of them are put before us as they really were held and presented by these thinkers, not as they have been construed and revised by their successors. The development of the various doctrines from writer to writer is followed with scrupulous accuracy. No economist can read the book without learning much that he had not before known, and without feeling indebted to Mr. Cannan for new light. We may add that there is an admirable index, a model in conciseness and completeness, which makes it easy to turn at once to Mr. Cannan's discussion of any part of his subject.

It is less important to know what the doctrines of the classic school were, and how they developed, than what is the truth about them: whether they are sound on the whole, or contain so much of error and exaggeration that they must be flung aside once for all. Although Mr. Cannan purports to give merely a history, his criticism is so severe and so unflagging that it is plain that he leans to the latter position. Hardly a doctrine or a writer among those which he takes up escapes without depreciating notice. Sometimes it is an acrid comment by the way; sometimes a long and elaborate refutation. Indeed, merely as a history, there is on its face something lacking in the book. Though the justice of every individual criticism here made should be admitted, it would still seem almost self-evident that there must have been some degree of merit, some progress in knowledge and understanding, in the writings of Adam Smith, Ricardo, Malthus, and Mill. The speculations of the mercantile writers who preceded them have sometimes been described as indeed of little worth in themselves, but as at least a necessary stage, preparatory for something better. Mr. Cannan has not even such scant praise as this for the unfortunate writers who come within his ken. Not a syllable of friendly acknowledgment can be found throughout his four hundred pages, while we have plenty of criticism, bitter comment, and sometimes unpleasant sneer. It requires all the respect to which his ability and scholarship entitle him not to revolt from some of his conclusions simply because of the acid temper in which they are set forth. As to the general significance of the classic doctrines, he states his views in the closing chapter very briefly and unequivocally: they may have done service in their day for England, by promoting the reform of the Poor Laws and the abolition of the Corn Laws, but as explanations of the phenomena of the production and distribution of wealth they are "unscientific and illogical," while as answers to the insistent questions of the socialists they are simply useless.

If a book of this temper had been published twenty or thirty years ago, the chances are that it would have been simply hooted down by the critics. The classic school then had full command of the field. Adam Smith and Ricardo were final authorities, and Mill's 'Political Economy' was accepted as containing what Mill had said in his preface it should

contain—"the latest improvements in the theory of the subject." But the times have changed mightily. First in Germany, then in the English-speaking communities, there was a revolt from the classic rule. Like every reaction, it bade fair at one time to swing too far, and indeed has now given way to a perceptible counter-movement. At present, economists have reached the stage of taking stock, so to speak, after the shock, and looking about to see where they stand, and what is left of the old structure. And here Mr. Cannan's book is helpful; but it might be more helpful. It tells us what we have lost, and where we must repair, but it exaggerates the losses, and does not show where the foundations remain substantially intact. Unquestionably, the ferment in economic discussion which began with the revolt from the "orthodox" domination, has made it certain that the traditional doctrines need a very thorough overhauling. No economist can now lay down the law in the confident tone which runs through Mill's once impeccable volumes, or deny that when the debates of the present have yielded their final outcome, we shall have an exposition of economic doctrines very different from Mill's. But, on the other hand, few would reject the classic doctrines as summarily as does Mr. Cannan, or set their scientific value as low as he does.

These general remarks may be illustrated by considering a specific doctrine, and its treatment at Mr. Cannan's hands. We will select, by way of example, the doctrine of saving as the explanation of interest. Adam Smith had laid it down that capital was created by saving, and had eulogized "parsimony" as the mainspring of all material progress. Senior had added the notion of "abstinence" as the origin of capital and as the sacrifice for which the capitalist got his reward in the form of interest. On Senior Mr. Cannan heaps criticism and ridicule, while "the conduct [abstinence] of which profit is the 'reward' has no name simply because it has no existence."

Now, the proposition that interest is the reward of abstinence, at best awkwardly stated by Senior and his followers, is an easy target for the carping critic; the more so as it has been often confounded with the very different proposition that interest at current rates is a fit and just reward for the abstinence of the individual capitalist. The abstinence of a Rothschild or a Vanderbilt is a favorite subject of ridicule; and Mr. Cannan speaks of "the comical result that a millionaire who saves £30,000 a year and spends £10,000 on himself, is more abstinent than a clerk who saves £10 a year and spends £100 on himself." The truth of the matter is that the mode in which capital is accumulated, and the reason why interest is paid, under a régime of private property, cannot be explained without a reference to this much-abused saving or (to use the term now coming into vogue) waiting. There would be no capital if there were no saving, and there would be no interest if saving were not usually an onerous act. On the other hand, there is nothing in this sort of reasoning to show that the payment of interest is right and just; and moreover there is nothing to indicate what are the terms on which the onerous act gets its reward, or, in other words, what fixes the rate of interest. The defence of capital and interest against the attacks of the socialists must rest, like the whole institution of private property, on a broader basis than that of the praiseworthiness of the capitalist's conduct and the merit of his individual abstinence. And as to the rate at which interest is paid, it is doubtful if much is gained by supposing that it is merely such as to give the owner of capital a sufficient inducement to abstain. The effect of capital in increasing the productiveness of industry, and the mode in which new arts and inventions enable more and more capital to be used with advantage, are the factors chiefly to be considered when we inquire what makes the rate. So far as the classic economists go, they thus laid the foundations (to continue our metaphor), if not in whole, at least in good part, in their discussion of saving and abstinence; and even though we build a structure different from theirs, we may yet accept gratefully the beginning they made, and treat their work in less contemptuous and destructive fashion than does Mr. Cannan.

These are days of currency nonsense and protectionist absurdity, of fantastic reasoning by the followers of Henry George as to the millennium to come from land confiscation, and hopelessly airy proposals for the assumption of any and every industrial function by the Government. The temptation is strong, under such conditions, to hold fast to authority and accepted doctrines, and to refuse to give aid and comfort to the enemy by admitting that the theories of current political economy are not settled and established scientific truths. But, in fact, there are few of them which the criticism of the last quarter of a century has not impugned more or less. The doctrines of exchange, money, international trade, have suffered least, those as to production and distribution most. The latter, it must be admitted, need to be largely recast, and such work as Mr. Cannan's is a contribution of unquestionable value in the process. But when the process is done, we doubt whether the new system will differ so fundamentally from the old as the enthusiastic radicals of the present day expect; and we predict that in it there will be incorporated not only essential doctrines of the classic school, but a grateful recognition of the service which the older writers did in building for their successors.

---

*Italian Gardens.* By C. A. Platt. Harper & Bros. 1893.

THE scenery of the earth was made for man, not man for scenery. Civilized man enjoys natural scenery as the savage cannot, and he permanently preserves what he may of it in parks and public forests. Elsewhere he is necessarily a transformer and destroyer of nature. The landscape of civilization is an artificial landscape, and as such it may be either beautiful or ugly—beautiful when it is the blossom of use, convenience, or necessity; ugly when it is the fruit of pompous pride or common carelessness. The gardens of the Renaissance in Italy, France, and England have been thoughtlessly ridiculed in modern days because of their unlikeness to wild nature. As well revile a palace for its unlikeness to a wigwam. The vast extent and the tiresome repetitions of some of the gardens in question may convict them of the sin of vainglorious display, but if they fitly served any human need or pleasure, their unnaturalness was no sin. Likeness or unlikeness to wild nature is no criterion of merit. Farmsteads, country roads, villages, city streets, and world's fairs are all more or less removed from nature and naturalness, yet even the last-named may be beautiful, as we have lately seen. Fitness for purpose is the safe foundation of the art of designing land and landscape for the use and enjoyment of men.

That the gardens of the classic world and the Italian Renaissance fitly served a worthy purpose there can be no doubt. In the Italian climate, halls and drawing-rooms out of doors were even more to be desired than parlors indoors. Groves, parterres, terraces, and approaches were designed conjointly with the house or palace to form one composition—the so-called "villa." The boundary of the villa was a sharp line separating it from the hills of Tivoli or the plains of the Campagna. Inside the boundary was the formality which befits stately living; outside, yet in view from the terraces, was the informality and picturesqueness of the natural world.

Rightly thinking that these villas of Italy may teach lessons of value to the America of to-day, Mr. Platt has published in the book before us forty full-page pictures of their buildings, pavilions, terraces, water-basins, and gardens, with many smaller drawings and photographs of architectural details. He has made an uncommonly charming yet truthful picture-book. We are compelled to wish he had done more. The text of the book is very handsomely printed with wide margins, but it consists of the briefest of notes. Even if it be "taken purely as supplementary to the illustrations," as we are asked to take it, it is very unsatisfying. For the fairly-to-be-expected elucidation of the plates, plans (as well as fuller notes) are sadly needed, yet only one is provided. On the first page mention is made of the great book of Percier and Fontaine, and it is stated that there exists no other "work of any great latitude" treating of Italian gardens. Evidently our author is not acquainted with W. P. Tuckermann's 'Die Gartenkunst der Italienischen Renaissance-Zeit,' published in Berlin in 1884, and containing, besides twenty-one plates and numerous other cuts, some twenty ground-plans and cross-sections of Renaissance villas.

In the grassless regions of our South and Southwest, in the necessarily rectilinear public squares of our cities, in connection with stately buildings in all parts of our country, be they public offices in Washington or hotels by Lake George, the formal lines of the Italian villa will always be acceptable because they will always be fitting. Our public has still to learn that only by designing buildings and their surroundings as one harmonious composition can a happy result be secured in either the formal or the picturesque style. The recent World's Fair taught this lesson very clearly. Mr. Platt's delightful pictures teach it also. If those whom these pictures interest will turn from them to the works of Tuckermann, Repton, and the other professional writers on landscape architecture, and then will practise what they learn therefrom, Mr. Platt will have accomplished a good work for America.

*My Arctic Journal;* A Year among Icefields and Eskimos. By Josephine Diebitsch Peary. With an account of the Great White Journey across Greenland, by Robert E. Peary, C.E., U. S. A. Philadelphia: Contemporary Publishing Co. 1893. 8vo, 240 pp., illustrated.

IN taking up this volume one is naturally moved not only by the interest which attaches to any account of travel in inhospitable regions, or to arctic exploration as such, but by a curiosity born of the circumstances which led to the experiences recorded. In brief, the question arises in the mind of every reader, "What justification shall we find in it for the experiment of taking a well bred, plucky woman away from her normal sur-

roundings and leaving her for months practically alone on the shores of the Arctic Sea?" Secondarily, explorers are likely to ask themselves, "Given the results here offered, are they such as will tend to make such experiments customary?" No question of personal heroism arises here; no one can be so blind to history as to doubt the possibility of courage and devotion of the highest order in woman. The problem is of a much more practical and less romantic kind. It will not be disputed that women feel more keenly than men the absence of those refinements and appliances of civilization upon which modern comfort depends, and suffer more from anxieties connected with the safety and success of those they love; or at least have less philosophy with which to meet such cares and privations than the average man. It is certain that the torment of women is not necessary to arctic exploration, or similar work, and in fact decreases the efficiency of a party in so far as they may be sympathetically affected by partaking of her trials, anxious for her safety, or obliged to waste time and strength over conventionalities disregarded by men among themselves under such circumstances.

Descending from the general to the special, in the present instance what advantages appear to have been gained by the presence of a lady in the Peary camp other than those personal to the two individuals most concerned? We turn for an answer to Mrs. Peary's account of her experiences. The party left New York on the steamer *Kite* June 6, 1891. On the 11th of July Mr. Peary was so unfortunate as to sustain a fracture of the leg due to a stroke from the iron tiller driven by a sudden movement of the ice. On the 26th of July it was decided to erect winter quarters on the shore of McCormick Bay; the party were landed, and on the 30th the *Kite* departed southward. The house being completed, preliminary excursions to examine the borders of the inland ice, hunting parties for deer and walrus, and negotiations with the Eskimo of the region, occupied the time. In the course of the season a number of the latter people, the "arctic highlanders" of earlier writers, made their home in the vicinity of "Redcliff House," as the building was named, and seem to have been very useful to the party, especially in preparing winter clothing. Winter set in about the end of October, and by about the middle of November Mr. Peary had entirely recovered from his injury. Daily exercise, the ordinary domestic duties, and the preparation of clothing and equipment for the expedition upon the inland ice absorbed the energies of the party, in all of which Mrs. Peary seems to have done her fair proportion without especial suffering or inconvenience, unless when attempting to sew at a temperature of only 44 degrees. Between her and the Eskimo, odors and parasites seem to have erected an impassable wall, and her account of the daily clean-up with corrosive sublimate after the departure of a native sempstress is amusing and almost pathetic. Of those mysteries of feminine life among the natives to which her sex might have given her access, or stimulated observation unthought of by male explorers, there is not a hint. We are not even told what sort of a thimble the women use. It would seem impossible to live in daily contact with a peculiar people for a year and learn less about them than what is recorded here. Under the circumstances this was not unnatural, but is somewhat disappointing.

In February the sun reappeared and the party began short excursions for various purposes. The anxiety felt by the writer on various occasions of delay or bad weather while such trips were in progress, is vividly depicted, though not unduly dwelt upon. In April the party suffered from a visitation of the grippe. Later, Mrs. Peary accompanied her husband on a short expedition to Inglefield Gulf, and passed a night of horrors in a native igloo where she could not prevail upon herself even so much as to lie down. Thereafter the party built their own snow hut or slept without a shelter. On the 4th of May, Mr. Peary started on his adventurous journey, and for Mrs. Peary began three weary months of waiting. Her anxieties were not diminished by an absurd fancy of the colored cook that their lives were in danger from the natives. On the 25th of July a diversion was created by the arrival of the *Kite*, though this again raises the question of what is to be done if the explorers should not return before the *Kite* is obliged to start south. We will not quote Mrs. Peary's painful reflections. On the 6th of August suspense was ended and all was well; but we think that any one, not totally devoid of sympathy, who reads this journal, will have answered for himself the questions with which this summary was introduced—this, notwithstanding the paragraph with which Mrs. Peary closes her narrative:

"I returned in the best of health, much stronger than when I left sixteen months before. The journey was a thoroughly enjoyable one. There were some drawbacks, it is true, but we meet with them everywhere; and, were it not for the sad loss of Mr. Verhoeff, I should not have a single regret."

A brief chapter on the second journey, that of the present year, written in Greenland, and another by Mr. Peary on his journey over the ice, conclude the volume.

The publishers have issued the book in a most attractive form. Scientifically, except as a contribution to psychology, the numerous excellent illustrations are the most valuable part of it. To those who know little of arctic people or travel the text contains much that will interest, though to the geographer or ethnologist it is an oft-told story. That the present expedition may be no less fortunate than the one she has recorded, will be the earnest hope of all Mrs. Peary's readers.

*A History of English Dress.* By Georgiana Hill. G. P. Putnam's Sons. 2 vols., 8vo.

ALTHOUGH the name of the American publishers alone appears on the title-pages of these volumes, they come to us from an English press, with the illustrations stamped with the name of the London firm of Richard Bentley & Son. We state these facts partly as another mode of saying that the steel plates are capitally engraved, the margins of the pages liberal, the type and printing a pleasure to the eye, while the surface-finish of the paper is delightfully free from the glaze and gloss that cause one alarming visions of failing sight and visits to the oculist. Nor does the mention of these adventitious merits by any means exhaust all that can be said in praise of the book. It is by far the best popular history of dress that has come under our notice. The author has not been betrayed by the lightness of her subject into flippancy, nor does she ever fall to the level of mere gossip about paint, powder, and pomatum. Common sense is at the bottom of her conception of fashion and its slaves, and a calmly impartial observation of the foibles and weaknesses of both sexes alike characterizes her pages.

As satirists of all times and every shade of wit and delicacy have rung so many changes in verse, prose, and journalese upon the theme of feminine vanities, we prefer to quote Miss Hill on the less threadbare side of the subject. "Because in the present day," she writes, "men have chosen to affect a certain rigour in dress which does not admit of much variation, they are pleased to forget the quality of their toilet in the past, the number and mutability of their fashions, the elaboration and costliness of their attire, which equalled, nay exceeded, that of women." As among the first of the protracted sufferings of the sex in the cause of beauty may be mentioned the wearing of long pointed toes, stuffed with tow and turned up like rams' horns, in the first (Saxon-Norman) of the six periods treated of, and even during the second (Plantagenet) period, while women were still moving about unimpeded "in the simple Græco-Roman dress which was worn under the Normans, and, indeed, earlier." Of the fine gentlemen of the Tudor period an eye-witness is quoted as writing: "Their doublets are so stuffed, bombasted, and sewed, as they can verie hardly eyther stoupe down, or decline themselves to the grounde, so styffe and sturdy they stand about them." The same observer's account of the process of the toilet of a gallant of the period does something towards proving that the intellect of the two sexes has been more on a par in past times than is commonly supposed. Among the milder vanities of the one claiming the greater freedom from them may be mentioned, in the Stuart period, the masses of curled hair, the earring in one ear, and the rose of ribbon fastened around the top of the other ear or in the curls.

The first volume ends with the Stuart period. The second includes two periods only, the eighteenth century and the nineteenth—a change, which strikes one as illogical, being thus introduced into the order of the subdivisions. A more serious charge, however, to be made is the lack of sufficient consecutiveness of thought and treatment. Miss Hill has not confined herself strictly to a discussion of apparel, but touches upon the various changes in the social habits and in the private manners that also go to mark the man, as well as upon trade and industry as affected by costume. But the interest always aroused upon these points is too often frustrated by abrupt and rapid transitions of subject, even without the warning of a change of paragraph. In the chapters dealing with latter-day problems of dress, æsthetic, hygienic, and domestic, no original line of thought is followed out, though the presentment is from the standpoint of plain sense and reasonableness. Such as they are, these volumes may be a valuable addition to the bookshelves of a philosopher upon themes social and conventional, while their value for the less reflective reader is the breadth of outlook they give to a subject whose details, if taken too seriously, occupy an amount of attention out of all proportion to their value. In passing, too, one would like to note that although the revered vowel has not been dropped from words like honour, rigour, and vigour, nor any other enormity of American spelling committed, constructions have been allowed to stand which are to be deprecated on both sides of the water alike.

---

*The Masters and Masterpieces of Engraving.* By Willis O. Chapin. Illustrated with sixty engravings and heliogravures. Harper & Bros. 1893.

WITHIN the two hundred and sixty-six pages

of this elegant specimen of book-making are contained the salient features of the entire evolution of the art of engraving. The work is apparently "composed" for readers of little leisure who love art, and are interested in the vicissitudes of the lives which have contributed to its making. Moot questions are settled out of hand, in accordance with the weight of evidence, and only such prominent matters and personalities as are in the line of progress are rounded into completion. For closer study of workmanship and comparison of styles, the nearly autographic reproductions from valuable originals, with which the volume is embellished, serve a better purpose than any amount of description. Plate-engraving and etching are traced through the development of the various schools, which, to some extent interdependent, were nevertheless sufficiently national to be recognized by the names of Germany, Italy, Flanders, France, and England. In regard to the personalities that dominated these schools, the reader's memory is greatly assisted by their arrangement into contemporaneous groups. The character of the illustrations may be gathered from the titles of a few of those which illuminate this portion of the subject: "A Portrait of Rembrandt (Rembrandt appuyé)," etched by himself; "Lucretia," by Marc Antonio, after Raphael; "The Angel of the Annunciation," by Martin Schongauer; "The Nativity," by Albrecht Dürer; and a portion of "David Playing before Saul," by Lucas van Leyden.

The author has included wood-engraving, and traces it from the work of the *Formschneider*, which is fittingly illustrated by the "St. Christopher" of Earl Spencer's collection, the earliest cut with authentic date, and subjects from Dürer and Holbein. Thomas Bewick is assigned his proper niche in the temple of fame, and, among the illustrations of the book, is represented by "The Yellow Bunting" and "The Woodcock," which exhibit his simple mastery as perfectly as an entire copy of 'The British Birds.' A portion of Harvey's engraving of "The Death of Dentatus"—rather an inferior reproduction—is used to display the traits of this famous work. Heliotype reproductions of "Rinaldo and Armida" by Nesbit and "The Cave of Despair" by Branston, works done in rivalry by these English engravers, as here presented, printed on antique paper, with the plate-mark, seem actually to be the copper plates they imitate. W. J. Linton receives his tribute of most honorable mention and a page engraving in his virile free manner. American engravers who receive equal distinction in the display of their work are Johnson, Kingsley, Kruell, and Closson.

Altogether this book is one which is likely to win attention to its subject, too often made repellent by a dry account of methods and catalogues of works.

---

*Printers' Marks;* A Chapter in the History of Typography. By W. Roberts, Editor of the *Bookworm*. Broad 12mo, pp. xv., 261. London: George Bell & Sons; New York: Macmillan. 1893.

THE earliest printed books had no titles or title-pages. The printer's name and place, when not entirely omitted, were to be found only on the last page of the book, in the small type of the text, where they would not be noticed by the careless observer. Properly to assert his claim as the mechanical maker of the book, and to cause the claim to be noted and remembered, the printer had to design and have printed on this last page a conspicuous engraved trade-mark. This bold engraving identified him with his books.

The 'Psalter of 1457,' printed by Fust & Schoeffer, at Maintz, was the first book with a printer's mark. In time other printers followed this example. At the close of the fifteenth century, every reputable printer put his trademark on his books. By general consent its position was transferred from the last page to the first page, and it was usually made the blackest and boldest impression of the volume. It often occupied one-half, sometimes two-thirds, of the entire title-page. The printer's mark is not now regarded as indispensable. Many large publishers have no mark. The few that are used are rather modest as to size, seldom exceeding the dimensions of three square inches. The only notable exception is that of the Kelmscott Press, which is almost as big as that of William Caxton.

In the book before us more than two hundred marks are shown, but those of French, German, and Italian printers are most in number. The marks of the eminent early English printers are reproduced, but the printers of this century do not fare so well; there are relatively few marks of modern printers, and only seven of the printers of America. Many of the marks have been copied by photo-engraving process, and all of them, and the text too, are exceptionally well printed. Mr. Roberts's comments are curt, but exact and instructive. He has made a valuable book of reference, giving much useful information concerning a department of typography that has been hitherto neglected by all writers in English, and is accessible to the student only in French and German books.

A study of these marks does not impress the reader with their artistic value as a whole. Some of the earlier ones, that may have been designed or suggested by artists of the period of Holbein and Dürer, and by the able French designers of the first quarter of the sixteenth century, have real artistic merit, but many of them are crude, fantastic, and inartistic. The domination of the religious sentiment is strongly shown in all designs made during the fifteenth and sixteenth centuries. The cross appears in every variety of distortion. Angels and Biblical characters are very common. With them came heraldic shields with supports of mythological and mediæval monsters, such as satyrs, fauns, tritons, phœnixes, griffins, and unicorns. Then came rebuses, monograms, and far-fetched puns on the name of the printer. English printers especially showed an extraordinary aptitude for this shocking form of illustration. Many printers whose names ended with *-ton* (an abbreviation of town) made use of a great barrel, or tun, as the chief ornament of their device. Nor is the punning device yet out of fashion; it can be found in the marks of several English publishers of this century. Curious and interesting as these marks are, the designs will not bear comparison with the designs or the engraving of the same number of chance-collected *ex-libris*.

In most of the marks is evident an effort to be striking and original at the expense of propriety and even of fair dealing. When a printer failed to invent a new design, he did not hesitate to copy the design of another. The dolphin and anchor of Aldus Manutius have been favorite stock pieces for plunder. Pickering of London appropriated them bodily. Whittingham incorporated them in one of his devices of the Chiswick Press. Bell of London and Joel Munsell of Albany have tagged them on their respective marks.

*Genealogy of the Cutts Family in America.* By Cecil Hampden Cutts Howard. Albany: Joel Munsell's Sons. 1892. Pp. 658.

*Life and Times of Henry Burt of Springfield* and Some of his Descendants. By Henry W. Burt and Silas W. Burt. Springfield, Mass.: Clark W. Bryan Co. 1893. Pp. 617.

*The Genealogy of the Mickley Family of America.* By Minnie F. Mickley. Mickleys, Penn. 1893. Pp. 182.

THESE three volumes are, we fear, only average specimens of the work now being done by enthusiasts in the name of genealogy. The Cutts book is large and evidently costly, the printer assisting to make the maximum of pages out of the material. It is not a Cutts genealogy, although a history of that very small, yet distinguished, family might be culled from its pages. It is really a miscellaneous collection of pedigrees of persons having a small portion of Cutts blood through their maternal ancestors. For example, the last name in the line is 5450, W. L. Putnam, traced through Harriet Lowell, Charles R. Lowell, Harriet B. Spence, Mary W. Traill, Mary Whipple, Mary Cutt, and Robert Cutt, jr., to Robert Cutt the emigrant. That is to say, Mr. Putnam was in the seventh generation from a male of the Cutts family, and probably had 127 other progenitors in that generation. Doubtless there are many thousands of persons who share equally in this connection, but the fact is as worthless as it is patent. It is a most serious defect in this book that no attempt is made to assist the reader by suitable typographical aids. There are no cross-references, nothing to show the continuance of families nor the generations. The few real Cuttses are swamped and lost among the female lines. This is a pity, as the males were very noticeable men, prominent in New Hampshire history, and well worth a clear record. Perhaps after this book has answered its purpose, some one will extract from it a Cutts pedigree.

The Burt book is a family magazine, being a mere collection of notices of various families of the name, prepared by different persons, and of widely varying degrees of correctness and fulness. It reports a general family reunion, and is avowedly only a collection of materials. Conformably to its fore-title, "Early Days in New England," much space is given to the early history of Springfield, Mass., Longmeadow, and Northampton, recording matter invaluable in a town history, but which would be entirely out of place in a formal genealogy.

The small Mickley genealogy is really a family history, unpretending in form and covering a small field very well. It begins with John Jacob Mickley, who was born probably in 1697, and who arrived in Philadelphia in 1733. Six generations of his descendants of the name are given, 503 names in all, in the simplest form of record. It seems probable that the emigrant was a brother of Louis Michellet of Metz, great-grandfather of Prof. Charles Louis Michellet of Berlin. If so, the family can be traced five generations in France.

In behalf of the high standard established for American genealogies, we may be excused for insisting that only those who inherit the name by birth belong to a family. Right or wrong, the paternal ancestry is the distinguishing one, and a genealogy is the record of a family from that standpoint. The public may or may not be right in supposing that the male line inherits certain definite traits; but if not, no one can select the line of female ancestry which will prove to dominate. Among

the Cutts descendants James Russell Lowell, B. P. Shillaber ("Mrs. Partington"), Gen. Fitz-John Porter, and Richard C. Shannon; among the Burts, Ezra Stiles, Ethan Allen, Silas Wright, Sylvester Judd, and President Cleveland appear. But there is no trait possessed in common by these gentlemen which is to be considered as due to the Cutts or the Burt influence. They may cast some borrowed lustre upon a less noted stock, and curiosity may be gratified by such fortuitous associations, but the true object of attention is the line selected for research. This principle has been in the main observed in the choice of portrait illustrations for the second work on our list, most of them being of descendants who bear the name of Burt. The Cutts volume is also illustrated.

BOOKS OF THE WEEK.

Almanach de Gotha. 1894. Gotha: Justus Perthes: New York: Westermann.
Bent, J. T. The Sacred City of the Ethiopians. Longmans, Green & Co. $5.

### The Week.

AT HOME.

Alabama for silver-purchase repeal, 260—Arizona, proposal to admit to Union, 458, 479—Atlanta Clearing-house wants Sherman Act repealed, 19—President Andrews on Colorado distress from silver depression, 57, on free coinage at 20 to 1, 337—Edward Atkinson on issuing exchequer bills for pension debt, 110—American Board of Foreign Missions checked in its proscription of heresy, 278—Ambassadors and their salaries, 260—Art made free by new tariff measure, 402—*Atlanta's* state justifies Capt. Higginson, 147—*American Wool and Cotton Reporter* on silver as the cause of depression, 116.

Blatchford, Judge Samuel, deceased, 19—Gov. Boies of Iowa nominated, 146—Commissioner Blount's return from Honolulu, 147, appointment criticised, 457—Wharton Barker's mode of pacifying silver, 237—Prof. C. A. Briggs made LL.D. by Williams College, 278, defeated in appeal to Synod of New York, 298, sustained by liberal Presbyterians at Cleveland, 361—Ambassador Bayard on Hawaiian affairs, 439—Bering Sea arbitration, contradictory American contentions, 38, award of damages, 128—Bank clearances in first half of 1893, 37, increase in deposits, 181, ready to favor Treasury with gold, 458.

Colorado mine-owners shut down, 2, 57, State's prosperity not dependent on them, 19, compared with Michigan iron industry, 57, plan to issue tax-receivable certificates against bullion, 73, Denver Ministerial Alliance demand a fast day, 109, woman suffrage voted into the Constitution, 360, extra session unpopular, 440—California, free-coinage meeting in San Francisco, 58—Cherokee Strip settlement begun, 204—Chester, Mass., railroad-bridge accident, 221—Chicago to have a natural-history museum, 320—President Cleveland calls extra session of Congress for Aug. 7, 1, appoints too many editors to office, 3, message to Congress in extra session, 91, returns to Massachusetts, 109, rebukes the Senate in his Capitol centennial address, 203, puts his foot on silver compromise, 297, dishonored by Van Alen appointment, 297, lesson from November elections, 338, duty as to Commissioner of Indian Affairs, 381, on malignant criticism of the Van Alen nomination, message, the abuse of right of asylum, 419, criticism of Harrison's administration regarding Hawaii, 457—Secretary J. G. Carlisle on cost of recoining silver, 127, revokes reduction in rental of Pribyloff Islands, 128—F. R. Coudert on Minister Phelps's Bering Sea belligerency, 320—Senator J. M. Carey's independence, 337—Judge T. M. Cooley on the Senate deadlock, 277—Wm. E. Chandler's filibustering programme, 381—Richard Croker's account of his means, 459—Chinese highbinder declared a laborer by Judge Ross, 239—Civil-service practice of Cleveland's Cabinet, 38—Consular reports (U. S.), valuable, 20—Catholic schools and the school fund in Maryland and New Jersey, 441—Clearing-house (N. Y.) transactions 1861-1893, 91, panic certificates cancelled, 338—Coffee, and Harrison's retaliatory duties, 204.

Congress, LIIId, extra session: Canvass of opinion as to repeal of Sherman law 91—Stewart's misinformation as to Continental bimetallism (Senate); day fixed for voting on measures, Bland's proposal to change ratio (House), 109—Vest for 20 to 1 coining ratio, his Jeffersonian lunacy, Voorhees's bill to increase currency (Senate); Committees (House), 127—Repeal Bill passed, speeches of Cockran and T. L. Johnson (House); Hoar reads letter of Ernest Seyd's (Senate), 145—Lee Mantle case decided against Governor's appointment to repair neglect of Legislature to elect a Senator; Peffer and Hill's inquiry as to national banks violating law (Senate), 146, majority for the Repeal Bill (Senate), 163, 203—Ways and Means Committee's tariff hearings (House), 163, 181, 220—Reed's debate with Crisp over new rules (House), 164—Pugh's talk against time (Senate), 181—Faulkner's bimetallic scheme (Senate); Tucker's bill to repeal Federal Elections Law; proposal to annex Utah to Nevada (House), 203—Revolutionary attitude of Senate; Gray's speech for repeal; Daniel's question about gold transfer (Senate), 219—Cameron's speech for silver, Gorman's and Aldrich's censure of the obstructionists, Morgan's hysterics over the gold press (Senate), 238—Vest says one-fifth of Senate controls all legislation (Senate); Geary anti-Chinese bill amended (House), 277—Silver-repeal bill passed; Allen and Peffer on per capita circulation in war-time; Sherman's proposal for bond issue (Senate), 319—Silver-repeal passed (House), 337.

—— —— regular session: Censure of President for secrecy in Hawaiian affair (Senate), 439—Hoar on precedents for Blount's commissionership (Senate), 457—Voorhees's new silver law (Senate); vote to admit Utah, proposition to admit Arizona (House), 458—President arraigned by Hoar (Senate) and Boutelle (House), 477—Proctor's bill to annex Utah and Nevada (Senate), 478—Mileage grab, 479.

Danbury hatters on strike vote themselves money at town meeting, 441—Prof. Henry Drummond's Chautauqua lectures on evolution, 21—Chauncey Depew for the repeal of Silver Purchase Law, 57—Rev. Morgan Dix denounces World's Parliament of Religions, 278—C. A. Dana's praise of Bible as a foundation for journalists, 278—Walter Damrosch and the Musical Mutual Protective Union, 459.

Elkins, S. B., charges financial difficulty on Democrats, 57—Patrick Egan to retire to Nebraska, 111—Erie R. R. receivership, 73—Elections in November, moral of, 338.

Florida, local experiment with Australian ballot, 58—Fall River mills' good showing for quarter, 110—Faribault plan of public education abandoned, 221—Gov. R. P. Flower's nullification of Civil-Service Act, 3, confession of Maynard's theft, 278—Charles Foster overdraws his accounts, 20—Hamilton Fish deceased, 182—Worthington C. Ford on the misreckoned trade balance for 1893, 164—Failures of 1893, high assets, 2—Football à la mode, 382, casualties in England and U. S., 403, celebration at Princeton, 421.

Georgia State-bank-note measure, 402—Secretary Gresham's report on Hawaii, 359—Gold returning, 19, gold certificates in small denominations needed, 91, gold likely to be exported, 219, shipments, 439, banks ready to spare loss from the Treasury, 459.

Hartford *Courant* on dividing pension burden with posterity, 110—Commander Higginson demands restoration, 20, justified by *Atlanta's* condition, 147—W. H. Hurlbert's reason for avoiding extradition, 20—Secretary Herbert's letter to Senate on Harrison's Chilian shells, 182, reinstates Capt. Higginson, 220, restores Commodore Stanton, 401, 478, annual report, 419—Ex-President Harrison on forgetting the Union soldier, 182, on Cleveland's wild team, 337—Carter Harrison assassinated, 319, speech to French engineers, 339—W. B. Hornblower appointed justice of Supreme Court, 220—Wade Hampton to organize S. C. Democrats away from Populists, 337—Hawaiian Constitution and Japan, 147, Gresham's policy to reinstate the Queen, 359, Blaine's part in annexation scheme, Blount's report, revolutionists aliens, 381, religious press obfuscated, 401, 478, Stevens's lecture on Christian civilization, B. F. Tracy's annexation hint to Admiral Skerrett, Minister Thurston disregarded, 401, President censured in Senate, Stevens's defence contradicted by Lieut. Swinburne and C. Nordhoff, precedent for W. I. annexation, 439, Stevens's refuge in Secretary Bayard, 457, his pretence of neutrality, 477, Boutelle on hauling down the flag, and Hoar on the Queen's morals, 477.

Iowa, low payment of teachers, 58, Republican Convention discards prohibition, 128, lynchings, 420—Indiana bribery-at-elections law, 338—Illinois lynching canard, 421, 465—Importations, Treasury error in reporting value of, 92—Immigration large in spite of cholera check, 92—Inter-State Commerce Commission report, 479.

Kansas, Topeka postmaster evades Civil-Service Law, 20, Democratic conventions against free coinage, 277, farmers pay taxes in hoarded gold, 402, Gov. Lewelling licenses tramps, 440—Kentucky mountain feuds unsuppressable by courts, 279—James T. Kilbreth appointed Collector for the port of New York, 74—Knights of Labor's new free-trade master-workman, 477.

Long, Judge Charles Dean, unworthy pensioner, 58—A. T. Lyman on the Wilson bill, 477—Lynchings at the South, 204.

Massachusetts Democratic Convention calls for silver repeal, 237—Michigan, female municipal suffrage unconstitutional, 320—Maryland Democratic Convention calls for silver repeal, 237—Mississippi public sentiment for silver-purchase repeal, 260—Secretary J. S. Morton's retrenchments, and meat-inspection idea, 38, report on Department of Agriculture, 401—Isaac H. Maynard defeated for reëlection to Court of Appeals, 338, carries his party down with him, 458—W. McKinley at Akron, O., on cheap era, 203, on silver, 204, election and Presidential prospects, 359—McKinley Bill's reciprocity clause neutral in British Guiana, 182—John Y. McKane sentenced for contempt of court, 459—Wayne MacVeagh nominated Minister to Italy, 478—Monetary stringency, 1, five N. Y. banks break the money rate, 2, hoarding, 2, sympathy with London, 37, relief, 110, N. Y. bank statement, 128.

New York *State:* Democratic Convention packed by Hill, 238, nominates Maynard, 260, State carried by Republicans, 338, thanks to Maynard, 458, Tammany investigation must be free from Platt, 382, State Canvassing Board held to account by Supreme Court, 440; *City:* Custom-house investigation, Surveyor Lyon refuses to inform, 2, Street Commissioner Brennan removed, 58, disorderly meeting of friends of silver, 73, Tammany as a striker of corporations, 92, 360, national authorities coöperating at Quarantine, 111, Mayor Gilroy on the wealth of New York, 239, Bar Association denounces Maynard's nomination, 277, Croker nominates all candidates, 278, trouble ahead for Tammany, 479, Madison Ave. church breaks down on free system, 261, Democratic address for reorganization, 420—N. Y. *Tribune's* experience with "illustrations" desired, 75, on House chairmanships going to the South, 146, on the loss in importing Bermuda onions, 163, on the tariff's cheapening prices, 203, on restoring the idolatrous Queen of Hawaii, 359, on a business administration for Brooklyn, 402, on free fish, 420—Nebraska Democrats for silver-purchase repeal, 260—National banks, condition of, 73—Naval abuse of promoting civilians, 221.

Oklahoma's facilities for divorce, 20—Ohio Democratic Convention calls for repeal of silver purchase, 110, negro postmaster at Wilberforce, 111, Wool Growers' Association denouncing free wool, 163.

Pennsylvania Republican Convention afraid to censure Senator Cameron's silver attitude, 238, Philadelphia Municipal League and Herbert Welsh, 298—Princeton hazing, 279, football rowdyism repressed by faculty, 339—Robert P. Porter's Tariff Pictures exposed, 147—Wm. Walter Phelps on the decay of American journalism, 402—President Patton on athletics, 441—Protective Tariff League calls for pessimistic statistics, 182—Populist retribution on Kansas and Colorado, 440—Pension Bureau to root out frauds, 19, Judge Long's case, 58, a prosperous Bostonian, 74—Postmen unpopular in rural districts, 382, Post-office deficit, 419—Presbyterian liberals stand by Prof. Briggs, 361—Parliament of Religions at Chicago, 204—Pencils, protected, underselling German makers, 321—Per-capita circulation increasing, 260, during war, 319.

Quincy, Josiah, on the changes in consular service, 74, defence of application of spoils system, 261, condemned by Mass. Civil-Service Reform League, 298.

Richmond *Despatch* opposes State-bank laws, 459—Thomas B. Reed's tilt with Speaker Crisp over rules, 164, belated protectionist pessimism in *N.A. Review*, 181, in the rôle of a filibuster, 219, 220—Republican folly in compromising with free silver, 1, right action on repeal, 297, exciting the unemployed against the Wilson bill, 477—Revenues to June 30, and prospects, 419, 420—Railway mail service improved, 3, railroad supply of middle Northern belt, 129, accidents on Chicago routes, 290—Reciprocity and the Wilson bill, 477.

Stewart, Senator, and the Emma Mine, 259—Senator John Sherman on his own Act, 1, 37, on Democratic friendliness to free coinage, 57, for a silver compromise, 259, 337—Sherman Act, Congressman Walker on political Republican support of, 1, Senator Sherman disavows his namesake, 1, defends it, 37—Mgr. Satolli puts the screws on Abp. Corrigan, 129—Mayor Schieren's good appointments, 420—Admiral Stanton removed for saluting Admiral Mello, 320, restored, 478—Savings bank run at an end, 165—Silver's legal-tender quality and the crazy Western governors, 91, Silver Convention at Chicago, 92, Silver's alleged unfair treatment by press, 163, relation to debtor and creditor class, 297, question of coining the seigniorage of Treasury's silver bullion, 337, rise and decline, 360.
